Mr. OLNEY. That is an individual case, of course.

Col. WOOD. The same conditions apply.

Mr. OLNEY. The cases of illness are very far above normal.

Col. WOOD. The variation in the ratio of pneumonia does not seem to have a direct relationship to the variation in the supply of clothing. I think a careful examination of the amount of clothing issued to the different camps will show that there is no very great difference in the situation. The variation in the prevalence of sickness has been from 9.1 per thousand to upwards of 75 or 80 per 1,000.

The CHAIRMAN. Can you show in the record how and why that is and prove that to be true? If you can, I think it would be a very important thing.

Mr. GORDON. It would serve as a great enlightenment to Gen. Gorgas, who reported to the contrary. I understood you to say that the lack of clothing had no relation to the number of deaths from pneumonia.

Col. WOOD. I would not say it has no relation. I think it has been very much overestimated. I have just recently come from Camp Hancock, and the temperature there has been probably as cold as in most of the camps, except those in the extreme North. I think probably there was in the early part of the winter less clothing and less blankets at Camp Hancock than at some of the others. For instance, I know that in the early part of December the number of blankets was less than two per man, and yet at Camp Hancock there was a lesser ratio of sickness than in any of the other camps, except Camp Meade. For several weeks ratios of these two camps were very close together, just a difference, I think, of one-tenth per thousand. One was 9.1 and the other was 9.2.

Later there was an increase at Camp Meade, because of an outbreak of measles, and a decrease at Camp Hancock.

So far as I can form an opinion from personal observation and experience there is more danger from pneumonia from an overheated condition in tents, where stoves are used, and where there is a lack of proper ventilation, and the men go out in the open air to duty after being in that overheated atmosphere than there is on account of a lack of clothing, although I do not want to minimize the discomforts which are due to a lack of clothing.

At Camp Hancock every tent is required to be opened at "taps," and the men sleep in the cold atmosphere with thorough ventilation. I think that probably had a great deal to do with the lower percentage of illness. I do not want to minimize the discomfort that the men had from a lack of sufficient clothing, but I do not think that ought to be emphasized as a cause of sickness, because sickness has applied to the officers as well as the men, and the officers provide their own clothing. It may be one of the contributing causes, but to what extent I do not know.

Mr. SHALLENBERGER. Could you not give the committee a statement showing what the extent of the shortage of clothing was in these particular camps where the greatest sickness was, and show whether there was any relation between the amount of sickness and the shortage of clothing, whether there was any relation between the fact that there was more sickness in the camp where the clothing was not the shortest?

Col. WOOD. The department now has figures as to the issue of the clothing, and there is published each week in the official bulletin a statement of the number of men who are not fit for duty on account of illness.

Mr. GORDON. And the causes?

Col. WOOD. In general the causes, and they give that by camps and cantonments.

Mr. GORDON. Where is Camp Hancock?

Col. WOOD. It is at Augusta, Ga.

Mr. GORDON. I think your statement is very important in view of the charges which have been made in the newspapers.

Col. WOOD. I think there has been great exaggeration of it. Of course, the sickness is most lamentable, but I think it is a mistake to jump at the conclusion that it has been due to a shortage of clothing and equipment. I think the men have suffered from cold, from lack of clothing and equipment, but to be uncomfortable from lack of clothing and to have sickness from it are quite different things.

The shortage of clothing was, to a large extent, unavoidable. The Government suddenly had to provide for an enormous number of men, articles which require in the ordinary course of civilian preparation, upward of six to eight months.

Cloth for civilian clothing which is worn in the winter season is purchased by the clothing manufacturers in the preceding January, and it is manufactured during the months from March to July, and is converted into garments during the period from May until September, and it is ready for delivery during the autumn.

Mr. GORDON. That is true, but I do not understand why men were seized by force and put into training camps when you were not prepared to equip them with sufficient clothing.

Col. WOOD. That is not our trouble.

Mr. GORDON. I can understand the delays, but the men ought to have been paroled home.

Col. WOOD. That has to do with policy which is formulated elsewhere than in Gen. Sharpe's office.

Mr. GORDON. To take the men by force and put them in camps when you can not clothe them—

Mr. KAHN. The Quartermaster's Department could not help that.

Gen. SHARPE. I regret that as much as anyone else, and I have shown you that I have stated from time to time that we could not provide the clothing for those men until December 31.

Mr. GORDON. There is no doubt about that.

Gen. SHARPE. But, under the conditions, I made my recommendations conscientiously. If I were Chief of Staff and the Quartermaster General made a recommendation to me such as I made to the Chief of Staff, I, nevertheless, would have ordered the troops into the camps.

Mr. GORDON. You would not have ordered them sent home?

Gen. SHARPE. I would not. I would have done exactly what has been done, because it was necessary to do that to get the psychological effect upon our enemies.

Mr. GORDON. But you drag men into camp without proper equipment; that will not help any, so far as the psychological effect is concerned.

•Gen. SHARPE. Every death which has occurred in the camps is to be regretted, but I would have done the same thing as has been done. I think the death of a man in the camp is just as much of a sacrifice for the Government as the death of a man who goes over the top.

Mr. GORDON. I do not agree with you. I think the death of men in the camps, under the circumstances which have existed, is murder. I would send them home. With all due respect to the General Staff and to the Chief of Staff, I say that the issuing of an order putting men in camps, when we are not prepared to clothe and equip them—I do not care what you may think about the psychological effects upon the enemies; we ought to have some respect for the psychological effect upon our own people, when you take so many of these boys out of good homes and put them in these camps—comes close to being murder.

The CHAIRMAN. It seems to me that is a matter which should be submitted to the heads of the War Department, and that the Quartermaster's Department ought not to be asked in reference to a matter of policy.

Col. WOOD. A question was asked a while ago by Mr. Olney in reference to the amount of knitting, and the desirability of bringing that matter under the control of the Quartermaster's Department. It has been estimated, I do not know how correctly, that there is probably used now by the civilians in this work 120,000,000 pounds of wool a year, and you realize that is equivalent to the entire American cleaning weight of wool.

Mr. OLNEY. I do. I know just what we raise in this country.

Col. WOOD. If the number of persons Mr. Olney mentioned are knitting, it does not seem extravagant to say that the number of sweaters they would knit, if they continue during the year, would be far more than all of our Army and a good part of the allies could possibly use, and they would be consuming wool which before the spring of 1919 may be badly needed in the manufacture of other articles of the soldiers' equipment. While it has been a most commendable work, there is great danger that it is going to be carried so far that the Government will be deprived of the wool for other needed things, and it seems at the present moment to be a matter that needs some regulation.

Gen. SHARPE. Several of these patriotic societies have come to me right along that line, and I have said to them that if they would knit toques—

Mr. OLNEY (interposing). And the helmets; the woolen helmets.

Gen. SHARPE. No; I did not suggest that as a substitute. I said if they would knit toques more largely than anything else it would be better, because it is such a simple thing to knit. There may be considerable difficulty in the matter of the fit of the sweaters and the stockings, but the toques will fit.

Mr. OLNEY. You do not think the sweater is a necessary article of clothing?

Gen. SHARPE. I think it needs regulation. If the heads of the Red Cross will come to the Quartermaster's Department, we will indicate to them the total quantity that will be required, and then let them restrict their activities to those quantities. I have reason to believe that the quantity of sweaters that will be knit from now on will be greatly in excess of the demand.

If you take the number you indicated, and if that number is half of 10,000,000, or less than that, if they need as much, we will set apart what is needed, so that there would not be more of these articles than there would be any use for.

Mr. OLNEY. I was only figuring that they knit a pound a month.

Gen. SHARPE. It seems to me it does need regulation, in the interest of the conservation of wool, and the heads of those organizations should ascertain from the Quartermaster's Department the total number that could be usefully employed, and then communicate with their various branches, telling them the aggregate number that should be made, and beyond that stop.

Mr. OLNEY. It amounts to a voluntary contribution of \$100,000,000 to the Government.

(Thereupon the committee took a recess until 2.30 o'clock p. m.)

AFTER RECESS.

The committee reassembled, pursuant to the taking of recess.

Mr. McKENZIE. General, recurring to the matter of clothing, is it not a matter of fact that the different standard sizes of the Army uniforms were adopted as a matter of experience rather than by chance?

Gen. SHARPE. Oh, yes, sir; entirely by experience.

Mr. McKENZIE. Is it not a fact that in ordinary times of peace, no matter whether you have an Army of 100,000 or 500,000 men, the ratio of the standard sizes that are made by the Quartermaster's Department would clothe the Army without any difficulty at all?

Gen. SHARPE. They have heretofore.

Mr. McKENZIE. Is it not also true that in time of peace the Army is raised by volunteer forces, and that the recruiting officers have in a sense standardized the recruits or standardized the men that come into the Army? By that I mean if an exceptionally tall man or a man with long legs, such as was described by some one here the other day, or a man entirely out of proportion or under size, wanted to get into the Army, notwithstanding the fact that he might be in good healthy physical condition, he would be rejected by the recruiting officer, and that the Army was made up of what might be termed normal men. Is that not true?

Gen. SHARPE. I think it is, in this way. I think the number of applicants in time of peace have usually been very much larger than the number they had to enlist, and they could make selections, to more nearly conform to the physical requirements which have been announced by the War Department.

Mr. McKENZIE. Is it not true that the Regular Army of the United States, in time of peace, was a very carefully selected body of men, as evidenced by the great number of rejections of men applying to enter the service of the United States?

Gen. SHARPE. Yes, sir.

Mr. McKENZIE. When this war came on, and the large number of men coming into the Army, both as volunteers, several hundred thousand of them, and the selective conscription act bringing hundreds of thousands more, is it not true that the careful selection that had been made heretofore was absolutely set aside, and that if a man was physically sound, regardless of his size or his peculiarities, or anything of that sort, he was certified for the service?

Gen. SHARPE. My idea about it is, that they accepted a man who was physically sound, but they did not actually set aside the physical requirements.

Mr. McKENZIE. I do not mean that they would allow a man to come in who had a defective eye, or who was physically unsound in some small way, or had some small defect. I do not mean that at all. I mean that they permitted men to come in who might be very large, or who might be undersized, compared to the men taken in in time of peace, when the men were being standardized, so to speak?

Gen. SHARPE. I think that is probably true, sir.

Mr. McKENZIE. Is it not a fact that that is one of the elements that led up to the shortage in certain kinds of uniforms, concerning which there has been so much criticism?

Gen. SHARPE. I think it is. **Mr. McKENZIE,** Col. Wood is just back from one of the large camps, and he can give you a better viewpoint of that situation than I can.

Col. WOOD. Your statement is absolutely correct.

Mr. McKENZIE. I want to get at a fair understanding about it. I want you to have all the criticism you deserve, but I do not want you to have any unfair criticism.

Col. WOOD. That is correct, and it is also true that in normal times a very large number of recruits for the Regular Army were between the ages of 18 and 21 years, and who, while of full height, may not have been fully developed physically. The draft is taking a much older average—men from 21 to 31 years of age—who are more fully developed, and the sizes required will average larger for that reason.

Mr. McKENZIE. Is it not a fact, and would you be willing to state it as a fact, that with the standard of the men brought into the service since this war has come on, if you had followed the regular ordinary course of manufacturing your clothing in the sizes that had been adopted by the Army, that you would have had uniforms sufficient to give one uniform to each man?

Col. WOOD. Yes, sir; we would.

Mr. McKENZIE. Is it not a fact that the shortage of uniforms is due, to a great extent, to the fact that it was not so much a lack of the uniforms themselves, but that the shortage was in having the sizes that would fit the men?

Gen. SHARPE. Yes, sir. I think Col. Wood has had experience along that line, and he can give you better information than I can.

Col. WOOD. That is partly true, and it is also true that there is always a certain quantity that are in transit, and it is just like filling up the stores of retailers and distributors in the sense that they had in the beginning no articles at all which they were to distribute, and suddenly began to prepare for business. There would, in the first instance, be a certain quantity that would be absorbed in that way.

Of all that have been made, a considerable number are in transit on the railroads between the makers and the depots, and between the receiving depots and the camp depots.

Then there is another cause of some of the shortage, coming under my own observation, which was alluded to by Col. Hirsch.

There has been a practice in the issuing from camp depots of clothing, of considering a requisition closed when it was partially filled if it was not possible to entirely fill it, and then requiring the supply officer to make a new requisition. When there has been a shortage of supplies that are coming in from time to time, that has necessitated a constant making of new requisitions. That is a condition that could not have occurred under normal circumstances, where the depots always carried a reserve stock. I believe that is one of the causes of the shortage that can be corrected.

I think it is very important that among the changes made there should be one that will require that a requisition once made shall be kept alive and open until it has been completely filled, because a great deal of the time of the supply officers has been taken up in trying to find out what they still are to requisition for, and it has been complicated by closing the original requisitions before they are filled. That is a local condition.

Then, too, there is the further fact that I do not suppose any regulation can entirely obviate, that in dealing with supply officers and those in charge of the different depots the human equation enters very largely; one supply officer by his personality will be able, probably, to get his requisitions filled a little bit more fully or more rapidly than some other supply officer whose personality is less apt. So it happens, I imagine, in almost all the camps, that some of the organizations will have received more nearly their full supply of certain articles while other organizations in the same camp will not have received nearly their complete requirements. There has not been an equal distribution.

I have long urged upon those in charge in the camps where I was detailed, that the proper practice is to require pro rata allotments whenever any articles come into the camp quartermasters' depots. For instance, if there are 10,000 overcoats needed among all the organization in that particular camp, and 2,000 are received to-day, that 20 per cent ought to be allotted on account of every supply officer's requisition. That method is not followed in any camp at all.

Mr. McKENZIE. As a matter of fact, Colonel, when you get reserves of clothing on hand, this trouble will disappear?

Col. WOOD. Yes, sir.

Mr. McKENZIE. Due to the fact that there are a few hundred men coming into Camp Grant at Rockford, Ill. on the 15th day of February, and the Quartermaster General's Department knowing that that number of men will have to be clothed and uniformed, and you had reserves on hand, you would not send simply that number of suits, but you would probably send a good many more than that, would you not?

Col. WOOD. Surely.

Mr. McKENZIE. It is a fact, it seems to to me, that the whole difficulty has arisen, as suggested by Mr. Gordon this morning, from the fact that we provided by law for the increase of the Army by increments, and also permitted volunteering to go on at the same time.

The Quartermaster General's Department had made no arrangements to take care of a certain number of men. The soldiers obtained both under the volunteer system and the selective-draft act are what you might term ready made soldiers. We had a reservoir of 10,000,000 men, and all we needed to do was to go out and pick up 500,000 of them, and say that on a day this particular man must report to a particular camp.

You have no control over that matter whatever.

To get down to the question of the uniforms, you could not call those into being from the sunlight, or from some obscure place. You had to go out and buy the cloth and have the garments made up, and that all requires some little time, and while you may be guilty of some lack of diligence—I am not here to say you are not—in my judgment the greatest mistake was made, and I believe I must be compelled to differ with Gen. Sharpe's statement made here this morning; in my judgment the greatest mistake was made, if a mistake at all, in ordering the men into the camps until the Quartermaster General's Department was prepared to take care of those men.

If it was thought best to order them out, it would have been better to have ordered them to the southern part of the country, where they could have used summer clothing, if such places could have been found. There is no doubt but that there have been some shortages, but as you have explained, they could not be helped, and I am glad to hear that by the time the next lot of men go to camp those mistakes will all be obviated, and from your statement I take it that they will be. By the 15th of February you will not only have all the men now in the field well clothed but will be prepared to take care of the increments as they come in.

Gen. SHARPE. I feel perfectly confident that we will be able to do that. We have the garments now, and have already shipped a good many of them to the camps to provide for the remaining men in the draft.

Mr. McKENZIE. I would like to suggest one thing. I received a letter from a nephew of mine a few days ago. He enlisted as a volunteer not a great while ago, in Chicago, and was sent to Jefferson Barracks at St. Louis. There he was given a suit of light clothing. I received a letter from him the other day from Fort Hancock, in New Jersey. He belongs to some battery down there to which he was assigned. In this letter he stated to me he had received a box from home, in which there was a sweater, a pair of wristlets, and two pairs of woolen socks, for which he was very thankful, because up to that time he had only received the khaki uniform. He said nearly all the boys got woolen suits, but he did not happen to get one. I presume the truth was that there was not enough to go around, and he was one of the ones who were short.

He made no complaint, but he said he was glad to get the sweater. While it may be a good plan not to knit sweaters in order to save the wool, at the present time the sweaters are very useful.

In regard to the manufacture of clothing, as I understand it, you buy the cloth and then put the cloth into the hands of the manufacturers to make it up into the different garments?

Gen. SHARPE. Yes, sir.

Mr. McKENZIE. What is your practice in regard to allowing the manufacturers salvage on that cloth?

Gen. SHARPE. We do not allow that now. Ever since last summer—up to last July or August—a number of yards would be turned over to a contractor, which would be sufficient to manufacture a certain number of garments. That lay was very carefully made in our depot at Philadelphia, to determine the number of yards that would be required to produce a certain number of garments. In the past, manufacturers have complained that sometimes the amount of cloth was not ample, but we have always held to our lay, and the cuttings which came from that cloth were obligated to the contractor.

After that we took them in and required them to send the cuttings back to us, and then we have disposed of them by sorting into the different kinds of rags.

Mr. McKENZIE. Those cuttings would have a value?

Gen. SHARPE. Yes, sir; the contractors always stated that they figured on getting those cuttings in making us the price for the garments.

But when we fixed the cost of manufacture ourselves, we considered that, too, in getting the garments back.

As you know, you gave us permission a couple of years ago to sell all those rags or cuttings and to have the money taken up into our appropriation, instead of being covered back into the Treasury as a miscellaneous receipt.

In that case we lost the value of the cuttings, and your committee gave us permission to make use of that.

Mr. McKENZIE. I am glad to hear you make a statement that you are not allowing the contractors to have that at this time, because, taking into consideration the enormous number of uniforms that are being made, and the large amount of cloth that is being used, it would, perhaps, subject the Government to some criticism if they simply gave that as additional compensation, when you are already paying these men the cost and then a profit on top of the cost.

My reason for asking that question and getting that into the record was due to the fact that I have heard that some men have made a good deal of money from the cloth. In time of peace, when we were only having a comparatively small number of uniforms made, it was not such an important item as it would be now.

Gen. SHARPE. In time of peace we did not have the right to practically fix the price at which the garment would be made. Now we fix the price and say to a man, "Will you take a contract for that price, under these conditions?"

Mr. McKENZIE. About how much was the salvage?

Gen. SHARPE. We can get the figures.

Mr. McKENZIE. That would be valuable information.

Col. HIRSCH. It would be about a half a pound on the requirements for an overcoat. They figured the cuttings would be worth about 15 cents on an overcoat and about 8 cents on a service coat. We found that that was about the value at which the ordinary manufacturer figured it—15 cents for the value of the rags after cutting out an overcoat, and from 8 to 10 cents in the case of a service coat.

Mr. MORIN. I heard recently a statement made by a gentleman to the effect that there are 4 inches allowed on an overcoat. It came

from a manufacturer near Philadelphia, and this manufacturer had told a friend of his that he had gotten a contract, and that he would have extra cloth worth nearly a hundred thousand dollars. He said he had so much cloth left over that he advertised for bids to make uniforms for private organizations, such as the Boy Scouts, and when he received the contracts for those uniforms of private organizations he made the uniforms out of the salvage left over from the cloth which was furnished him by the Government, and he practically got that much cloth for nothing from the Government.

Col. HIRSCH. Not knowing to whom you refer, I can not discuss that case specifically, but I can simply make the general statement that if that occurred, the contractor did either one of two things—he either made a misstatement or stole cloth belonging to the Government. Then, again, we went very carefully into the matter of what we would allow the contractor. The way we arrived at that was to do it after a very thorough investigation and trial. We worked that matter out completely at Philadelphia by making up garments of different sizes, to see what the yardage would be for the various garments. For instance, we found that it would take so much cloth to make up a coat and so much to make up a pair of breeches, and so much more to make up an overcoat.

Then when we gave out a contract, for instance, for 100,000 pairs of breeches in which we stipulated that so many should be 51 or 53, we were able to figure out at once how many yards it would take, according to the standard yardage that had been figured out, to make 100,000 pairs of breeches. That was the allowance that was allowed to the manufacturer receiving the award of the contract to make the 100,000 pairs of breeches. We also followed that same principle in making contracts for the manufacture of coats.

We also put into the contract that in the event that when the contracts are finished if there was any yardage left over it remained the property of the United States Government, and if the manufacturer used more yardage than that allowed by the Government, he would have to pay for it by purchasing additional cloth at the market price. The clippings and the rags belonged to him, and the only way he could get anything out of the Government would be by him cutting the coat so that he would save a little on the allowance the Government made to him. According to the terms of the contract the material left over belongs to the Government, and the contractor would either be deliberately cutting it up into rags, which would be a fraud, or stealing the cloth.

That statement holds good to-day, except that very recently the Quartermaster General made a new ruling. Some of the manufacturers said that by doing the cutting in a scientific way they could save a certain amount of cloth which other manufacturers may not be able to save from the allowance made by the Government. They said that, therefore, they thought that when a man goes to the expense and trouble of using the latest methods of cutting a garment, he should be reimbursed for that. So that in consideration of that matter it was decided that hereafter 20 per cent of the value of the cloth saved at the end of a contract would go back to the man, and the other 80 per cent of the cloth saved would come back to the Government. So there was an incentive to a man to try to save as much as he could from the allowance which the Government had

made, but he would only get it in money value and would not get the actual cloth.

Mr. GREENE. I have had occasion to see, merely as an onlooker, some of the expert cutters at work on long bolts of cloth and to be acquainted with a master cutter, and, in the way of casual information, learned, once in a while, some of the things they figure on.

As I understand it, a part of the art of the craft is to see with what economy a pattern can be figured on, in as much as the remnants themselves may be useful and not wasted. As I understand it, in case a large order come in, they figure how they can, by skillful cutting, get the most out of a certain piece of cloth, and if the cutting of the cloth for some specific garment makes a certain angle, they figure how the remaining cloth can be utilized for another part of the same garment, so that the custom cutters pride themselves with being able to show almost no waste at all in a bolt of cloth. That is supposed to be a standard of the trade, to begin with.

Col. HIRSCH. Exactly so.

Mr. GREENE. Starting with that, would you hold that the contractor shall not enter upon an obligation to cut that bolt, originally, with the least possible wastage, and that he should not be offered a premium for having no wastage?

Col. HIRSCH. I do not quite understand you. Do you mean am I of the opinion that he should not get a premium?

Mr. GREENE. Whether he should get a premium for doing what he ought to do as a matter of common business sense?

Col. HIRSCH. I personally never would have allowed the 20 per cent, but I had nothing to do with that part of it. The reason the Quartermaster General's office did allow that was because, after giving the matter consideration, they thought the Government would save cloth and would get 80 per cent of the cloth that was saved.

Mr. GREENE. I am referring to the original proposition, that it is supposed to be a matter of business in a standardized clothing establishment to save that stuff anyway, and therefore why should they now be offered a premium because when the Government furnishes the material they employ their own simple methods of economy in the utilization of it for the manufacture of garments?

Gen. SHARPE. The reason that was given was to justify the contractor in employing the most skilled cutter he could get.

Mr. GREENE. I thought that was an obligation of his contract in any event.

Gen. SHARPE. I can not say that it is. He is expected to get the number of garments out of that yardage which we know he can get from the lays that we have made. If he can employ the most skillful cutters and pay them more, he can get his compensation for the additional wages by the saving which he is going to make in the yardage. The difficulty with the individual manufacture of the cloth is that the cutters at one time were not considered as being a necessary part of the business. They really are the keystone of the business and control the whole trade to-day.

Mr. GREENE. Suppose you start a contractor off to-day with a large order in which he furnishes the cloth. He will resort to every means within his power to see that there is no wastage in the cutting of that cloth. That is his own lookout, because he is furnishing the cloth. He sees to it that the cloth is saved.

Gen. SHARPE. But he gets the best cutters he can afford to pay.

Mr. GREENE. Exactly, and for the same reason he is doing business for himself. Why do we offer a premium to men who do business for themselves by certain standard methods which would result in economies to them, to do business for the Government in time of war, when there is an extra consideration in their contract for doing the business as economically for the Government as for themselves?

Gen. SHARPE. Because we know that there is a better degree of excellence among the cutters, and we want to get the best cutters and make the saving.

Mr. GREENE. And the contracts provide that a man shall turn over to you as good work for the Government as he would do for himself?

Gen. SHARPE. I do not know about that.

Mr. GREENE. I mean that is the spirit of the contract?

Gen. SHARPE. Yes. But the man looks after his own interests, engaging his employees at the figure he can get to the best advantage for himself.

Mr. GREENE. Then it would boil down to this proposition: When he is working for himself he is doing the best he can; when he is working for the Government he wants an extra inducement to do the best he can?

Gen. SHARPE. I do not know about that, but at the same time we are giving him an inducement to get the best cutters.

Mr. MCKENZIE. These men are allowed 20 per cent of the value of the clippings?

Gen. SHARPE. No, sir; not the clippings, but the yardage saved. If for instance, he gets a hundred thousand yards and cuts a number of garments out of that and saves two or three hundred yards, he is allowed 20 per cent of the value of the yardage saved.

Mr. MCKENZIE. Is there a regular standard by which you can measure that? Is there a certain amount of wastage that is fixed, by rule, on each pattern?

Gen. SHARPE. You can not fix that definitely. It all depends upon the skill of the cutter in fitting the different patterns in. It depends upon the amount of time he is willing to put in in the different sizes of garments, making them fit in on the lay of cloth that he has.

Mr. MCKENZIE. If the standard was fixed and a man was a careful cutter there would be but very little bonus which a man could get; but if it was fixed on the standard of some reckless cutter, he might do very well on salvage; that is, figuring on the amount saved.

Col. HIRSCH. It is figured by the cutters. The Philadelphia depot has the most skilled cutters it is possible to get. You have to allow a margin, and by the time you get through with the hundred thousand yards there may be a couple of hundred yards left over within the case of every large contract.

Mr. MCKENZIE. This bonus is paid on the amount saved by the contractor over and above this margin allowed by the Philadelphia cutters, which is considered a fair margin?

Col. HIRSCH. In piece goods only; it is so stated in the contract. He can not have it in remnants; it must be in that piece.

Mr. MCKENZIE. I catch the point now, that the bonus is paid on the saving rather than the wastage.

Mr. GREENE. This bolt of cloth, of standard measure, has surface sufficient; if it is cut properly, always to leave certain margins, which

may be utilized in other parts of the same or other garments being made under contract, dependent upon whether the pattern varies with the pattern for the goods; but it is a mathematical certainty if the cutter, with his electrically-driven knife, runs down through that piece of goods, always sticking to the chalk lines, he must of necessity leave just so much every time.

Gen. SHARPE. There is the very point, right there. The ordinary men in making cuttings will take his lays of cloth and will put the widest at the bottom and the narrowest at the top. He may get his patterns on the narrowest part and then cut that through. But this method we have adopted induces him to take all the various different widths of cloth and put together all of practically the same width and make one lay of that, and he will economize in that way, by figuring in the patterns on these different widths of cloth.

Mr. GREENE. That is the practice in the trade?

Gen. SHARPE. Under ordinary conditions.

Mr. GREENE. When that thing is once figured out, so that the cutter knows what he is going to do, why would not it be followed? As a matter of fact, why does it require any unusual amount of skill, after the first layout?

Col. HIRSCH. Suppose the contract is for cloth running from 54 to 56 inches. When we deliver the cloth to a man, say in 10,000-yard pieces, he gets some 54, some 53, some 56, and some 57 inches. If he spreads that on his cutting table, one piece on top of another, he will find that it cuts into the width, and a great saving comes in having the same widths, one above another. If he puts a 54 on top of a 56, and then a 55 on that, and then another 56 on top of that, you can easily see what the wastage will be. Formerly, when they got the rags the trick was to get all the rags possible out of that, whereas another man who was careful would see that the thing was carefully done. Now, with the rags belonging to the Government, they have found that there are no more tricks to put over.

The next proposition they advanced was the scientific cutting arrangement, and as a result of that the Government decided to give them 20 per cent, but I think that is not right, because I think it is a man's business, or ought to be, to make the allowance in such a way that it will be carefully worked out and will make up any error that may have been made.

Mr. GREENE. We are engaging these people by contract to do as well for the Government as they would do for themselves, and for doing that we pay them a bonus.

Col. HIRSCH. In order to be sure they will do it.

Mr. GREENE. What is the obligation of the contract, in the first place? If you consider any other article to be manufactured under a guaranty, if a man has an article which he has to sell on his own guaranty, by individual sales, he saves as much out of the material as he can and puts it into other articles of the same kind.

Now, if he does exactly the same thing for the Government as he would do for himself, he not only is to have his normal profit for the manufacture of the article, to be paid to him by the Government, but he is to have a bonus for being as honest with the Government as he is economical for himself.

Col. WOOD. I think I can simplify that a little bit. The allowance in the cutting of a jacket should be 1.834 yards per jacket, and that

has been found to be the proper allowance by the most experienced cutting they have been able to do at the arsenal.

The difference in human ingenuity and skill is such that whatever standard is adopted there will be some man who, by reason of some new method that nobody else has thought of, will do a little bit better than that standard, and that is going on all the time, and if the arsenal revises its standard and says this can be done with 1.83 yards next year, then, some one will be able to save some part of that; some part of a yard per garment again; and if you never offer any reward to ingenuity for bettering these things there is no incentive for them to be bettered.

I believe the correct thing to do is to offer such an incentive and then find out how well it can be done, let the new standard be set up as to the allowance per thousand or per hundred thousand of garments, and then some one will find means to cut still more economically, and if he comes around with a proposition that he should have a part of the saving, I would give it to him.

Mr. GORDON. In other words, it is not exactly a question of mathematical certainty in cutting this cloth, as was suggested by Mr. Greene. I think that the attitude of these gentlemen who criticize the method which obtains in this matter is based upon the theory that it is a mere matter of mathematical calculation.

Mr. GREENE. Oh, no; I can see how the margins on the cutting of the cloth uniform, whether they are half an inch or an eighth of an inch, would be useless, because there is nothing about the pattern or any likelihood of any subsequent production in which that small remnant would fit, and that sort of variation in cutting is really economy.

Col. WOOD. I think the answer to that is this: The cutting out of garments is very much like a picture puzzle. There are certain small parts cut out from the angles and interstices. One man in fitting the small parts into the interstices of the larger parts may effect a greater saving than has been before attained.

Another man may come along who will find how he can match the patterns together so that he can save a fraction more, which on the cutting of a few garments would not amount to very much, but in cutting such large numbers as the Government is having made would run into a large amount and would be worth the saving.

If I was the contractor and you would say you have been getting an allowance of 7.9 yards for a garment, and with my experience, by going to some extra expense and by doing some things that might give me or my workmen a little more trouble, I can save some of that, I am willing to do it, provided it is made worth while.

Mr. GREENE. The great trouble, you admit, was really found on the first layout?

Col. WOOD. It might happen every time it is done.

Mr. GREENE. If you have certain specified widths and lengths of cloth—

Col. WOOD (interposing). The case that Col. Hirsch has cited is probably only one of many in which they are getting the saving. If 500 pieces of cloth are in the possession of the contractor, he takes time to go through the stock carefully and select all those of 54-inch width and put those down in one layout, and then does the same with the 56 and the 57 inch widths. He matches up the cloths of

exactly the same width, so that he can cut more economically. But if there is no inducement for him to save he will put the price together as they come, the pieces of the wider widths on the pieces of the narrower widths. The department can not know how many of each of the different widths are delivered to him, because the variation is an accident of manufacture.

Col. HIRSCH. There is one thing they are doing all the time and that is revising the allowance. As soon as they find that an allowance is slightly too much, because some contractor got through a large contract and shows that he has made a considerable saving, they will see how he made that, and they will immediately revise the allowance and get that down, so that it is very hard for a man to save much, except that 20 per cent of the cutting.

Mr. GREENE. The idea I had in mind was that this width of material runs on about a certain area. Every variation is practically known, and when you have fixed your standard of layout on that proposition it is very obvious that is all the savings you make, and you will very rarely make anything further than that width. You may have great long strips, but they are something you can not use, and they have to go into the waste anyway, because the rest of your pattern was too large.

Col. HIRSCH. If you could select the 57-inch pieces in matching up the parts of the picture puzzle, you would match them up differently than if you put 54-inch pieces together. It takes a good deal of time to select the pieces of one width.

Mr. GREENE. But your 3 inches difference runs laterally, and it will not increase in width.

Col. HIRSCH. But the pieces are put in diagonally.

Mr. GREENE. But still there would be some saving out on the edge. I know that is part of the original proposition, that a cutter himself, working for himself, with his own material, tries to economize in every way he can, but when he works for the Government he insists that to do for the Government as well as he does for himself he must have a bonus.

Col. HIRSCH. To do a little bit better than the Government has ever had done for it before.

Mr. GREENE. But the Government is deserving of as good service as any citizen in it.

Mr. GORDON. The Government has to determine how much cloth is to be allowed for each garment, and it does that in a scientific way. If some fellow comes along and discovers how he can improve on that, how is there anything wrong in giving him a bonus for that?

Mr. GREENE. It seems to me that almost amounts to the same thing as trying to look for the fourth dimension, and there are so many ways of laying out a pattern.

Mr. MCKENZIE. I would like to ask how the Colonel figures that the Government makes a gain on this. What does the gain consist of, on which these men figure their 20 per cent profit? How do you get at it?

Col. HIRSCH. You know what the allowance is for each garment. We do that by going according to the value of the cloth, what the Government pays for the cloth.

Mr. MCKENZIE. I would like to have that made more explicit in the record, by giving an illustration showing how that is done.

Col. HIRSCH. You turn a bolt of cloth over to a contractor containing so many yards, and then explain how the Government is a gainer in the transaction, and on what you figure you will allow this man 20 per cent of what is saved. Suppose the amount of cloth necessary for the contractor to fill his contract would be 100,000 yards, according to the best estimates which the arsenal had yet made, based on its experience. The 100,000 yards are delivered to the contractor. Suppose that by some superior method of matching up the patters at the end of the contract there were 300 yards saved, and those 300 yards were worth \$3 a yard, that would be \$900. The Quartermaster Department as I understand it, would allow 20 per cent of that, or \$180 to that contractor. The cloth would be returned to the Government, and the whole amount would be infinitesimal, compared to the value of the whole contract, but it would be some inducement for a man to do the best he could on that.

Mr. MCKENZIE. That would not be accomplished, however, by placing a 54-inch lay of cloth on a 56-inch lay of cloth or on a 59-inch lay of cloth, because whatever came off of the side of that bolt of cloth would be wasted.

Col. WOOD. It does not come off the side, because they can put parts of the pattern obliquely, use all the small pieces, and it is possible to utilize almost every part except the little angles.

Mr. MCKENZIE. There was a great deal said about the laying of this cloth down in different widths and the saving there would be by putting one pattern of the 54-inch width on top of another pattern of the same width, and then cutting through all of those patterns of the same width, and thus making a saving.

Col. WOOD. That is one of the ways. The cloth is irregular in width, some 54 inches, and some 57 inches. It is entirely accidental as to what the width of any given piece may be. It is due to variation in the process of manufacture.

The cloth delivered by the arsenal to the contractor may vary from 54 inches to 55 and 56 inches, in the various pieces.

Ordinarily, the contractor would lay them down irrespective of their widths, and in that case the laying of the patterns would have to be within the width of the narrowest piece.

But if there is an inducement made for saving, the contractor would take the additional time, which would be quite material, to go through his whole stock, and for his first layout pick out all the 54-inch pieces and lay down 15 or 20, or whatever number of thicknesses he cuts at a time, of pieces exactly 54 inches in width; and then he would take the pieces of another width, and so on, using for each cutting pieces of practically uniform width. That would require a certain amount of additional labor, and that would be compensated for by whatever allowance was made to him out of the saving. That is only one of the ways by which saving might be made.

A skilled cutter will try all the new ways he can to save if encouraged to do so, and when he has found some way to do the work more economically he will still have the same object in view of making still further saving. That is the way all progress and improvement are generally accomplished, through incentive to individual ingenuity.

Mr. MCKENZIE. Say you want 20,000 uniforms. You go to a contractor and you know how much cloth it requires, according to your

standard, to make those uniforms. You measure off that cloth and take it out of your storehouse and turn it over to the contractor, and you say to him, "Here is sufficient cloth to make 20,000 uniforms. We want you to make them. Here is our standard; you go to work." You say to him, "If you can cut those uniforms out of that cloth and save 100 or 200 yards out of it, when you have completed your contract, we will pay you 20 per cent of what remains after you get through." That is the situation, is it not?

Col. WOOD. Yes, sir.

Mr. McKENZIE. Has there been any evidence of any of these contractors undertaking in any way to skin or to cut the uniforms below that standard in any way?

Col. WOOD. Not within my knowledge.

Col. HIRSCH. To my knowledge, I can not answer that positively, and that is the reason why I am opposed to the 20 per cent proposition. That gives a man the incentive to skimp, and to make a 36-inch coat smaller than it ought to be. Whether that has been done or not, I do not know. That is one of the reasons why I am opposed to that proposition.

Mr. GORDON. Would not a proper method of inspection provide against that?

Col. HIRSCH. Yes; and probably there has been a lot of that done, but all the inspection in the world would not make it impossible for some of that to be done by somebody.

Mr. GREENE. Have your inspectors inspected the measurements of each garment?

Col. HIRSCH. Yes; they do it as well as they can. An experienced inspector can tell fairly well about that, but those garments are turned out in such large volume that it takes a great deal of careful inspection in order not to let a man get ahead of you.

The CHAIRMAN. How do you get your inspectors?

Gen. SHARPE. Through the civil service.

Mr. DAVIDSON. In this standard as fixed at the arsenal, when you turn out so many bolts of cloth and require so many outfits to be furnished by the contractor, do you take into account the difference in the width of the cloth when you turn it over to the contractor?

Col. WOOD. I do not see how they could do that, because there is no way of knowing what the differences are. They are accidental in the process of manufacture.

Mr. DAVIDSON. I would like to ask for the record a general statement on the question of shoddy. I want to know to what extent shoddy is being used now in the wool suits for the soldiers, whether it is wool shoddy or part cotton, and its effects on the heating and wearing qualities of the soldier's uniform.

Gen. SHARPE. Shoddy is used in all of the different cloths we manufacture—in the 30-ounce Melton, in overcoating, and in the blankets.

I am going to ask you to ask Col. Wood, who is familiar with the matters in connection with the shortage of wool, and who is one of the best authorities on wool matters in this country, to give you an explanation as to what is shoddy and where the objection to a garment said to be made of shoddy arose, and whether in his opinion shoddy should be used in the manufacture of clothing.

The CHAIRMAN. Before Col. Wood does that, for the benefit of the Red Cross, I wish you would state, Colonel, exactly what duties you perform in connection with the Quartermaster General's Department.

Col. WOOD. I am not a professional officer, but I went into the service through the National Guard. In civil life my vocation has been in connection with wool and wool manufacture. For many years I have been in the National Guard commanding a cavalry regiment. Unfortunately, cavalry is not required, so my command was dissolved and the personnel distributed among other commands, and then, because it had made a very good record, it was re-formed by orders from the War Department, and after being reassembled, because it was the only National Guard cavalry regiment, it was dissolved again, and I was assigned to command a regiment of engineers. Gen. Goethals learned that I have some knowledge of wool manufacture, and had me transferred to the Quartermaster Corps and assigned to his office.

Mr. GORDON. Where are you from?

Col. WOOD. Philadelphia.

The CHAIRMAN. How long have you been with the Quartermaster General's Department?

Col. WOOD. About 10 days. Such information as I have concerning the supply service is derived from experience in field service and in having my own troops clothed and equipped.

Mr. DAVIDSON. What is your experience with wool?

Col. WOOD. It has been my principal vocation for the last 30 years.

Gen. SHARPE. I would like you to ask Col. Wood to explain about the materials used.

Col. WOOD. I have some samples that I think will tell you more in a few minutes than I can tell in a long time.

Two or three years ago there was pending before the House a labeling bill, for the purpose of requiring that all garments should be labeled as to their components.

The CHAIRMAN. Were you a manufacturer?

Col. WOOD. I was for a long time an official in a manufacturing organization, and up to the time of my going on active service I was president of the National Association of Wool Manufacturers, but I am not actively, personally identified with manufacture at the present time. At the time this labeling bill was before the House, representing the Association of Manufacturers, I gathered together quite a number of samples for the Committee on Interstate and Foreign Commerce, for the purpose of illustrating the components of civilian clothing, and when I was called before the Senate committee, thinking I might be asked some question upon this subject, I sent for this collection of samples. It was not prepared for this particular purpose, but most of the samples will serve to illustrate what you have asked about.

Confirming Gen. Sharpe's impression as to how this prejudice arose, I think I may say, historically, that it probably came about in this way:

The process of finishing the woollen cloth involves, in the last stage, the passing of the cloth between revolving knives, which trim off the surface to give a perfectly uniform face. What is cut off is scarcely more than dust or powder, but it still retains the quality which wool

has of felting. This waste is called flocks. It is possible to make of a very flimsy foundation fabric a close, compact piece of cloth by filling it with these flocks during the process known as fulling, in the course of which the cloth in a wet state is passed under a heavy block with a pounding action. In this way a quite sightly piece of goods can be made which, however, has but little durability.

The tradition is that during the Civil War a good deal of cloth was made in that way by unscrupulous manufacturers. The cloth in wear became poor and thin and was not very serviceable. Experience of soldiers who received clothing made of such goods was carried back to their home communities and caused a widely diffused belief that any goods containing other wool fiber than virgin wool was unserviceable and an imposition upon both the wearer and the Government. That impression has survived to this day, though few of the present generation have ever seen any goods of that sort.

Reworked wools are of many sorts and some of them are much better than some kinds of new wool. They grade all the way from very fine long fiber, which is much better than a great deal of new wool, down to the other end of the scale, which is a very poor and perfectly useless material.

Realizing that there would be a scarcity of wool, owing to military requirements, and taking cognizance of the experience which England was having, it seemed to the committee of wool manufacturers who have been advising the department of these matters that it was important to begin the conservation of wool as early as possible. So the committee recommended that there be used of reworked wool 35 out of 100 parts in the blankets and in the overcoating.

But in order that the quality of the garments should be kept up to a useful and serviceable standard, they prescribed that the tensile strength of the cloth should be such as would insure the use of none but good fiber in this reworked wool. Unless fiber of satisfactory quality is used, the cloth would not stand the strength tests, which are prescribed and applied by the department to all purchases. That much it is necessary to understand in a preliminary way.

The samples which I have here will illustrate the fact that the use of the reworked wool is as much of an economic necessity as the use of scrap iron. A great deal of reworked wool has never reached the stage of cloth, such for example, as waste ends of yarn. That is the reason that those in the trade have used the term reworked wool, which some of the newspapers seem to think is camouflage for shoddy. It is not at all.

The term has a very definite meaning. Reworked wool is such as has passed through any stages of manufacture, however slight, and subsequently restored to its original condition of separate fibers. Shoddy has reached the stage at least of cloth, if not garments. And at this point it might be well to say that the shoddy which has been authorized in the Government goods is chiefly made out of the clips from new Government cloth that you have discussed, and not from the rags of old garments. It is largely made from the clippings which have been discussed here, in your consideration of the saving in the cutting of the goods.

MR. SHALLENBERGER. Did you make this statement before the other committee?

Col. WOOD. I did not, because I was not asked to.

These [referring to samples] are clips from new blue worsted cloth. They are tailor's trimmings. This is the shoddy made from those clips [exhibiting]. If you pull that apart you will see it has the fiber, length, and strength to be very useful.

This cloth is made for women's jackets, of 100 per cent shoddy [exhibiting cloth]. There is nothing but shoddy in it, and you will find it is a very strong, useful, and serviceable cloth.

Mr. DAVIDSON. Of shoddy?

Col. WOOD. It is all made up of the clippings I showed you first.

Mr. GORDON. What is the process of manufacture?

Col. WOOD. It is put through a machine covered with strong steel teeth, which revolve very rapidly and pull the fabric apart until it is reduced to the original fibers.

This is a sample of a finer quality of shoddy than that which I have just showed you. That is much better than a great deal of new wool [exhibiting sample].

Mr. GORDON. Is this manufactured from cloth?

Col. WOOD. I can not tell the exact source of that. It may have been either from cloth or from knitted articles. From its fineness I would judge it was probably made from knitted articles.

Next is another sample of very fine shoddy—high-priced shoddy—costing more than a good deal of new wool.

Here is a sample of thread waste [exhibiting]. In the process of manufacture a certain amount of waste yarn occurs—broken threads—is made from very superior wool. Unless that can be used over, it would be a loss of so much wool to the world.

This next sample is the same material after it has been put through the machine that brings it again into its original condition [exhibiting]. That is very much superior to a large amount of new wool.

Mr. DAVIDSON. In what way?

Col. WOOD. I shall show you some samples of inferior wool and you will readily see the difference.

Mr. DAVIDSON. I wanted to find out what has happened.

Col. WOOD. Because it is longer in staple than some wools, and a great deal finer in fiber than a good deal of the coarse wool. It will make fabrics that the coarser wools will not make at all.

At another stage of manufacture there is waste produced from what is known as roving, which is from the stage of manufacture just before the spinning. It makes a very superior kind of re-worked wool. These would not be termed shoddies, but they are reworked wools, after they are reduced to their original condition.

This sample is broken top [exhibiting]. The very first stage in the manufacture of worsted is to comb the wool and there is a certain amount of waste there. Broken top is worth more than the clean new wool from which it was made.

Mr. QUIN. What does the wool top come from?

Col. WOOD. From the first stage of manufacturing raw wool into worsted yarn. The wool is put through a machine called a comb, which separates all the short fibers from the long fibers. As you undoubtedly know, some of the sheep hairs are long and some are short. In one system of wool manufacture known as the worsted

process the longer fibers are separated from the shorter ones, the long ones being used in the manufacture of worsted yarns and worsted cloths. The shorter fibers are called noils. This top is superior to new wool because all the short fibers have been removed from it.

Mr. SHALLENBERGER. Why do they permit it to go as waste?

Col. WOOD. In some mills it is worked back into the same machines. In others, where the length of the staple must be preserved to the greatest degree possible, they prefer to sell it for use in other kinds of goods. But when they do sell it, it brings more than the price of the wool out of which it was made.

The next sample shows the short fibers that have been combed out of the same wool the top was made from. This has not been cleansed at all, but it is new wool. It could not be called shoddy. It has never been through any process of manufacture except the mere separation from the longer fibers that made the top.

Mr. GORDON. What makes the difference in color?

Col. WOOD. It has not been scoured. This sample is the same thing I have just shown you—noils—but it has been carbonized. It has been treated in a diluted bath of sulphuric acid, and then subjected to a very high temperature, which removes all the vegetable matter which gets into the sheep's wool. Carbonizing also occurs where any piece of fabric which has cotton in it is treated with the sulphuric acid bath and submitted to a high temperature.

I will now show you two or three samples of new wool. This one would pass any strict definition of new wool. It has never been manufactured at all; it is straight from the sheep's back.

The sheep are shorn usually in the spring of the year, but they are slaughtered the year around, and so it happens that some sheep are sent to the butcher shortly after they have been shorn, and there is taken from the pelts of those sheep the wool that has been left from the shearing or what has grown since the sheep were last shorn. This is absolutely pure wool, and yet it would make a very poor garment. The cloth would not have the necessary strength or durability, because the fibers are so short—shorter than many kinds of shoddy.

Mr. DAVIDSON. Is that called pure wool?

Col. WOOD. It is, in the sense that it is taken direct from the pelts of the slaughtered sheep. Wool that is taken from the pelts of slaughtered sheep is known as pulled wool.

Here is another specimen of pure wool that is not very good. In sorting the wool the sorter cuts off all that part which he knows will not work satisfactorily, and that is sold to people who make a business of treating it with chemicals to cleanse it, and they get a very short fiber wool, which at the best is quite dirty and not very good. It is brand new wool, known as tag locks, and if it is made into soldiers' clothing they would be getting pure wool, but the clothes would not be durable.

This lot is a still different sort of pure new wool. They usually mark the sheep with paint for the purpose of identification. Almost any other marking is washed out by rain. That paint can not easily be removed, so when it comes to the mills it is necessary to cut off the part where painted, and that is sold at a low price. Those who buy it "reclaim" it by special cleansing and make it useful for some purposes, but it is very poor wool. That would be brand new wool, but

very inferior to the shoddies that are so much condemned and so ignorantly condemned.

Here are samples of fabrics containing various proportions of shoddy [exhibiting]. If you refer to the numbers I can tell you the proportion in any of them, and you can test the cloths for strength.

Mr. MORIN. The first number is 109.

Col. WOOD. That is 25 per cent cotton and 75 per cent shoddy; no new wool at all. You can pull them and test them. They make a great deal cheaper clothing than cloths of all good quality new wool.

Mr. MORIN. The next one is No. 139.

Col. WOOD. That is 52 per cent cotton and 48 per cent of worsted; the worsted is of a fine grade of wool.

Mr. GORDON. That is more than half cotton?

Col. WOOD. Yes, sir.

Mr. MORIN. The next one is No. 66.

Col. WOOD. That is made wholly of pure new wool. These were made up in 1914. The prices are of that time, when all wools were very much lower in price than now. That cloth was \$2.

Mr. GORDON. A yard?

Col. WOOD. Two dollars a yard.

Mr. GORDON. How wide?

Col. WOOD. Fifty-six inches.

Mr. GORDON. That is pure wool?

Col. WOOD. Yes, sir.

Mr. MORIN. The next number is No. 99.

Col. WOOD. That is made wholly of shoddy and is 47½ cents a yard.

Mr. MORIN. The next one is No. 169.

Col. WOOD. That is 70 per cent cotton and 23 per cent worsted, and the price of it was 85 cents.

Mr. MORIN. The next one is No. 199.

Col. WOOD. That is pure wool, and the price was \$1.375. That is a lightweight or summer cloth. These are all mill prices.

Mr. MORIN. The next one is No. 33.

Col. WOOD. That is 25 per cent wool and 75 per cent shoddy, and the price is \$1.25 a yard.

Of this group, excepting the one marked four, all are partly wool and partly shoddy, or partly noils, such as I showed you here. This next is a fabric I do not know the exact components of and the next is made of pure worsted wool of long staple, and yet I think you will realize that although of pure wool it is worthless.

Mr. GORDON. Why is that?

Col. WOOD. The raw material is all right, but the art of manufacture is at fault. You can see through it. This cloth clearly shows that it is no certificate of character to say that a fabric is all pure wool.

Here is another fabric which is not all wool [exhibiting]. It is about one-third cotton and two-thirds shoddy, but it will give much better service, so far as durability and warmth are concerned, than the sample of pure wool goods I have just before shown you.

It is only necessary to add that in testing the various samples of goods containing high-grade shoddy and reworked wool, the committee which investigated the matter last spring, after having made a large number of samples, especially for the Quartermaster's Department, determined that heavy overcoating cloth, made with a

proportion of 35 per cent new wool and 35 per cent reworked wool would give a durable, substantial, and warm cloth, and better than cloth made of 70 per cent wool and 30 per cent cotton, of which latter there had been some made for the Army.

The committee concluded that a blanket made of 65 per cent new wool and 35 per cent of a good quality of reworked wool would give a strong, durable, and warm blanket, and I can testify that such a blanket is durable and strong and warm, because I have been sleeping in such blankets in camp during the severely cold weather of the past few weeks.

They decided that a shirting flannel, an excellent cloth, and one that would have wool, and also, incidentally, avoid some of the trouble of shrinkage in washing, could be made with a fine cotton yarn for the warp and all wool for the weft, or cross threads. And the committee so recommended.

They said it would be better to make the uniform cloth, the 16-ounce Melton, of all new wool, because it would be more difficult to use the sizes of yarns of the required strength out of the combination than to make larger-sized threads out of which the blankets and the overcoats are made. They stated that if the necessity for conserving wool should later become more serious, that then they would advise that the uniform cloth be made of all worsted in the warp and a proportion of reworked wool and new wool in the weft, but until that should seem necessary they advised that this cloth be made wholly of new wool instead of with 25 per cent of cotton, as had previously been done. I believe that the specifications were adopted in accordance with those recommendations, and I understand most of the cloths and blankets bought, except some of the emergency purchases, has been in conformity with the committee's recommendations.

Mr. GORDON. Were you a member of that board?

Col. WOOD. Yes, sir; I was chairman of the committee.

Mr. GORDON. You concurred in that recommendation?

Col. WOOD. Yes, sir; I did.

Some recommendations were made to the Navy Department. In the Navy the fabrics are of an entirely different class of wool. They use very expensive wools and make expensive garments. They were using overcoating made of the very fine wool, not in point of durability but very fine fiber. The cloth was of beautiful appearance, and it was finished in a most expensive way. It has a face finish like broadcloth. An overcoat of that kind, such as was given to the enlisted men in the Navy, is a more costly overcoat than most of you probably habitually wear.

We thought, in view of the necessity of conserving wool, it was advisable to adopt one that would be just as durable, just as warm, and less expensive, and so we recommended the same proportion of 65 per cent and 35 per cent and a lower grade of wool—not a poorer quality but a coarser fiber—as being stronger and more durable.

I believe before I left this work they did officially adopt that recommendation and that a lot of the material was so made, although I understand that at the hearing before the Senate committee the head of that bureau announced that the Navy had never used any reworked wools of any kind. As a matter of fact, the topcoat cloth is being made exactly in that way, and I understand they have had

no complaints at all, and I take it that that is a great tribute to the excellence of this very much maligned article, reworked wool, and the War Department can share the credit claimed for the Navy in respect to its cloths.

Gen. SHARPE. May I ask Col. Wood to explain the difference between fleeced wool and pulled wool?

Col. WOOD. Fleece wool is the wool shorn from the live sheep usually in the spring, although in parts of California and Texas they shear the sheep twice a year. But that applies to a very limited extent. Most of the sheep in the United States are shorn but once a year.

Fleece wool is not scoured. When cut from the sheep it is full of the natural grease or oil, and of dust and dirt absorbed on the roads and in the fields over which the sheep travel, so that the larger part of the fleeced wool as shorn from the sheep is dirt.

When scoured the clean wool is in varying proportion to the whole. For example, where most of our wool comes from, in the intermountain country—Montana, Idaho, Utah, and Wyoming, and parts of the Pacific Slope, out of every hundred pounds of wool as it is shorn from the sheep there are only about 30 to 40 pounds of clean wool. The rest of it is dirt and natural oil from the sheep. In some parts of the country the proportion is very different.

The bright wools of Virginia and West Virginia and Tennessee only shrink about 50 or 55 per cent, and sometimes under 50 per cent; from 45 to 55 per cent of clean scoured wool from the hundred pounds of wool as it comes from the sheep.

Pulled wool, as has been mentioned before, is that which is taken from the pelts of the slaughtered sheep, and it varies in length according to the period of time that has elapsed since the shearing. It is all classified by the dealers and sold according to its length of staple and fineness of fiber, and for the various uses to which it is applied it is as useful as the fleece wool, but comparatively little of it can be used in the worsted branch of the industry, which requires the longest staple.

Mr. DAVIDSON. Can you tell us whether there is any wool, as distinguished from shoddy, reworked wool as distinguished from shoddy, being used in the clothing furnished the soldiers? The general impression in the minds of the people is that this shoddy is not good for anything.

Col. WOOD. Shoddy is anything which has reached the stage of cloth and been reduced to a fibrous condition from cloth. Reworked wool really includes shoddy. That is the more general term; it is inclusive of shoddy, of broken tops, of garnetted threads, of anything at all that has once been partly or wholly manufactured.

Mr. DAVIDSON. That is the general term?

Col. WOOD. Yes, sir.

Mr. DAVIDSON. What is the percentage?

Col. WOOD. Sixty-five per cent wool and thirty-five per cent reworked wool in overcoat cloth and blankets.

Mr. DAVIDSON. And the 35 per cent of reworked wool that is put in the soldiers' uniforms is of the class of wool distinguished from the generally accepted term "shoddy" in that it has more fiber?

Col. WOOD. Distinguished from what the popular mind thinks of shoddy, which is really floss, so short as to be worthless stuff.

Mr. GREENE. There is still in this 35 per cent some wool which has once been cloth?

Col. WOOD. This 35 per cent is almost wholly clippings from the uniform cloth which have been saved.

You referred to uniform cloth. I ought also to say that this has not yet gone into uniform cloth. The uniforms themselves, except in some emergencies, have been made of all new wool. It is the overcoats and the blankets in which the 35 per cent was recommended and has been used. I shall have no hesitation in recommending, if the necessity arises, if wool becomes too scarce and too high in price, that in the web of the uniform a proportion of the reworked wool be used also.

I do not believe that the necessity has been reached. It has been reached in Germany, and it has been reached in England. In England, for instance, they are gathering in not merely these clippings but the clippings of old clothes. In Germany one of the witnesses before the Senate Military Committee stated that no shoddy or reworked wools were ever used in the German uniforms. One of the English textile papers stated early last year that an analysis made of some of the uniforms taken from German prisoners showed that the cloth was made of 40 per cent cotton, 20 per cent paper yarn, and 40 per cent rag shoddy.

Here are clippings from the Army overcoat cloth. [Showing sample.] They are torn up and made into this material [exhibiting another sample], and that is the material which is so much talked about—the shoddy in the overcoats and the blankets.

Mr. HARRISON. How does the warmth of that compare with the warmth of all-wool goods?

Col. WOOD. It is just as warm.

Mr. DAVIDSON. And the percentage is not sufficiently large to affect the wearing quality?

Col. WOOD. No. That is determined very largely by the strength test. We have had tests of strength for this cloth, which have been very much more severe than the tests for the civilian garments of the same kind. The Government overcoat is a great deal stronger than almost any civilian overcoat you would buy in a retail store.

Mr. DAVIDSON. Any protection which the Government has against an undue proportion of shoddy is the strength test?

Col. WOOD. Yes, sir; the protection the Government has against an undue proportion of shoddy or poor quality of shoddy is the strength test. That would prevent the manufacturer from putting in an inferior grade of shoddy, and the Government has inspectors at every mill whose business it is to see what materials go into the mixtures.

Mr. QUIN. What is the relative lasting quality of the shoddy substitute as compared to the regular wool garment?

Col. WOOD. It would be idle to say that a garment made with 35 per cent shoddy is as strong as one made of 100 per cent of the best wool. If that were true, and there was an abundance of new wool, there would be no purpose in using shoddy. The cloth is more lasting than the garments into which it is made. It is like many of the samples of civilian cloths that I exhibited. Cloth will still be just as serviceable when the garment has gotten so old and out of shape that the wearer does not want to wear it any more.

Mr. QUIN. And will it give the soldier as much warmth?

Col. WOOD. It will give the soldier as much warmth.

Mr. QUIN. Then all this stuff in the newspapers that we have seen about it being inferior is all rot and nonsense.

Col. WOOD. It is absolute nonsense.

Mr. QUIN. Your testimony is that it will last as long or longer?

Col. WOOD. It will last as long as the garment itself will be useful.

Mr. QUIN. What is the difference in the cost per yard?

Col. WOOD. It would be difficult to answer that, because I have been away from the market for some time, and I can not say now. But in a general way I can say that just before I left for active service I saw the prices on the old ordnance blanket; that is the blanket put under the saddles of the mounted troops, it weighs 5 pounds, and the cost of that blanket, at the then current price of wool, was between \$11 and \$12. But if made in the proportion of 65 per cent to 35 per cent, my recollection is that the figure was a little under \$8.

Mr. QUIN. Will you put that exact difference in the record?

Col. WOOD. I will be glad to do so if I can find the particulars which I then had, now several months ago.

MEMORANDUM FOR COL. DALY DATED FEBRUARY 4, 1918.

The difference in price would vary somewhat in the computations of different mills, and at various times, according to variations in costs of production, but the following averages are believed to be a close approximation of the differences in cost of the respective fabrics at this time:

Thirty-ounce overcoating: Approximate difference between a fabric made wholly of new wool and one made of 65 per cent new wool and 35 per cent reworked wool, would be about \$1 per 6/4 width yard. Purchases to date, 22,802,874 yards, \$22,802,874.

Three-pound blanket: Approximate difference in cost between one made of 100 per cent new wool and one made of 65 per cent new and 35 per cent reworked wool of same grade of stock, \$1.58 per blanket. Purchases to date, 18,738,757 blankets, at \$1.58, equals difference of \$29,607,236.06.

Eight and one-half ounce shirting flannel: Approximate difference in cost between the all-worsted fabric and the one made with cotton warp, and worsted weft, quality of the wool in each being the same, 45 cents per yard. Purchased to date, 36,522,579 yards at difference of 45 cents, \$16,435,160.55.

Total estimated difference on orders to date, \$68,845,270.61.

Sixteen-ounce uniform cloth: At the beginning of the war this cloth was made of a blend of about 75 per cent wool and 25 per cent cotton. It was recommended to the department in April or May, 1917, by the woolen committee that the specifications be changed to all new wool, which was adopted, and except as to certain emergency purchases of relatively small quantities, all of the 16-ounce uniform cloth contracted for since that time are for the all-pure new wool construction.

(Inquiry received by woolens section February 4, 1918. Data obtained by woolens section February 9, 1918. Reply forwarded by woolens section February 11, 1918.)

FEBRUARY 9, 1918.

Mr. QUIN. I had the impression from what has been printed in the newspapers that this was a very inferior cloth, and I presume the majority of Congressmen have the same idea. We want the facts about it.

Col. WOOD. I can tell you in a general way with regard to the overcoats. The overcoat at the time—this was for the 30-ounce cloth—and the price at most of the mills was \$3.50 a yard, made in the proportion of 35 per cent to 65 per cent. My recollection is that the price of 100 per cent wool would have been about \$4.45 a yard.

Col. HIRSCH. At the March opening our requirement under the old specifications was 75 per cent wool and 25 per cent cotton in the overcoating, and our price then was about \$3.25. When we continued the emergency purchases during the month of April, the price ran almost up to \$4. That was for 75 per cent wool and 25 per cent cotton in the overcoating.

Mr. QUIN. To what do you attribute that rise in price?

Col. HIRSCH. The increase in the price of both wool and cotton.

Col. WOOD. I think this ought to be brought out quite clearly, that at the time of the change the department was buying overcoat cloth made of 75 per cent wool and 25 per cent cotton, and the lowest prices which they had been able to obtain on that were higher than the price that was finally obtained on the 65 per cent-35 per cent combination, which is all wool, and warmer, and which enables the soldiers' clothes to dry out more quickly when they get wet in the rain.

Mr. QUIN. What percentage of shoddy substitute has been secured by the Quartermaster General's Department for all of the cloth used for overcoats, uniforms, blankets, etc., supplied to the Army since the declaration of war?

Col. WOOD. I have not those figures. I can say that none of that was in the uniforms. They have been made of all new wool.

NOTE.--No shoddy substitutes were used in the 16-ounce meltons for suitings or in the shirting flannel for shirts. The following shows the approximate percentage that the purchase of substitutes in 30-ounce meltons and blankets bears to the total quantity purchased from March 5 to December 31, viz:

Thirty-ounce meltons: Sixteen per cent, 75 per cent wool, 25 per cent cotton; 67 per cent, 65 per cent wool, 35 per cent wool substitutes; 17 per cent, 50 per cent wool, 50 per cent wool substitutes; 90 per cent, 65 per cent wool, 35 per cent wool substitutes.

Blankets: Ten per cent, 75 per cent wool, 25 per cent cotton.

Col. HIRSCH. In the blankets and in the overcoating it is 35 per cent of the weight of all purchases made since that time, which was in April.

Mr. QUIN. The other matter you have not in mind now, but you will put that in the hearing?

Col. WOOD. Yes, sir.

Mr. QUIN. The record shows, Gen. Sharpe, that Congress gave your department all the money that you or the department asked of Congress last year for uniforms, clothing, overcoats, blankets, and so on; is that correct?

Gen. SHARPE. No; I think not.

Capt. DALY. They gave us all the money asked for in the emergency deficiency estimate, but in the estimate of October 6 they cut what we asked for.

Gen. SHARPE. There was not much of a reduction; only \$7,500,000.

Mr. QUIN. This committee gave you all you asked for?

Gen. SHARPE. Yes, sir.

Mr. QUIN. Did you use all of that money for those articles?

Gen. SHARPE. Yes, sir.

Capt. DALY. And \$300,000,000 more.

Gen. SHARPE. There is a deficiency now of \$310,000,000, I think.

Mr. QUIN. If you had gotten all the money you had asked for, would you have needed any more?

Gen. SHARPE. Yes, sir. The deficiency was created by making the purchases in order to keep the factories in operation, purchases running until the 31st of December, 1918.

Mr. QUIN. General, as I understand it, you foresaw that you could not equip all of the National Guard and the Regular Army and the 85 per cent of the 1,000,000 drafted men whom the War Department ordered to be in camps in September, and you notified the Secretary of War of that fact, I believe. That is your evidence, is it not?

Gen. SHARPE. Only 500,000 drafted men.

Mr. QUIN. I understood they took above the allotment of 500,000. There was something like 556,000 men; but the draft does not include a million men yet.

Gen. SHARPE. We reported on the 13th of March that we could equip the National Guard and the Regular Army by July 31, but that it would take us until December 31 to equip the other 500,000 men in the National Army. We made the same report on April 2 and April 16.

Mr. QUIN. Did you make any report in regard to that later?

Gen. SHARPE. Yes, sir; we made one on July 21 or July 27, I think, stating that we could not take care of more than 100,000 a month after September.

Mr. QUIN. How many men did you tell the Secretary of War you could properly equip?

Gen. SHARPE. We said we could take care of 100,000 a month after the 1st of August; commencing in September we could take care of 100,000 men a month.

Mr. QUIN. What date was it when you made that statement? You knew how many had volunteered and been accepted in the Regular Army at that time?

Gen. SHARPE. No; those numbers were very disturbing, and also that calculation, just as the last enlistment in December was. We expected about the 1st of December we would have clothing assembled in the camps to clothe the last of the draft to be called but there were some 70,000 men who enlisted between the 1st and the 15th of December, and the same thing occurred last June. There was a very large increase in the number of enlistments.

Mr. QUIN. Of course, you had no way of knowing, nor did the War Department have any way of knowing what a severe winter we were going to have?

Gen. SHARPE. No; and we could not tell about the number of people who would be willing to enlist.

Mr. QUIN. I do not want to be hostile in criticism of the War Department at all, but you stated that the Secretary of War or the General Staff were right in putting these men in the camps without proper clothing, and with all this cold weather on us. I do not agree with that. You said the reason for that was the psychological effect it would have abroad. What countries, or nations, did they have any psychological effect on, and what was the effect?

Gen. SHARPE. There was not any intention of sending the troops abroad until this year.

Mr. QUIN. What mistakes have been made we can not help and I do not want to condemn anybody. But I do want to say in reference to this matter, there is a psychological effect, as you call it, on the parents of the soldiers who happen to suffer because of the lack of

clothing, and on the friends of the soldiers, and that causes dissensions and dissatisfaction about the conduct of the War in every community in the United States, and further than that, it gives the anti-war newspapers a chance to publish all of this stuff by way of criticism, and if they do it with a sinister motive, it has a very bad effect on the population.

Col. Wood. Mr. Tilson asked whether a cloth made according to specifications or 65 per cent wool and 35 per cent of reworked wool, or made of 75 per cent wool and 25 per cent cotton, is the warmer and the more serviceable. I do not think there is any appreciable difference in the serviceability. I think possibly the breaking strength of the 75 per cent wool and 25 per cent cotton would be a little higher: it would be a little stronger, as would be shown by the breaking-strength tests, than the 65 per cent wool and 35 per cent shoddy. But the 65-35 combination would be the warmer of the two, and there would be less dampness in the blanket or overcoat in wet weather.

The CHAIRMAN. As I understand you, from your experience as a manufacturer and your actual experience in the field, you think the articles supplied, so far as keeping the soldiers warm is concerned, are as good as are supplied to the soldiers of any country in the world?

Col. Wood. Yes, sir. The uniform—the coat and the breeches—has thus far been made of all wool, with the exception of some small experimental and emergency purchases, which were an infinitesimal part of the whole quantity. The charge that the uniforms are being regularly made otherwise than of all new wool is a mistake.

There is probably one other thing I ought to state in order to make the whole subject clear.

There has been a great deal of discussion by the manufacturers and the economy board and others about the shortage of wool, and opposed to that, other statements have been made by some persons that there is no shortage of wool.

Both are right, but because of the difference of the statements it probably needs a little clearing up of the situation.

We have in this country at the present time probably as much wool as we ordinarily have. But there are two very important qualifications. Of the approximately 280,000,000 pounds grown in America in a year, which is about one-third of what we are now using, only about 35 per cent of that is of the grades such as are necessary for military clothing, and the rest of it is much finer fibered wool, and while it could be used it would be much more costly and not make so sturdy a cloth.

We rely for the rest of our wool upon importations from Australia, New Zealand, South America, and South Africa. Australia, New Zealand, and South Africa are under the control of Great Britain entirely, and owing to the shortage of ships it has been almost impossible to bring any from those colonies to this country for nearly a year. A certain amount has been brought from South America, but Great Britain's anxiety, both for herself and her allies, to create a reserve supply against a still more serious shortage of shipping, and competition in South America for the wool of the only open or free market, has made it impossible for us to accumulate supplies for the future. The whole question is involved with the problem of shipping.

There is a lot of wool in Australia and New Zealand, but most of that is also of the fine sort. Great Britain has taken almost all of the coarser wools for military purposes. The necessity for conservation at the present moment is because of the very great difficulty, if not impossibility, of bringing wools in any large quantity to this country, and while we have enough to probably see us through for this year, if the amount brought into the country continues to be as little as during the last nine months, we will have a famine in wool in 1919, while with the shortage of shipping increased by reason of destruction or by reason of diversion of still more vessels to carrying supplies to our troops in Europe, the wool situation will become acute even sooner.

That is the reason for anticipating and conserving the wool now while we have it, rather than waiting until the supply is exhausted. It is not a question of whether we want to use the cloth in the proportion of 65 to 35, but it is whether, by adopting that at the beginning of the war we can continue using that for a considerable period of time, or whether we should go on using 100 per cent in all of these articles for 1917, and then probably have to use a much greater proportion than 35 per cent of reworked wool. That is why this step was taken.

Gen. SHARPE. It was those suggestion presented by Col. Wood that induced me to approve of the use of the reworked wool in the garments, in order to conserve the wool supply and to prevent a very great increase in the price of the garments, and for that reason we have always kept away from using higher grades of wool, because we have felt that we could get just as serviceable and just as warm a garment without paying an extravagant price for it.

There is only one other question that I think the committee would like to hear from Col. Wood about, and that is because the matter has come up in the Senate committee as to whether in his opinion the weight of the O. D. melton 16-ounce cloth for the coat and trousers is sufficient; whether it is heavy enough cloth to be used. That matter has come up, and was very considerably discussed in the hearings before the Senate committee, and it may be possible when there is a conference between the two Houses the matter may come up again there.

The CHAIRMAN. Several members of the committee would like to ask Col. Wood some questions first.

Mr. SHALLENBERGER. I want to ask Gen. Sharpe a question or two. We have had at various times a number of statements as to the cost of the maintenance, the pay, and equipment and clothing of a soldier—the average cost of the private soldier. Can you put in the hearings a statement as to the average cost of a soldier, both in this country and in France?

Gen. SHARPE. The clothing?

Mr. SHALLENBERGER. The whole cost—for clothing, transportation, and every other cost as a soldier, both in this country and in France.

Capt. DALY. Exclusive of arms?

Mr. SHALLENBERGER. His entire equipment: everything you furnish him.

Gen. SHARPE. Yes, sir.

1 These articles not for general issue in the United States.

Mr. SHALLENBERGER. There have been a great many statements as to the cost of the maintenance of our Army in France, as compared with the maintenance of other armies in Europe, and I would like to know what that comparison shows. I have had the statement made to me that it costs about 14 times as much to maintain an American soldier in France as it requires to maintain a French or a German soldier over there, and in order to find out just what that comparison shows and to account for the expense of our Army I would like to have you put in the record what it costs us. When you estimate the pay for the private soldier you take the average pay for about a thousand men?

Gen. SHARPE. Yes, sir. The great difference will come in pay, particularly in the case of the French Army.

Mr. SHALLENBERGER. You have the transportation?

Gen. SHARPE. Yes.

Mr. SHALLENBERGER. And the clothing?

Gen. SHARPE. I do not know what the cloth for their clothing is.

Mr. SHALLENBERGER. I do not mean for you to make an absolute comparison, but to tell what the cost is to us.

Capt. DALY. It is costing the Government for the soldier, for all purposes, including the whole Military Establishment, nearly \$6,000 a year per man.

Mr. SHALLENBERGER. It is costing much more in France?

Capt. DALY. That is including the cost in France.

Mr. SHALLENBERGER. But can you not give us an estimate of what it costs for the soldiers you have to maintain across the sea?

Capt. DALY. Yes.

Mr. SHALLENBERGER. I have heard a great many statements as to the amount of tentage which is required per man per year—to maintain a man and move him to France. Can you give us an estimate or a statement as to about what tentage will be required per man, so that if we maintain a million troops we will have some idea as to what number of tents we will have to maintain to support those million troops?

Capt. DALY. Yes, sir.

Mr. SHALLENBERGER. Then, in a general way, you have made, no doubt, a very careful study of the care which other nations give to their soldiers. Can you state to the committee whether or not it is a fact that we clothe our soldiers as well or better than the soldiers of any other nation now fighting in Europe are clothed? Is it not your opinion that we do?

Gen. SHARPE. I think we do, but I would like to have Col. Wood answer the question I suggested to the chairman. I think that will answer it. I think we clothe them as well. We do not give our men as heavy underclothing as the men get in England, because our people do not wear it. Up until last year we only used woolen undershirts, and never used woolen drawers at all. We used canton flannel drawers, because a great many people in our country do not wear woolen underclothes. They all do in England.

Mr. SHALLENBERGER. Can you give us a comparison in the matter of shoes?

Gen. SHARPE. Our shoe is better than the shoes of any of the rest of them. It is a combination of the English, French, Belgian, and Italian shoe, taking the best points in the way of manufacture from all of them.

Mr. SHALLENBERGER. Do you not think the ration we give our soldier is superior to the ration given to the French troops?

Gen. SHARPE. It is superior to the French ration, but the English have recently increased their ration, and it is as good as ours.

Mr. SHALLENBERGER. We pay our soldiers more?

Gen. SHARPE. Much more. The only army which pays its soldiers anything like the amount that our men get is the Canadian Army, and the pay given them was the cause of demoralizing the markets in that part of France where they went, because they were getting \$30 a month and they were willing to pay what they thought was a reasonable price, whereas their action really had a very serious effect upon the market values.

The CHAIRMAN. The Canadian soldiers are paid \$30 a month—the private soldiers?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. They do not pay any more than we do?

Gen. SHARPE. Not as much. We pay our men 20 per cent additional for foreign service.

Mr. SHALLENBERGER. Capt. Daly gave us the figure of \$547 as the per capita cost. What does that include?

Capt. DALY. That includes the whole items of clothing and equipage.

Mr. SHALLENBERGER. Any subsistence?

Capt. DALY. The subsistence is \$152 per man.

Mr. SHALLENBERGER. That amount of \$547 includes clothing, equipage, and everything except his arms?

Capt. DALY. No; that does not include subsistence. It does not include stationery and kitchen utensils. It is just the clothing and the tentage and the equipment issued to a man.

Mr. SHALLENBERGER. In making your statement in reference to the total expense of the soldier, will you make it in separate items, so that it can be readily analyzed?

Capt. DALY. In the notes that follow each item we will have that per capita.

Mr. HARRISON. There are so many different reports that come from the camps, some through Congressmen and some through the various officers and others, that I would like to know if there is any system of inspection by your department to see whether your officers there in the camps are making the necessary requisition on you for the proper supplies and the extent to which the men are actually supplied.

I have seen statements made in the press that the Secretary of War is thoroughly satisfied with the conditions in the camps, but we get reports, such as the letter I put in the record, and I have been getting complaints that things are not what they ought to be. I was wondering whether there is a system in your department of inspection, of seeing whether the proper supplies are called for by your officers in the camp. In other words, whether the officers of the Quartermaster Department in the camps are making proper requisitions, and whether, when they do make the requisitions, the supplies get to the soldiers.

Gen. SHARPE. The requisitions all come to our office.

Mr. HARRISON. Suppose there is an officer in one of the camps who does not make the requisition which he ought to make?

Gen. SHARPE. We could not control that. If he reports that he has on hand more than he actually has—his requisition calls for the difference between what he requires and what he has on hand.

Mr. HARRISON. Suppose he does not make proper requisitions?

Gen. SHARPE. That is for his commanding officer to control.

Mr. HARRISON. Would you have no way of knowing whether he was properly discharging his duties?

Gen. SHARPE. We have no way of knowing that. His commanding officer would have control of that. The Inspector General goes out from time to time and inspects all of those matters at the camps.

Mr. HARRISON. Then there is a system of inspection?

Gen. SHARPE. Yes.

Capt. DALY. The camp commander would have jurisdiction also. It would be his duty to see that the quartermaster makes the necessary requisitions.

Gen. SHARPE. He has an inspector at the camp.

Mr. GREENE. We will very likely be met on the floor of the House by some repetition of the popular misunderstanding of the word shoddy and its application to our particular situation now in the manufacture of uniforms, etc. Will you, Col. Wood, be kind enough to frame some kind of a concise statement and put it in the record that will show what you have so interestingly explained to us in detail, in such concise form that we may have it to quote, making plain the distinction between the so-called reworked wool that is worked into the fabric and this substitute which is the cheapest the trade knows of, and which is plastered in on the garment?

Col. WOOD. Do you want me to make that with some care?

Mr. GREENE. Yes; so that we may have that to quote and to show that what we are talking about when we refer to shoddy is not the plaster stuff but real fabric.

The CHAIRMAN. In other words, the shoddy we are talking about is the technical term.

Mr. QUIN. And that the cloth they put into the overcoats and blankets which they talked about so much in the hearings before the Senate committee is as good as anything they can use.

Col. WOOD. A great deal of the discussion occurred in the Senate committee hearing as to the sufficiency of the weight of the uniform cloth which is now 16 ounces to the yard, and it has been referred to by some of the members of the committee as being entirely inadequate.

I make the same statement now that I did before that committee, that until some American experience in European service determines the necessity for greater weight, I think it would be a very serious mistake to increase the weight, and for this reason: The troops in the expeditionary force are to wear this uniform the year around. The 16-ounce weight is heavier than the average weight of civilian winter clothing in this country, which is 14 ounces. If they are to wear a still heavier weight, the 20 or 21 ounce weight, such as is worn by European troops, I think they will suffer very greatly during the larger part of the year when the temperature is not severe.

With the 16-ounce uniform it is possible to supplement it in extremely cold weather by using sweaters, or jerkins, or an extra suit of underwear. But in the warmer weather, during most of the year, there is no way in which the heavy uniform can be lightened.

The reason for the difference in weight between our uniform and that of the European soldiers is a national characteristic. In Europe the civilian clothes are still made in the heavy weights that were common to this country several generations ago. The winter clothing is 20 or 22 ounces and the summer clothing is 14 ounces. Because of the public demand in the United States for lighter clothing, just the same sort of a demand that made people cease to wear red flannel shirts, there has been a progressive lightening of the weight until the common weight is about 14 ounces. That represents American experience.

It is impossible for us to say that our troops may not require something warmer in the trench warfare in the wintertime, but those of us who are familiar with the Northern climates here are inclined to believe the necessity for heavier clothing is no greater there than here.

If it is, it would be much simpler to supplement that by wearing extra underwear, or a sweater, than it would be to lighten it in the warmer parts of the year.

Mr. SHALLENBERGER. You spoke about the amount of wool being used in the knitting of sweaters. I understood Gen. Sharpe to say that it was anticipated that every private soldier would be furnished with one of the leather jackets, or a jerkin, and that if the soldier wears one of those leather jackets he would have no immediate use for a sweater.

Col. WOOD. No; except in very severe weather.

Mr. SHALLENBERGER. So it might possibly be a matter of economy of wool to discourage the sending of sweaters over there at the present time.

Col. WOOD. I think so. None of them can reach there in time for this winter, and so far as next winter is concerned, the Army will probably be entirely supplied with these jerkins. Meanwhile, the continued using of enormous quantities of yarn is making a serious draft on the wool supply of the country.

The heavier cloth used in the uniforms abroad is made up without lining, while our uniforms are lined.

Mr. SHALLENBERGER. Do you anticipate having the leather jerkins over there for this winter?

Col. HIRSCH. They are already there. We have already delivered over 500,000 of them, and we only need less than 200,000.

Mr. SHALLENBERGER. So if we had a sweater for every man, he would have a leather jerkin and a sweater?

Col. HIRSCH. I imagine every man over there has a sweater, anyway.

Mr. SHALLENBERGER. He would really have no particular use for a sweater, with one of the leather jerkins?

Col. HIRSCH. Personally, from my own experience, I think every soldier wants a sweater and should have it. If I do not wear a sweater when I am out, I will wear it when I come back. I think every soldier would like a sweater.

Mr. SHALLENBERGER. As well as the leather jerkin.

Col. HIRSCH. He would wear them at different times. When he comes back to his tent he will put on his sweater—he likes to wear it in place of a coat.

Mr. HULL. I think an answer to this question would be well to have in the record. It is not possible that these sweaters are ever sold to the soldiers, is it?

Gen. SHARPE. That the sweaters are sold?

Mr. HULL. Yes.

Gen. SHARPE. I do not know.

Mr. HULL. As an Army man, you would know if they are sold by the Red Cross, or anybody in authority.

Gen. SHARPE. I should say decidedly not.

Mr. HULL. I wanted an answer to that question in the record, because the statement has been made, and I know that is not possible.

Mr. DAVIDSON. In connection with Col. Wood's statement about the use of the uniform in France in the warm weather, is there any disposition to supply to our soldiers khaki or light uniforms?

Gen. SHARPE. No; Gen. Pershing says they do not want the khaki uniforms over there. The nights are sufficiently cool to require the wool, and he has just asked for a shipment of cotton underwear, anticipating that he is going to change to that in the springtime. Our custom with the Army is in the summer time to leave off the coat and just have the ordinary olive-drab shirt.

Mr. QUIN. What is the temperature in Flanders compared to our temperature here?

Gen. SHARPE. One of the French officers says it is about the same kind of weather we have been having here recently.

Mr. QUIN. How is it in the summer time?

Gen. SHARPE. It is cooler than we have it, and the nights are cool. The details of the estimate are as follows:

Divisions arranged in order according to new cases pneumonia for week ending Jan. 4, 1918.

Divisions.	New cases of pneumonia.	Number of wool coats reported short Dec. 26, 1917.	Numerical order arranged according to shortage of coats.	Divisions.	New cases of pneumonia.	Number of wool coats reported short Dec. 26, 1917.	Numerical order arranged according to shortage of coats.

¹ No report.

JANUARY 22, 1918.

The cloth made for the woolen uniforms for soldiers is made of pure new wool.

In the emergency of the Mexican border service some contracts were made for uniform cloth composed of a mixture of 75 per cent new wool and 25 per cent new cotton.

In April, 1917, the woolen committee of the Council of National Defense advised against the use of cotton in the uniform cloth, and recommended that this fabric be made entirely of new wool. This recommendation was adopted and contracts were subsequently made for the all-wool goods.

The overcoat cloth and the soldier's blankets had also been made with an admixture of cotton. The committee of the Council of National Defense disapproved the use of cotton in these fabrics and recommended that 35 per cent of a good quality of reworked wool be substituted for the cotton with a view to greater warmth and the avoidance of the disadvantages inherent in the cotton mixture when subjected to wet or dampness. These changes were also adopted, and it is confidently believed that the overcoats and blankets thus made are of excellent durability, fully as warm as those made entirely of new wool, and much warmer and more comfortable than those made with the admixture of cotton.

By using the proportion of reworked wool in the overcoat cloth and blankets, it will be possible to continue this proportion in these cloths and make the uniform cloth of all new wool for a much longer period than would be possible

had all of these goods been made wholly of new wool from the beginning of the war, for while there is still a good supply of wool in the United States, the amount imported in 1917 was much less than in 1916, and owing to the limitations of available shipping there is serious doubt whether enough of suitable sorts of wool will be brought here during 1918 to supply the deficiency in domestic production.

It is understood that Great Britain has found it necessary to employ reworked wool even in uniform cloths of British and colonial troops, although the British Empire produces about 64 per cent of all the wools of the world suitable for clothing that are exported from the countries of origin.

If available shipping continues to be required in increasing quantities for transport and shipping of supplies from the United States to Europe, it seems quite probable that the very good quality of uniform cloth now supplied to the Army may later have to be replaced with goods composed in part of reworked wool; and the necessity for that change in the uniform has undoubtedly been considerably deferred by the earlier use of reworked wool in the overcoats and blankets, where it can be more advantageously employed.

Because of the difficulty of having completed in time sufficient quantities of goods in process of manufacture of the kinds already described, to provide for the large number of troops to be assembled, certain emergency purchases were made, a small part of which did not conform to the changes mentioned. But these small quantities were additional to what would otherwise have been received, and though less desirable in point of durability were of great value in providing more warm clothing and blankets than would have been possible had none of these additional goods been obtained.

It should further be mentioned that a large part of the reworked wool employed is derived from the waste parts of the new Government cloths left from the cutting of uniforms and overcoats. Samples of the waste cloth and of the reworked wool derived from it are submitted with this statement, together with typical samples of the overcoating cloth and blankets containing 35 per cent of reworked wool.

JNO. BLOOD,

Colonel, Quartermaster Corps.

A is a sample of the cloth clips.

B is a sample of the cloth clips after first process of reworking.

C is a sample of the cloth clips after second process of reworking.

D is a sample of overcoat cloth made of 65 per cent new wool and 35 per cent of reworked wool like sample.

DECEMBER 24, 1917.

Changes made in the specifications for woolen cloth and reduction in cost per yard as the result of such changes.

1. The Council of National Defense on June 27 last transmitted revised specifications for 30-ounce melton, as recommended by the woolen committee. Mr. Eisenman also advised this office at the same time that large quantities of this fabric were then being made. These specifications call for mixture of this fabric to consist of 65 per cent wool and 35 per cent wool substitutes. The material prior to the proposed change referred to consisted of 75 per cent three-eighths blood wool and 25 per cent cotton.

2. Pending action upon the adoption of these specifications, Mr. Charles Eisenman, of the committee on supplies, Council of National Defense, on September 6, 1917, requested the privilege of using such wools and wool substitutes in woolen fabrics, including melton, as in the judgment of the committee would be deemed wise and necessary in the conservation of such grade of wool upon which there might be a shortage and for the expedition of fabrics necessary for the equipment of the Army.

3. In reply to this communication, the Quartermaster General, on September 7, 1917, approved this recommendation, with the understanding that the textile and color tests were not to be affected. The cost of the material purchased under these conditions was \$3.50 per yard, the same as heretofore, due to the increased price in wool.

4. On October 20, 1917, Maj. W. B. Gracie, Quartermaster Corps, wool purchasing quartermaster at Boston, Mass., forwarded a letter from Mr. J. F. Brown, chairman wool purchasing committee, to the committee on supplies, stating that in view of the insufficiency of the supply of one-fourth blood or similar wools that it would not be possible to make with profit the 30-ounce melton at

\$3.50 per yard on a basis of 65 per cent wool and 35 per cent cotton, but that if the composition could be made 50 per cent wool and 50 per cent cotton sufficient wool would be available to permit the making of the 30-ounce melton on the latter percentage at \$3.40 per yard. On the 23d of October a memorandum was submitted to the Quartermaster General to the effect that the Bureau of Standards had been communicated with by telephone, resulting in the recommendation that the greatest amount of cotton should be 35 per cent and wool 65 per cent, and strongly recommended against the use of 50 per cent cotton. In consequence the Quartermaster General, on October 25 last, informed the Council of National Defense (attention of Mr. Eisenman) as indicated above, to which reply was made on the 30th of October that contracts for 30-ounce melton placed by the committee on supplies contained no cotton, but that manufactures were being made on 50 per cent virgin wool and 50 per cent reworked wool.

PURCHASE AND MAINTENANCE OF RESERVE SUPPLY OF WOOL FOR THE QUARTERMASTER CORPS.

For the purpose of obtaining and maintaining a supply of wool available at all times while the war shall last so that manufacturers contracting for supplies for the Quartermaster Corps may be protected in their bids in the event that they do not own wool themselves, the following committee denominated "The Committee on Wool Supply of the Council of National Defense" is appointed: Mr. Jacob F. Brown, chairman, Mr. Stephen O. Metcalf, Mr. Frederick S. Clark, with Mr. Robert H. Stevenson, Jr., as secretary.

It is the intention of the War Department to maintain a reserve supply of wool approximating, but not exceeding, \$25,000,000, and to endeavor to keep this quantity as a working stock ahead of orders. Based on this, the committee will proceed to purchase \$10,000,000 to \$12,000,000 worth of wool, a portion of which will be suitable for the 8½-ounce flannel, 16-ounce suiting, 30-ounce overcoating and blankets, with possibly some finer wool adapted for underwear.

POWERS OF THE COMMITTEE ON WOOL SUPPLY.

The Committee on Wool Supply, which is a subcommittee of the Council of National Defense, is authorized to carefully investigate the different offerings of wool that are made and to make such selections as they feel to be the most advantageous for the Government to own and then to recommend these selections for approval to the quartermaster selected by the Quartermaster General as his direct representative. On the quartermaster's approval of such purchases, instructions will be given to owners to bill up, attaching a weigh certificate duly sworn to by the weigher, storage receipts and list of insurance policies applying, or actual policies when requested. These papers, after being checked and certified to by the Committee on Wool Supply, will be submitted to the purchasing quartermaster for his attention and payment, if in his judgment such payment is warranted. The amount of wool to be carried in stock will be decided by the Wool Supply Committee.

PROCESS OF BUYING.

Samples, large enough to represent the different lots of wool, will be submitted to the Committee on Wool Supply, with the owner's price, this price being known only to the committee. After removing all identification marks from samples, the various valuation committees, selected by the Boston Wool Trade and the Committee on Wool Supply, will make a report in writing, describing the wool and putting their valuation thereon. After a comparison of the various goods delivered, with the owners' prices, those lots that are offered at a higher price than the valuation will be discarded. The lots offered at an equal or less price than the valuation put on by the valuation committee will be set aside for the examination of the Committee on Wool Supply, and from these lots such lots will be selected as are considered desirable, and the remaining lots will be rejected. The lots selected for purchase will then be examined in bulk by wool experts from the various valuation committees, and if their written report substantiates the fact that the wool is like the original sample, then purchase will be recommended to the purchasing quartermaster.

A complete card system will be installed which will show the record of each lot of wool submitted and also a record covering the offerings from each individual firm so that at any time in the future data will be available to show why certain lots were rejected or why certain lots were bought.

The terms of purchase of wool in the Boston market will be covered by the following agreement:

COMMITTEE ON WOOL SUPPLY OF
COUNCIL OF NATIONAL DEFENSE,
273 Sumner Street, Boston, Mass.

GENTLEMEN: We agree that on all wool submitted to your committee, the terms of sale shall be as follows:

Net cash within 10 days from delivery of bill, detailed weights, storage receipt, and memorandum of insurance policies applying, or actual policies applying, when requested. We will allow customary tare. Charge for top bags at a fair price. New bags at 60 cents each, No. 1 bags at 45 cents each, No. 2 bags at 35 cents each, short bags at 25 cents each. We will make no charge for stenciling as may be directed. We will make no charge for storage (or

insurance) for a period not exceeding four months, but after four months the charge for storage per month, or fraction thereof, shall be 15 cents per hundred pounds on scoured wool, 8 cents per hundred pounds on grease wool, this wool to be fully covered by insurance without cost to the Government. We will furnish a certificate of weights as weighed by a sworn weigher who is not in our employ, and if any palpable errors should develop, we agree to make same good. We agree to guarantee the Government against any loss arising from the failure of any individual firm or corporation (which has been approved by the committee constituted for that purpose) to fully carry out its agreement. The amount of our liability under this guaranty will be determined by the relation that our own sales to the Government bear to the total sales of the coinsurers, but we do not guarantee the solvency of any insurance company or against losses arising from riots, explosions, invasions by foreign enemies, civil commotions, or any military or usurped power whatever. We agree that any lot offered to the Committee on Wool Supply is to be under refusal until withdrawn by written notification to the committee, but no lot is to be withdrawn within two weeks from date of delivery of sample. We will offer to manufacturers, who either have or are anticipating contracts for manufacturing goods for the Government, every facility for examination of all wool or tops bought by the Government of us and will quote such prices as the agents for the Government may request.

(Date.)

(Signature.)

The terms of purchase in the secondary markets of Philadelphia, New York, Chicago, and St. Louis will be according to the following agreement:

COMMITTEE ON WOOL SUPPLY OF COUNSEL OF NATIONAL DEFENSE,
275 Summer Street, Boston, Mass.

GENTLEMEN: We agree that on all wool submitted to your committee that the terms of sale shall be as follows: Net cash within 10 days from delivery of bill, detailed weights, public warehouse receipt and memorandum of insurance policies applying, or actual policies applying, when requested. We will allow customary tare. Charge for top bags at a fair price, new bags at 60 cents each. No. 1 bags at 45 cents each, No. 2 bags at 35 cents each, short bags at 25 cents each. We will make no charge for stencilling as may be directed. We will make no charge for storage or insurance for a period not exceeding four months, but after four months the charge for storage per month, or fraction thereof, shall be 15 cents per 100 pounds on scoured wool, 8 cents per 100 pounds on grease wool, the Government stock of wool to be kept fully insured without expense to the Government. We will furnish a certificate of weights as weighed by a sworn weigher who is not in our employ, and if any palpable errors should develop, we agree to make same good. We agree that any lot offered to the Committee on Wool Supply is to be under refusal until withdrawn by written notification to the committee, but no lot is to be withdrawn within two weeks from date of receipt of sample. We will offer to manufacturers, who either have or are anticipating contracts for manufacturing goods for the Government, every facility for examination of all wool or tops bought by the Government of us and will quote such prices as the agents for the Government may request.

(Signature.)

(Date.)

It will probably be found impracticable to attempt to buy wools in small country markets or small secondary markets, and this situation will be covered by circular to read substantially as follows:

DEAR SIR: Wools bought for the Government are for the use of manufacturers making goods for the Army. These manufacturers will wish to see the wools in bulk before making their selections and as the Government has no adequate storage facilities, it is important that wools purchased should be in markets easily accessible and where considerable quantities can be shown at any time. It is essential that when wool is paid for it should be held in public or guaranteed warehouses. If you can suggest a way in which you can meet these necessary conditions we will be pleased to consider your offerings. We inclose copies of notices and agreements sent to other markets.

Yours, very truly,

COMMITTEE ON WOOL SUPPLY,
Secretary.

(Date.)

These agreements in all cases will be signed by some person or persons authorized to sign for the firm, company, or corporation.

Before buying wool of any holder in the secondary markets it will be necessary that the seller file the agreements above quoted showing that he has accepted the terms of sale. These terms of sale will also cover the agreement by each seller to show all wools purchased of him to any manufacturer with Government orders and to quote such price as requested by the Committee on Wool Supply. This will obviate the necessity of establishing a showroom with a force of clerks to do this work, and the arrangement will doubtless be most satisfactory to manufacturers. The seller will also agree, as required in the circular, to attend to the shipping and billing when he receives orders from the purchasing quartermaster to ship the wool.

WOOL, ISSUE OF.

A list will be made of houses from whom wool has been bought, and these lists will be available for manufacturers who have taken Government orders. These manufacturers will have the privilege of examining any or all of the lots of wool and of learning the price at which they are available. They will also be informed that they are not obliged to buy these particular wools, but may buy wool elsewhere if, in their judgment, it is more adaptable or can be secured at lower figures. If a manufacturer wishes to avail himself of wool belonging to the Government, he will make requisition on the contracting quartermaster stating the number of the lot or lots and quantity he wishes. The contracting quartermaster will forward same to the wool-purchasing quartermaster in Boston, with copy of the contract. The Committee on Wool Supply will determine from the data thus submitted whether or not the amount of wool requisitioned for is proper, and on their approval of the requisition the wool-purchasing quartermaster will call upon the contractor for a sufficient bond to cover the value of wool thus requisitioned, provided payment is not to be made on delivery to the contractor. On receipt of this bond the wool-purchasing quartermaster will issue orders for shipment in accordance with requisition and the wool will be forwarded billed, and the receipt of the railroad for the correct number of packages will be his voucher of delivery in connection with the actual bill.

Payment for wool by manufacturers may be made on delivery of the wool or may be made at the time of delivery of the goods by deduction of the value of the wool furnished from the first invoices of completed goods delivered. This will be covered in the contract in each individual case.

If payment is to be made by contractor on delivery of the wool, the wool will be shipped and bill for same submitted to the contractor and payment made to the wool purchasing quartermaster. If payment is to be made through deduction from the amount due on first deliveries of the completed article, bill for the wool should be forwarded by the wool purchasing quartermaster to the contracting quartermaster for collection. The amount so collected will be transferred by the contracting quartermaster to the wool purchasing quartermaster, who will deposit it with the Treasurer of the United States to his official credit. Where settlement is to be made by deduction from the first bill for completed goods delivered, the wool purchasing quartermaster will enter a charge against the contracting quartermaster, which will be removed by receipt of check for amount deducted from bill for such first delivery of completed goods.

The various lots of wool will be available for manufacturers at the actual cost to the Government, including cost of bags and any storage charges that may accrue after the four months' period has expired, so that the dollar value of each lot will balance on shipment. The actual weight of wool varies according to climatic conditions, some wools gaining in weight, others losing in weight, and in order that the pounds bought may balance with the pounds sold, the wool will be shipped out at the same weight as bought by the Government, this to be definitely provided for in the contract. If any apparent errors in weight arise they will be adjusted by the original seller—this outside of variations of weight due to natural causes.

It will not be practicable to name a fixed price at which wool will be furnished, but a range of prices paid for the different grades will be available for the use of those concerned.

WOOL, ACCOUNTING FOR.

The wool purchased will be taken up on Q. M. C. Form 200 and accounted for as other Government property, to be classified as "grease wool," "scoured wool," and "tops." The voucher to be used in connection with wool property account will be Q. M. C. Form 217-A. The authority to be quoted on vouchers, as well as the authority to be quoted on Form 330 to the money account, will be a copy of the telegraphic authority of the Quartermaster General, dated August 10, 1917, directing Capt. W. B. Gracie, Quartermaster Corps, to proceed with the purchase of wool, and a true copy of these approved instructions. These authorities should be filed with the first voucher submitted. In subsequent vouchers it will be only necessary to make reference thereto.

A certificate properly signed by the committee on wool supply or its authorized secretary will be sufficient authority for the wool-purchasing quartermaster to make the purchases recommended by the committee.

Wool will be dropped from the wool-purchasing quartermaster's property account on a statement from him giving date and number of contract, accompanied by copy of call from contractor for wool and copy of bill of lading on which wool is shipped to contractor.

The wool-purchasing quartermaster will furnish monthly to the Quartermaster General a report showing the total purchases for the month, with amounts of the various grades on hand and the amounts and grades of lots accepted but not purchased.

Cartage and freight charges on all shipments of wool will be paid for by the manufacturer, as is customary in the trade. This will be included in each contract, to apply in all cases where manufacturers use Government wool.

CLERICAL HELP.

The wool-purchasing quartermaster, Boston, Mass., is authorized to employ as "special employees" such expert wool inspectors as in the judgment of the committee on wool supply may be necessary for the proper inspection of wool and to protect the Government's interests. He will submit a list of such employees, with amount of pay of each, to this office for approval. He is authorized to issue such travel orders as may be necessary, and while these special employees are traveling under such orders and when absent from their station they will be entitled to a flat per diem allowance of \$4 per day in lieu of subsistence, including date of departure from and date of return to their station. These accounts and all other expense accounts in connection with the activities of the wool purchasing office will be settled by the depot quartermaster, Boston, who will also furnish such supplies as are needed for the proper equipment and operation of the wool office. The wool-purchasing quartermaster, Boston, will issue the necessary transportation and Pullman requests to cover the travel of his special employees. Payment for storage charges accruing after a storage period of four months will be made by the wool-purchasing quartermaster.

DEALINGS WITH MANUFACTURERS.

The following instructions are for use of contracting quartermasters in dealing with contractors:

First.—When manufacturers offer goods at a price that is satisfactory to the contracting quartermaster and state that they have sufficient wool, tops, or yarn on hand necessary for the manufacture of the fabrics to bid on, such contracts should be immediately closed.

Second.—If a manufacturer names a price on a fabric that is acceptable to the contracting quartermaster and states that he has not the necessary wool on hand for the manufacture of the goods specified, he then should be informed that the committee on wool supply is now buying a reserve stock of wool for the War Department which will be available at cost to manufacturers with Government orders and who have not the necessary wool. The payment for this wool may be made on delivery of the wool or from the first deliveries of goods, a bond for the value of the wool to be given in the latter case. While this buying for the Government account is going on it is very undesirable to have active competition in the market from manufacturers who are given orders, and it is expected that such manufacturers will not enter the wool market actively but will send to the committee on wool supply samples of the wool they desire to use in their blends, stating quantities and also the price

at which they have figured these wools in their goods. The committee will notify such manufacturers whether they can depend on it for similar wools at practically the same prices figured. If the price figured is lower than the committee feels it can safeguard, then the manufacturer can go out and buy wool at the price he has figured, but not at any higher prices without first notifying the committee on wool supply.

In other words, a manufacturer going out for wool at a stated price which is below the market, as the committee finds it, does not run up the price of wool, but the exceeding of this price, without consultation with the committee, does create a rising market. If manufacturers are not willing to do this, then orders to them might be held up until the committee had sufficient wool in hand to safeguard itself against competition.

Filed herewith as a constituent part of these instructions and regulations are the various blank forms for the use of the Wool-Purchasing Office, numbered —, and the letters (two in number) of Mr. Jacob F. Brown, dated August 4, 1917, to Mr. Charles Eisenman, Committee on Supplies, Council of National Defense, Washington, D. C., with accompanying letters of the Quartermaster General (two in number) dated August 7, 1917, and August 10, 1917, and approval of the Secretary of War, dated August 8, 1917.

Statement showing articles of clothing and equipage manufactured at the Philadelphia depot from July 1, 1916, to Sept. 27, 1917, with average price of each article and total cost.

Item C. & E. 259.—Toilet articles.

For use of general prisoners confined at military posts and at disciplinary barracks, without pay or allowances, and applicants for enlistment while held under observation ----- \$1,522,074.86

Item C. & E. 260.—Barbers' materials.

For use of general prisoners confined at military posts and disciplinary barracks, without pay or allowances, and applicants for enlistment while held under observation ----- 761,037.44

Item C. & E. 261.—Tailors' materials.

For use of general prisoners confined at military posts and disciplinary barracks, without pay or allowances ----- 761,037.44

Item C. & E. 262.—Toilet kits: Issue of, to all enlisted men upon entering the service.

Authorized gratuitous issues of, to all enlisted men upon first entering the service, under the provisions of paragraph 1217, Army Regulations, as amended ----- 4,566,421.57

Item C. & E. 263.—Housewives: For issue to the Army when necessary.

Authorized issues of one housewife annually to a squad when the necessity for the issue is certified by the commanding officer for service in the field, in accordance with the provisions of paragraph 1215, Army Regulations ----- 761,037.44

Item C. & E. 264.—Packing, expenses of.

For the purchase of packing boxes, lumber, wrapping paper, etc ----- 9,893,489.57

The funds estimated for will be required during the fiscal year ending June 30, 1919, for the purchase of packing boxes, lumber, excelsior, twine, wrapping paper, etc., at the various depots of the Quartermaster Corps.

Item C. & E. 265.—Handling, expenses of.

No estimate fiscal year 1919.

Item C. & E. 266.—Similar necessities, expenses of.

For the purchase of, and repairs to, machinery at depots and posts, in connection with the manufacture and repair of clothing and equipage ----- 1,401,257.44

The funds estimated for will be required during the fiscal year ending June 30, 1919, for the purchase of and repairs of machinery (sewing and repair machines, etc.) at depots, posts, and cantonments, and similar necessities connected with the manufacture and repair of clothing and equipage.

Item C. & E. 266a.

Employees, hire of ----- 2,612,500.00

For list of employees, see Book of Estimates, 1919. These men are employed in inspecting, packing, handling, and shipping clothing and equipage supplies at the general purchasing and manufacturing depots of the Quartermaster Corps.

Item C. & E. 267.

Citizens' outer clothing ----- 2,192,422.73

Funds estimated as required for the purchase of citizens' outer clothing, at a cost of not to exceed \$10 per suit, for issue upon release from confinement to each prisoner who has been confined under a court-martial sentence involving a dishonorable discharge.

Item C. & E. 268.—Indemnity.

To officers and men of the Army, for clothing and bedding, etc., destroyed since April 22, 1898, by order of medical officers of the Army for sanitary reasons, no estimate for fiscal year 1919.

2. The decrease in the amount estimated for in item 258a (equipment purchased from contractors) and the increase in item 252c (clothing purchased from contractors) is partly attributed to the item blankets involving approximately \$63,000,000, which was transferred from equipment to clothing.

3. Jerkins, moccasins, and toques are now being furnished for use of troops abroad and which articles were not heretofore prescribed. Gen. Pershing has also called for large allowances of rubber boots, arctic overshoes, service and winter caps, winter gauntlets, heavy wool stockings, and many other articles of clothing and equipment for which provision must be made.

4. Increased prices since tentative estimate was submitted have also tended to increase the detailed requirements.

5. Item 254 (altering clothing) has been increased to provide for the altering and repairing of all service clothing in the hands of troops.

6. Item 256 (washing clothing and equipment) has been increased to provide for the renovation of all clothing in the hands of troops.

7. Item 266 (similar necessities) has been increased to provide for the purchase and repair of machinery to be provided at posts, cantonments, and other organizations for the repair of clothing, including shoes.

8. In regard to estimate for reserve stock of materials no provision for reserve under item 258a (manufacture of equipment by Quartermaster Corps), which includes the materials required for manufacture of equipment, principally tentage, was made in the original estimate and has been included in the details.

9. On account of the increased prices of materials the full quantity estimated for as reserve can not now be procured with the amount of money included for that purpose.

10. Statements showing purchases and issues of C. & E. supplies will be submitted at an early date.

Supplemental estimate for fiscal year 1919, appropriation "Clothing and camp and garrison equipment" required for 1,387,755 men, in addition to original estimate for 1,612,245 men.

Original estimate..... \$883, 172, 148.36
Supplemental estimate..... 949, 342, 872.27

(Thereupon the committee adjourned, to meet to-morrow, Wednesday, January 16, 1918, at 10.30 o'clock a. m.)

ARMY APPROPRIATION BILL, 1919.

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Wednesday, January 16, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent, jr. (chairman), presiding.

STATEMENTS OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, ACCOMPANIED BY BRIG. GEN. I. W. LITTELL, LIEUT. COL. M. C. BRISTOL, AND LIEUT. COL. R. H. WILLIAMS, QUARTERMASTER CORPS—Continued.

The CHAIRMAN. The next item is:

Horses for Cavalry, Artillery, Engineers, and so forth, \$28,755,991.

The appropriation under this item last year was \$65,400,000, so that you are now asking for less than half the amount you received at the last session.

Gen. SHARPE. I would like to submit a table showing the various items, divided into the requirements for the United States and the Philippine Islands, and then tables giving an explanation of each one of the items of the appropriation.

The CHAIRMAN. Under the head of transportation, I understand you will put in a detailed statement as to the number of animals that item provides for.

Gen. SHARPE. Yes, sir. This item is for horses for the Artillery, Cavalry, and Engineers.

The CHAIRMAN. General, do you know how many Cavalry regiments were transformed into Artillery and Infantry under the act we recently passed?

Gen. SHARPE. Col. Bristol can tell you that.

Col. BRISTOL. Eight regiments.

The CHAIRMAN. On what sized army is this based?

Gen. SHARPE. This is based on an army of 1,612,245 men.

The CHAIRMAN. How many regiments of Cavalry are there now.

Col. BRISTOL. We have 17 regiments of actual Cavalry. The other eight regiments are really Cavalry, but they have been transposed into Artillery, making 25 in all.

The CHAIRMAN. You had 25 in the Regular Army, did you not?

Col. BRISTOL. Yes, sir.

The CHAIRMAN. Did you not transform some National Guard Cavalry also?

Col. BRISTOL. No, sir.

The CHAIRMAN. I know of one instance myself.

Mr. McKENZIE. I know that the First Illinois Cavalry was transformed.

Col. BRISTOL. I was talking about the Regular Army regiments. As to the Cavalry in the National Guard which was transferred I could not say.

Mr. MORIN. There was one regiment in Pittsburgh that was transformed, the First Regiment.

Mr. HULL. There was one in Iowa.

The CHAIRMAN. The regiment which I referred to, in Alabama, was a complete regiment.

Mr. KAHN. One of the California regiments has been transformed into a Field Artillery regiment. Have any of the Cavalry regiments been transformed into Infantry regiments?

Col. BRISTOL. No, sir; except that one of the regiments have been sent over dismounted, the Third Cavalry has gone.

Mr. KAHN. They will act as Infantry?

Col. BRISTOL. They are acting as Infantry now.

Mr. KAHN. Where are the Cavalry regiments that we have, stationed at the present, along the Mexican border?

Col. BRISTOL. They are practically all along the border, at different stations. We have one regiment in the Philippines and one in Hawaii.

Mr. KAHN. Those are all along the border?

Col. BRISTOL. Except the Second Cavalry. We have some up here, but they are practically all along the border.

Mr. KAHN. We passed some legislation recently providing for a whole division of Philippine soldiers to be organized, with a possible view of utilizing them along the border. Would they have to be trained as Cavalry? They would have to be in order to be useful down there, would they not?

Gen. SHARPE. I think not. We have never used any of the Filipinos as Cavalry. They are foot troops.

Mr. KAHN. What are the Philippine Scouts?

Gen. SHARPE. They are foot troops.

Mr. KAHN. So that even if we were to use the Filipinos over here, they probably would not be able to supplement the Cavalry that is now used on the border?

Col. BRISTOL. I do not think they would, sir.

Mr. SHALLENBERGER. Is there any one here who has to do with the purchase of horses?

Col. BRISTOL. Yes, sir; Col. Williams is in charge of the purchasing of the animals.

Mr. SHALLENBERGER. What price do you pay for the different horses you buy, of the heavy draft type?

Col. WILLIAMS. We have a tentative maximum price of \$165 for cavalry horses, \$190 for light artillery horses, and \$230 for heavy artillery horses.

Mr. SHALLENBERGER. Colonel, can you tell the committee how that price compares with the price you were paying for the same type of horses before the European war? Do you recall what you paid for the same type of horses in 1913 and 1914?

Col. WILLIAMS. No; I can not.

Mr. SHALLENBERGER. Is it not about the same price?

Col. BRISTOL. It is a little bit higher for all of them, especially the heavy draft horses. We did not use many heavy draft horses at that time.

Mr. SHALLENBERGER. You paid about the same for the cavalry horses?

Col. BRISTOL. We pay just a little bit more for them now. The average price before was about \$147 or \$150.

Mr. SHALLENBERGER. You buy these horses either from the contractors, or from the farmers. We have had another officer here who told us that you have a system whereby, under certain conditions, you purchase directly from the farmers.

Col. WILLIAMS. We were not able to buy them to any extent.

Mr. SHALLENBERGER. Are you able to get the horses at this price?

Col. WILLIAMS. We think we can get all we want at that price.

Mr. SHALLENBERGER. Is there anything else that the Army purchases in large quantities direct from the producer, except horses?

Col. WILLIAMS. Not that I know of.

Mr. SHALLENBERGER. In the case of beef, which the Army purchases in large quantities, you pay a great deal higher price for it now than you did before the war, according to the testimony which has been given before this committee. According to the testimony the price of beef has advanced nearly 100 per cent, and the price of wool has advanced nearly 300 per cent. I have observed that all these materials have advanced in price because of the war. Why is it, when you buy these horses directly from the farmers you pay practically the same that you did before the war?

Col. WILLIAMS. I think it is a very fair price.

Mr. SHALLENBERGER. You think a man can raise a horse to be 6 years old and get a fair profit when he sells him for \$165, taking into consideration the present high price of forage?

Col. WILLIAMS. I think it is a perfectly fair price.

Mr. SHALLENBERGER. You get them at that price?

Col. WILLIAMS. Yes, sir.

Mr. SHALLENBERGER. Do you not think a man ought to have a fair profit on the production of horses?

Col. WILLIAMS. I do not think the Government would be justified in paying any higher price.

Mr. SHALLENBERGER. As a matter of fact, the farmer only gets \$145 for the horse which the Government buys. You have a fixed profit of \$20 to every dealer who buys horses, so that the price the farmer gets is only \$145 in this time of war.

What explanation can your department make of the fact that you are buying 500,000 of these horses from the farmers, and that in the case of the only thing you do buy from the farmers direct, you fix the price, without competition, because the dealer knows he is going to have \$20 margin on the horse, but you do not pay the farmer practically any more than you did before the war, when everything else has advanced tremendously which the Government buys of dealers?

Col. WILLIAMS. The farmer is very much pleased, as a rule, to get anything like \$145 for his horse. It is more than he has ever gotten before for the same class of horse, and the buying for military purposes is practically the whole market. I think the \$20 margin allowed to the dealers is justified by the expense and the risk he undergoes.

Mr. SHALLENBERGER. Is there anything else a dealer buys in the way of articles to be sold in which he is insured any such return as

that upon the investment, considering the fact that he takes no risk at all? He does not take any risk at all upon the horses, does he?

Col. WILLIAMS. Of course he does. He runs the risk of having the horses rejected, in which case they are practically worthless.

Mr. SHALLENBERGER. When the contractor takes the horses to the place where they are to be inspected, he buys a certain number of horses, and the average horse buyer, at least from my experience, knows a horse as well as the Government buyers. We have had testimony here that there are only 50 men in the country that the War Department considers as having the ability to do this work. Is it not a fact that this contractor usually buys the horses with the knowledge that there are a great many horses that will not pass inspection, and therefore he does not make many mistakes, and that most of his horses pass?

Col. WILLIAMS. A very fair proportion of rejects is 30 per cent. If the contractor loses money on 30 per cent, he is going to come very near losing money on the whole lot. The margin of \$20 works out in such a way that if he has a fair proportion of horses accepted and has no other losses he makes a fair profit.

Mr. SHALLENBERGER. Who passes on these horses?

Col. WILLIAMS. We have an inspecting officer and a veterinarian.

Mr. SHALLENBERGER. Are the inspecting officers Regular Army officers?

Col. WILLIAMS. No, sir.

Mr. SHALLENBERGER. You have civilians?

Col. WILLIAMS. They are commissioned in the Reserve Corps, most of them. We have very few Regular Army officers available for that purpose.

Mr. SHALLENBERGER. You have to use them for other duties?

Col. WILLIAMS. Yes, sir.

Mr. SHALLENBERGER. A buyer buying these horses does not really pay an average of \$20 less than your maximum price? Is it not a fact that with your maximum price of \$165 the contractor buys his horses nearer \$100 than \$145, and therefore he fortifies himself against possibilities of loss and that he sells those horses at a price that nets a profit to him, at any rate?

Col. WILLIAMS. No, sir; his rejects cost him from \$30 to \$40 a horse.

Mr. SHALLENBERGER. He loses that much money?

Col. WILLIAMS. He loses that much on his rejects; they are practically worthless.

Mr. SHALLENBERGER. In other words, you mean to say that if he buys a horse at \$130 and he is rejected that he loses \$35?

Col. WILLIAMS. He has to sell him.

Mr. SHALLENBERGER. He has, and he would have to take something like \$100 for the \$130 horse.

Col. BRISTOL. I have had some experience in buying horses, and I remember one case of having shown to me over 200 horses one morning, of which I accepted 19. All the others were rejected. That was last year at Fort Worth. They were a very poor lot, and none of them was very good.

They were all turned back. In a case of that kind the contractor must have lost a good deal of money. Sometimes he goes out and buys the animals for very much less than the contract price, and

at other times they will pay inside of the \$20 margin if they can make sure of \$10 or \$15, provided they are near railroad transportation. But the contractor always has to keep up an establishment and have a number of buyers all over the country, and their expenses have to be paid, and then they have to have their pens at the different points throughout the country besides having their interest in stock yards, and so forth, and that amounts to a great deal of expense for the contractor; so that he has to cover all of that expense in some way by the profit. I know in many cases the contractors have bought animals for very much less than the contract price.

At the same time I have had experience in going into the country and buying horses, especially in Texas, and I have been able to get them at a certain price. That was so in 1916.

I found that when they knew I was coming to a little town along the border, or anywhere in Texas, the animals that were selling, as a rule, for \$75 or \$80 would go up to \$150 when I arrived there. Nearly everybody's price was \$150, no matter what kind of an animal it was. The best that they had they would sell for \$150 and the very poorest they wanted \$150 for, while I was authorized to to pay \$100 or anything I thought they were worth. We did not get very many. Wherever we went we usually found that to be the case.

I think if we had enough experienced officers and veterinarians we could go throughout the country and pick up practically all the horses we needed, if we did not want them in a hurry, in that way, but when we have to get a certain number of horses in a certain time it is practically impossible to do that.

Mr. SHALLENBERGER. It has been stated here that when your department tried the proposition of buying direct from the farmers, the farmers offered a lot of horses which were not suited for the Army service, and thereby implying that the farmer was attempting to put something over on the Government. You have had the same experience with contractors, have you not? They bring you practically as large a percentage of unfit horses as the farmer does, do they not?

Col. BRISTOL. I think they do at first, until they know the inspecting officer. They will soon find what kind of a buyer the inspector is and naturally if they can sell him poor stock they will do so. I do not think the farmer does that any more than the contractor. I would prefer to say the reverse is true.

Mr. SHALLENBERGER. It is a matter of record that a farmer can not raise a good horse until he is 6 years old with feed at its present price and make anything like \$20 on that horse, but the contractor why buys the horses is insured a profit of \$20 on each horse on a very short period of time. I have a statement of the facts in the case of a horse buyer selling to the Government who made over \$6,000 on 87 hors s. He made in about three or four weeks as much as we pay a brigadier general in the United Army in a year in times of war, and that sort of profit is made possible by the prices which the Government allows the contractor, thereby enabling the contractor to go out and buy these animals of the farmers at a much lower price, because the farmer knows he can not sell the horse to the Government at the price the dealer gets, and therefore he takes a much lower price, and the dealer is insured against any possibility of loss for the rejections, so that he can make a profit.

The thing that I particularly want to call attention to is that in the case of the horse, which is as essential as any of the other things, that is the one article the Government buys which has practically received no benefit from this war. The farmer who produces the horse is not able to come out whole, so far as the cost of producing the horse is concerned, and the price he gets for him, and I wondered why the War Department has not raised the price of horses to something like the cost to the producer of raising the horse, as has been done in the case of other articles which the Government is buying.

Col. WILLIAMS. I think the reason is we can get the animals we want for this price.

Mr. SCHALLENGER. You fixed that price. Have you ever attempted to fix the price of any of the other articles, such as beef and wool? In those cases the price is rather fixed by the men who sell than by the Government, up to date, but you fix the price on the horse.

Col. WILLIAMS. That price fixed by the Government on the horse is based on information.

Mr. SCHALLENGER. You think it is a fair price?

Col. WILLIAMS. We think it is, compared to the price we would have to pay in the market.

This last spring I saw some horsemen in Nashville, before we had established these prices, and I consulted them and asked about what they thought the price would have to be. The price was lower than they said they thought it would be, but they are quite satisfied, and we are told now that the prices of the animals will be higher next spring than they are now.

Mr. SCHALLENGER. Do you think, under this price, if the war goes on, you will be able to obtain the horses you need in this country at this price?

Col. WILLIAMS. Personally, I think we will.

Mr. GARRETT. Have you testified as to the number of horses you will need during the present war, or that you anticipate you will need?

Col. BRISTOL. No; we have not given that information.

Mr. GARRETT. Have you that?

Col. BRISTOL. We have not the number of animals, except in detail, based on 45 divisions. For 45 divisions we would require about 155,000 horses. That is for the Cavalry, Artillery, and Engineers.

Mr. GARRETT. One hundred and fifty-five thousand?

Col. BRISTOL. About that, yes, sir. That is without replenishment. That is for the organization of 45 divisions.

Mr. GARRETT. Is that what you need now, in addition to what you should have?

Col. BRISTOL. That provides for the organization of 45 divisions.

Mr. GARRETT. You now have about 340,000 animals, according to the testimony of Col. Fair.

Col. BRISTOL. About that. That includes mules, of course.

Mr. GARRETT. Does the contractor get the same price for buying mules as for buying horses—that is, does he get the same allowance of \$20 per head?

Col. BRISTOL. Yes, sir.

Mr. GARRETT. In other words what you now have on hand, and what you need would amount to 495,000 animals, or, in round numbers, a half million animals?

Col. BRISTOL. Yes, sir.

Mr. GARRETT. On 500,000 animals, at \$20 per head, the contractors would have a profit of \$10,000,000, would they not?

Col. BRISTOL. I do not think we can consider that as profit.

Mr. GARRETT. That is the allowance that he gets?

Col. BRISTOL. Yes, sir.

Mr. GARRETT. What are the specifications required in the cases of these animals. Have you published printed specifications to guide your men in the inspection of these animals?

Col. BRISTOL. Yes, sir; we have them in printed form.

Mr. GARRETT. Will you put those specifications in the hearings?

Col. BRISTOL. Yes, sir.

(The specifications referred to are as follows:)

SPECIFICATIONS FOR CAVALRY, ARTILLERY, DRAFT, RIDING, AND REMOUNT HORSES AND DRAFT, RIDING, AND PACK MULES.

With a view to carrying out the provisions of paragraph 1066, Army Regulations, 1913, the following specifications are hereby published for the guidance of all concerned in the inspection and purchase of public animals for the military service:

GENERAL DESCRIPTION FOR HORSES.

Head.—Small and well set on neck; with ears small, thin, neat, and erect; forehead broad and full; eyes large, prominent, and mild, with well-developed brow and fine eyelid; vision perfect in every respect; muzzle small and fine; mouth deep; lips thin and firmly compressed; nostrils large and fine; and branches of underjaw (adjoining neck) wide apart.

Neck.—Light, moderately long, and tapering toward the head, with crest firm and longer than underside; mane and forelock fine and intact.

Withers.—Elevated, not unduly fine, well developed and muscled.

Shoulders.—Long, oblique, and well muscled.

Chest.—Full, very deep, moderately broad, and plump in front.

Forelegs.—Vertical as viewed from front and side and properly placed; with elbow large, long, prominent, and clear of chest; forearm large at the elbow, long, and heavily muscled.

Knees.—Neatly outlined, large, prominent, wide in front, well situated, and well directed.

Back.—Short, straight, and well muscled.

Loins.—Broad, straight, very short, and muscular.

Barrel.—Large, increasing in size toward flanks, with ribs well arched and definitely separated.

Hind quarters.—Wide, thick, very long, full, heavily muscled, rounded externally, and well directed.

Stifle.—Well defined, prominent, and well supported by muscles of that region.

Tail.—Fine and intact; well carried and firm.

Hocks.—Neatly outlined, lean, large, wide from front to rear, well situated, and well directed.

Limbs.—From knees and hocks downward vertical, short, flat, wide laterally, with tendons and ligaments standing well out from bone and distinctly defined.

Pasterns.—Strong, medium length, not too oblique, and well directed.

Feet.—Medium size, circular in shape, sound; with horn smooth and of fine texture; sole moderately concave, and frog well developed, sound, firm, large, elastic, and healthy.

Each horse will be subjected to a rigid inspection and any animal that does not meet with the above requirements should be rejected. No white or gray horses will be accepted.

SPECIAL DESCRIPTION FOR HORSES.

(a) *Mature cavalry horses and saddle horses for mountain artillery, Signal Corps, Engineer Corps, infantry and other purposes.*—The mature horse must be sound, well bred, of a superior class, and have quality; gentle and of a kind disposition; well broken to the saddle, with light and elastic mouth, easy gaits, and free and prompt action at the walk, trot, and gallop; free from vicious habits, without material blemish or defect.

A gelding of specified color, in good condition; from 5 to 8 years old at time of purchase; weighing from 950 to 1,200 pounds, depending on height, which should be from 15 to 16 hands, and otherwise to conform to general description of horses.

(b) *Specifications for mounts for use in the Panama Canal Zone.*—A gelding or stallion of specified color, in good condition; from 4 to 8 years old at time of purchase; weighing from 800 to 950 pounds, depending on height, which should be from 14 to 15 hands, and otherwise to conform to general description for horses.

Stallions will be purchased only when exceptionally fine individuals, and then only by special authority.

(c) *Artillery horses for light and horse batteries.*—The artillery horse for light and horse batteries must be sound, well bred, of a superior class, and have quality; of a kind disposition, well broken to harness, and gentle under the saddle, with easy mouth and gaits, and free and prompt action at the walk, trot, and gallop; free from vicious habits; without material blemish or defect.

A gelding of special color, in good condition, from 5 to 8 years old at time of purchase; height from 15½ to 16 hands; weight from 1,150 to 1,300 pounds, depending on height, and otherwise to conform to general description for horses, except that the neck and shoulders of the artillery horse should be somewhat more heavily muscled than the cavalry horse, and shoulders so formed as to properly support the collar.

Horses otherwise satisfactory which fall short of or exceed these limits of weight by not more than 50 pounds, due to temporary conditions, may be accepted.

The artillery horse for light and horse batteries is required for quick draft purposes, and should be heavy enough to move the carriage ordinarily by weight thrown into the collar rather than by muscular exertion. Long-legged, loose-jointed, long-bodied, narrow-chested, coarse, and cold-blooded horses, as well as those which are restive, vicious, or too free in harness, or which do not upon rigid inspection meet the above requirements in every respect, will be rejected.

(d) *Artillery horses for siege batteries.*—A gelding conforming to the above specifications for horses for light and horse batteries, except that the animal should be from 16 to 17 hands high and weigh from 1,400 to 1,700 pounds, depending on height.

A smart, active, heavy draft horse, with plenty of bone and substance and enough quality to insure staying power in fairly fast work, is required for this service.

(e) *Medium draft horses.*—The medium draft horse must be sound, well bred, and of a superior class; gentle and of a kind disposition, thoroughly broken to harness, with easy mouth, and free, prompt, straight, and regular action at the walk and trot; free from vicious habits, without material blemish or defect, and otherwise to conform to the general description for horses, except neck and shoulders, which should conform to specifications for artillery horses.

A gelding of uniform and hardy color, in good condition; from 5 to 8 years old at time of purchase; weighing from 1,200 to 1,400 pounds, depending on height, which should be from 15½ to 16½ hands.

(f) *Light draft horses.*—The light draft horse must be sound, well bred, of a superior class, and have quality; of a kind disposition; thoroughly broken to harness; with easy mouth, and free, prompt, straight, and true action at the walk and trot; free from vicious habits; without material blemish or defect; and otherwise to conform to the general description for horses, except neck and shoulders, which should conform to specifications for artillery horses.

A gelding of uniform and hardy color, in good condition; from 5 to 8 years old at time of purchase, weighing from 1,100 to 1,250 pounds, depending on height, which should be from 15½ to 16½ hands.

(g) *Young horses for cavalry, artillery, and other purposes.*—The young horse must be sound, well bred, of a superior class, and have quality; gentle, free from vicious habits, and of a kind disposition, broken to halter, with free and prompt action at the walk, trot, and gallop; without material blemish or defect, and otherwise to conform to general description for horses, and also to the following special requirements:

A gelding of specified color in good health and fair condition.

Two-year-olds.—Minimum height, 14½ hands; minimum weight, in flesh, 750 pounds.

No two-year-olds will be purchased except when specially authorized.

Three-year-olds.—Minimum height, 15 hands; minimum weight, in flesh, 900 pounds.

Four-year-olds.—Minimum height, 15 hands; minimum weight, 950 pounds. Weight depending upon height.

MARES.

Mares will be purchased only when exceptionally fine individuals, and then only by special authority, but neither young nor mature mares will be purchased for the classes of horses described under (a) and (c).

SPECIFICATIONS FOR DRAFT MULES.

The draft mule must be sound, well bred, and of a superior class; of a kind disposition, free from vicious habits, gentle, and well broken to harness, with free and springy action at the walk and trot; without material blemish or defect, and otherwise to conform to the following description:

A mare or gelding of uniform and hardy color, in good condition; from 3 to 8 years old; weight and height to be as follows:

Three-year-old mules will be purchased only when exceptionally fine individuals. Wheel mules to weigh from 1,150 to 1,250 pounds, depending on height, which should be from 15½ to 16½ hands high.

Lead mules to weigh from 1,000 to 1,150 pounds, depending on height, which should be from 15 to 15½ hands high.

Head.—Well formed and of medium size, with ears long, tapering, and erect; forehead broad and full; eyes large, clear, prominent, and mild, with well-developed brow and fine eyelid; vision perfect in every respect; teeth sound and meeting vertically; tongue free from blemishes; muzzle well rounded and firm, with large nostrils.

Neck.—Medium length and smoothly joined to the shoulder and withers, with crest firm, full, and inclined to arch.

Shoulders.—Long, oblique, well and smoothly muscled, and so formed as to provide proper support for the collar.

Chest.—High, wide, very deep and full.

Back.—Short, straight, well and smoothly muscled.

Loins.—Broad, straight, very short and muscular.

Barrel.—Large, with ribs well arched and definitely separated from each other.

Fore legs.—Vertical from both front and side view and properly placed; with elbow large, long, and clear of chest; forearm large, very long, heavily muscled, and vertical.

Knees.—Large, wide in front, well placed, and free from blemishes.

Hind quarters.—Wide, thick, very long, full, heavily muscled, rounded externally, and well directed.

Hocks.—Neatly outlined, lean, free from puffs, large, wide from front to rear, and well directed. Gaskins well developed.

Limbs.—From knees and hocks downward vertical, short, flat, wide laterally, with tendons and ligaments standing well out from bone and distinctly defined.

Pasterns.—Strong, medium length, not too oblique, and well directed.

Feet.—Medium size and round; with horn smooth and of fine texture; frog well developed, elastic, and healthy.

Each mule will be subjected to a rigid inspection, and any animal that does not meet the above requirements should be rejected.

SPECIFICATIONS FOR PACK AND RIDING MULES.

Pack and riding mules will conform to specifications for draft mules, except as follows: Height, from 14½ to 15½ hands; weight, from 950 to 1,150 pounds. Of stocky build; neck stocky, broad, and strong; back short and straight, showing strength of loins; barrel very large and deep, indicating a good feeder; dock low and stiff; pasterns short, strong, and not too oblique.

SPECIFICATIONS FOR PACK AND RIDING MULES FOR USE IN THE PANAMA CANAL ZONE.

Pack and riding mules for use in the Panama Canal Zone will conform to specifications for draft mules, except as follows: Height, from 13 to 14 hands; weight, from 700 to 850 pounds. Of stocky build; neck stocky, broad, and strong; back short and straight, showing strength of loins; barrel large and deep, indicating a good feeder; dock low and stiff; pasterns short, strong, and not too oblique.

J. B. ALESHIRE,
Quartermaster General, U. S. Army.

Approved:

By order of the Secretary of War.

W. M. WRIGHT, *Adjutant General.*

JANUARY 25, 1916.

Mr. GARRETT. How long would it take the average intelligent farmer boy or man between the ages of 21 and 31 years now in the service, to learn those specifications so that he would be able to buy horses suitable for the Army? How long would you say it would take him to be able to do that?

Col. BRISTOL. A very small percentage are ever successful as horse buyers for the Army.

Mr. GARRETT. Why?

Col. BRISTOL. Some men can not become horsemen. We find often men who have been accustomed to animals all of their lives, and who are good riders and good trainers and good handlers of animals, can not buy animals. I have seen men try to buy horses, and they will reject them, and the contractor will bring the rejects back within a few minutes and the buyer does not recognize the horses he has seen.

Then again, we have an instance of this kind. I remember a case that was brought up the other day of a civilian who is well known in the country as a buyer in the West, and the story was told on him that they could not possibly bring a horse back after he had once seen it. He would say, "I told you the other day I did not care about that animal," and he will pass it along. He is an exception.

Mr. GARRETT. That is an exceptional case?

Col. BRISTOL. Yes, sir.

Mr. GARRETT. Would that not also be true of almost any officer in the Army to-day? If you were to pass before him a thousand men in uniform, and call them by name, and then bring them back the next day, he could not recognize one-tenth of them.

Col. BRISTOL. No; he could not, of course.

Mr. GARRETT. Why should a man be expected in the Army to recognize a bay horse that was different from some other bay horse that he had brought before him a few hours before unless there was some specific mark on the horse?

Col. BRISTOL. I suppose no man can recognize every one, but some men will recognize a great many more than others.

Mr. GARRETT. That is the exception, rather than the rule. You require the Army horse which is used in the Cavalry to be so many inches high, approximately, and so many years old, and so many years young. They are to be without spavins or splints, or anything of that kind; is that true?

Col. BRISTOL. Yes, sir.

Mr. GARRETT. In other words, he has to have clean joints, and he has to be a well-rounded horse?

Col. BRISTOL. Yes, sir.

Mr. GARRETT. Does not the average farmer boy know that kind of a horse the minute he lays his eyes on him?

Col. WILLIAMS. No, sir; not to my mind, anyway.

Mr. GARRETT. What is there about it that a man who is born and raised among horses, and who can tell how old a horse is by looking into his mouth, until he is 10 years old—what is there to prevent him from going out and selecting a horse when you hand him the specifications and tell him not to get any other kind of a horse than that described in the specifications? Why can he not do that?

Col. BRISTOL. In the first place, we can not find the specification horse in the country; that is, the actual specification horse, and so we have to accept those that come nearest to the specifications. In

other words, we do not want a buyer buying those that are too far away from the specifications.

There are certain well-known parts of a horse that we object to, and experience has shown that we should get away from them. Those things the average farmer does not understand. After being in the service a while, perhaps he does know more about it.

For instance, we object to a short back, and while the animal may be perfectly clean, and have no spavins or splints, or anything of that kind, no defects, yet that horse is unsuitable for Army purposes.

Mr. GARRETT. He is coupled too short?

Col. BRISTOL. He is coupled too long, generally, instead of having a short back. We try to get as near to the specifications as we can, but we do not expect to get a real specification horse, naturally. There are none.

Mr. GARRETT. It is a question of the exercise of judgment and discretion, when the specifications would not be followed?

Col. BRISTOL. Yes, sir. We must get as near as we can to the specifications.

Mr. GARRETT. According to these figures, the Government is paying, whether it be profit or what not, in buying these 500,000 horses, it is paying \$10,000,000 to the contractors to select them for the Government. Have you ever considered at this time the question of having an officers' training camp to train men in the selection and purchase of horses?

Col. BRISTOL. To a certain extent we did that at Atlanta this season. At each one of our purchasing zones we ordered certain reserve officers, who were supposedly horsemen, and also experienced Cavalry officers to go to this place and instruct these officers in the art of buying horses. I myself went to Front Royal, and there were several experienced civilians who had been commissioned in the Reserve Corps for that purpose. Very few of those officers are now buying horses.

Mr. GARRETT. Do you not think the Government would make a considerable saving by having a training school of that kind, and putting those men out over the country to gather up these horses you want, just as the Army puts men out in the different cities to recruit soldiers, and that purchasing officer could have his zone and invite all the farmers in that part of the country to bring their horses in on a certain day for inspection and examination, and have that man an officer of the Army and not a contractor, a man sworn to represent the Government of the United States, with a uniform on, who has been commissioned, and let him buy up the horses and grade them for the Army. Let him be there and let him tell the producer what is the standard price the Government will pay for all horses the producers have that meet the requirements of the Government?

Col. BRISTOL. That could be done, provided we could get enough experienced officers for that purpose. We would have to have a very large number to cover the country the way the contractors have the country covered now by their buyers.

Mr. GARRETT. How many would it require to cover the country with officers to get these horses as you are going to want them?

Col. WILLIAMS. To get them all together I should say it would require five or six thousand officers.

Mr. GARRETT. How many contractors have you buying for the Government now?

Col. WILLIAMS. Contractors?

Mr. GARRETT. Yes.

Col. WILLIAMS. I do not know exactly, but some of them have had 35 or 40 buyers of their own. Some of them have an organization of two or three hundred men. We would have to practically duplicate that organization in order to get the animals.

Mr. GARRETT. What kind of men are these men that are out buying these horses for the contractors?

Col. BRISTOL. They are their own buyers. They send them out with a blank check book, and if they average three horses a day they consider themselves very fortunate.

Mr. GARRETT. Do you not think that those men that are buying horses for the contractors would prefer to have a uniform on and do the buying for the Government?

Col. BRISTOL. I would prefer not to have them.

Mr. GARRETT. As a matter of fact, the contractor is not a horseman at all, as a rule. Most of them are men that simply take a gamble on gathering up the horses and selling them to the Government and they send out these buyers to gather up the horses at the various places, but the contractor himself is not, in most cases, a horseman or a good judge of horses.

Col. BRISTOL. In most cases there is one horseman in the firm and the other men furnish the money.

Mr. GARRETT. And they go out and pick up these men to tell them what kind of horses they want. They rely on the judgment of subordinates to get the horses?

Col. BRISTOL. Yes, sir.

Mr. GARRETT. What percentage of horses are rejected?

Col. BRISTOL. A fair percentage would be from 20 to 30.

Mr. GARRETT. Then these men who are gathered up to go out and select the horses are from 70 to 80 per cent correct in their judgment?

Col. BRISTOL. Yes, sir.

Mr. GARRETT. Could not they render that same service for the United States Government, and render it cheaper to the Government than to the contractors?

Col. BRISTOL. I do not think so. I think it would be a great mistake to turn those men loose as Government buyers.

Mr. GARRETT. Why do you think it would be a mistake? We turn all of our officers of the Army loose here for the Government, to buy different things for the Government; why not horses?

Col. BRISTOL. It took us about 12 months to decide on these 50 men we have in this work. It took us that long to decide that these men were capable of doing it, and that was because of the high standard of the specifications, and the knowledge of horses necessary, and I think it would be a great pity to turn loose a large number of those men, or even any of those men who are now buying for the dealers, and to commission them.

Mr. GARRETT. I do not mean to commission those men who are buying for the dealers particularly, but I mean men of their capacity, who can judge horses. You would not have to take those men.

Col. BRISTOL. I do not think the Government would get anywhere near as good a class of horses.

Mr. ANTHONY. Colonel, the only criticism I can think of so far as the present method of buying horses is concerned is that the grower of the horses, the farmer, is too far removed from the Government purchasing agent. It strikes me it would be more satisfactory, at least to the grower of horses, if you could adopt a modification of Mr. Garrett's idea, and have your representative visit, say the county seats of the different counties in the territory contiguous to the military posts on certain days and let the growers know that he is going to be there, and on those days the farmers would respond, if you asked them to bring their horses that they think are available for Government use, ask them to bring those horses to a certain point on a certain day. I believe they would be only too glad to bring them there, and it would give you an opportunity to get the cream of the horses of each particular county.

As it is now the farmer has to deal with the buyers, who have to go out and locate the horses, or the farmers if they want to sell their horses have to try to locate the horse buyer and frequently they can not get in touch with him, and the farmer considers that there is too much of a gap between himself and the Government in the sale of the horses. Why could you not require local posts or local organizations to purchase their own horses? There are men with the regimental organizations who are responsible enough to do that work.

Col. BRISTOL. You mean at each camp or cantonment?

Mr. ANTHONY. Yes.

Col. BRISTOL. There are a great many in places where they can not get those animals. Certain classes of animals come from certain districts, and if you had that plan in operation, you would not know how many horses you would get. The farmers may bring them in and they may not. When you have a proposition to get 250,000 in about 10 weeks, you have got to be sure of getting them. We could not rely on that kind of a plan and run the risk of not getting the number we wanted when we wanted them.

Mr. ANTHONY. Under the present system of purchasing these animals, the farmer is absolutely at the mercy of the horse speculator. He can not deal with the Government direct, and he feels when he has a horse suitable for military purposes he has to allow a speculator to make a profit on it, that is probably greater than it would be if he was dealing direct with the Government.

Col. BRISTOL. In order to get a large percentage of our horses direct from the farmers, you would have to duplicate the dealers' organizations; otherwise you can not get them.

Mr. ANTHONY. You have a quartermaster's organization at all these posts. Certainly those quartermaster officers are capable of doing that, and if they are not, there are men there who know how to buy horses, and with that organization it seems to me that it would be possible to buy horses through the local representatives of your department.

Col. BRISTOL. Suppose we wanted to buy horses at Camp Upton, on Long Island, through the local quartermaster, how would you get them?

Mr. ANTHONY. I would not consider that a proper place for the Government to buy horses. But take Camp Funston, or Fort Riley. They are in the center of horse-growing activities, and there must be

plenty of men there with a good knowledge of purchasing horses, who could purchase them if they had the authority. Is there anyone there with authority to purchase horses?

Col. BRISTOL. No; there is not.

Mr. ANTHONY. Would it not be proper to authorize those men to buy for the Government?

Col. BRISTOL. No, I think it would be a pity, because you would still be up against the proposition of not knowing how you were to get your horses, and how many you were going to have. Under that plan, it would be perfectly indefinite.

Mr. ANTHONY. But would it cost the Government any great amount to purchase animals in that territory? Say the Government wanted a thousand animals near Fort Riley. It would cost a few dollars to publish a notice stating that fact in the newspapers, and it would cost a few dollars more to have a representative of the Government there to inspect the horses when they were brought in. Have you ever tried that method?

Col. BRISTOL. Time after time.

Mr. ANTHONY. With any success?

Col. BRISTOL. Practically none.

Mr. ANTHONY. I am a stock raiser myself. I have horses and mules I would like to sell to the Government, if I could get in touch with the Government purchasing agents, but the only people I can reach are the horse buyers that come through the country, and we are afraid to sell to them because we fear that we will not get the value of the animals, but if there was a representative of your department there we would be only too glad to sell them.

Col. BRISTOL. If you will furnish a carload lot and get in touch with the purchasing officer, he will send an inspector there.

Mr. ANTHONY. It is impossible for a farmer to do that.

Col. BRISTOL. Can the Government afford to do the other thing?

Mr. ANTHONY. Unquestionably, in my opinion, it can.

Col. BRISTOL. I do not agree with you on that.

Gen. SHARPE. In 1916, we had a number of horses in the New England States and they were shipped to the South, and I think you heard of the condition of the horses which arrived down there.

Mr. ANTHONY. I did not. I would like to ask you one other question.

Are you buying anything but seasoned horses now? Are you buying any young animals for training?

Col. BRISTOL. We were just authorized to purchase a few in Montana, and they are to be trained at Fort Keogh.

Mr. ANTHONY. Do you find it is paying the Government to purchase horses of tender age?

Col. BRISTOL. There is a difference of opinion in regard to that. Some officers prefer the animals from the remount stations that have been bought when they were young and taken care of there, while other officers do not.

Gen. SHARPE. We feel a sort of obligation to buy some of those young animals that have been bred by the stallions we have around in the country among the farmers. We have felt that we were under a sort of an agreement to buy those provided the farmers would breed from those stallions.

Mr. ANTHONY. But for purposes of war you are buying only mature animals?

Gen. SHARPE. Yes, sir.

Mr. GORDON. If I understood you correctly, in fixing the price you pay for these horses you are governed by the law of supply and demand.

Col. WILLIAMS. We took what we considered to be a fair price for the Cavalry type of animal and we said we would not consider giving a higher price at the time.

Mr. GORDON. And that price is determined by the law of supply and demand?

Col. WILLIAMS. Exactly.

Mr. GORDON. You do not feel the Government would be justified in paying more for horses than other people?

Col. WILLIAMS. I think the Government would be unjustified in paying a higher price for Cavalry horses than they do pay. I think they ought to get a fair type of horse for that price.

Mr. GORDON. If this organization controlled by the horse buyers, which you deal with direct were to be taken over by the Government, the Government would have on its hands from 20 to 30 per cent of the horses that had been bought, and which could not be used in the service.

Col. WILLIAMS. Absolutely.

Mr. GORDON. And the losses on those horses would probably amount to as much as you pay these men in commission? The Government could not use them at all?

Col. WILLIAMS. No. The idea is to lower the percentage of rejects as much as you can. Even when you use the services of the horsemen you can get, you are going to have some unsuitable animals.

Mr. GORDON. These men to whom you pay commissions are required to maintain stables in which to keep the horses until the Government can send a man there to inspect them, in order to determine whether it will take them or not, and they have left on their hands between 20 and 30 per cent of rejects, which they are required to dispose of upon the best terms they are able to get?

Col. WILLIAMS. Exactly. They have to pay the expenses of their buyers and the expense of maintaining their organization.

Mr. MCKENZIE. Is it not a fact that there is a good deal of sentiment among a certain class of people against selling their horses for war purposes?

Col. WILLIAMS. There has been in some cases.

Mr. MCKENZIE. Would not that be obviated by your system of purchasing through contractors? I am asking that question as a response to inquiries propounded to you by Mr. Anthony.

Suppose you would have a man go into the county seat of his county, or into the county seat of the county in which I live, and advertise that he was buying horses for the war against Germany. Do you believe that the farmers, as a rule, would rush in to sell these horses, knowing they were going directly into that war, as readily as they would if a contractor were buying the horses unknown to them?

Col. WILLIAMS. I do not think the farmer will go to the county seat and sell his horses as readily as if you go to the farmer. I do not know how much that sentiment would have to do with it.

Mr. FIELDS. In that connection, is it not a fact that the local dealer knows the farmer, knows how to deal with him, knows how to approach him, and would come nearer to buying his horses than a man in uniform who is there representing the United States Government?

Col. WILLIAMS. Of course he will; there is no question about that.

Mr. FIELDS. I am a horse raiser, like Mr. Anthony, and I have sold horses ever since I was old enough. I do not understand how the Government could buy the horses direct and get as many as they want.

Col. WILLIAMS. They can not get them in the proper length of time.

Mr. FIELDS. Of course, in the buying of horses, it is a question of jockeying and barter, and a man often sells the horse for \$25 or \$50 less than he first asked for it. Perhaps he has a pair of horses. If he sells one of them he has got to sell both of them. One is an Army horse and the other is not. The dealer is a man who deals in horses. He can buy both of them, because he can place one of them with the Government, and he knows where he can place the other one somewhere else.

Is it not like all other business? A manufacturer of goods does not sell them direct to the consumer. The consumer would not get the goods if he depended upon getting them from the manufacturer. The manufacturer does not understand dealing directly with the consumer. It takes the middleman to deal with the consumer. I know there is a good deal of prejudice against the middleman, but I doubt if the business of the country could be handled without the middleman, because he is the man who goes between the producer and the consumer and adjusts the differences of opinion and keeps business going.

Mr. MCKENZIE. If I understand Mr. Anthony and Mr. Garrett correctly, the point they are emphasizing is the protection of the farmer. Do you think the farmer would have more nerve to ask one of the local buyers a fair price for his horse than he would a man in uniform?

Mr. FIELDS. I think he would ask the man in uniform a considerably higher price than he would the local dealer. I think the man in uniform could not handle him like the local dealer. If he asked \$175 for a \$150 horse, the deal would stop there, and the Government would not get the horse, whereas the local dealer would buy the horse eventually for \$150.

Mr. KAHN. I would like to ask this question, if you please. The Government, I take it from what you have stated, is about the largest purchaser of animals that there is in this country?

Col. WILLIAMS. Yes, sir.

Mr. KAHN. By reason of that fact, do not the Government purchases help to increase the general price of the draft animals and animals that would be used in the military establishment?

Col. WILLIAMS. Yes, sir.

Mr. KAHN. If the Government bought no horses at all, the price that the farmer would receive for his animals would materially decrease; do you not think so?

Col. WILLIAMS. I do not think that for the Cavalry horse they would get anything like the price we are paying them.

Mr. KAHN. I take it the price is even higher now than it would have been if it had not been for the large purchases of draft animals and other animals that were made in this country by the allied nations.

Col. WILLIAMS. Yes, sir.

Mr. KAHN. Can you give this committee an idea of how many mules and horses were purchased by the allied nations before this country got into the war; how many of those animals were taken out of the country?

Gen. SHARPE. We can get those figures.

Mr. GARRETT. And what they paid for them?

Mr. KAHN. And the character of horses they were?

Gen. SHARPE. Yes, sir; we can furnish that information.

Mr. KAHN. That great number of horses and mules taken from the supply of the country also added materially to the present cost of the animals, did it not?

Col. WILLIAMS. Yes; there is no question about that.

Mr. ANTHONY. Is it not a fact that the Government price is a fixed price?

Col. WILLIAMS. No, sir.

Mr. ANTHONY. Do you have a flexible scale of prices?

Col. WILLIAMS. Yes, sir; we have a maximum price, and we buy for anything under that that we can get them for.

Mr. ANTHONY. What difference is there between the maximum and the minimum prices?

Col. WILLIAMS. We bought some horses as low as \$137 for the Cavalry.

Mr. ANTHONY. Were they horses that came up fully to the Army specifications?

Col. WILLIAMS. Absolutely.

Mr. ANTHONY. Does the price vary in different parts of the country?

Col. WILLIAMS. That is the maximum price in all parts of the country.

Mr. ANTHONY. What did you say is the difference between the maximum and the minimum?

Col. WILLIAMS. I say we bought some—I think it was only one lot—as low as \$137.50

Mr. ANTHONY. When was that?

Col. WILLIAMS. That was out West. It was in September or October.

Mr. ANTHONY. What did you pay for the small horses you bought on the border during the border troubles—when you bought a great many undersized animals?

Col. BRISTOL. We bought some as low as \$107. I remember one contract at \$107, and then there was another at \$120.

Mr. ANTHONY. When these buyers go out and buy Government horses, do they have any assurance from you as to what price you will pay them for the horses when they are brought in?

Col. BRISTOL. They usually do not buy the horses until they have a contract with the Government to supply a certain number of animals, and we fix the price according to the specifications. The specifications for the small horses are very different from the specifications for the regular Cavalry horses.

Mr. ANTHONY. So the buyer purchases them as cheaply as he can from the farmer?

Col. BRISTOL. Oh, yes.

Mr. ANTHONY. And he has the benefit of all the profit he can make in between you and the farmer?

Col. BRISTOL. Yes, sir; we do not know what he pays for the animals.

Mr. ANTHONY. You do not know how much he pays for the animals?

Col. BRISTOL. No, sir.

Mr. GARRETT. What are the average prices that prevail now for your horses for the Cavalry?

Col. WILLIAMS. Very close to the maximum.

Mr. GARRETT. Very close to the maximum? What was the maximum?

Col. WILLIAMS. It was \$165.

Col. BRISTOL. The contractor is chosen after numerous bids are put in by different contractors, and as a general rule the lowest bid is accepted, and that establishes the price paid that contractor for his contract.

Mr. GARRETT. How long has \$165 been the maximum price for a horse?

Col. WILLIAMS. That price has not been announced as a maximum price. That is a confidential price.

Mr. GARRETT. What do you mean by a confidential price?

Col. WILLIAMS. I mean we have not told the dealers that was the maximum price. We have simply asked them to submit bids.

Mr. GARRETT. What has been the maximum price before this confidential price of \$165?

Col. BRISTOL. This was a new idea. In 1916 we let contracts at various prices. Some would be higher than others. In some parts of the country we would let a contract at a price which would be higher than the price in another part of the country.

Mr. GARRETT. What has been the average price during the last five years?

Col. BRISTOL. I should say it was less than \$165. I am not quite certain about that. About two years ago the average price was about \$147.

Mr. GARRETT. A little less than \$150?

Col. BRISTOL. Yes, sir.

Mr. GARRETT. In fixing this confidential price, do you take into consideration the cost of the production of a horse of that character to the farmer?

Col. WILLIAMS. We took into consideration chiefly the prices that animals had sold at for war purposes since the beginning of the war.

Mr. GARRETT. In all of the other supplies that the Quartermaster Department is using, that you buy from contractors, it has been testified here you take into consideration the cost of production, that you figure that out and allow the men approximately about 10 per cent on these huge contracts that they get. What I want to get at is what figures have you made on the cost of the production of a horse?

Col. BRISTOL. I do not believe it would be possible to estimate the cost of producing a horse that we would take into the service accu-

rately enough to base our estimates on that calculation. The horse has been used by the owner, it has been used as a work horse before we got it, and while the cost of his keep would be greater now, the price of his labor or work would also be greater. That is to say, if it costs more to feed the horse, the work that may be done by the horse would be worth more.

Mr. GARRETT. As a matter of fact, it costs more than twice as much to feed a horse now than it did two years ago; is not that your experience?

Col. BRISTOL. Not twice as much.

Mr. GARRETT. How much does it lack of being twice as much? Two years ago, what were corn and oats selling for?

Col. BRISTOL. I should say it would cost about 50 per cent more.

Mr. OLNEY. As a matter of fact, you are unable to secure horses in New England for Camp Devens or Camp Upton? You do not secure horses there for those camps, but you have to go to the Middle West and the far West?

Col. BRISTOL. The country is divided up into purchasing zones, and of course New England is a part of the eastern zone, with headquarters at Front Royal. Our contracts are let throughout the East for the eastern zone, and our purchasing boards move around through the eastern zone to every place at which they can get animals.

Mr. OLNEY. Do you get horses from Canada?

Col. BRISTOL. No, sir.

Mr. GARRETT. Somebody spoke of calling for a fixed number of horses in a certain time. Is there anything to keep the Government from going out and commandeering the horses? If you need 250,000 horses, have you not the power, under the authority granted to the President, to go out and commandeer all the horses you need, and take charge of them just as easily as the Government can take charge of the railroads?

Col. WILLIAMS. How are you going to get suitable animals?

Mr. GARRETT. You can order people to bring their horses in and let you select them, or you can send men through the country to take them, can you not?

The CHAIRMAN. Where is the authority for that? Section 120 of the national defense act only applies to manufacturers.

Mr. GARRETT. Has anybody ever questioned the power of the Government to go out and buy horses?

Mr. FIELDS. Would it not be better to let the dealer go to the farmer than to send a Government agent to some farmer who does not want to part with his horses?

The CHAIRMAN. This method of purchasing horses is a matter of regulation and not a matter of statute?

Col. BRISTOL. It is a matter of regulation.

The CHAIRMAN. I think that is a matter we might take up as a question of policy when we come to pass on this bill. We know what the facts are now.

Gen. SHARPE. I would like to state in reference to the matter of buying articles, as it was explained, when you buy articles which are manufactured, such as canned goods products, and articles of that kind, the price is fixed on them, but we always buy whenever we can below that price. Anyone can come in who wants to deliver anything and sell it to us lower than the price which has been fixed,

which the packer is obliged to furnish at that price. If anybody wants to furnish those articles at less than the price we fix, we take them.

Mr. GARRETT. That would be the same in reference to horses?

Gen. SHARPE. That is another section, 120. We have not authority of law for the other.

Mr. KAHN. Some years ago this committee reported legislation, which I believe the Congress adopted, and which was approved, to the effect that the Government, at the remount stations should have a certain number of stallions to serve mares. Do you know, Colonel, whether that law was ever put into effect, and does the Government now own stallions to serve mares?

Col. BRISTOL. Yes, sir; the Agricultural Department have some stallions at Front Royal.

Mr. KAHN. That is at an Army depot?

Col. BRISTOL. At the remount station. They are in the town of Front Royal, near the remount station there. Those stallions are used during the season, and the offspring, when they are 3 years old, are bought, if the owner cares to part with them, at \$150 each, and in that way we encourage the breeding of animals that are very useful to us. But as a general rule, unfortunately, a great many of them have been not altogether too satisfactory. The best of them, perhaps, we do not get.

Mr. KAHN. The owner will not take——

Col. BRISTOL (interposing). The owner prefers to keep them; the others, of course, we get. In order to encourage them, we take a lot we would not buy if it were not for that fact.

Gen. SHARPE. The owner is allowed to keep the horse if he pays the service price.

Mr. GORDON. Does he pay anything for the service of the stallion?

Col. BRISTOL. He pays \$25 if he keeps the horse.

Mr. KAHN. But if he sells the horse to the Government that is remitted to him? Do you think the system is proving sufficiently successful to warrant the Government going into it still further?

Col. BRISTOL. I think it should be encouraged, whether it has been successful or not. I do not think it would be advisable to give up the idea. I think our remount system would be improved, provided we would have enough stallions at each one of the remount stations to breed satisfactory animals, because now at the present time, what we consider a suitable Cavalry horse is very scarce. They are very scarce throughout the country, everywhere.

Mr. KAHN. As I recall, quite a number of gentlemen who were interested in the matter donated some blooded stallions for the purpose of breeding.

Col. BRISTOL. Yes, sir; they did.

Mr. KAHN. Has the Government bought any stallions?

Col. BRISTOL. I am not certain about that.

Gen. SHARPE. I think one of the things most needed is the proper selection of mares which are to be bred.

Mr. KAHN. Has the department made any recommendation along that line?

Gen. SHARPE. No, sir; that is in control of the farmers.

Mr. KAHN. It is not in your department?

Gen. SHARPE. No, sir. While we are on this matter, I want to refer to one of the questions you were asking about the number of

horses shipped out of the country. It has become necessary to try to curtail the number of shipments of brood mares out of the country, because we will be in a serious condition if the shipment of brood mares is continued, and we will not have animals to produce the horses that we require.

Mr. KAHN. So far as your purchasing is concerned, do you try to avoid, as far as you can, the purchase of mares?

Col. BRISTOL. Yes, sir, and we have tried to get the British and the French also to reduce, as far as possible, the number of mares which they are buying.

Mr. KAHN. Have you met with any success in that direction?

Col. BRISTOL. Yes, sir, some success.

Mr. KAHN. Are they still buying draft animals over here in any quantity?

Gen. SHARPE. I think they are buying both.

Col. BRISTOL. The British are buying here. We have an agreement with them that they will not pay a higher price than we pay, and that they will not buy mares any more than we do.

Mr. KAHN. That agreement is working satisfactorily?

Col. BRISTOL. Quite satisfactorily.

Mr. SHALLENBERGER. You said, as I understood you, that you are operating now in conjunction with the allies to fix the price upon the horses; if we were not in the market, the price would probably be lower?

Col. BRISTOL. Yes, sir.

Mr. SHALLENBERGER. Therefore it is essential that you fix a fair price at which these horses can be purchased; does that not follow? Is not the Government bound to fix a price which is fair to the producer, and which will result in the production which the country will need in the future?

Col. BRISTOL. Yes, sir, I think so. I mean to say that the price of the horse would be lower, and that the farmer would get even less than he gets now.

Mr. SHALLENBERGER. There are three things that I think are most essential for the people of the country, especially at this time, which the farmer produces, one is wheat, the other is hogs, and the last is horses. We fixed the price for wheat arbitrarily. Last year the production of wheat was less than it was before. This year it was less again, and we know now that under the price the Government has fixed for wheat, the production of wheat is going down, because in my opinion the Government has fixed a price that the farmer will not raise the wheat for.

We also know that there is going to be a decrease in the number of hogs, instead of an increase, because the farmer can not produce them at the price he gets, since it does not cover his cost of production. We know there is not going to be an increase in the production of hogs or wheat.

Is it not likely that because of the fact that the Government has fixed a price for horses, at which the farmer can not produce them and sell them at a profit, that before the war is over you are not going to get the horses that the Government needs?

Col. BRISTOL. The contractors with whom I have talked all agree that there are plenty of horses.

Mr. SHALLENBERGER. Will the farmer go on to produce horses, under the conditions that confront us now, and sell them at the price

you have fixed? Can he afford to do it? If he knows that if he keeps the horse until he is old enough for the Government to buy him, it is going to cost him so much more to raise the horse, do you think the farmer will go on and produce the number of horses that the Government ought to have?

Col. BRISTOL. I think he will, because there are other uses for the horse. There is no other use for the hog. The man who owns the horse works him on his farm, and still he has the horse available for sale, at a certain age.

Mr. SHALLENBERGER. I understood you to say you could not get the horses you need by the method of purchasing directly from the farmers. If you raised the prices of horses, as the price has been raised on everything else which the Quartermaster's Department buys, do you not think you would have the horses coming much faster than you have them now? If you doubled the price of the horses, and paid the farmer twice as much, do you think you could get them much faster? Does it not inevitably follow that if you raise the price you pay for a commodity you get the commodity more rapidly than otherwise, if there is a surplus?

Col. BRISTOL. I suppose that is true, but I think now the farmer is quite satisfied with the price he gets.

Mr. SHALLENBERGER. You think he will breed the horses at that price? That is not my experience in Nebraska. There the farmer is not breeding horses because he can make more money by feeding the stuff he might feed to the horses to the hogs and the cattle. The horses are the least profitable thing that he raises.

Col. BRISTOL. We find we can get them.

Mr. SHALLENBERGER. But it takes six years to grow the horses that you buy, and you have only been in the business buying horses about a year. If the farmer finds it is impossible to produce the horses, as it is in France and England now, you will not get the horses you need, will you?

Col. BRISTOL. If it keeps up long enough, I suppose we will get rid of all the horses.

Mr. SHALLENBERGER. If you buy horses from the farmers and pay them prices at which they lose money, will they not quit breeding them?

Col. BRISTOL. I think probably so, if they lose money.

Mr. KAHN. If the farmer does raise wheat at \$2 a bushel, which I take it to be a good price, because I remember when wheat was selling at 65 and 70 cents, what product is he going to grow on his land that will give him a greater profit?

Mr. SHALLENBERGER. He will grow corn right now.

Mr. GARRETT. At the time they fixed the price of wheat at \$2, it was \$3.25 in the market.

Mr. HULL. Did I understand you to say that the Government has fixed the price on hogs?

Mr. SHALLENBERGER. It has an agreed price, that they shall not go below \$15 at Chicago, and under that inspiration the farmers have not responded to it, notwithstanding the fact that a great appeal has been made to increase the production of hogs at least 15 per cent, but instead of having that increase, the figures now show that the number of hogs will not be increased, and that probably there will be less next year than the year preceding, because the prices of other things

are so high that the farmer will sell other things rather than produce hogs. If the price had been fixed at \$20 a hundred, the farmers would probably have increased the production.

The question is whether if we do not pay a profitable price for the horses we will not run out of horses. I do not think we are paying a price at which the farmers will produce the horses.

MR. GARRETT. I want to inquire about the zones you talked about. How many of the purchasing zones have you, and how large are they?

COL. BRISTOL. I can not give you that in detail just at this time.

MR. GARRETT. Can you put that in the hearings, the number of the purchasing zones, and their extent?

COL. WILLIAMS. Yes, sir.

MR. QUIN. Colonel, is there not a distinction between what Gov. Shallenberger has referred to in the matter of fixing the prices of wheat and hogs, and fixing the prices of horses? The Government has not fixed any price for horses, has it?

COL. BRISTOL. The Government has not fixed a price, except by the contracts.

MR. QUIN. There is no fixed price by law, nor by any administrator?

COL. BRISTOL. No, sir.

MR. QUIN. Or by any body connected with the Government?

COL. BRISTOL. No, sir; except the War Department.

MR. QUIN. Of course, the War Department fixes a maximum that it will pay for a certain type of horse. If the contractor or the farmer does not want to take that price, there is no way for the Government to force him to take it, is there?

COL. BRISTOL. No, sir. I might add that we started at that time with the idea of establishing a price of \$160. If we had found that the contractors would not buy for that price, of necessity we would have raised that price.

MR. QUIN. The truth of the matter is that the Government, buying all the horses, is letting them bring their value to the farmer. If the Government did not buy these 500,000 horses, there would be a surplus of horses in the market of the United States?

COL. BRISTOL. I would think so.

MR. QUIN. And the fact that the Government is the largest buyer of horses and has fixed a maximum price, gives the market to the farmers for all the surplus horses they produce?

COL. BRISTOL. I think so.

MR. QUIN. It seems to me that it is beneficial to the farmer and to the Government, as the purchaser of the farmer's horses, and if the farmer does not want to take that price for his horse, it is his business to sell it to some private customer.

COL. WILLIAMS. If he can get more for it.

MR. QUIN. I can not see how it would hurt any farmer.

MR. MORIN. I see in this item that the average price of the draft mule is \$210. Do the mules cost more than the horses?

COL. BRISTOL. We have a heavy draft horse that costs as much as the biggest mule. As a rule the mules cost more than the horses. The big heavy draft mule is beginning to be a very scarce animal.

Mr. MORIN. You are speaking of Cavalry horses?

Col. BRISTOL. More of the Cavalry horse.

Mr. DAVIDSON. I wanted to follow the subject to this extent, and ask you to what extent has the purchase of automobiles by the farmers affected the horse market, and the use of horses in farming?

Col. BRISTOL. I do not know. I have heard that in some localities they say the automobile is running the horse out; but in others it does not seem to have made much difference.

Col. WILLIAMS. It has made the light horse of less value to the farmer.

Mr. KAHN. In the West, where they used to farm very large areas with a horse and plow—they had probably ten horses attached to a big plow—they now plow those lands with tractors. You see the tractors coming along and doing all the plowing in those big areas. It has practically made the horse absolutely valueless in those neighborhoods. Has that not had something to do with the breeding of horses?

Col. WILLIAMS. I think it has.

Mr. HULL. I want to ask you this question: There can be no monopoly in the sale of these horses, can there, from the fact that you will do business with anyone who has 20 horses?

Col. BRISTOL. Yes, sir; a carload.

Mr. HULL. And the buyer can sell to you in that way, or the farmer, or any association of farmers?

Col. BRISTOL. Any person who cares to get together 20 animals.

Mr. HULL. What do you do in case a man notifies you that he has 20 horses and then you find he has only ten?

Col. BRISTOL. We, as a rule, can not buy less than a carload lot. If he makes an agreement to get 20 horses, he makes the same kind of an agreement as the man who agrees to get 5,000 horses; he agrees to get them together. That is our trouble in this method of purchasing. We go to a place and a farmer has said he would get together 20 horses, and he probably does have 20 horses, but when we get there there may be only 2 or 3 which are fit for our purposes.

Mr. HULL. Then you can not do business?

Col. BRISTOL. Then we can not do business.

Mr. HULL. You will give him a chance to deal with you, if he will bring in the horses?

Col. BRISTOL. Yes, sir.

Mr. GARRETT. Is it your understanding that there is a surplus of these animals in the United States now?

Col. BRISTOL. Not a surplus, but we seem to have plenty of horses; the mules are getting very scarce.

Mr. GARRETT. Is it not true that the standard of the Cavalry horse is not as high as it was 5 or 10 years ago, and you have not anything like the quality of horse that you had before; that is, so far as his appearance and qualities go?

Col. BRISTOL. I do not think they are as good now as they were five years ago.

(The details of the estimate are as follows:)

Horses for Cavalry, Artillery, and Engineers.

Deficiency act, June 15, 1917..... \$25,000,000
 Deficiency act, Oct. 6, 1917..... 40,000,000

Item H. C. A. & E.—269—Horses for remount.

[Estimate, fiscal year 1919, \$150,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$150,000.00	\$150,000.00	\$150,000.00
Appropriated, fiscal year 1918.....	105,000.00	105,000.00	105,000.00
Expended, fiscal year 1917.....	81,750.50	81,750.50	81,750.50

REMARKS.

United States.—The amount estimated for under this item is required for the purpose of purchasing approximately 1,000 young horses at \$150 each (\$150,000), which have been bred under agreement with the Department of Agriculture (copy herewith).

Farmers and breeders have bred these horses for the military service by utilizing their best mares and Government-owned stallions, and as these young horses are of high class and particularly suitable for military purposes, it is to the interests of the Government to purchase them. This action will encourage farmers and breeders to continue to breed horses suitable for the Army.

AGREEMENT.

This agreement, made and entered into , 191.., by and between , for and on behalf of the United States of America, party of the first part, and , of , State of , party of the second part:

Whereas, the parties hereto desire to breed horses suitable for the use of the United States Government, now this agreement witnesseth:

First. The party of the first part does hereby promise and agree as follows: To furnish the service of the stallion for the mare , of the party of the second part, during the season of 191.., and to repeat the service of the said stallion during the same breeding season in the event that the said mare fails to prove in foal after the first service.

Second. The party of the second part does hereby promise and agree as follows: In consideration of the service of said stallion, as hereinbefore provided, to grant, to the United States of America an option, in the event of an appropriation being made available for that purpose by Congress, to purchase, for the sum of \$....., the resulting foal at any time during the year the same is three years old, it being understood that a horse is 1 year of age on the first day of January next following after it is foaled: *Provided*, That the party of the second part shall have the right, in lieu of granting the option hereinbefore mentioned, to pay a service fee of \$..... at any time before the option of the party of the first part is exercised, after which no service fee shall be exacted.

Third. It is further mutually understood and agreed by and between the parties hereto as follows:

1. That in case the party of the second part should sell the mare or the resulting foal the party of the second part shall pay to the party of the first part the sum of \$25 as a service fee: *Provided*, That such sum shall not become due and payable if satisfactory evidence is furnished to the party of the first part that said mare did not produce a live foal: *And provided further*, That such sum shall not become due and payable on the in-foal mare, if sold, or on the resulting foal if sold before weaning time, if the party purchasing the in-foal mare, or the mare and resulting foal, agrees in writing to assume the obligations of the party of the second part under this agreement.

2. That the party of the first part shall, upon the request of the party of the second part, waive its option on a filly foal bred and foaled under the provisions of this agreement and charge no service fee for the same: *Provided*, That such filly foal is sound, and a desirable type for breeding purposes. The examination of a filly for this privilege will be made by the inspecting officer when said filly is presented for the Gov-

ernment's option. A filly so retained by the owner will be given a number in the Remount Brood Mare Register and a certificate of breeding will be issued by the Government to the owner without charge.

3. That under the provisions of paragraph 1 of this agreement, the party of the second part will notify the Chief of the Bureau of Animal Industry of the Department of Agriculture, Washington, D. C., promptly in advance of any sale of a mare or foal; the party of the second part further agrees to notify the Chief of the Bureau of Animal Industry of the said Department of Agriculture promptly of the result of the service provided under this agreement, upon forms to be furnished by said Department of Agriculture.

4. That this agreement shall be assigned in whole or in part; that no Member of or Delegate to Congress, or Resident Commissioner, after his election or appointment, and either before or after he has qualified and during his continuance in office, and no officer, agent, or employee of the Government shall be admitted to any share or part of this contract or agreement, or to any benefit arising thereupon. Nothing, however, herein contained shall be construed to extend to any incorporated company, where such contract or agreement is made for the general benefit of such incorporation or company (sec. 3741, R. S., secs. 114-116, act Mar. 4, 1909).

In testimony whereof, the parties hereto have executed this agreement on the day, month, and year first above written.

Witness:

The United States of America, party of the first part.

Witnesses:

Party of the second part.

Item H. C. A. and E. 270—Horses for officers entitled to public mounts.

[Estimate, fiscal year 1919, \$1,696,680.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,692,900	\$1,692,900	\$3,780	\$3,780	\$1,696,680
Appropriated, fiscal year 1918.....
Expended, fiscal year 1917.....	499,320	499,320	3,780	3,780	503,100

REMARKS.

United States.—Four hundred and fifty-six mounts are authorized in Tables of Organization, 1917, for officers with an Infantry division. For 45 divisions 20,520 mounts are authorized. Should the present emergency continue it is considered that 50 per cent of this allowance will be required to replace wastage that will occur in the field during actual campaign, or 10,260 horses, at \$165, costing \$1,692,900.

Philippine Islands.—The sum of \$3,780 was estimated for by the department authorities, Philippine Department.

Item H. C. A. & E. 271—Horses for the Cavalry.

[Estimate, fiscal year 1919, \$2,972,480.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$2,922,480.00	\$2,922,480.00	\$50,000.00	\$50,000.00	\$2,972,480.00
Appropriated, fiscal year 1918.....
Expended, fiscal year 1917.....	2,222,553.25	2,222,553.25	55,100.00	55,100.00	2,277,653.25

REMARKS.

United States.—The amount needed under this item, should the present war continue, is as follows:

The maximum allowance of Cavalry horses for troops stationed in the United States, Hawaii, and the Canal Zone organized under the provisions of Tables of Organization, May, 1917, is 1,476 per regiment, or 35,424 for 24 regiments of Cavalry now in the service, excluding 1 regiment stationed in the Philippines.

It is considered that 50 per cent of this allowance will be needed to replace wastage that will occur should the present war continue during the fiscal year 1919, amounting to 17,712 horses, at \$165 per head, costing \$2,922,480.

Philippine Islands.—This estimate is based on figures submitted by the department authorities, Philippine Department.

Item H. C. A. & E. 272—Horses for the Artillery.

[Estimate, fiscal year 1919, \$18,078,990.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$18,075,480.00	\$18,075,480.00	\$3,500.00	\$3,500.00	\$18,078,980.00
Appropriated, fiscal year 1918.....							
Expended, fiscal year 1917.....	4,501,765.50	4,501,765.50	3,500.00	3,500.00	4,505,265.50

REMARKS.

United States.—The maximum allowance of Artillery horses for Artillery organizations with 45 Infantry divisions is as follows:

Allowance for one division, 3,059 light artillery horses, or 137,655 for 45 divisions.

Allowance of heavy draft artillery horses for one division, 962, or 43,290 for 45 divisions.

To replenish such wastage as will occur in the field, should the present war continue during the fiscal year 1919, it is estimated that 50 per cent of the foregoing allowance will be required, amounting to:

68,827 light Artillery horses, at \$190..... \$13,097,130
21,645 heavy draft Artillery horses, at \$230..... 4,978,350

18,075,480

Philippine Islands.—\$3,500 is the amount estimated for by the department authorities, Philippine department.

Item H. C. A. & E. 273—Horses for the Signal Corps..

[Estimate, fiscal year 1919, \$657,500.]

	United States.			Philippine Islands.			Grand total.
	C. R.	N. C.	Total.	C. R.	N. C.	Total.	
Estimate.....	\$656,100	\$656,100	\$1,400	\$1,400	\$657,500
Appropriated, fiscal year, 1918.....							
Expended, fiscal year, 1917.....	257,750	257,750	1,450	1,450	259,200

REMARKS.

United States.—The maximum allowance of horses for Signal Corps organizations with an Infantry division, organized in accordance with Tables of Organization, 1917, is 156 riding horses and 18 draft horses. The allowance for 45 divisions amounts to

7,020 riding horses and 810 draft horses. It is estimated that 50 per cent of this allowance will be necessary to replace such animals as will become unserviceable during the fiscal year 1919 should the present war continue, requiring:

3,510 riding horses, at \$165 each, amounting to.....	\$579, 150
405 draft horses, at \$190 each, amounting to.....	76, 950
Total.....	656, 100

Philippine Islands.—\$1,400 is the amount estimated for by the department authorities, Philippine department.

Item H. C. A. and E. 274—Horses for the Engineers.

[Estimate fiscal year 1919, \$645,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$645,270.00	\$645,270.00	\$320.00	\$320.00	\$645,590.00
Expended fiscal year 1917.....	203,000.00	203,000.00	400.00	400.00	203,400.00

REMARKS.

United States.—The maximum allowance of horses for Engineer organizations with 45 Infantry divisions, organized under the provisions of tables of organizations 1917, is as follows:

Riding horses.....	1,395
Draft horses.....	5,580

It is estimated that 50 per cent of this allowance will be needed during the fiscal year 1919, should the present emergency continue, to replace wastage that will occur requiring:

698 riding horses, at \$165.....	\$115, 170
2,790 draft horses, at \$190.....	530, 100

Total.....	645, 270
-------------------	-----------------

Philippine Islands.—Three hundred and twenty dollars is the amount estimated for by the department authorities, Philippine Department.

Item H. C. A. and E. 275—Horses for the United States Military Academy.

[Estimate fiscal year 1919, \$11,920.]

	United States.			Philippine Islands.			Grand Total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$11,920	\$11,920	\$11,920
Expended fiscal year 1917.....	9,840	9,840	9,840

REMARKS.

United States.—Based on an allowance of 200 Cavalry and 140 Artillery horses for the detachment at West Point, authorized by the Secretary of War on October 20, 1914 (A. G. O. No. 2145188) and considering the life of usefulness of horses at the United States Military Academy at five years, it will require the replacing of one-fifth of this allowance during the fiscal year 1919, or 40 Cavalry horses at \$165 each and 28 Artillery horses at \$190 each, amounting to \$11,920.

ARMY APPROPRIATION BILL, 1919.

Item H. C. A. and E. 276—Horses for service schools and staff colleges.

[Estimate fiscal year 1919, \$10,395.]

	United States.			Philippine Islands.			Grand Total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$10,395	\$10,395	\$10,395
Expended fiscal year 1917.....	24,000	24,000	24,000

REMARKS.

United States.—The allowance of horses for the service schools and staff colleges is as follows:

Name of school.	Authority for allowance.	Number of horses.
Army War College, Washington, D. C.....	Approval, Secretary of War, dated Apr. 30, 1910 (A. G. O. No. 1636104) and Oct. 2, 1912 (A. G. O. No. 1899867-B).	70
Army Service School, Fort Leavenworth, Kans.....	A. G. O. indorsement, dated Feb. 7, 1912 (No. 1870475).	129
Coast Artillery School, Fort Monroe, Va.....	A. G. O. indorsement, dated Oct. 13, 1910 (No. 1658890).	15
School of Musketry, Fort Sill, Okla.....	A. G. O. indorsement, dated May 28, 1915 (No. 2291195).	50
School of Fire, Fort Sill, Okla.....	A. G. O. indorsement, dated May 8, 1911 (No. 1762422).	50
Total.....	314

It is estimated that the life of usefulness of horses at service schools and staff colleges is 5 years, requiring one-fifth replenishment for the fiscal year 1919, or 63 riding horses at \$165 each, amounting to \$10,395.

Item H. C. A. and E. 277—Horses for Indian scouts, no estimate.

Item H. C. A. and E. 278—Horses for Infantry, mounted.

[Estimate fiscal year 1919, \$1,074,955.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,072,995.00	\$1,072,995.00	\$1,960	\$1,960.00	\$1,074,955.00
Appropriated, fiscal year 1918.....
Expended, fiscal year 1917.....	762,170.00	762,170.00	9,730.00	9,730.00	771,900.00

REMARKS.

United States.—The authorized allowance of riding horses for Infantry regiments with 45 Infantry divisions organized in accordance with the Tables of Organization 1917, is 13,005. Fifty per cent replenishment of this allowance will be needed during the fiscal year 1919 should the present emergency continue, requiring 6,503 riding horses at \$165 each, amounting to \$1,072,995.

Philippine Islands.—One thousand nine hundred and sixty dollars is the amount estimated for by the department authorities, Philippine Department.

Item H. C. A. and E. 279—Horses for the Hospital Corps, mounted.

[Estimate fiscal year 1919, \$286,260.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$285,780.00	\$285,780.00	\$480.00	\$480.00	\$286,260.00
Appropriated, fiscal year 1918.....
Expended, fiscal year 1917.....	141,465.00	141,465.00	435.00	435.00	141,900.00

REMARKS.

United States.—The authorized allowance of riding horses for the Hospital Corps organizations with 45 Infantry divisions is 3,465. Fifty per cent of this allowance will be needed to replenish horses that will become unserviceable should the present emergency continue, requiring 1,732 riding horses, at \$165 each, amounting to \$285,780.

Philippine Islands.—Four hundred and eighty dollars is the amount estimated for by the department authorities, Philippine Department.

Item H. C. A. and E. 280—Expenses incident to purchase.

[Estimate fiscal year 1919, \$397,166.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$396,966.00	\$396,966.00	\$200.00	\$200.00	\$397,166.00
Appropriated, fiscal year 1918.....	800.00	800.00	800.00
Expended, fiscal year 1917.....	1,530.75	1,530.75	100.00	100.00	1,630.75

REMARKS.

United States.—This amount will be needed to pay the hire of attendants to accompany animals from place of purchase to their destination, and pay other expenses incident to the purchase of animals estimated for in this estimate.

Philippine Islands.—Two hundred dollars is the amount estimated for by the department authorities, Philippine Department.

Item H. C. A. and E. 281—Hire of employees.

[Estimate fiscal year 1919, \$31,120.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$31,120.00	\$31,120.00	\$31,120.00
Appropriated, fiscal year 1918.....	327,600.00	327,600.00	327,600.00
Expended, fiscal year 1917.....	36,000.00	36,000.00	36,000.00

REMARKS.

United States.—This amount is estimated for to cover the hire of the following employees at remount depots:

1 cook, at \$600.....	\$600
2 range riders, at \$600.....	1,200
2 assistant range riders, at \$540.....	1,080
15 stablemen, at \$480.....	7,200
1 trainer (chief), at \$1,000.....	1,000
10 trainers, at \$600.....	6,000
8 trainers, at \$480.....	3,840
2 trainers, at \$420.....	840
15 assistant trainers, at \$540.....	8,100
3 waiters, at \$420.....	1,260
59 employees at a total cost of.....	31,120

Horses for train headquarters and military police.

[Estimate, fiscal year 1919, \$1,069,200.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....							
Appropriated fiscal year 1918.....	\$1,069,200	\$1,069,200	\$1,069,200
Expended fiscal year 1917.....

REMARKS.

United States.—Tables of Organization, series A, August, 1917, authorizes an allowance of 288 riding horses for train headquarters and military police, for one Infantry division, or 12,960 horses for 45 Infantry divisions. If this organization is continued in the service during the fiscal year 1919, 50 per cent of this allowance to replenish wastage will be needed, or 6,480 horses at \$165, amounting to \$1,069,200.

Horses for ammunition trains.

[Estimate, fiscal year 1919, \$1,673,745.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,673,745.00	\$1,673,745.00	\$1,673,745.00
Appropriated, fiscal year 1918.....
Expended, fiscal year 1917.....

REMARKS.

United States.—Tables of Organization, series "A," August, 1917, authorize an allowance of 133 riding horses and 276 draft horses (Artillery type) for ammunition trains with each Infantry division, or a total of 5,985 riding horses and 12,420 draft horses for ammunition trains with 45 Infantry divisions. If these units are continued during the fiscal year 1919, 50 per cent of this allowance will be needed to replenish such animals as may become unserviceable during field operations, amounting to—

2,993 riding horses, at \$165.....	\$493,845
6,210 draft horses, at \$190.....	1,179,900
Total.....	1,673,745

Classification.	Number contracted for Apr. 1 to Nov. 25, 1917.	Number delivered Apr. 1 to Oct. 31, 1917.	Number due under contracts Nov. 25, 1917.	Average unit price.	Total cost.
Cavalry horses.....	50,416	32,564	17,852	\$165.91	\$8,364,683.50
Light-artillery horses.....	93,827	50,329	43,498	189.76	17,235,412.00
Heavy-artillery horses.....	5,480	2,636	2,844	220.24	1,206,945.00
Wheel mules.....	41,281	24,140	17,141	229.28	9,465,023.00
Lead mules.....	50,566	26,892	23,674	189.67	9,591,127.00
Pack mules.....	8,729	5,733	2,996	184.22	1,608,119.00
Grand total.....					47,471,309.50

On July 6 the estimates branch submitted a memorandum to the remount division requesting that a deficiency estimate be prepared to cover deficiencies for a force of 55,042 officers and 2,033,345 enlisted men. The \$40,000,000 appropriated under the act of October 6, 1917, was intended to cover the requirements of this estimate. So far arrangements have been made to purchase horses for only 16 National Guard and 16 National Army divisions, 32 in all. Nineteen thousand three hundred and twenty-two light-artillery horses have not yet been contracted for to equip these 32 divisions and contracts for these animals will be awarded within a short time.

These animals will cost \$190 per head, or a total of..... \$3,671,180

The force upon which deficiency estimates was based comprises approximately 65 Infantry divisions. As only arrangements have been made to purchase horses for 10 Regular Army divisions, 16 National Guard and 16 National Army divisions, 42 in all, 23 Infantry divisions still remain to be equipped with horses. To provide horses for these 23 divisions the following funds will be needed:

74,083 light-artillery horses, at \$190 each.....	14,075,770
22,126 heavy-artillery horses, at \$230 each.....	5,088,980
31,096 Cavalry horses, at \$165 each.....	5,130,840

The following animals will be needed to replace those that have so far died and been destroyed at auxiliary remount depots which were bought for the 16 National Guard, and 16 National Army divisions:

742 Cavalry, at \$165 each.....	122,430
1813 Artillery, at \$190 each.....	344,470

Required for replenishing animals for the 10 Regular Army, 16 National Guard and 16 National Army divisions:

11,424 Cavalry horses, at \$165 each.....	1,884,960
27,090 light-artillery horses, at \$190 each.....	5,147,100

Total.....	35,465,730
------------	------------

ARMY APPROPRIATION BILL, 1919.

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
January 16, 1918.

STATEMENT OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, ACCOMPANIED BY BRIG. GEN. I. W. LITTELL, LIEUT. COL. M. C. BRISTOL, AND LIEUT. COL. R. H. WILLIAMS, QUARTERMASTER CORPS.

BARRACKS AND QUARTERS.

The CHAIRMAN. The next item is, "Barracks and quarters, \$26,839,967." Under this item at the last session of Congress you got appropriations amounting to \$99,758,314.20.

Gen. SHARPE. We got that amount under two appropriations, Mr. Chairman. In the act of June 15, Congress gave us \$47,603,314, and the appropriation act of October 6 gave us \$49,155,000.

I would like to say that the estimates for the appropriation of October 6 was \$84,335,000, while the appropriation as passed was a reduction of that estimate by \$35,185,000.

I have a table showing the various items of the appropriation and the various amounts required for current requirements and new construction, and the total of these estimates. This appropriation is based on practically 3,000,000 men.

The CHAIRMAN. This is for 3,000,000 men?

Gen. SHARPE. It is for 2,952,000 men.

The CHAIRMAN. You will put in the record a detailed statement in reference to each item, and the amount you have expended under the appropriation you got last year, and what has been obligated.

Gen. SHARPE. Yes, sir.

(The matter referred to and the details of the estimate, is as follows:)

Statement showing the various items under appropriation "Barracks and quarters," the amount estimated for current requirements, etc., also the amount of expenditures made under each item.

Item No.	Purpose.	Current requirements, fiscal year 1919.	Expenditures, fiscal year 1917.	New construction, fiscal year 1919.	Expenditures, fiscal year 1917.
282	Barracks, construction of.....				\$740.28
283	Quarters, construction of.....			\$10,450.00	60 313.42
284	Stables, construction of.....				34 949.04

¹ \$10,000 of this amount for furniture in China.

FORT BLISS, TEX.

Item No. 283. Purchase of 31 privately-owned houses for quarters:

Construction..... \$10,450

Quarters.—The amount estimated, \$10,450, is to provide for the purchase of 31 houses now owned by officers, which are to be used as quarters for officers and non-commissioned officers stationed at and near Fort Bliss, where there are now seven regiments and many smaller units, with barracks and quarters for only one regiment. It is believed that such purchase would result in a saving to the Government.

LETTERMAN GENERAL HOSPITAL, PRESIDIO OF SAN FRANCISCO, CAL.

Item No. 284. Carpenter and plumber repair shops:

Construction..... \$12,473
Lighting..... 437

Total..... 12,910

Carpenter and plumber repair shops.—Size of building 60 by 117 feet, to be of reinforced concrete. It is required to replace the old frame dilapidated building now used as a shop. According to the latest information in this division the authorized strength at this general hospital is 24 officers and 191 enlisted men, making a total of 254. There are also at this hospital 44 Army Nurse Corps, and 39 civilians. The amount estimated contemplates a permanent building for these purposes, including a room for use as lumber shed, storing crates and crating material; also for lime, cement, etc. It is impossible to keep the lumber dry in the present temporary structure. These shops were included in the estimates for the fiscal year 1918, but in view of the reduced appropriation as passed by Congress the project was cut out.

FORT M'DOWELL, CAL.

Item No. 291. Disinfecting plant for clothing:

Construction..... \$10,500
Lighting..... 368

Total..... 10,868

Disinfecting plant for clothing.—The size of this building will be 17 by 34 feet and will be of concrete walls and floor and tile roof. It is needed for the proper disinfection of recruits' clothing, the effects of soldiers suffering with contagious diseases, blankets, etc., which at times become infected with vermin. The present disinfecting plant is unsightly, small, and unsuited for thorough disinfection, and when sulphur is used it requires great care not to burn the building and contents. This project was included in the estimates to Congress for the fiscal year 1918, but was eliminated on account of lack of funds. There are 29 officers, 19 noncommissioned officers, and 1,425 enlisted men at this post. The kind of buildings now at this post are concrete and frame.

PRESIDIO OF MONTEREY, CAL.

Item No. 287. New administration building to replace one destroyed by fire:

Construction.....	\$6, 370
Plumbing.....	478
Heating.....	414
Lighting.....	223
Total.....	7, 485

Administration building—one story.—The size of this building is not given in correspondence, but it is to replace one destroyed by fire March 13, 1916, which was 32 feet 4 inches by 60 feet 6 inches. The building is to be of frame construction, with either tin or slate roof. The authorized strength of this garrison in officers and men is 1,102, divided as follows: 53 officers, 17 noncommissioned officers, and 1,032 enlisted men. Buildings at this post are of frame construction.

PRESIDIO OF SAN FRANCISCO, CAL.

Item No. 291. Building to house telephone switchboard:

Construction.....	\$7, 500
Plumbing.....	563
Heating.....	488
Lighting.....	263
Total.....	8, 814

Building to house telephone switchboard—two stories.—Size of building to be 37 by 25 feet. To be of concrete, with either tin or slate roof. This building is required to properly house new switchboard, which is to be increased from 200-drop equipment to 640-drop equipment. The authorized strength of garrison in officers and men is 5,749, which includes 168 officers and 5,581 enlisted men. The kind of buildings now at this post are of frame, brick, and concrete.

REMARKS.

The amount stated under this item (\$10,450) is to provide for the purchase of 31 small privately owned houses on the Fort Bliss Reservation, June 26, 1917, copy of which follows:

Proceedings of a board of officers convened at Fort Bliss, Tex., pursuant to the following order:

Special Orders, No. 89—Extract.

HEADQUARTERS EL PASO DISTRICT,
El Paso, Tex., June 26, 1917.

11. A board of officers is hereby appointed to meet at Fort Bliss, Tex., at the call of the president thereof, to consider and make recommendations of such questions regarding ownership and disposition of temporary structures erected on the reservation at Fort Bliss, Tex., or any neighboring camp sites referred to it.

Detail for the board: Col. William D. Beach, Cavalry, D. C. L.; Col. Daniel L. Howell, Thirty-fourth Infantry; Capt. Eugene J. Ely, Cavalry, D. O. L.
By command Brig. Gen. Bell:

VAUGHN W. COOPER,
Captain, Cavalry, D. O. L., District Adjutant.

FORT BLISS, TEX., *July 3, 1917.*

The board met at 10 a. m., pursuant to the foregoing order.

Present: All members.

The order convening the board was read.

The board discussed in general the matter of the rights of the parties concerned and directed the recorder to write letters to the commanding officers of all organizations concerned, requesting information as to ownership, cost of construction, occupancy and present status of all privately owned buildings within the limits of the terrain assigned to their respective organizations.

The board then at 11 a. m. adjourned to meet at the call of the president.

E. J. ELY,
Captain, Cavalry, D. O. L., Recorder.

FORT BLISS, TEX., *July 27, 1917.*

The board met from time to time and examined the reports received from the various regimental commanders hereto attached and inspected the various structures reported upon.

The board finds that the following described buildings are of such construction, location and appearance as to be suitable for use as cantonment quarters for officers and noncommissioned officers, and recommends that the same be purchased from the present owners by the Government.

Number.	Owner.	Date built.	Cost.	Present appraised value.
7-1	Capt. O. C. Aleshire, Seventeenth Cavalry.	November, 1916.	\$800	\$500
7-2	Capt. R. W. Holderness, Seventeenth Cavalry.	do.	600	500
7-3	Capt. T. H. Cunningham, Seventeenth Cavalry.	do.	500	500
7-4	Capt. E. J. Ely, Seventeenth Cavalry.	do.	450	450
7-5	Maj. Edmund M. Leary, Seventh Cavalry.	December, 1916.	550	400
7-6	Capt. H. T. Bull, Seventeenth Cavalry.	do.	500	400
7-7	Capt. L. W. Pruntly, Seventh Cavalry.	do.	500	250
7-8	First Lieut. F. W. Boye, Seventeenth Cavalry.	do.	500	400
7-9	Capt. P. D. Glassford, Fifth Field Artillery.	do.	1,000	600
7-11	First Lieut. F. D. Cooks, M. R. C.	do.	400	300
34-1	Col. Alfred Hasbrouck, Twentieth Infantry.	November, 1916.	1,000	600
34-40	Capt. Clyde L. Eastman, Forty-third Infantry.	do.	1,000	600
34-41	Sergt. Walsh, Eighth Cavalry.	July, 1916.	500	400
34-42	do.	do.	375	300
34-43	Capt. Davidson, Seventh Infantry.	March, 1916.	400	300
34-17	Lieut. Corbett, Medical Corps.	October, 1916.	600	500
34-16	Lieut. O. G. Pitts, Seventh Infantry.	November, 1916.	600	450
34-15	First Lieut. Floyd C. Hecox, Sixty-first Infantry.	do.	600	500
34-14	Capt. F. B. Alderdee, Thirty-fourth Infantry.	do.	1,200	250
34-44	E. B. Oldham, M. S. E.	July, 1915.	300	75
34-46	Sergt. Snyder, Seventeenth Cavalry.	August, 1916.	300	100
34-47	J. T. McAniff, M. S. E.	July, 1916.	300	100
34-48	Sergt. Hirsch, Eighth Cavalry.	June, 1916.	150	75
34-49	Sergt. Wells, Eighth Cavalry.	do.	400	75
34-50	Sergt. F. J. Locke, Medical Corps.	June, 1914.	400	200

34-52	Corp. Hutton, Sixteenth Infantry.	November, 1916.	300	200
34-53	Pvt. Kline, Eighth Cavalry.	September, 1916.	650	275
34-54	Pvt. Lee, Thirty-fourth Infantry.	November, 1916.	400	275
34-58	Pvt. Martin, Quartermaster Corps.	May, 1917.	200	75
1	Brigade headquarters Sixth Field Artillery, officers' mess.	1914.	300	200
Total.				10,450

In each case above mentioned the owner has certified that no Government material has been used in construction, which statements have been verified as far as practicable, to the satisfaction of the board. The board recommends the purchase of these structures for use as quarters for officers and noncommissioned officers stationed at and near Fort Bliss, where there are now seven regiments and many smaller units, with barracks and quarters for only one regiment, in the belief that such purchase would result in a saving to the Government, and would greatly add to the comfort and health of the command with very small expense.

The board finds from investigation that a number of privately-owned structures on the Fort Bliss Reservation are being rented for amounts greatly in excess of a reasonable rate of interest on the investment.

The board recommends that other structures, which have been permitted to be built on the reservation and are not suitably constructed or located for quarters for officers and noncommissioned officers, be allowed to remain as at present, subject to the following restrictions:

1. That no person not in the military service of the United States shall be allowed to purchase, rent, occupy, or act as agent for any structure on the military reservation.
2. That in case any privately-owned structure on the military reservation is occupied by any person other than the owner, the rental charge shall not exceed a rate which would amount to 33½ per cent per annum of the value of said property as appraised by a duly authorized board of officers.
3. That whether such building, privately owned, shall be occupied by the owner, shall be rented or shall stand vacant, the ownership of same shall vest in the Government three years after date of construction.
4. That in case any privately owned structure occupies any portion of the reservation which has been or may be assigned to any organization, and should such incoming organization not desire to purchase or rent such structure, the owner shall be notified by the commanding officer to remove such structure within 30 days, and should such owner fail to remove structure within the time designated, same shall be wrecked or removed by the commanding officer or otherwise used for Government purposes in his discretion—provided that the 30 days' notice above prescribed may be reduced in the discretion of the commanding officer, should the exigencies of the service so require.

There being no further business before it, the board adjourned to meet at the call of the president.

W. D. BEACH,
Colonel, Cavalry, President.

D. L. HOWELL,
Colonel, Thirty-fourth Infantry, Member.

E. J. ELY,
Captain, Cavalry, D. O. L., Recorder.

Commanding officer, Fort Bliss, Tex., June 25, 1917, remarked: "Conditions at Fort Bliss have rendered necessary the construction by officers and enlisted men, at their own expense, of living quarters; some of these are well worthy of purchase by the Government and some should be abolished."

From an administrative, as well as an economical standpoint, it is highly advisable that quarters such as above, suitable for occupancy by officers or enlisted men, should be purchased by the Government rather than to permit their sale or rental by the original builders or their successors. One house (the case is now before me for adjudication) was built by persons in the military service from private funds, by written authority from the War Department, so that it would appear to be the policy of the department to mitigate the hardship incident to men with families as much as possible. There are a number of excellent houses on this reservation built by private means which have been rented or sold.

REMARKS.

United States.—The amount estimated for under this item will be required for new construction as follows: Presidio of Monterey, Cal., construction of new administration building to replace one destroyed by fire, \$6,370.

This administration building is to be one story in height. Correspondence does not state the size of building, but it is to replace one destroyed by fire March 13, 1916, which was 32 feet 4 inches by 60 feet 6 inches. The building is to be frame construction, with either tin or slate roof. The authorized strength of the garrison in officers and men is 1,102, divided as follows: Fifty-three officers, 17 noncommissioned officers, and 1,032 enlisted men. The buildings at this post are generally of frame construction.

Expenditures for fiscal year 1917 under this item were approximately \$1,100.

Practically all new construction for the fiscal year 1918 has been eliminated, in view of the reduced appropriation "Barracks and quarters" as passed by Congress.

Expended, fiscal year 1917.....		58,974.85	58,974.85				58,974.85

REMARKS.

United States.—The amount estimated under this item will be required wholly for new construction and is to provide for the following item which it is contemplated will be undertaken with the funds estimated for: Letterman General Hospital, Cal., carpenter and plumber repair shops, \$12,473.

The size of this building is to be 60 feet by 117 feet, to be of reinforced concrete. It is required to replace the old frame dilapidated building now used as a shop. According to the latest information the authorized strength at this general hospital is 24 officers and 191 enlisted men, making a total of 254. There are also at this hospital 44 Army Nurse Corps and 39 civilians. The amount estimated herewith is for the construction of a permanent building for these purposes, including a room for use as lumber shed, storing crates, and crating material, also for lime, cement, etc. It is impossible to keep lumber dry in the present temporary structure. These shops were included in estimate for fiscal year 1918, but in view of the reduced appropriation as passed by Congress, the project was eliminated.

During the fiscal year 1917 there were expended for shop buildings at various stations, mostly on the Mexican border, approximately \$59,000.

Barracks and quarters 291—Other necessary buildings, construction of.

[Estimate fiscal year 1919, \$18,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$18,000.00	\$18,000.00				\$18,000.00

Expended, fiscal year 1917.....		133,877.74	133,877.74				133,877.74

REMARKS.

United States.—The amount estimated under this item will be required entirely for new construction and is to provide for the following projects:

Fort McDowell, Cal., disinfecting plant for clothing.....	\$10,500
Presidio of San Francisco, Cal., building to house telephone switchboard....	7,500
Total.....	18,000

McDowell, Cal.—The disinfecting plant for clothing at this post is to consist of a building 17 by 34 feet and will be a concrete wall and floor, and tile roof. It is needed for the proper disinfection of recruits' clothing, the effects of soldiers suffering with contagious diseases, blankets, etc., which at times become infected with vermin. At present disinfecting plant is unsightly, small and unsuited for thorough disinfection, and when sulphur is used requires a great deal of care not to burn the building and contents. This project was included in the estimates to Congress for the fiscal year 1916, but was eliminated on account of the lack of funds. The garrison capacity of this post consists of 29 officers, 19 noncommissioned officers, and 1,425 enlisted men. The character of construction of buildings now at this post is concrete and frame.

Presidio of San Francisco, Cal.—The building to house telephone switchboard at this post is to be of two stories in height and to be of size 37 by 25 feet, and is to be constructed of concrete with either tin or slate roof. This building is required to properly house new switchboard which is to be increased from 200-drop equipment to 640-drop equipment. The authorized strength of garrison officers and men at this post is 5,749, which includes 168 officers and 5,581 enlisted men. The character of buildings at this post is a frame, brick and concrete.

During the fiscal year 1917 the following expenditures were made under this item:

Brooklyn, N. Y., animal shelter, Thirty-seventh Infantry National Guard	\$3, 175.00

State South Carolina, latrines, etc.....	\$2,769.00
Riley, Kans., eight mess and kitchen buildings.....	1,480.00
Watertown Arsenal, mess and kitchen shelter.....	500.00
Goldsboro, N. C., mess hall, etc., Second North Carolina Infantry.....	272.00
Panama Canal, shelter for animals.....	10,800.00
L. H. Roots, 16 kitchens, etc.....	4,060.00
Total.....	133,841.06

No construction work under this item for fiscal year 1918 is contemplated due to the reduction in this appropriation made by Congress.

Item B. & Q., 291a.—Construction of temporary shelter.

[Estimate, fiscal year 1919, \$4,500,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$4,500,000.00	\$4,500,000.00				\$4,500,000.00
Appropriated, fiscal year 1918.....		54,933.00	54,933.00				54,933.00
Expended, fiscal year 1917.....		2,116,134.34	2,116,134.34				2,116,134.34

REMARKS.

United States.—The supplies to be procured under this item consist of lumber, nails, brick, cement, and various kinds of building material required where authority is given to construct such temporary shelter, etc., by purchase of material and hire of labor.

The services to be performed under this item consist of the hire of labor, or job or contract service in the construction of temporary buildings, etc.

The large increase estimated for 1919 requirements over the preceding fiscal year, is to provide for construction of temporary buildings and shelter at cantonments, various camps, etc., the necessity for which is continually arising due to war conditions.

The expenditure of approximately three and one-third million dollars during the fiscal year 1917 was on account of the Mexican border situation.

Item B. & Q. 292.—Repairing public buildings at military posts.

[Estimate, fiscal year 1919, \$11,600,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$11,600,000.00		\$11,600,000.00				\$11,600,000.00
Appropriated, fiscal year 1918.....	709,000.00		709,000.00				709,000.00
Expended, fiscal year 1917.....	630,493.98		630,493.98				630,493.98

REMARKS.

Supplies.—The supplies to be purchased under this item consists of lumber, nails, cement, paint, and all other supplies required in keeping in repair all the public buildings at the various military posts and stations except those chargeable to other appropriations such as hospitals, quarters for hospital stewards, military post exchange and shooting galleries and other buildings on target ranges.

Services.—The services to be performed under this item consist of both job and contract services required in the repair and maintenance of public buildings at military posts and stations.

United States.—All of the above amount will be required to meet current requirements. Of the amount estimated \$1,100,000 will be required for permanent construction at regular posts and \$10,500,000 will be required for repairs to temporary buildings at the cantonments for the Regular Army, National Army, and National Guard Army. The \$1,100,000 estimated for permanent posts is based upon the estimate for the fiscal year 1918 plus 10 per cent for the probable increase in cost of material and labor. It is believed that \$750,000 will be required for making repairs to public buildings based on annual inspection reports of March 1, 1917, and the remainder, \$350,000, will be required to cover special repairs and alterations to buildings including repairs caused by storms, floods, fires, etc.

Annual repairs.—The amount estimated for permanent construction is \$100,000 more than that included in the estimate for 1918. The following explanation is given for this increase: At a number of posts there are many frame buildings which require frequent painting, etc., and as they have been in use for many years, repairs become more numerous. Furthermore, the total amount of the annual estimates as submitted from the various posts in departments, headquarters, and independent stations for the fiscal year 1918 was approximately \$1,916,118, while the total allotted is only \$655,297.

Special repairs and alterations.—The amount estimated (\$350,000) for special repairs and alterations (current requirements) is the same as that estimated for 1918. Funds under this heading are required for making repairs that can not be foreseen, such as damages by storms, hurricanes, fires, etc., and for miscellaneous items of work that are properly chargeable under this head. Under this item also are chargeable repairs which in former years have been charged to appropriation "S. S. & T., Q. M. C.," such as central heating plants, power-plant buildings, ice and refrigerating plants (building proper), pump houses, water tanks, dormitories, sawmills (in connection with fuel), etc.

The amount \$1,100,000 will be required to keep in repair approximately 9,800 buildings the approximate value of which is estimated at \$53,600,000 at permanent posts.

Item, barracks and quarters 293.—Hire of employees.

[Estimate, fiscal year 1919, \$1,535,900.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,535,900.00	\$1,535,900.00	\$1,535,900.00
Appropriated fiscal year 1918.....	78,117.00	78,117.00	78,117.00
Expended fiscal year 1917.....	295,639.39	295,639.39	295,639.39

REMARKS.

The estimate for the fiscal year 1919 for permanent posts is based on the estimate for the fiscal year 1918, plus a small percentage of increase to allow for advance in labor. The estimate for this purpose is \$85,900 for permanent posts and \$1,450,000 for cantonments, the latter of which is based upon half the per capita cost at permanent posts for 1918, for 1,196,287 men in the various cantonments. Total for employees, \$1,535,900.

The services (class 1, personal) rendered under this item are for the hire of employees in connection with repair and maintenance of public buildings at military posts, the positions to be designated as follows: (civil engineer and superintendent of construction, engineers, carpenters, masons, painters and tanners, and miscellaneous labor. A complete list of the employees paid from this item for the fiscal year 1917 and those estimated for under this item for the fiscal year 1917 and those estimated for under this item for fiscal year 1919 is shown in the Treasury Book of Estimates for the fiscal year 1919.

Item B. & Q. 294.—Quarters for officers, rental of.

[No estimate for fiscal year 1919.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....							
Appropriated, fiscal year 1918.....							
Expended, fiscal year 1917.....	\$4,539.21		\$4,539.21				\$4,539.21

REMARKS.

Nothing is estimated for for the fiscal year 1919, as all officers have been placed on a commutation status when not serving at a military post where quarters are available and in the field.

NOTE.—There was expended for the fiscal year 1917, \$4,539.21, as follows:

Garden City, L. I., N. Y.....	\$952.50
Hempstead, L. I., N. Y.....	1,529.00
Mineola, L. I., N. Y.....	806.50
Westbury, L. I., N. Y.....	727.50
Miscellaneous.....	523.71
Total.....	4,539.21

The above amounts were authorized by the Secretary of War to house several officers stationed at the Aviation School and Mineola, L. I., and considered an emergency measure. Commutation of quarters was granted for the reason that these officers would be moved about from place to place a great deal and even the Aviation School itself probably moved from Mineola to a new site. Some of the officers are married while others are not and if quarters were rented it would necessitate considerable time, trouble, and inconvenience which, so far as efficiency is concerned, would more than make up the difference on a commutation status. Therefore, these officers were granted commutation of quarters and the saving of \$1,200 approximately was thus saved annually.

Item, barracks and quarters 295.—Rental of barracks.

[Estimate fiscal year 1919, \$79,250.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$79,250.00		\$79,250.00				\$79,250.00
Appropriated fiscal year 1918...	1,600.00		1,600.00				1,600.00
Expended fiscal year 1917.....	13,054.32		13,054.32				13,054.32

REMARKS.

The estimate for the fiscal year 1919 is based on the estimate for the fiscal year 1918 for other than cantonments, and is estimated to be \$4,250.

The estimate for cantonment requirements is \$75,000, making a total of \$79,250 for this item.

The expenditures for the fiscal year 1917 were as follows:

Roma, Tex.....	\$300.00
San Fordyce, Tex.....	552.00
Tientsin, China.....	9,841.25
Miscellaneous.....	2,361.07
Total.....	13,054.32

The barracks in question were rented for sheltering troops on the Mexican border, Tientsin, China, and other miscellaneous places.

Item, barracks and quarters 296—Rental of quarters, noncommissioned officers and enlisted men.

[Estimate, fiscal year 1919, \$240,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$240,000.00	\$240,000.00	\$240,000.00
Appropriated fiscal year 1918.....	4,900.00	4,900.00	4,900.00
Expended fiscal year 1917.....	3,087.94	3,087.94	3,087.94

REMARKS.

Services.—The services procured under this item consist entirely of class I non-personal, rental under lease of quarters for enlisted men on duty where no public quarters are available.

Remarks.—It is contemplated to pay commutation of quarters to the majority of enlisted men on duty at posts, recruiting stations, etc., where no public quarters are available in lieu of renting quarters. The estimated amount for this purpose for other than cantonments is \$13,000, based upon the estimate for fiscal year 1918, plus a small percentage for increase in cost of rentals. The estimate for cantonment requirements is \$227,000, making a total for this item of \$240,000.

Expenditures for the fiscal year 1917 were mostly for Mexican border stations, as follows:

Deming, N. Mex.....	\$360.00
El Paso, Tex.....	810.00
Mission, Tex.....	756.00
San Antonio, Tex.....	944.00
Miscellaneous.....	217.94
Total.....	3,087.94

Item, barracks and quarters 297—Rental of cantonments.

[Estimate fiscal year 1919, \$5,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$5,000.00	\$5,000.00	\$5,000.00
Appropriated fiscal year 1918.....	180.00	180.00	180.00
Expended fiscal year 1917.....	4,879.17	4,879.17	4,879.17

REMARKS.

The amount estimated for under this item is for rentals of cantonments at camps near regular posts and for the National Army, National Guard Army, and Regular Army requirements. The cost for fiscal year 1917 under this item was as follows:

Annapolis Junction, Md.....	\$4,687.50
San Benito, Tex.....	191.67
Total rental.....	4,879.17

Item, barracks and quarters 298.—Rental of camp sites.

[Estimate fiscal year 1919, \$3,531,200.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$3,531,200.00	\$3,531,200.00	\$3,531,200.00
Appropriated fiscal year 1918.....	11,420.00	11,420.00	11,420.00
Expended fiscal year 1917.....	84,003.91	84,003.91	84,003.91

REMARKS.

The estimate for the fiscal year 1919 for places other than cantonment camps is \$31,200 and is based on the estimated requirements for the fiscal year 1918 plus a small percentage to allow for increase of rental rates; \$250,000 is for rental of embarkation camps, \$250,000 for rental of 32 rmount stations, \$2,000,000 for rental of camps for cantonment sites, and \$1,000,000 for rental of grounds, etc., for troops in France.

The rentals for cantonment camps are based on a rental of approximately 5,000 acres for each camp at \$10 per acre for the 32 camps. It is believed that provisions should be made for the necessary rentals for at least 500,000 men in France, part of this number living at the front and others in cantonments and rented buildings, most of which would be located on private lands and in private buildings. Assuming there would be 500,000 to be thus accommodated and taking the cost of \$2 per capita, the average amount in the United States, the sum of \$1,000,000 would be necessary for this purpose.

The total amount estimated under this item is \$3,531,200.

Following is a list of the larger rentals under this item during the fiscal year 1917:

Allentown, Pa.....	\$3,125.00	McPherson, Ga., Fort.....	735.51
Alpine, Tex.....	720.00	Marfa, Tex.....	2,547.34
Brownsville, Tex.....	6,412.75	McAllen, Tex.....	6,635.31
Brda, Tex.....	620.00	Mercedes, Tex.....	688.30
Calexico, Cal.....	4,314.33	Monte Christo, Tex.....	678.84
Candelaria, Tex.....	360.00	Montgomery, Ala.....	5,280.00
Columb's, N. Mex.....	5,726.25	New Braunfila, Tex.....	1,125.00
Comal, Tex.....	767.50	Nogales, Ariz.....	6,277.24
Corpus Christi, Tex.....	1,546.17	Pharr, Tex.....	623.30
Del Rio, Tex.....	1,483.93	Portero, Cal.....	360.00
Deming, N. Mex.....	1,373.65	Presidio, Tex.....	493.34
Detroit, Mich.....	810.80	Progreso, Tex.....	600.00
Douglas, Ariz.....	2,277.89	St. Elmo, Tex.....	579.00
Eagle Pass, Tex.....	2,145.67	Salem, N. H.....	666.67
Eatontown, N. J.....	416.67	San Antonio, Tex.....	1,155.40
El Paso, Tex.....	4,640.36	St. Asaph, Va.....	318.33
Harlingen, Tex.....	257.82	San Pedro, Tex.....	275.00
Harvard, Mass.....	886.12	Shirley, Mass.....	233.17
Hidalgo County, Tex.....	381.77	Sierra Blanca, Tex.....	1,035.00
Hot Springs, Tex.....	275.00	Yuma, Ariz.....	2,043.55
Imperial Beach, Cal.....	1,180.00	Valentine, Tex.....	625.00
Jeffersonville, Ind.....	107.50	Wetmore, Tex.....	302.50
Kushla, Tex.....	1,462.50	Miscellaneous.....	4,945.68
Llano Grande, Tex.....	2,650.00		
Lancaster, Mass.....	291.74		
Luxello, Tex.....	1,548.00		
		Total.....	84,003.91

B. & Q. 299.—Rental of grounds for other military purposes.

[Estimate, fiscal year 1919, \$79,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$79,000.00	\$79,000.00	\$79,000.00
Appropriated fiscal year 1918.....	1,500.00	1,500.00	1,500.00
Expended fiscal year 1919.....	15,521.76	15,521.76	15,521.76

REMARKS.

Services.—All of the above services will be class 1 nonpersonal, the funds estimated thereunder being required to pay rent of grounds for drill and corral purposes, aviation purposes, parties detailed on progress map duty and other miscellaneous duties. The estimate for the fiscal year 1919 is for places other than cantonment camps and is based on the estimated requirements for the fiscal year 1918 plus a small percentage to allow for increase of rental costs.

The estimated cost for such purposes is \$4,000; that for cantonment sites is \$75,000, and is based upon approximately one-half the per capita cost for 1918 requirements multiplied by the number of men in the various cantonment, estimated at 1,196,207.

The rentals during the fiscal year 1917 under this item were almost entirely for the Mexican border and enumerated as follows:

Brownsville, Tex.....	\$1,282.50	Nogales, Ariz.....	\$2,264.10
Douglas, Ariz.....	451.00	San Antonio, Tex.....	6,633.92
Hidalgo County, Tex.....	475.00	Miscellaneous.....	3,292.23
Honolulu, Hawaii.....	729.67		
Misson, Tex.....	393.34	Total.....	15,521.76

B. & Q. 300.—Rental of buildings or portions of buildings.

[Estimate, fiscal year 1919, \$101,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$101,000.00	\$101,000.00	\$101,000.00
Appropriated, fiscal year 1918.....	2,000.00	2,000.00	2,000.00
Expended, fiscal year 1917.....	7,579.75	7,579.75	7,579.75

REMARKS.

Services.—The services to be procured under this item consist of all rentals of buildings or portions of buildings for military purposes that would not be classified under the preceding items, such as hire of garage space, rental of hangars, hospital space, etc.

The estimated cost at stations other than for cantonments is \$5,500; that for cantonments is \$95,500, and is based upon approximately one-half the per capita cost for 1918, multiplied by the number of men in the various cantonments. The expenditures under this item for the fiscal year 1917 were as follows:

Brownsville, Tex.....	\$326.50	Nogales, Ariz.....	690.00
Chicago, Ill.....	324.70	Miscellaneous.....	1,304.05
El Paso, Tex.....	4,502.00		
New York City, N. Y.	342.50	Total.....	7,579.75

B. & Q. 301.—Rental of stables.

[Estimate, fiscal year 1919, \$600,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$600,000.00	\$600,000.00	\$600,000.00
Appropriated, fiscal year 1918.....	12,000.00	12,000.00	12 000.00
Expended, fiscal year 1919.....	25,980.32	25,980.32	25,980.32

REMARKS.

Services.—The amount under this item is for rental of stables at the various quartermaster depots, etc., and for the authorized private mounts of officers on duty at stations where no public stable accommodations are available. The estimated cost at stations other than cantonments is \$33,000, which is a slight increase over the amount of the estimate for 1918 and the amount estimated for cantonments is \$567,000, making a total of \$600,000.

The following is a list of the stable rentals during the fiscal year 1917:

Boston, Mass.....	\$832.00	Philadelphia, Pa.....	1,063.66
Chicago, Ill.....	463.33	Roanoke, Va.....	247.50
Garden City, N. Y.....	363.60	Seattle, Wash.....	275.00
Hartford, Conn.....	660.42	Tientsin, China.....	600.00
Newark, N. J.....	886.67	Miscellaneous.....	18,059.13
New York City.....	2,210.00		
Paris, France.....	319.01	Total.....	25,980.32

Item B. & Q. 302.—Rental of storehouses.

[Estimate, fiscal year 1919, \$2,103,800.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$2,103,800.00	\$2,103,800.00	\$2,103,800.00
Appropriated, fiscal year 1918.....	42,400.00	42,400.00	42,400.00
Expended, fiscal year 1917.....	226,895.08	226,895.08	226,895.08

REMARKS.

Services.—The services to be procured under this item consist of the rentals under lease of the necessary buildings used as storehouses for the Quartermaster Corps, Medical Corps, Ordnance Department, etc., of the Army. The estimated cost at stations other than cantonments is based upon the 1918 requirements at permanent posts, plus a small percentage to allow for increase in rentals, which is \$116,800.

The amount estimated for cantonment requirements is \$1,990,000, which is based on approximately one-half the per capita cost for 1918 multiplied by the number of men in the various cantonments, estimated at 1,296,287. The total under this item is \$2,106,800.

Following is a list showing rentals for which expenditures were made during the fiscal year 1917:

Atlanta, Ga.....	\$7,313.85	Mission, Tex.....	\$1,080.00
Boston, Mass.....	11,400.55	New Orleans, La.....	420.00
Brownsville, Tex.....	12,220.68	Newport News, Va.....	11,200.00
Calxico, Cal.....	675.50	New York, N. Y.....	20,410.90
Charleston, S. C.....	657.50	Nogales, Ariz.....	6,562.50
Columbus, N. Mex.....	914.00	Pharr, Tex.....	761.00
Corpus Christi, Tex.....	1,648.20	Philadelphia, Pa.....	2,979.60
Fonna, Tex.....	871.00	Portland, Oreg.....	1,290.27
Douglas, Ariz.....	1,336.00	Richmond, Va.....	470.87

El Paso, Tex.....	52,880.61	San Antonio, Tex.....	54,707.57
Fort Niagara, N. Y.....	440.00	San Benito, Tex.....	351.00
Harlingen, Tex.....	2,269.25	San Francisco, Cal.....	2,377.66
Jackson, Mich.....	570.00	Seattle, Wash.....	2,708.33
Laredo, Tex.....	4,062.65	Washington, D. C.....	13,248.00
Los Angeles, Cal.....	525.00	Miscellaneous.....	1,233.58
Marathon.....	396.00		
McAllen, Tex.....	1,247.51	Total.....	226,895.08
Memphis, Tenn.....	1,200.00		
Mercedes, Tex.....	596.00		

Item: Barracks and quarters 305, rental of offices.

[Estimate, fiscal year 1919, \$1,058,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,058,500.00	\$1,058,500.00	\$1,058,500.00
Appropriated, fiscal year 1918.....	21,400.00	21,400.00	21,400.00
Expended, fiscal year 1917.....	92,228.49	92,228.49	92,228.49

REMARKS.

Services.—The services to be procured under this item consist of the rental of buildings or portions of buildings for use as offices. The estimated cost at stations other than cantonments is based on the 1918 requirements at permanent posts plus a small percentage to allow for increase in rentals which is \$58,500. The amount estimated for cantonments is \$1,000,000, which is based on approximately one-half the per capita cost for 1918 multiplied by the number of men in the various cantonments. The total under this item is \$1,058,500.

The following is the list showing places where office rentals were authorized during the fiscal year 1917:

Albany, N. Y.....	\$1,530.00	Los Angeles, Cal.....	\$316.67
Atlanta, Ga.....	2,681.83	Nagasaki, Japan.....	600.00
Berlin, Germany.....	445.40	New Orleans, La.....	1,891.50
Boston, Mass.....	1,900.00	New York City, N. Y.....	1,084.42

Holbrook, Ariz.....	299.50	Miscellaneous.....	4,432.53
Honolulu, H. T.....	7,085.00		
Kansas City, Mo.....	8,978.00	Total.....	92,228.49
Laredo, Texas.....	992.56		

Item, barracks and quarters 304.—Rental of buildings for other military purposes.

[Estimate fiscal year 1919, \$201,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$201,000.00	\$201,000.00	\$201,000.00
Appropriated fiscal year 1918.....	4,100.00	4,100.00	4,100.00
Expended fiscal year 1917.....	36,718.79	36,718.79	36,718.79

REMARKS.

The estimate submitted under this item is for rentals in the United States, Hawaiian Islands, etc., except for the Philippines and China which are estimated for under the appropriation "Barracks and Quarters, P. I." The amount estimated for stations other than cantonments is \$11,000 which is a slight increase over the estimated requirements for 1918.

The estimate for the various cantonments is \$190,000 based upon the full strength of the cantonments at the per capita cost for fiscal year 1918.

The total amount under this item is \$201,000. Following is a list of rentals that have been authorized during the fiscal year 1917.

Copper Center, Alaska.....	\$250.00
Harlington, Tex.....	350.67
Llano Grande, Tex.....	121.00
Marfa, Tex.....	240.00
Tientsin, China.....	22,773.00
Miscellaneous.....	12,984.12
Total.....	\$36,718.79

Item barracks and quarters 305—Hire of recruiting stations.

[Estimate Fiscal Year 1919, \$200,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$200,000.00	\$200,000.00	\$200,000.00
Appropriated fiscal year 1918.....	48,000.00	48,000.00	48,000.00
Expended fiscal year, 1917.....	174,104.56	174,104.56	174,104.56

REMARKS.

The amount estimated under this item is for hire of recruiting stations and auxiliary recruiting stations at various places in the United States and Hawaii, and is based upon the estimated requirements for the fiscal year 1918 plus an additional amount to provide for increased rentals that may be necessary due to war conditions.

Following is a list of the main and auxiliary recruiting stations that were hired during the fiscal year 1917:

Albany, N. Y.....	\$990. 90	New Haven, Conn.....	\$594. 34
Baltimore, Md.....	1, 152. 00	New Orleans, La.....	812. 57

Estimate.....	\$243, 774. 00	\$243, 774. 00	\$243, 774. 00
Appropriated, fiscal year 1918.....	37, 000. 00	37, 000. 00	37, 000. 00
Expended, fiscal year 1917.....	141, 832. 66	141, 832. 66	141, 832. 66

REMARKS.

Services.—The services to be procured under this item consist of hire of lodgings for recruits and recruiting parties, all of which are chargeable to Class I, non personal funds.

Funds for the procurement of these services are apportioned to the various departments and depot quartermasters in lump sum and the services are covered by "Proposal and acceptance agreements." The usual amount paid for lodgings is from 25 to 50 cents per man per night, although lower rates are often obtained when large parties are provided for. Lodgings are also furnished to recruits who have been accepted and are waiting to be sent to the general recruit depots. The estimated amount required at stations other than for cantonment camps is \$243,774, which is an increase over the 1918 estimate of \$153,774, and is due to war conditions.

Item barracks and quarters 307—Furniture.

[Estimated fiscal year 1919, \$100,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$90,000.00		\$90,000.00	\$10,000.00		\$10,000.00	\$100,000.00
Appropriated fiscal year 1918.....	7,600.00		7,600.00				7,600.00
Expended fiscal year 1917.....	50,470.58		50,470.58				50,470.58

REMARKS.

Heavy furniture for officers' quarters and officers' mess is provided for in the appropriation "Barracks and quarters," and the Secretary of War in 1910 approved the following allowances:

For each separate set of married officers' quarters:

- 1 dining-room table.
- 6 dining-room side chairs.
- 2 dining-room armchairs.
- 1 sideboard (where none is built in).
- 1 library desk.
- 2 library armchairs.
- 1 parlor table.
- 1 bookcase.
- 2 chests of drawers.
- 1 kitchen table.
- 2 iron bedsteads for servants.
- 2 library side chairs.
- 1 divan.
- 1 hatrack or hall tree.

For each separate set of field officers' quarters: Same as for each set of married officers', except that an additional bookcase is furnished where none is built in.

For each set of bachelor officers' quarters:

- 1 library desk.
- 1 library armchair.
- 1 parlor table.
- 1 bookcase (except where one is built in).
- 1 chest of drawers.
- 1 iron bedstead.
- 1 hatrack.
- 2 Library side chairs.

For public messes in bachelor officers' quarters for every eight officers, or for less number occupying one building:

- 1 dining-room table.
- 6 dining-room chairs, side.
- 2 dining-room armchairs.
- 2 bookcases.
- 4 library chairs (2 arm and 2 side).
- 2 parlor tables.
- 1 sideboard (where none is built in).
- 1 kitchen table.
- 2 divans.

The same basis is used for supply furniture to the Philippine Islands with the exception that 1 library chair and 1 library rocker is furnished instead of 4 library chairs and no divans are furnished.

Furniture is supplied the Canal Zone on the following approved basis.

For each married officers' quarters:

- 1 dining-room table.
- 8 dining-room chairs.
- 1 sideboard (where none is built in).
- 1 library desk.

For each married officers' quarters—Continued.

- 2 library chairs.
- 2 library chairs, rocker.
- 1 library table.
- 1 bookcase (where none is built in).
- 2 chests of drawers.
- 1 kitchen table.
- 2 iron bedsteads for servants.
- 1 hall tree.

For each set bachelor officers' quarters:

- 1 library table.
- 1 library chair, rocker.
- 2 library chairs.
- 1 library desk.
- 1 chest of drawers.
- 1 iron bedstead.
- 1 hall tree.
- 1 bookcase (where none is built in).

For public messes where eight or less bachelor officers occupy one building:

- 1 dining-room table.
- 8 dining-room chairs.
- 2 bookcases (where none is built in).
- 2 library tables.
- 2 library chairs, rocker.
- 2 library chairs.
- 1 sideboard (where none is built in).
- 1 kitchen table.

Heavy furniture has been furnished in two types—the mahogany type for use in the United States and the quartered white oak or wicker for use in tropics.

No construction is estimated for the fiscal year 1919 which will require this equipment.

In submitting data for the annual estimate for the fiscal year 1919 the commanding general, Philippine Department, reports that during the fiscal year 1917 the sum of \$10,000 was expended for the construction of new furniture required in China, and the Philippine Islands. He requests that a similar sum be included in the estimate for the fiscal year 1919 for said purpose.

During the fiscal year 1917, the following sums were authorized to provide furniture, under contract, to equip officers' quarters:

Oak	\$30,585.39
Mahogany	19,885.19
Total	50,470.58

The following list shows the furniture required in the Hawaiian Department, Canal Zone, and posts pertaining to the United States, according to requisitions received:

HAWAIIAN DEPARTMENT.

81 dining-room tables, at \$10.97 each	\$888.57
258 dining-room side chairs, at \$3.59 each	926.22
181 dining-room arm chairs, at \$5.76 each	1,042.56
66 sideboards, at \$23.94 each	1,580.04
54 library desks, at \$18.34 each	990.36
119 library arm chairs, at \$8.41 each	1,000.79
132 parlor tables, at \$10.97 each	1,448.04
93 chests of drawers, at \$12.75 each	1,185.75
160 library side chairs, at \$7.65 each	1,224.00
40 hall trees, at \$4.23 each	169.20
305 bookcases, at \$13.38 each	4,080.90
24 kitchen tables, at \$4.94 each	118.56
4 iron bedsteads, at \$5 each	20.00
14 library tables, at \$6.60 each	92.40

14,767.39

CANAL ZONE.

55 dining room tables, at \$10.97 each.....	\$603.35
152 dining room side chairs, at \$3.59 each.....	545.68
152 dining room arm chairs, at \$5.76 each.....

2 iron bedsteads, at \$5 each.....	10.00
	<hr/>
	1,494.93
	<hr/>
Grand total.....	25,555.41

The above prices for heavy furniture are those quoted approximately two years ago. Prices now existing for furniture of this class have nearly doubled. In addition to the number of pieces of furniture listed herewith, many new requisitions have been received, and it is believed that the requirements under this item for the United States will be approximately \$90,000.

The amount estimated for herein totals \$100,000; the amount required for permanent posts in the United States is \$90,000; \$10,000 is also estimated as being required for furniture in China.

Item, barracks and quarters 308—Wall lockers in permanent barracks.

[Estimate, fiscal year 1919, \$50,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$50,000.00		\$50,000.00				\$50,000.00
Appropriated, fiscal year 1918.....	6,100.00		6,100.00				6,100.00
Expended, fiscal year 1917.....	532.12		532.12				532.12

REMARKS.

The supplies purchased under this item consist of metal wall lockers for installation in permanent barracks.

The following statement shows the number of metal wall lockers purchased since they were first authorized and up to and including the fiscal year 1916; also the unit price paid for locker:

Fiscal year.	Number.	Amount.	Fiscal year.	Number.	Amount.
1907.....	2,500	\$11.80	1912.....	4,200	\$8.34
1908.....	8,250	11.80	1913.....	5,592	8.45
1909.....	7,500	8.80	1914.....	None.
1910.....	5,000	8.52	1915.....	4,660	6.99
1911.....	3,500	8.62	1916.....	2,069	11.70

For the fiscal year 1917 the sum of \$532.12 was appropriated for replenishment of stock of metal wall lockers for distribution to military posts upon approved requisitions. Instructions were given the depot quartermaster, Philadelphia, to advertise, and upon opening bids prices were found prohibitive, and all bids were rejected.

In view of the present unsettled condition of affairs with reference to occupancy of posts by troops and the great necessity for conserving all "Barracks and quarters" funds to meet absolutely necessary requirements of the Army, also the high prices of materials entering into the construction of lockers, it was decided not to attempt to make contract for the fiscal year 1917. A considerable number of requisitions are now in this office unfilled, and the sum of \$50,000 is estimated sufficient to meet the requirements for the fiscal year 1919.

United States.—The amount estimated for under this item for permanent posts is \$50,000. This is a considerable increase over the estimated requirements for the fiscal year 1918 and is to provide for increase in cost of material and to meet unfilled calls heretofore made.

Item, barracks and quarters 309—Refrigerators.

[Estimate, fiscal year 1919, \$60,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$60,000.00	\$60,000.00	\$60,000.00
Appropriated, fiscal year 1919.....	3,600.00	3,600.00	3,600.00
Expended, fiscal year 1917.....	40,333.83	40,333.83	40,333.83

REMARKS.

The following table shows the refrigerator which is being purchased under contract for the use of the Army, giving arm of service, ice capacity, and cost per unit, according to last contract, viz:

Battery size, for messes of over 100 men, 74 inches high, 85 inches wide, and 30 inches deep, ice capacity about 560 pounds:	
Metal (for Canal Zone and Porto Rican posts).....	each.. \$206.00
Wood (for all other posts).....	do.... 145.00
Company size, for messes of less than 100 men, 74 inches high, 60 inches wide, 30 inches deep, ice capacity about 450 pounds:	
Metal (for Canal Zone and Porto Rican posts).....	each.. 157.00
Wood (for all other posts).....	do.... 102.00
Officers' size, for officers' quarters and small messes, about 55 inches high, 40 inches wide, and 25 inches deep, ice capacity 150 pounds:	
Metal (for Canal Zone and Porto Rican posts).....	each.. 69.00
Wood (for all other posts).....	do.... 63.83
Noncommissioned officers' refrigerators, for noncommissioned officers' quarters, 52 inches high, 30 inches wide, and 19 inches deep, ice capacity about 75 pounds:	
Metal (for Canal Zone and Porto Rican posts).....	each.. 35.00
Wood (for all other posts).....	do.... 34.38

Supplies.—The supplies to be purchased under this item consist of refrigerators purchased under contract, and also spare parts for refrigerators, such as hinges, locks, casters, linings, etc., used for repairing refrigerators.

United States.—All of the estimated amount will be required to meet current requirements.

The amount estimated under this item for permanent posts is \$10,000. This is a small increase over the estimated requirements for 1917 to allow for increase of cost of material, etc.; \$50,000 is estimated as being required for the various cantonments, based upon half the per capita cost 1918 at permanent posts, making a total under this item of \$60,000.

Items barracks and quarters 310 and 311—Screens, barracks, and quarters.

[Estimate, fiscal year 1919, \$355,300.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$355,300.00	\$355,300.00	\$355,300.00
Appropriated, fiscal year 1918.....	9,200.00	9,200.00	9,200.00
Expended, fiscal year 1917.....	7,362.83	7,362.83	7,362.83

REMARKS.

Supplies.—The supplies to be purchased under this item consist of lumber, wire screening, nails, and other material required in making repairs to screens already installed. These supplies are based on the annual estimates of March 1 and also on special estimates received from time to time. New barracks must be screened, as the specifications for buildings constructed do not include this feature.

Services.—The services to be procured consist of both contract and job services required for the installation of window and door screens.

United States.—The amount estimated will be required to meet current needs.

All posts have been provided with suitable screens in buildings requiring the same. However, much screening is anticipated in the Canal Zone. This is deemed imperative to preserve the health of the troops, and the necessity can not be too strongly emphasized.

Wooden screens, formerly supplied, are gradually being replaced by metal screens as they become unserviceable.

The amount estimated for screen doors and windows at permanent posts is \$25,300, and \$330,000 is estimated as being required for cantonments, based upon the per capita cost for fiscal year 1918 at permanent posts, making a total for this item of \$355,300.

Item barracks and quarters 312—Storm doors and sash for barracks, officers, and quarters.

[Estimate, fiscal year 1919, \$18,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$18,000.00	\$18,000.00	\$18,000.00
Appropriated, fiscal year 1918.....	1,200.00	1,200.00	1,200.00
Expended, fiscal year 1917.....	45.77	43.77	43.77

REMARKS.

Supplies.—The supplies to be procured under this item consist of lumber, nails, glass, etc., required to construct storm doors and sash for buildings where required. Allotments for this purpose usually result in a saving in the fuel bill.

Services.—These are usually performed by contract.

United States.—All of the above amount will be required to meet current needs. The work is generally done by post labor, but frequently when there are a number of buildings, and it is believed that better prices would be obtained by having the work done under contract, the same is advertised and the lowest bid for the best article accepted.

The requirements under this item for storm doors and sash at permanent posts is estimated to be \$3,000, which is a slight increase over the 1918 requirements to allow for increase in cost of material, etc. The amount estimated for cantonments is \$15,000, based upon approximately one-half the per capita cost for fiscal year 1919, making a total for the item of \$18,000.

Item barracks and quarters 313—Window shades for barracks, offices, and quarters.

[Estimate, fiscal year 1919, \$7,250.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$7,250.00		\$7,250.00				\$7,250.00
Appropriated, fiscal year 1918.....	500.00		500.00				500.00
Expended, fiscal year 1917.....	1,625.89		1,625.89				1,625.89

REMARKS.

Supplies.—The supplies to be procured under this item are based on the annual estimates of March 1, where window shades are required to replace those worn out in the service, and upon special requisition where shades are to be installed in new buildings.

The policy of this office is to limit the cost per shade to \$1, including roller fixtures, etc., complete; but they are frequently purchased for a less sum. Specifications therefore required that they be put in place by post carpenter.

United States.—All of the above amount will be required to meet current needs.

The estimated amount applied under the item for window shades at permanent posts is \$1,250, which is a small per cent of increase over the estimated requirements for 1918 to allow for increase in cost of material. The estimated amount for cantonment requirements is \$6,000, making a total of \$7,250 for this item.

Barracks and quarters 314—Flooring and framing for tents.

[Estimate, fiscal year, 1919, \$120,700.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$120,700.00		\$120,700.00				\$120,700.00
Appropriated, fiscal year 1918.....	2,500.00		2,500.00				2,500.00
Expended, fiscal year 1917.....	192,828.61		192,828.61				192,828.61

REMARKS.

Supplies.—The supplies under this item consist of lumber and nails used in the flooring and framing of tents where the same are considered necessary.

The estimated requirements under this item, \$120,700, to provide for tent floors at miscellaneous posts and stations wherever the emergency may arise.

(a) *Rentals of office space authorized, showing office for which rented, place, square feet, rate per annum, name and street, location of building, and amount of funds authorized for the rental.*

The bulkhead shed to the north of this pier contains 3,018 square feet and the one to the south 2,935 square feet, totaling 105,155 square feet, at the rate of 25 cents per square foot per annum, or \$26,288.75. The upper deck contains 89,543 square feet, the cost of which is 15 cents per square foot per annum, amounting to \$13,431.45. The total cost per annum of the entire pier is \$39,720.20.

Pier No. 78 has two decks, each containing approximately 225,000 square feet. The rate for the lower deck is 25 cents per square foot per annum, which amounts to \$56,250. The rate for the upper deck is 15 cents per square foot per annum, or \$33,750. The total cost per annum of this pier is \$90,000.

New York.—Pier No. 45 contains 68,470 square feet, at \$60,000 per annum, or approximately 87½ cents per square foot per annum.

Hoboken.—Pier No. 1 contains approximately 65,000 square feet, at \$102,000 per annum, or approximately \$1.57 per square foot per annum.

Baltimore.—Pier No. 3 contains approximately 120,000 square feet, at \$72,000 per annum, or approximately 60 cents per square foot per annum.

Pier No. 6 contains 235,875 square feet, at \$150,000 per annum, or approximately 63½ cents per square foot per annum.

Seattle.—Pier 11B contains 140,000 square feet, at \$16,650 per annum, or approximately 11½ cents per square foot per annum.

The CHAIRMAN. I believe the question was asked the other day if you could put into the record a statement showing the shortage of clothing in each particular camp.

Gen SHARPE. We are having that prepared.

The CHAIRMAN. You are preparing that, and that will show the exact shortage of clothing at each cantonment?

Gen SHARPE. Wherever there is a shortage.

The CHAIRMAN. And what the status is now?

Gen. SHARPE. Of the date you called for it.

The CHAIRMAN. Up to date?

Gen. SHARPE. Yes, sir.

Mr. KAHN. Along that line, if you will permit me, a statement was made last night by a Member of the House that when our forces went to France they had to buy 200,000 uniforms in England for our troops in France. Do you know anything about that?

Gen. SHARPE. Yes, sir; that was authorized. It was referred to in the hearings. It was authorized for the reason that they wanted to have a reserve over there.

Mr. KAHN. It was not for the immediate use of the Army, but simply as a reserve?

Gen. SHARPE. As I explained, we got the authority here, and I suggested it myself, by inquiry of the British officer on duty in our office, whether or not it would be possible for them to supply any clothing to us from the British Government. The British officer took it up with his Government and they said they could sell us 100,000 uniforms already made up, and they could give us the cloth for an additional 100,000.

The CHAIRMAN. Under this item of barracks and quarters, did you pay for the construction of cantonments out of last year's appropriation?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. That was included in this item, and paid out of last year's appropriation?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. Will you put in the record what each of the cantonments cost?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. And give us information as to the size of the structures of the different quarters there. Who regulated that?

Gen. SHARPE. That was fixed by the Surgeon General, as to the air space.

Gen. LITTELL. Mr. Chairman, if you desire it, we can furnish you a tabulated statement for the record showing the cost of every single building that has been put in each cantonment.

The CHAIRMAN. I would like to have that in the record. But the point I am inquiring about especially just now is the size of the quarters for the men, how many men you put in the quarters, and who fixed the size of the quarters.

Gen. LITTELL. Of course, the size of the buildings—in the first place, we determined the air space per man, and the size of the building would have to be determined by the number of men to be housed.

The CHAIRMAN. What was the air space for each man, and how many men were there?

Gen. LITTELL. The air space desired by the Surgeon General was 500 cubic feet per man, and in the Infantry companies as now prescribed the strength is 250 men.

When we first designed the cantonments the strength of the Infantry companies was 100 men. It was afterwards changed, and when we got the buildings about three-quarters finished they changed the strength of the company from 200 to 250 men, and that made necessary a rearrangement of all plans, and the building of an additional number to accommodate the additional strength of the companies. I understand the change in the strength of the companies was made to meet the request of Gen. Pershing as to the organizations of the divisions.

The CHAIRMAN. Then, as I understand it, according to the original construction plan, you followed the recommendations of the Surgeon General as to space?

Gen. LITTELL. As near as possible.

The CHAIRMAN. You followed that, and the reason the barracks became crowded was because of the large increase in the infantry companies.

Gen. LITTELL. We changed that, Mr. Chairman, so that they could have that amount of air space.

The following tables show the number, size, etc., of the cantonment buildings originally contemplated:

ARMY APPROPRIATION BILL, 1919.

In old hospital.

Gen. LITTELL (continuing). Take, for instance, the plan we had of three barracks in a row. We took the three barracks intended for three companies of 200 men each, and gave a barrack and a half to a company, dividing one barrack into two, and attaching that to the nearest one on the other side, in order to accommodate a company of 250 men.

The CHAIRMAN. What I am trying to get at is to have an explanation of what we have seen printed in the newspapers, and charged in the hearings before the Senate Committee on Military Affairs, that some of these barracks and quarters were too crowded, and that that was the cause, in part, of the unhealthy condition in some of the camps.

Gen. LITTELL. Even though these barracks did not have 500 cubic feet of air space for each man, they were unusually well supplied with windows and had good ventilation, so that the men could get plenty of air if they looked after the ventilation.

But we designed those barracks in the first place to provide for that number of men. If they have crowded more in there, they have done what was not intended.

The CHAIRMAN. The responsibility for that would lie with the division commander?

Gen. LITTELL. I should say so; yes, sir. But I think the complaints of overcrowding in these camps do not apply to the cantonments. I think the greatest amount of complaint they have is overcrowding in the camps.

As I understand it, the Surgeon General has claimed all along that there are too many men in a tent. He wants from five to six men in a tent, whereas the regulations governing that has prescribed eight or nine men in a tent.

Gen. SHARPE. The orders directing the arrangements of the National Guard camps directed that 12 men should be put in a tent. Our usual number of men that we put in a tent, by regulation, is eight or nine. We did not have sufficient canvas and they directed that 12 men should be housed in a tent. That number was later reduced to nine, and has since been reduced to five.

The CHAIRMAN. That is the recommendation of the Surgeon General, that the number should not be over six?

Gen. SHARPE. Yes, sir; at present.

The CHAIRMAN. What is the size of the tent in which they put 12 men?

Gen. LITTELL. It is 16 feet square.

The CHAIRMAN. Then the complaints that have been made do not refer to the National Army cantonments, but to the National Guard camps?

Gen. LITTELL. That is as I understand it. I have never known of any complaint extending to the National Army camps.

The CHAIRMAN. The question was asked the other day, and I would like to have a full explanation of it, as to why the War Department made a distinction between the camps of the National Army and the camps of the National Guard. What was the reason for that?

Gen. LITTELL. Of course I can only guess at that, Mr. Chairman, because we were not told why that was.

Gen. SHARPE. When they first started to establish the cantonments and the camps, I believe it was the intention to put them all

under canvas, but we told them we did not have it, and could not get the tentage. In the different recommendations I made as to the time when it would be possible to equip the troops, I always said except tents.

Therefore it was determined some time in April or May that we would have to put the National Army in cantonments. That decision was arrived at because it was assumed that the National Guard had a large portion of the tentage which it would require. I think that is the reason.

There was not any discrimination as between the National Guard and the National Army, because we could not house them, and did not have any possible way of getting tentage for the National Army, and the National Guard had possession of the tentage.

The CHAIRMAN. Is it not a good deal more expensive to build the National Army cantonments than to build the National Guard camps?

Gen. SHARPE. You mean as between the canvas and the wood?

The CHAIRMAN. Yes.

Gen. SHARPE. The cantonment is less expensive in the end, sir, because the canvas has to be renewed so often.

The CHAIRMAN. That is due to the fact that the canvas does not last as long as the wood; but I am talking about the original construction cost.

Gen. SHARPE. We had recently a statement showing a comparison of the cost as between the canvas and the cantonment, and the cost of the canvas had gone up enormously. While the original cost for the cantonment was greater than for the canvas, they are getting very close together now, and then when we have to renew the canvas once or twice a year, it soon makes the canvas much more expensive.

The CHAIRMAN. Then, as a matter of fact, it would have been more economical in the end if you had provided the same kind of camps for both?

Gen. SHARPE. I think it would, but it would have required about \$35,000,000 for the National Guard. There was a \$35,000,000 item for putting the National Guard into cantonments, but that was stricken out of the estimate.

The CHAIRMAN. Then, as I understand it, the only reason you know of for the distinction between the National Guard and the National Army was because the National Guard already had some tents?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. But they did not have a sufficient number of tents for the whole National Guard force?

Gen. SHARPE. I do not know about that. They were supposed to have enough for them to go to camp.

The CHAIRMAN. You only had, when war was declared, about 160,000 National Guardsmen in the service, and now you have over 480,000.

Mr. KAHN. The companies were recruited up to full war strength.

Gen. SHARPE. There are over 400,000 National Guardsmen.

Mr. KAHN. So that certainly you did not have enough tentage for the entire strength of the National Guard when they were at full war strength.

Gen. SHARPE. That was the reason the instruction was published in general orders to put 12 men in a tent, instead of 5, to try to

accommodate more men than the regulations had said could be accommodated in a tent.

The CHAIRMAN. Certainly, however, when the plan was devised of building these different cantonments for the National Army and the National Guard and for a part of the Regular Army, wherever necessary, there must have been some discussion as to the reason for the distinction, and I do not think that is a very satisfactory one, that because the National Guard had a few tents, they ought to have been put entirely under canvas, and the men drafted in the Army should have so much better quarters, sanitary arrangements, sewage, and so forth.

Gen. SHARPE. In so far as our department was concerned, we simply stated the impossibility of getting the canvas to provide for the National Army cantonments, and then we were instructed to provide canvas for the National Guard and to build wooden barracks for the National Army.

Mr. McKENZIE. You understood that the order of the Army going to France would be, first the Regular Army, second the National Guard, and lastly the National Army, and under the belief that the National Guard would only be in camp perhaps for a short time it would be needless to build these permanent cantonments for them?

Gen. SHARPE. That was the understanding when we asked for the increased amount to turn the National Guard camps into cantonments. That was a matter in which we had no power to determine; we were simply instructed to provide cantonments for the National Army, and were informed that the National Guard would go into camps.

The CHAIRMAN. Who in the War Department is responsible for making this distinction?

Gen. SHARPE. I do not know, Mr. Chairman. The instructions came to us through the Chief of Staff.

The CHAIRMAN. We would have to find that out from the Chief of Staff or the Secretary of War?

Gen. SHARPE. Yes, sir.

Mr. ANTHONY. Who was the Chief of Staff at that time?

Gen. SHARPE. Gen. Scott was the Chief of Staff. I do not know whether that was determined before he went to Russia, or afterwards.

Gen. LITTELL. Part of it was done before and part of it was done afterwards.

Mr. KAHN. As I recall, when the troops were on the Mexican border, some of the general officers down there recommended that in the larger camps down there cantonments be built, either of wood or adobe, in preference to tents, and that that would be a saving to the Government. Was any action ever taken by the War Department on those recommendations?

Gen. SHARPE. They were authorized to put up cantonment construction down there when a regiment was going to be held there for a length of time which would justify it.

Mr. KAHN. From your experience down there it would seem that they would have tried to put up cantonments all over the country, wherever soldiers were to be accommodated. You do not know about that? That would rest with the General Staff?

Gen. SHARPE. Yes, sir; we simply made a statement that we did not have the tentage and could not get it.

Mr. KAHN. When I was on the Mexican border they said they preferred to have the cantonments, and that it would be a big saving, and they had recommended cantonments, and that even if the cantonments were to be built of adobe, it would be preferable to the tents.

Gen. SHARPE. A great many of the officers themselves did build their own adobe huts.

Mr. KAHN. Did the change of the plan raising the size of the companies from 200 to 250 men entail much additional expense?

Gen. LITTELL. Yes, sir; quite a little.

Mr. KAHN. It is just like a person first building a house figuring on a certain plan, and then finding that there are a lot of extras, and the extras and changes are the things that cost.

Gen. LITTELL. Yes, sir; you can readily see that. You can readily see about what it would be by the fact that we had to put two companies in barracks which were provided for three. We took three barracks to accommodate two companies, and so, of course, we had to build a lot of new barracks in the end.

Mr. KAHN. Did those new barracks cost you more for their construction than the original ones?

Gen. LITTELL. Not per capita. The new barracks we built were built to accommodate 250 men, and so they cost more than barracks for 200 men, but the unit cost was no greater, possibly a little bit less, for the reason that some of the utilities were different.

Mr. KAHN. Did I understand you to say you now have at the various cantonments and camps sufficient accommodations to take care of the next increment of 200,000 men of the first draft?

Gen. LITTELL. Yes, sir; that was intended.

Mr. KAHN. What do you mean by that?

Gen. LITTELL. We were given certain figures for each camp, to accommodate a certain number of troops, and we have that, and in some cases we have more than was originally intended, for the reason that some organizations have been added, and we have had to build for those.

Mr. KAHN. But you think there will be no complaint because of lack of accommodations when those 200,000 men go to the cantonments?

Gen. LITTELL. We built the buildings for a certain number of men, that is, the National Army cantonments, for 654,000 men. We have that capacity now.

In the embarkation camps, we have capacity for 43,505. In the quartermasters' training camp we have accommodations for 17,800, and we have also built cantonments, and are building them at Coast Artillery posts to provide for the increased companies of the National Guard Coast Artillery going in there, and we have built accommodations for them to the extent of 17,857 men. Then we have increased the size of the various Regular Army posts by building cantonments to the extent of 100,000 men.

Mr. KAHN. I think I asked you to put into the hearings a statement showing the cantonments you have constructed, their capacity and their cost.

Gen. LITTELL. Yes, sir. We have a tabulated statement of that.

Mr. ANTHONY. Who was it who formulated the plans for these great military cities you built which you call cantonments?

Gen. LITTELL. You mean the general plan?

Mr. ANTHONY. The general plan.

Gen. LITTELL. We called into service a number of men who were skilled in town planning, as it is called. They are men whose engineering duties call upon them to lay out cities, with all the utilities, sewers, water, and all that. Mr. Frederick Law Olmstead was one of the men working on that without cost.

Mr. ANTHONY. As I understand it, you worked jointly with the committee of the Council of National Defense?

Gen. LITTELL. Yes, sir; they act in an advisory capacity to us.

Mr. ANTHONY. Was it the committee of the Council of National Defense that laid out these plans?

Gen. LITTELL. No, sir; they assisted us by recommending men who were skilled in that sort of work.

Mr. ANTHONY. Here is what I want to get at: Were these plans the plans of the military department of the Government, or were they plans formulated by your civilian advisers?

Gen. LITTELL. Both. We drew the plans on suggestions we got from expert engineers, men whose business it was to provide those things.

Mr. ANTHONY. In regard to the authority exercised in the construction of these great military cities, was the Council of National Defense supreme in laying out these ideas, or did the Quartermaster General's Department of the Army formulate them and carry them out?

Gen. LITTELL. No, sir; their function was to act in an advisory capacity to us, and the Secretary of War so instructed us that that was their function.

Mr. ANTHONY. You really had two bodies at work. You had this civilian body called in, and you had the organization of the Quartermaster General's Department of the Army?

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. Is it not true that the officers in the Quartermaster General's Department of the Army are fully competent to build these military camps with their own force, and with the knowledge and ability they have, without the assistance of this advisory board?

Gen. LITTELL. At the time that the cantonment construction was thrust upon us, the Quartermaster's Department did not have a sufficient force to handle it. We had to increase that portion of the Quartermaster General's Office very greatly in order to handle it, and we could not have handled it in the same time at all without the assistance and advice of this Committee of National Defense.

Mr. ANTHONY. There were 16 of the large cantonments?

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. The method of letting the contracts for these cantonments was on the cost plus basis, was it not?

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. What was the profit you allowed a contractor? There was no competitive bidding?

Gen. LITTELL. I have a table that shows the whole thing.

Mr. ANTHONY. What was the general average of profit allowed?

Gen. LITTELL. It figures out about 3 per cent—2.84 per cent.

Mr. ANTHONY. Was it not considered that 10 per cent should be allowed on the cost?

Gen. LITTELL. We have a copy of the contract. The contractor only gets 10 per cent on the cost, provided the profit is not over \$250,000, and the scale slides all the way down.

Mr. ANTHONY. What was the maximum of profit received by any contractor, the gross profit on any camp which you erected?

Gen. LITTELL. \$250,000.

Mr. ANTHONY. You limited it to \$250,000?

Gen. LITTELL. Yes, sir; no matter what he did.

Mr. ANTHONY. What was the greatest cost of any one cantonment?

Gen. LITTELL. Probably about \$10,000,000 would be the most expensive one.

Mr. ANTHONY. Which one was that?

Gen. LITTELL. I think that was the one at Petersburg, Va., \$11,300,000.

Mr. ANTHONY. Is it true that while you limited the profit to any one contractor to \$250,000 on any one camp, yet you found that there was a large amount of incidental work and additional work to be done at the conclusion of his contract, upon which additional profits were allowed?

Gen. LITTELL. No, sir; the fixed percentage of \$250,000 was based on a 6 per cent profit, based on the cost not to exceed \$3,500,000, and none of the contractors has gotten any increase in his fee because of the large amount of additional work he has done, and those contractors have done a great deal more than was contemplated in the original plan.

Mr. ANTHONY. I have heard the statement made that after the completion of some of these cantonments you found you needed roads, and you allowed the contractor to go ahead and construct a million dollars worth of roads, on which he got his 10 per cent. Is there anything in that?

Gen. LITTELL. No, sir.

Mr. ANTHONY. In a hearing held by the Committee on Naval Affairs, the statement was made that while the Army had limited the profit to the contractors to \$250,000, yet by giving them additional work, in some cases running as high as \$2,000,000 in certain cantonments, the contractors had been allowed excess profits of much more than the 10 per cent.

Gen. LITTELL. No, sir; that is incorrect.

Mr. ANTHONY. Such statements were made by authorities in the Navy Department to a House committee. What is the largest amount you have expended for roads, at any one of the cantonments?

Gen. LITTELL. I will put those figures in the record.

Mr. MCKENZIE. General, can you put in the record a statement showing the amount and the character of the equipment you have sent to France? Have you got any table that will show that?

Gen. SHARPE. In the way of cloth?

Mr. MCKENZIE. Yes.

Gen. SHARPE. You mean from the beginning up to the last shipment that was made?

Mr. MCKENZIE. Yes; I will appreciate it very much if you can put in a table showing that.

Gen. SHARPE. We can do that.

(NOTE.—This information appears in the hearings on the Appropriation, "Clothing, Camp and Garrison Equipage.")

(Thereupon the committee adjourned to meet to-morrow, Thursday, January 17, 1918, at 10.30 o'clock a. m.)

ARMY APPROPRIATION BILL, 1919.

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., Thursday, January 17, 1918.

The committee met at 10.30 o'clock a. m., Hon. William J. Fields, presiding.

STATEMENT OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, ACCOMPANIED BY BRIG. GEN. I. W. LITTELL, MAJ. R. C. MARSHALL, JR., AND MAJ. W. H. OURY, QUARTERMASTER CORPS—Continued.

CANTONMENT CONSTRUCTION.

Mr. LUNN. General, there are a number of things I would like to know regarding the cantonments. There is a great deal of interest, naturally, in the construction of those cantonments, how that work was done, and the arrangements as to the cost, a great many statements being made that exaggerated costs were allowed, and I think it would be a good idea for you to give us a statement regarding the construction of the cantonments, how the cost-plus plan operates, according to your contracts. I think a statement in regard to that would be of value. Perhaps it would be better to begin with the ground work and ask you whether or not you have had anything to do with the selection of the sites, whether that was up to you or somebody else.

Gen. LITTELL. I might begin by stating that way back, early in the year, at the usual time for preparing estimates for submission to Congress, the Quartermaster General was instructed to prepare estimates for housing a million men in cantonment shelter.

Mr. LUNN. This was prior to the declaration of war?

Gen. LITTELL. Yes, sir; at the usual time for making the estimates. The instructions did not state whether that number of men was to be divided into 32 divisions or any other number; it just gave the number of men for whom the cantonment shelter should be provided.

Estimates were prepared in accordance with existing approved plans in the Quartermaster General's office for cantonment construction, such as we had built from time to time along the border and at other places.

Those estimates were submitted in due course to the Secretary of War, and then we were, at the same time, directed to prepare an estimate for buildings of a more substantial character, say concrete, with steel laths, or something of that sort. We did that and that latter estimate amounted to about twice the amount of the other. It seemed to be a very stupendous figure on its face, and it was not approved. So an estimate for the construction of wooden shelter to take the place of the camps was submitted, and that finally got to Congress.

All this time we knew nothing about how it was to be divided. Later the Quartermaster General, on numerous occasions, requested

information as to where the cantonments were to be constructed, and in the mean time the Chief of Staff had submitted the matter of the selection of the camps to care for these million men to the War College, and finally the president of the War College prepared a memorandum to the Chief of Staff stating that they could not select the camps, that it would take a number of officers to do it and that they had not the time to spare from their duties at the War College. The Chief of Staff then turned it over to the various department commanders, who were directed to select the camp sites and prepare the necessary leases and make the leases for the camp sites.

That was done by each department commander designating a board of officers, and that board in every instance, I think, consisted of one of his immediate staff, that is, his chief of staff, or some other officer close to him, and a medical officer and a representative of the Quartermaster Corps from his personal staff.

They went out over the country and made selections and recommendations of camp sites to the department commanders, who forwarded the papers here to the Chief of Staff, with their recommendations, and that was finally acted upon by the Secretary of War, and he either approved or disapproved the selections.

Then we were notified that the camp site at such and such a place had been approved by the Secretary of War, and that we were to go ahead and construct our cantonments or camps as the case might be, on that particular location.

The camp sites for the National Army were all selected first, and instructions given to go ahead with the construction of the cantonments, and we were notified of the number of troops to provide for in each cantonment.

Previous to that, or at about the same time, a memorandum was submitted to the Secretary of War by the Army War College in reference to the cantonments and the camps for the National Guard. Their memorandum was sent to us with instructions from The Adjutant General to construct 16 cantonments for the National Army and 16 camps for the National Guard. Attention was invited to this memorandum of the War College authorities directing what kind of camps the National Guard camps were to be, that is, they were to be canvas camps.

Mr. LUNN. They were to be canvas camps, and they are at the present time not as desirable camps, from many standpoints, as the National Army camps are. Why were they placed in canvas instead of wooden barracks?

Gen. LITTELL. In the first place, I imagine there were various elements that entered into that, which, I believe, were the causes of deciding whether they should be camps or cantonments.

In the first place, we did not have funds enough to completely construct the 16 cantonments, and then to build 32 of those at the same time would have congested transportation, and would have also congested the lumber market and other material markets, so that it would have been practically impossible to have gotten them done, as it was difficult to get the stuff accepted by the railroads in order to get it there on time, to get the cantonments completed in time to take the quota of the draft at the dates prescribed.

Mr. LUNN. Was the principle followed to endeavor to force the construction to meet the date of the draft, or to withhold the date of the draft until the cantonments were ready for the men?

Gen. LITTELL. No, sir. We rushed the cantonments to take care of the men, because it was represented by the Provost Marshal General that to make any change in the draft orders, would throw everything into the utmost confusion and upset things generally, and cause the public to have a lack of confidence in the way the draft was being handled, and it would have been a very bad thing at the last moment to have issued orders countermanding the calling out of the draft.

Mr. LUNN. The draft order was fixed on the supposition that the cantonments would be ready at a certain time?

Gen. LITTELL. At certain dates. Then I presume that it was thought that some money could be saved by putting the troops into camps instead of into cantonments, for it was evidently thought that a number of these camps would not be occupied during the winter, that the troops would be moved away.

Mr. LUNN. Would go abroad?

Gen. LITTELL. Yes, sir. The National Guard troops had seen service on the border, and it was presumed they would be ready much sooner than the National Army men, who had never had any training before, and it was known that the latter would have to stay in this country through the winter, and possibly some time longer. But the National Guard, having had service on the Mexican border, and many of them just back, it was thought they could stand the life in camp, which is not at all unhealthy, under ordinary circumstances.

The Regulars are out in camps sometimes in very much colder weather than we have had, and the Surgeon General's desire was to house all these men in huts containing six men each. The huts would not have been any more comfortable than the tents, but they would have been cheaper, although they would not be more economical than a tent. Of course, a tent can be ventilated, or it can be made so hot that you can not live in it.

Mr. LUNN. A great deal of the sickness could easily be due to the failure of the men to take care of the hygienic conditions, as regards water and heat?

Gen. LITTELL. I think that is probably one great cause of so much sickness, that the men could not be educated how to live outdoors, because people do live outdoors all the time, in buildings that are not as warm as a tent, and yet they are very healthy people.

Mr. LUNN. I would like to bring out something in regard to the camp sites, for which we appropriate money to pay the rentals. Who fixed the rentals for the cantonment sites selected by these boards?

Gen. LITTELL. The department commanders.

Mr. LUNN. They fixed the rentals?

Gen. LITTELL. Yes, sir. Of course, the boards made their recommendations to the department commanders, who recommended approval to the Secretary of War, and it was finally decided by the Secretary of War.

Mr. LUNN. These rentals run all the way from 88 cents to \$20 an acre?

Gen. LITTELL. I have the scale.

Mr. LUNN. Could we have that in the record?

Gen. LITTELL. Yes, sir; I will submit that.

(The matter referred to is as follows:)

National Army camps—Approximate acreage and annual rental paid therefor. (Compiled Nov. 15, 1917.)

1 Located on Government reservation.

Mr. LUNN. It is true that at some of the camp sites the rental for the first two years is almost twice what it is later on?

Gen. LITTELL. Yes, sir.

Mr. LUNN. I looked into that matter in relation to some of the camp sites, and the rental for the first year in the case of Louisville is about half what it is the third year, and it looked rather strange why it should go from \$4 to \$9 per acre.

Mr. GORDON. I understood that the Louisville camp was located in a swamp.

Gen. LITTELL. No, sir; It is one of the best we have. Something of that sort was reported to the Secretary of War and he sent a special inspector from the Medical Department to Louisville to look over the situation and he said the camp site was in a favorable location.

Mr. LUNN. So that those charges about that camp site being in a swamp are not well founded?

Gen. LITTELL. No.

Mr. GORDON. Is it not a fact that they used oil to burn out the impurities and marsh grass that were in the camp, before locating the camp there?

Gen. LITTELL. That I do not know. I dare say the doctors would do that. They are doing that at all times, wherever they see a pool of water, to prevent the breeding of mosquitoes. They are using oil all the time for that purpose. We consider that Louisville site one of the best camp sites we have.

Mr. LUNN. How many acres are there in the Rockford, Ill., cantonment?

Gen. LITTELL. Five thousand six hundred and thirty-five acres.

Mr. LUNN. And the rental is \$20 an acre?

Gen. LITTELL. The rental is \$20 an acre; yes, sir.

Mr. LUNN. That is continuous?

Gen. LITTELL. Yes, sir; for the first, second, and third years, \$112,700. That is a flat rental of \$20 an acre.

Mr. LUNN. For three years. There is no reduction in the rental?

Gen. LITTELL. There is no reduction in the rental; no, sir.

Mr. LUNN. Is it a fact that the amount of these rentals was fixed by the board appointed by the department commander to select the site, and they were Army men and not civilians?

Gen. LITTELL. Yes, sir; that is right.

Mr. LUNN. It seems to me a very large rental, and if you figure the rental cost, the Government could condemn that land and take it at a less cost than \$20 an acre with the interest out.

Gen. LITTELL. We did in most cases recommend that the land should be purchased.

Mr. LUNN. Is there anything in the contract that would hinder the Government from taking it at any time?

Gen. LITTELL. I do not know. I have not seen the contract.

Mr. GORDON. The Government is bound by its own contracts, the same as anybody else.

Mr. ANTHONY. Are not those leases in your office?

Gen. LITTELL. They may be filed in the Quartermaster General's Office, but it is the work of the construction and repair branch to pay the rentals.

Mr. LUNN. Your department pays the rent, does it not, but you had nothing to do with fixing the amount of the rent?

Gen. LITTELL. No, sir; we had nothing to do with that.

Mr. LUNN. Were there any of the cantonment sites presented to the Government?

Gen. LITTELL. Yes, sir; the one at Camp Lewis.

Mr. LUNN. Where is that located?

Gen. LITTELL. At Tacoma, Wash.

Mr. LUNN. What is the acreage of that site?

Gen. LITTELL. That is the largest one we have, I think, although possibly it may not be quite as large at Anniston. It is located at American Lake, and it contains 70,000 acres.

Mr. LUNN. It was donated to the Government?

Gen. LITTELL. Yes, sir.

Mr. LUNN. What kind of land is it; valuable land?

Gen. LITTELL. It appears to be a most excellent site for camp ground. It is principally sand; it is a sandy soil. There is pine and oak on it.

Mr. McKENZIE. Can you put into the hearings as a part of your statement the facts showing how much was contributed at each one of the different cantonments by the people?

Gen. LITTELL. I presume we could get that information in time, as to just what each city and town in the vicinity of these places contributed. They contributed various things.

Mr. LUNN. How were the contributions by the various citizens made?

Gen. LITTELL. In various ways. They offered to bring the water up to the reservation, and all sorts of things of that kind, and build a highway, or extend their highways to the camp, or up to the camp.

Mr. GORDON. Were these offers accepted in all cases?

Gen. LITTELL. I presume so, on the acceptance of the site.

Mr. HULL. Were they always complied with?

Gen. LITTELL. So far as we know, up to date.

Mr. HULL. The cities have always done as they agreed to do?

Gen. LITTELL. So far as we know.

Mr. LUNN. That was one site which was contributed to the Government. Were there any others?

Gen. LITTELL. The site at Little Rock, Ark., I think was contributed.

Mr. LUNN. What is the acreage there?

Gen. LITTELL. The acreage at Little Rock is 2,800.

Mr. LUNN. What is the acreage at Anniston; you said that was one of your largest camps?

Gen. LITTELL. That is a camp, and is located on a Government reservation that was purchased by the Government some time ago. The completion of it was accomplished just about the time we were beginning our estimates.

Mr. LUNN. There was no charge; that is Government land?

Gen. LITTELL. No charge; no, sir. That is large enough for several divisions.

Mr. LUNN. What was the amount of rental for the Yaphank Camp, Camp Upton, Long Island?

Gen. LITTELL. The rental for the first year is \$13,857, and the same rental every year. The amount of the acreage is 15,646 acres.

Mr. LUNN. What is that rental per acre?

Gen. LITTELL. That is 88 cents per acre.

Mr. LUNN. Those are the extremes, 88 cents per acre at Yaphank and \$20 an acre at Rockford, Ill.

Gen. LITTELL. Yes sir. The land at Yaphank is covered with scrub.

Mr. QUIN. I would like to ask you about Camp Shelby, in Mississippi.

Mr. LUNN. I would suggest that you put in the record a list of all the camp sites and the amount of rental you pay for each one.

Mr. FIELDS. You would like to have that in the record?

Mr. LUNN. Yes, sir.

Total.....			1,590,223	

NOTE.—Buildings at Jeffersonville Depot to be as follows: One story high, 45 feet wide, 224 feet long, ceiling 14 feet high. Trussed room in one span. No interior posts. Floor truck height, 3 feet 9 inches above road. Windows alongside and ends of building 3 feet from floor of height to 1 foot below ceiling. Concrete pier foundation. Exterior walls of wood sheathing, covered with tar-felt paper, and then covered with corrugated iron. Two thicknesses of flooring with deadening paper between. Roof of Ready composition roofing. Ceiling and inside walls sealed with tongued and grooved flooring. Ventilation shafts from ceiling to roofs. Shipping and receiving doors and platforms. Steam heating and electric wiring. Estimated cost, \$17,500.

Gen. LITTELL. At Camp Shelby the amount of acreage is 3,275 acres, and it is rented at a dollar a year. That is at Hattiesburg, Miss.

Mr. LUNN. The rental is a dollar a year for all of it?

Gen. LITTELL. Yes, sir.

Mr. SHALLENBERGER. That is practically a donation.

Gen. LITTELL. Yes, sir; that is not the only other one; there are six of the same kind. There is one at Greenville, S. C.

(Notes concerning contributions herewith.)

STATEMENT SHOWING CONTRIBUTIONS BY INDIVIDUALS AND THE PUBLIC AS AN
INDUCEMENT FOR THE LOCATION OF CANTONMENTS AND CAMPS AS NOW
LOCATED.

NORTHEASTERN DEPARTMENT.

No inducements offered.

EASTERN DEPARTMENT—CAMP UPTON, YAPHANK, LONG ISLAND.

Clarence G. T. Smith donated 800 acres and Young & Metzner 8,400 acres at an annual rental of \$1.

WESTERN DEPARTMENT—CAMP LEWIS, AMERICAN LAKE, WASH.

On October 16, 1917, the ways and means committee for securing an Army maneuvering site, consisting of 20 representative citizens of Tacoma, Wash., offered the United States Government 70,000 acres located in the vicinity of American Lake, Wash., on the condition that approximately a division of troops should be permanently stationed thereon, this land to be acquired by the county of Pierce, Wash., through condemnation proceedings, and payment to be made thereafter from the proceeds of the sale of bonds approximating \$2,000,000. The county of Pierce, Wash., conveyed this property to the Government. In case the United States ceases to maintain a permanent mobilization, training, and supply station, the property would revert back to the county of Pierce, Wash.

CAMP KEARNEY, LINDA VISTA, CAL.

On May 21, 1917, the city of San Diego offered a tract of land of 8,000 acres in the vicinity of Linda Vista, Cal., rent free for a period of five years and further agreed to provide, without cost to the Federal Government, necessary connections for water, gas, and electricity and railroad connection. The city of San Diego further offered to construct and maintain the necessary highways to the cantonment. In addition to the 8,000 acres they also offered to provide a site for an artillery range under the condition that the Government locate a permanent division cantonment.

CAMP FREMONT, PALO ALTO, CAL.

San Francisco Chamber of Commerce and citizens agreed to donate free of rent for one year, 780 acres of land for cantonment buildings, and 6,300 acres adjacent to camp for maneuvering purposes. They also secured free rent on 20,000 additional acres for maneuvering purposes for the period of the war.

The annual rental for the 780 acres after the first year is about \$9,000. The annual rental on the 6,300 acres after the first year is about \$31,000.

They raised \$50,000 for the construction of 6 inch out fall sewers.

They raised \$85,000 in a fund to be used to compensate individual owners for damages to improvements, removed or possible damages to be incurred.

Spring Valley Water Co., laid four miles of 14-inch water main, capable of supplying daily not less than 2,000,000 gallons of water.

Pacific Gas & Electric Co. installed 35 miles of 8-inch 80-pound pressure main to supply gas.

CENTRAL DEPARTMENT—CAMP CUSTER, BATTLE CREEK, MICH.

No land contributed direct to Government. Battle Creek Chamber of Commerce had undertaken to give blanket lease on entire cantonment site and rifle range at \$15 per acre rental fiscal \$10 second year. They make all arrangements with individual owners. Savings on rentals to be refunded to United States.

CAMP DODGE, DES MOINES, IOWA.

No land contributed. Greater Des Moines committee furnished blanket lease method similar to Camp Custer. Annual rental approximately \$10 per acre. unexpended money to be refunded.

CAMP SHERMAN, CHILLICOTHE, OHIO.

No land contributed. Chillicothe War Council, by Col. Richard Enderlin, furnishes blanket lease on original cantonment site at \$15 rental and \$15 crop damage per acre. War Council is paying unknown amount in excess these rates.

CAMP GRANT, ROCKFORD, ILL.

No land contributed. Rockford Chamber of Commerce, by Charles A. Dickinson, furnishes blanket lease entire cantonment, rifle range, and artillery range at \$20 rental per acre. No refund. Government pays actual damage of all kind in addition.

CAMP ZACHARY TAYLOR, LOUISVILLE, KY.

National Camp Land Co., organized by citizens of Louisville, furnishes blanket lease of original cantonment. No rental first two years. Government to pay crop damages \$40,000 first year, other actual damages payable relinquishment of cantonment. Annual rental after second year \$24,000, to include fifth year. Two additions necessary to complete origination camp site furnished by National Camp Land Co., as follows: Two hundred acres used for hospital, rental sixty six hundred first year, eighty-eight hundred each succeeding year with damages \$25,000 first year and soil and some other damages in additional. Thirteen acres rental, \$270 annual rental; damages, \$3,300 first year and actual damages thereafter. Rifle range, 800 acres; annual rental, \$3,000; crop damages, approximately \$25,000. Rifle and artillery ranges not specified herein are being leased by this office direct.

SOUTHEASTERN DEPARTMENT—CAMP M'CLELLAN, ANNISTON, ALA.

Bureau of Militia Affairs handled and purchased 15,000 acres, present camp location; no inducements.

CAMP BEAUREGARD, ALEXANDRIA, LA.

Three thousand acres leased at \$1 per annum, expiring June 30, 1922.

CAMP GORDON, ATLANTA, GA.

No land; city agreed to assume amount of last year a crop on which lease was secured prior to June 3.

CAMP GREENE, CHARLOTTE, N. C.

Chamber of Commerce leased two tracts of 2,100 acres, expiring June 30, 1921. at \$1 per annum, city agreed to pay crop damages.

CAMP SEVIER, GREENVILLE, S. C.

Two tracts of 1,970 acres leased to June 30, 1920, at \$2 per annum; chamber of commerce agrees to construct public highway from Greenville to camp.

CAMP SHELBY, HATTIESBURG, MISS.

Commercial club tendered free an area of 5½ square miles. Lease pending on 3,260 acres, expiring June 30, 1922, at \$1 per annum.

CAMP JACKSON, COLUMBIA, S. C.

City deeded in fee simple 1,192 acres.

CAMP PIKE, LITTLE ROCK, ARK.

Certain responsible citizens agree to convey, free of incumbrance and as a gift, title in fee simple, 34 acres in Pulaski County, Ark., acceptance recommended by Judge Advocate General.

CAMP WHEELER, MACON, GA.

City agrees to keep roads to camp in good condition. Chamber of commerce agreed to lease 3 tracts of 2,360 acres, expiring June 30, 1922, at \$3 per annum. Board of county commissioners, Bibb County, agree to construct main line sewers from camp to suitable outlets, capacity 1,000,000 gallons per day, cost thirty-seven and seven dollars per line.

CAMP WADSWORTH, SPARTANSBURG, S. C.

City agrees to lease 1,354 and 1,500, expiring June 30, 1922, at \$1 per annum, also agrees to pay crop damages on tracts aggregating 1,178 acres.

CAMP SHERIDAN, MONTGOMERY, ALA.

City leased 1,750 acres, expiring June 30, 1922.

CAMP HANCOCK, AUGUSTA, GA.

Board of commerce leased 1,450 acres, expiring June 30, 1922, at \$1 per annum.

SOUTHWESTERN DEPARTMENT—CAMP TRAVIS, SAN ANTONIO, TEX.

No inducements were offered by the city of San Antonio in the way of lands or other concessions. The only concession made was that the city administration, county administration, and community would render hearty and full cooperation with Army officers in locating and conducting such a national cantonment. The city and public service companies have expended approximately \$100,000 in providing utility facilities for Camp Travis, Tex.

CAMP LOGAN, HOUSTON, TEX.

Community gave no land. They agreed to furnish water at cost and build certain connecting roads and obtain certain lands and public utilities at reasonable rates and carry out War Department requirements of policing the city.

CAMP CODY, DEMING, N. MEX.

Following telegram from Gen. Blocksom of January 24: "Rental January 21; camp site comprises 1,800 acres. Of this land 36 acres was bought by Deming Chamber of Commerce, price \$5,600, and leased remainder. Leases from 13th July, 1917, to date have cost chamber of commerce \$4,000 and are now costing \$800 monthly. Target range comprises 11,500 acres leased last November 1 for \$4,000 monthly by chamber of commerce. These leases will continue in force as long as camp remains. The chamber of commerce say they made no promise to pay for leases when Gen. Green's board located the camp site, but as constructing quartermaster and other officials thought the land should be furnished free, as there was competition at other places for the camp site, chamber of commerce decided the land should be given to the Government at nominal lease of \$1 each for the two sites. My opinion is that Government should pay all this, although the chamber of commerce does not ask it." In addition to this telegram, chamber of commerce and principal business men guaranteed that prices of commodities, rents, and other necessities to the military personnel should not be raised. The city and county authorities promised hearty cooperation with the military authorities in regulating saloons and prostitution.

CAMP MACARTHUR, WACO, TEX.

Land was furnished at rent of \$5 per acre by chamber of commerce. Following telegram from Gen. McGachlin, January 22: "Rental 21st; Chamber of Commerce of Waco agreed to extend to camp adequate sewerage and water system and provide not less than 1,600,000 gallons daily at cost not exceeding 6 cents per 1,000; electric street car service at 5-cent fare efficient; local and long distance telephone service—electric lights and power; local railway spur and switches; place river-bathing facilities at disposal of camp; to lease to the Government suitable tracts at satisfactory prices; police to cooperate with military authorities. To enforce laws regarding intoxicants to carry out desires of Secretary of War to console social evil. Every above agreement fully observed. Some of land leased by chamber of commerce and sub-

leased to Government; cost is more than Government pays, but none less their lease covers yearly. Government lease is terminable monthly. No land contributed, but 65 acres acquired for use without rental should Government want it; this is not used by Government. Social evil apparently very effectively handled; promise regarding intoxicants exceeded by city going dry; not only have police been effectively cooperating but county authorities also. Chamber of commerce also agreed to fulfill every verbal offer made to board of officers which located camps, of which it is believed Col. Laubach, now at Camp Travis, was a member. Earnest, faithful, and successful efforts have been made to carry out agreement, and subjects not originally covered have been most satisfactorily handled in the same spirit."

CAMP DONIPHAN, FORT SILL, OKLA.

The city of Lawton adopted resolutions to build 24-inch pipe line and to enter into a contract to deliver to the War Department at Fort Sill the full capacity of the proposed 24-inch pipe line, delivering approximately 8,000,000 gallons per day. Following telegram from Gen. Wright, January 23, "Water concessions only inducement any kind known by this office as being offered by citizens of this vicinity for location of this camp site."

CAMP BOWIE, FORT WORTH, TEX.

Site was donated by chamber of commerce, also maneuver ground and rifle and artillery ranges. Water was to be furnished at cost and not to exceed 6 cents per thousand gallons; also to allow free use of water from Lakeworth or artesian wells in the vicinity if they desired to use it. Sewer line was to be extended to camp. They proposed hearty cooperation in regulating vice. Report of all correspondence selection of Army camp sites at Fort Worth going into detail is furnished by mail this date. The original and copies of the board of officers appointed to investigate the sites for cantonments should be on file in The Adjutant General's Office, Washington, D. C. The board which investigated and selected all the camp sites except Camp Cody, Deming, N. Mex., made the following statement: "At all the places recommended certain more or less definite offers and agreements were made by the responsible authorities as to furnishing camp and maneuver sites, water, fuel, light, and steam and electric road facilities; those submitted in writing accompany the original copy of the board of officers."

Mr. LUNN. Would you consider that as a donation?

Gen. LITTELL. Practically so.

Mr. LUNN. I am glad to know that there was more than one.

Gen. LITTELL. There were six of them.

Mr. LUNN. I do not mean to infer that everyone would give their land for this purpose, because that is impossible; there are cases where they have to have rental.

Gen. LITTELL. The price per acre at Yaphank, you will notice, was 88 cents, but the cost of clearing that site brings the cost up to \$200 an acre.

Mr. LUNN. That was very costly, then.

Gen. LITTELL. About \$200 an acre.

Mr. GARRETT. What was there on that site that had to be cleared off?

Maj. MARSHALL. There was a second growth of timber, and a tremendous lot of oak stumps.

Gen. LITTELL. It had been originally an oak forest, and that had been cut down, and there was a scrub growth there, and when they cut away the scrub they found these big stumps, and they had to be cleared out.

Mr. LUNN. What did it cost at Camp Shelby to prepare the ground for the camp?

Gen. LITTELL. To clear it?

Mr. LUNN. Yes, to put it in shape. I would like to have a figure in comparison with the cost for clearing the site at Yaphank. What did the camp at Shelby cost?

Gen. LITTELL. I will have to look up these figures and put them in the record.

Mr. FIELDS. May I suggest that you put in the hearing the cost of preparing each camp site for the buildings?

Mr. LUNN. That is, the ground work, preparing the surface of the ground for the buildings.

Gen. LITTELL. I will do that. You see, in any unusual case, of course, the ground on which any building is to be erected has to be cleared, and that usually does not amount to very much. You are referring to the general clearing of the ground, any unusual clearing?

Mr. LUNN. Yes.

Mr. LUNN. I want to ask some more questions about the Long Island camp. You say it cost \$200 an acre to clear it. Was there any special reason why this camp was better than anything else available, any particular reason why it should have been chosen?

Gen. LITTELL. I do not think I ought to be asked that question, because we did not select the camp site.

Mr. LUNN. Who did select that camp site, who was the commanding general of that department?

Gen. LITTELL. It was the commanding general of the Department of the East. Gen. Bell was the commanding general at that time.

Mr. SHALLENBERGER. General, has your department any information, or can you inform us why these camps have not all been located on Government reservations, thus avoiding the expense for rentals?

Gen. LITTELL. Most of the Government reservations are not big enough. Very few of them are big enough. Then it would also——

Mr. SHALLENBERGER (interposing). Result in congestion?

Gen. LITTELL. It would not comply with the desire to get as near the centers of the draft as possible.

Mr. SHALLENBERGER. Was that considered to be essential?

Gen. LITTELL. Yes, sir. The scheme was to locate one of the National Army cantonments in each draft area containing a certain number of men. That is one reason why they picked out Yaphank. That district for a certain number of men to be called out under the draft included New York City and Long Island. They could not locate a camp in New York City, and they had to go to Long Island.

Mr. SHALLENBERGER. Was that for military reasons?

Gen. LITTELL. I suppose it was for convenience in sending the draft men to the cantonments so they would not have to travel too far.

Mr. GARRETT. Does not the Government have to pay for transporting all of these men to the camps?

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. Have you any records to show what were the original recommendations of these boards of officers selected by the department commanders in reference to these sites, what those recommendations were, and how many of those recommendations were afterwards changed, that is, the recommendations of the boards of officers?

Gen. LITTELL. No, sir. I do not know where those reports are. They were all sent to and handled by an officer who was on duty with the Chief of Staff.

Mr. ANTHONY. It is a fact, is it not, that in some instances the recommendations of these boards of officers appointed for the purpose of selecting a camp site were not followed?

Gen. LITTELL. I do not know.

Mr. ANTHONY. Who would know.

Gen. LITTELL. The Chief of Staff. They were handled in the office of the Chief of Staff. In several cases there was a question—that is, a camp site would be approved by the department commander, and then the recommendation would be made to the Secretary of War to have that changed, and he would investigate, and in a couple of instances, in the case of this particular site at Yaphank, that was delayed quite a little, while it was being investigated, and then it was finally approved, and the same was true in reference to another one of the sites, where we were held up for a week, after we had been working on that for a week.

Mr. GORDON. General, you say that estimates were prepared for each of these cantonments?

Gen. LITTELL. Not for each one; no, sir. We made our original estimates for cantonment construction to house a million men.

Mr. GORDON. These cantonments were then constructed in accordance with the plans you prepared, were they?

Gen. LITTELL. As I stated at the time, we were told to make that estimate. We did not know whether it was for a national training Army, or whether it was for war, or what it was for.

Mr. GORDON. It would not make any difference, would it?

Gen. LITTELL. Or whether it was for use on the Texas border. We based our estimate on the standard plans which we had for cantonments, which were merely made to take the place of tents. On the Texas border it was found that in some cases they had to renew their tentage at least three times a year, and that made it very expensive. Therefore it was decided that it would be better to put them in cantonments, and so we designed certain buildings to take the place of the tents, and they are just simple, perfectly plain long buildings, with the cracks covered up by battens.

Mr. GORDON. Did you prepare the plans and estimate for these cantonments that were actually constructed?

Gen. LITTELL. We prepared the plans, and we have from time to time prepared estimates to construct these cantonments in accordance with the plans designed, but of course putting all these cantonments in places where it was going to be cold, and where men were going to stay a long time, it was necessary to get a different kind of building from the ordinary frontier cantonment.

Mr. GORDON. You did design different kinds of buildings?

Gen. LITTELL. Yes, sir.

Mr. GORDON. I want to know how the contract for these cantonments compared with the estimates which you made as to the cost of construction.

Gen. LITTELL. How that cost compared with our estimates?

Mr. GORDON. Yes.

Gen. LITTELL. The cost in every case was considerably larger.

Mr. GORDON. How much larger?

Gen. LITTELL. In some cases at least 25 or 30 per cent.

Mr. GORDON. Could you put into the record the estimated cost for each of the cantonments with the location of the cantonments and the actual cost of construction to the Government?

Gen. LITTELL. Yes, sir.

Mr. GORDON. Will you do that?

Gen. LITTELL. Yes, sir. I have a table showing the actual cost. Of course it must be remembered that when we started in and made our plans for all of these cantonments that was based on certain costs, and we got the best information we could get at the time as to the kinds of organizations and all that sort of thing, and the utilities they would need. Many things have been changed since that time, and many buildings have had to be added, and at least 25 per cent more has been added to the camps with all sorts of things.

(The tables referred to are as follows:)

NATIONAL ARMY CANTONMENTS—NATIONAL GUARD CAMPS.

Comparison of total estimates of cost, dated Mar. 13, 1917, May 26, 1917, and Aug. 9, 1917, with the total estimated cost prepared Jan. 1, 1918.

	National Army can- tonments.	National Guard camps.	Total.
Estimate of Mar. 13, 1917.....			\$78,365,799
Estimate of May 26, 1917.....			192,393,200
Estimate of Aug. 9, 1917.....	\$102,088,525	\$23,527,000	125,615,525
Estimate of Jan. 1, 1918.....	140,726,473	38,375,272	179,101,745

Summary of estimates for cantonments for the National Guard and the National Army.

Appropriation.	Estimate Mar. 13, 1917 (1,061,270 men).		Estimate May 26, 1917, canton- ment construction.		
	Per capita.	Amount.	Per capita.	Per division (32,347 men).	32 divisions and addi- tional units (1,108,496 men).

Mr. GORDON. Did you make an estimate for the cost of those additions?

Gen. LITTELL. Yes, sir; we have had several estimates in.

Mr. GORDON. Then you would be able to answer the question as to what the estimated cost in every case was, and what the actual cost was?

Gen. LITTELL. Yes, sir. Of course, in some cases we have, as you will note, a deficiency, because every few days there is something new that has to be furnished. In the beginning we had no idea that they would need quarters for the French and English officers and the non-commissioned officers.

Mr. GORDON. But in all cases you made estimates for those additions, did you not?

Gen. LITTELL. We did not, originally.

Mr. GORDON. I did not say originally. I say you did that before they were actually constructed; you made plans and estimates?

Gen. LITTELL. This is the way that happens. We make no original estimates for those things. The people on the spot write to The Adjutant General and state what they consider necessary.

For instance, they consider a building to house the foreign officers necessary. They state that they have not got room enough for the clerical office force for division headquarters and they need a new building for that purpose. They look to the people on the spot to furnish the bids, and they are sent to us and we make an estimate and send it back to the Secretary of War, who authorizes the construction of the buildings.

Mr. GORDON. Then you have estimates for all of the different structures?

Gen. LITTELL. We always make an estimate for buildings.

Mr. GORDON. I would like to have you put into the record the estimated cost and the actual cost of these various structures.

Gen. LITTELL. Of each of the structures?

Mr. GORDON. Of each of the camps.

Gen. LITTELL. Yes, sir. We have constructed over 26,000 buildings at the various camps and cantonments.

Mr. GORDON. I simply want the cost of each camp.

Gen. LITTELL. Yes, sir. I have a table giving the cost, and the other information we can put in another column.

Mr. GORDON. Put that in the record, if you please.

Mr. LUNN. There has been a great deal of criticism regarding the method of building the cantonments; that is, the cost plus plan, and a great many statements that may have been exaggerated, and I would like to have you state the method of granting these contracts, and whether in the case of a given cantonment you award a contract for the entire construction to one concern, what the contract was, and what the cost plus method involves. I think you have that.

Gen. LITTELL. Very unfortunately, it has gotten to be designated as a cost plus 10 per cent contract. There is no more reason why it should be called that than that it should be called a cost plus 6 per cent contract.

Mr. LUNN. As a matter of fact it is not a cost plus 10 per cent, but a cost plus various percentages?

Gen. LITTELL. Yes, sir; it is a sliding scale.

Mr. LUNN. It makes no difference how big the contract may be, if it amounts to \$10,000,000, the contractor would only get a quarter of a million?

Gen. LITTELL. The percentage of profit would remain the same, no matter what the amounts might be; it would never go above \$250,000.

Mr. HULL. Does that same method of contracting apply to the erection of the buildings at the arsenals?

Gen. LITTELL. Not in all cases; no, sir. Some of those contracts at the arsenals were made by the ordnance people and I do not know just what their terms were. The average per cent of profit on these contracts is 2.84. That is on the total cost of the cantonments.

Mr. LUNN. Have you got those averages, that is, what do they average, from what to what, on the cantonments, and then the average on the National Guard camps?

Gen. LITTELL. Yes, I have them all right here.

Mr. SHALLENBERGER. Do you mean that the average net profit was 2.84 per cent, less than 3 per cent?

Gen. LITTELL. Yes, sir.

Mr. SHALLENBERGER. That is, on the entire proposition?

Gen. LITTELL. Yes, sir; on the 16 cantonments; that is the average that all these contractors get, and they have to pay, in some cases, a very heavy war excess profits tax. One of them has to pay about \$130,000.

Mr. LUNN. Will you put that matter in the record?

Gen. LITTELL. Yes, sir.

FEES PAID CONTRACTORS FOR THE CONSTRUCTION OF NATIONAL ARMY, NATIONAL GUARD, EMBARKATION, AND TRAINING CANTONMENTS AND CAMPS.

Summary of approximate total fees paid general contractor at National Army, National Guard, embarkation, and quartermaster training camps and cantonments.

School of Fire: Fort Sill, Okla.....		47,600	7.00

Mr. LUNN. I want to ask you regarding the contracts, whether any one contractor got a contract for more than one cantonment, or did any one contractor get a contract for the whole cantonment?

Gen. LITTELL. The contract for the whole cantonment was given to one contractor; but under certain conditions he was authorized to sublet such things as plumbing and electric lighting, because that is always done.

Mr. LUNN. Will you put in the record a list of those contractors for the 32 cantonments?

Gen. LITTELL. Yes, sir; we have a tabulated statement of all that. (The matter referred to is as follows:)

Names of contractors and date camp sites were approved, contracts executed, and work started.

Location.	Name.	Name of contractor.	Address.	Date camp sites were approved.	Date contracts were executed.	Date work was started.

¹ Camp Fremont temporarily abandoned when construction work was 70 per cent completed.

Mr. LUNN. I was in one department this morning and saw a sign reading, "Stone & Webster's office." Have they done any of your work?

Gen. LITTELL. Yes, sir.

Mr. LUNN. This was not in your department, and I wondered how far they were doing the work of the Government.

Gen. LITTELL. They did the San Antonio cantonment, and did remarkably well on it. Of course, they had a lot of comparatively good weather. At some of these cantonments ever since they have started, the weather has been unusual, not only in the summer time, when it rained more than usual, but then there was also all this cold weather.

Mr. LUNN. Has there come to your attention the knowledge of any excessive wages being paid, the argument for that being based on the supposition that because the work was being done on a cost plus basis that the contractor did not care how high the wages went?

Gen. LITTELL. I have a little information. I get this information through letters which we are continually receiving from all sorts of people, workmen who have been discharged, and some who have not been able to get a job, and from cranks who are continually writing to the Secretary of War in regard to that matter, and of course they are sent for reply to our office, for the facts. I have seen it stated in those letters by men that they did not care whether they worked or not, that the contractor was designing to get just as many men as he could get, because the more men that were on that particular job getting big pay the more benefit the contractor would get out of it. But that is not the case after they go beyond a certain point.

I think myself that the greatest cause for the cost of these cantonments is due to the fact that there has been such a large amount of inefficient labor that had to be employed. You could not get any other kind.

Expert men in their lines could not be gotten, and in order to get the cantonments done on time, we had to take what labor we could get, and as it turned out, we employed a lot of men, and they would work a few days, and then we would have to discharge them, or they would quit themselves. There have been as many as 110,000 men enrolled at one camp, and out of that whole number there were not a greater number than 10,000 working on any one day at the greatest maximum point of activity.

Mr. LUNN. It is fluctuating labor entirely?

Gen. LITTELL. Yes, sir. In reference to the matter of the wage scale, that was fixed in a memorandum of agreement between the Secretary of War and Mr. Gompers. That was put into effect, and it provided that the wages to be paid would be according to the union scale of wages in existence in the locality on the 1st of June.

Mr. LUNN. That was perfectly fair.

Gen. LITTELL. I do not know how you could ever have regulated that in any other way. The camps might have been bidding against each other and the contractors for the cantonments might have been bidding against contractors for other Government work, and it might have upset the whole thing generally.

Mr. SHALLENBERGER. I was at one of those camps, and I was told that the men who worked overtime and on Sundays got a very great increase above the union scale.

Gen. LITTELL. They were paid the same as the union scale in the locality, that is time and a half for overtime and double time for Saturday afternoons and Sundays.

Mr. GORDON. I understood you to say that all of these locations were recommended to the Chief of Staff?

Gen. LITTELL. Of course that means to the Secretary of War, who finally passed on them.

Mr. GORDON. And the camp sites for the National Army were selected first?

Gen. LITTELL. Yes, sir. I dare say that the same boards that were sent out were doing both, but the camp sites for the National Guard were not approved until later. That is, they were not given to us.

Mr. GORDON. Who fixed these rentals that are paid for the sites?

Gen. LITTELL. They were recommended by the boards which selected the camp sites, and I presume they were approved by the department commanders.

Mr. GORDON. I understood you to say that the cost of constructing many of these cantonments was enormously increased by the bad weather.

Gen. LITTELL. I did not say it was enormously increased by the bad weather, but I said that delayed things.

Mr. GORDON. That would result in increased cost, of course.

Gen. LITTELL. Not necessarily. It might some, however. It is harder to work. They do not accomplish as much on a day when it is raining hard as they would on a clear day.

Mr. GORDON. Was there any provision in the contracts requiring the contractor to furnish supervisors or inspectors over the men to see that the men employed were actually at work?

Gen. LITTELL. Yes, sir. They were required to have the usual experienced foreman, and all that sort of thing, and we had a number of officers on each job, but even with that you could not make them work.

The great difficulty, especially in places like Yaphank, and also other places, too, but more so in some places than in others—the great difficulty was to get good, efficient, honest foremen. They are not in the market, and the contractor had to take the best men he could pick out for that work, and if he discharged the foreman the question was where to get another one. You could not find one that was any better.

That whole question was studied very carefully by Gen. Bell and the constructing quartermaster, and the contractor at Yaphank. It was a very bad situation, and there was considerable criticism about the large amount of inefficient labor loafing on the job, etc., and Gen. Bell worried about it a great deal, and called me up there to consult with him to try to devise some means of preventing it.

He brought certain officers from the training camps to go around and observe the work and report on all the foremen, each officer to go to a different crowd every day, so that he would not be prejudiced, and so that he could get a good fair estimate from the various officers as to which foremen were doing their duty and which ones were not, and the contractor said he was perfectly willing to have that done,

but he said to Gen. Bell, "What am I to do if this foreman is reported? If I discharge him, can you furnish me with another one that is any better?" Gen. Bell had to say he did not know of any way to remedy that situation.

Loafing on the job nowadays is not peculiar to Government work. You can find it wherever you go. We had Secret Service men on all of these jobs looking around for all sorts of things, and especially watching this inefficient labor loafing. One of those Secret Service officers at Camp Meade sent in his report to the Department of Justice, and it was sent down to me to see if there was anything in it that we wanted to correct. This Secret Service man stated in his report that he had paid particular attention to a gang of men, about 40 of them, who were working for a contractor, whom he named. He reported a great deal of loafing and told exactly how many minutes in each hour each man worked, and when that was sent to me and I looked it up I found out that that particular contractor was working for the Pennsylvania Railroad Co., and not for us. But you can see loafing anywhere. Go in any one of the apartment houses building here, and when there is no foreman around you will see a lot of loafing on the job. You will even see that in your own house, when you are having work done.

Mr. QUIN. Did the war cause that?

Gen. LITTELL. No, sir; I do not believe the war has anything to do with it, except in this way, that it has created an enormous demand for labor, and these men know if they are fired from one job it is very easy for them to get another one.

Mr. LUNN. You would not say that that was true of all of the workmen, would you? You must have had some good ones?

Gen. LITTELL. I want to qualify that by saying that the skilled workmen, usually the men belonging to the unions who are skilled, stick to their jobs and do work good and hard.

Mr. LUNN. These men who loaf on the job are the casuals, the fluctuating fellows?

Gen. LITTELL. They are in the class of laborers--and there are thousands of them--who do not care, and who have never gotten anywhere because they do not care. They are not particularly good mechanics, and just now they do not care, because they can get a job anywhere they please. Railroad men are leaving to go into munition plants, brakemen and firemen are leaving to go into other jobs because they get more money temporarily.

Mr. LUNN. I would like to ask you regarding the class of materials for the cantonments; how the prices of raw materials were fixed, for instance, on lumber, and other items of that kind.

Gen. LITTELL. There was a committee of the Council of National Defense, an advisory committee on lumber, and they coordinated the lumber interests. They first fixed the price of lumber, I think it was at \$22 or \$24. Then we had some further discussion with them, and finally, after going over the whole situation again and getting a lot of other men from the lumber mills into the circle who had not been in before, and who had declined to come in, they reduced the price of lumber to about \$20. That has been the rule ever since.

We go to them for advice. Our instructions are that their decisions are not mandatory, that they are simply acting in advisory capacity. Those are the instructions given to us by the Secretary of War, and we have always so considered them.

If we have any large construction job, we prepare a schedule of the lumber we need and send the schedule to them, and tell them where the building is going to be erected, and that we will need so much lumber in the various sizes, and then they recommend to us where we should purchase that lumber. We do not always do it, for the reason that we get a job started and we find out that the lumber from that place or some other place, from the mill, could not get to us in time not to delay the job, and therefore we find that it is cheaper to pay the market price for the lumber than it is to keep a lot of men lying idle.

In this way we have gotten our lumber very much cheaper than market prices.

In reference to the other large number of materials we use, the next largest would be, naturally, plumbing. At the beginning, we called all of the manufacturers of plumbing supplies together and stated the case to them, what we were going to do, and about the quantities we thought we would need, and asked them to get together and see what they could do for us in the way of furnishing supplies promptly in the quantities we wanted and at reasonable rates. They did that very willingly, organized right away, and shortly reported to us giving a price list of all the supplies that they would furnish as we needed them, agreeing to have all of the orders placed through one of the large firms, that firm to distribute them equitably among the various manufacturers, according to what they could produce.

That was entirely agreeable to them, and most of those supplies we got at very reasonable rates, some of them cheaper than we had been paying for them under our regular contract. One of the largest items under that head was water closet outfits, 54,000 of them, and for those we had been paying about \$21, and we were able to get a reduction of price on them to about \$16, buying right direct from the manufacturers.

MR. GORDON. You say you got the lumber at less than the market price?

GEN. LITTELL. When I say less than the market price, I mean, for instance, if we want lumber right away to-day or to-morrow, in New York City, we will have to pay a price, probably more than we are paying for it by getting it on the advice of the lumber committee. They could tell us where we could get that lumber in the neighborhood of \$20 or \$22, but if we want to buy it from one of the big yards in New York City, we have got to pay the market price for it, and that not only includes the price of the lumber, but the price of delivering it, and the various other overhead charges they have.

MR. GORDON. When you speak of a standard price, do you mean that all the lumber that went into the cantonments was furnished at the same price per thousand feet?

GEN. LITTELL. Not exactly. The various dimensions of lumber cost various prices.

MAJ. MARSHALL. The average price was about \$20. Fifty-four thousand carloads of lumber were used in the first four months, July, August, September, and October.

Mr. GORDON. What did you say the average price of that was?

Gen. LITTELL. Between \$20 and \$22.

Mr. ANTHONY. Was that at the mills, or delivered?

Gen. LITTELL. At the mills.

Mr. GORDON. At the mills?

Gen. LITTELL. At the mills; yes, sir. Then it was all shipped at Government rates.

Mr. GORDON. Are the Government rates for shipping higher or lower than the ordinary rates?

Gen. LITTELL. They are lower in some cases. That would be the case on any of the land-grant or free roads, and we had to take advantage of all those things wherever that was allowed.

Mr. OLNEY. I have seen a list of the names of the members of this so-called emergency construction committee, and it consists of civilians who, in commercial life, receive salaries of from \$6,000 to \$30,000 a year.

Gen. LITTELL. I know they are very high-grade men.

Mr. OLNEY. I have heard, also, of some dissatisfaction among the members of those committees, and that a number of them left to go into the Ordnance Department, where they receive commissions. Is that true?

Gen. LITTELL. I do not know.

Mr. OLNEY. You think that committee is intact, as far as you know?

Gen. LITTELL. They have changed several times; first one man going, and then another. When this work first commenced, we saw a great deal of the members of the committee because they advised us in a great many ways where to get expert engineers that we have on the jobs; and the men whom we have commissioned received salaries in civil life which amount to very much more than their commissioned pay. We saw a great deal of them, almost every day; but since that time we only come in contact with them, possibly occasionally, sometimes with the chairman of that committee, and I understand that it has changed in several respects since the early days. Mr. Olendorf used to be on that committee, but he is no longer there. Mr. Tuttle is another man who, I understand, has gone to the Shipping Corporation.

Mr. OLNEY. Are there any members of your board who have been commissioned?

Gen. LITTELL. Maj. Starrat has been commissioned.

Mr. OLNEY. The others are all \$1 a year men?

Gen. LITTELL. The others are all \$1 a year men; yes, sir.

Mr. OLNEY. To whom are you directly responsible?

Gen. LITTELL. To the Secretary of War, through the Quartermaster General.

Mr. SHALLENBERGER. How many of the uncommissioned officers have you had on this board?

Gen. LITTELL. I do not know. That board was just acting in an advisory capacity.

Mr. SHALLENBERGER. Was it a large board, or a comparatively small board?

Gen. LITTELL. I think there were not more than five members on it at any one time. Which committee are you talking about?

Mr. SHALLENBERGER. The one Mr. Olney was talking about.

Gen. LITTELL. That is, the emergency construction or lumber committee?

Mr. OLNEY. This general committee on construction.

Gen. LITTELL. There are two committees we have had a great deal to do with.

Mr. OLNEY. There were as many as 18 or 20 on the general board?

Gen. LITTELL. I do not think there have ever been more than four or five on the committee on emergency construction, and the lumber committee never had more than three or four members present. How many members they had, I do not know.

Mr. FIELDS. I think there are several men who served on that committee who have alternated, that is, one would serve one week and the next week another man would take his place.

Mr. SHALLENBERGER. The point I had in mind was this: It has been brought out that the members of that board, seemingly, were willing to serve without commissions, whereas possibly it might be brought out later that other boards found it more efficient to secure men by commissioning those who served on the different boards.

Gen. LITTELL. The Ordnance people also use this Council of National Defense, and the committees of the Council of National Defense in an advisory capacity, but they have taken in a great many officers who are skilled along certain lines and given them commissions. I do not know whether they have gotten them through the boards or not. The Signal Corps has done the same thing. We have a number of men in our division and some of them have commissions in the Engineer Corps, and we have one in the Ordnance Corps, and, of course, a lot of quartermasters, but they have been picked out for their ability as constructors and civil engineers, and water engineers, and mechanical engineers.

Mr. ANTHONY. You stated that the War Department called upon you for specifications for buildings to house a million men. What was the date when the War Department called upon you for this information?

Gen. LITTELL. It was back at the beginning of the year. I have not a particularly good memory for dates.

Mr. ANTHONY. At the beginning of the year 1917?

Gen. LITTELL. Yes, sir; it was back some time before the month of May.

Mr. ANTHONY. You said a while ago you thought it was before the declaration of war.

Gen. LITTELL. Yes, sir, it was.

Mr. ANTHONY. Can you put that date in the record?

Gen. LITTELL. I can get it for you.

(The data is here inserted:)

MARCH 13, 1917.

To the C. AND R. DIVISION:

Please prepare and submit to the estimates branch, within the next five days, detailed statement of the cost of original equipment, including equipment C, supply trains, ammunition trains, animals, motor-truck equipment, motorcycles, automobiles, subsistence, fuel, forage, clothing and equipage, temporary shelter, temporary stores, houses, and other items necessary for equipment of 10 field armies based on photographic copy of table representing divisions at war strength, as authorized by national-defense act. Composition of field army to be as per photo copy of table, page 31, Tables of Organization, figuring on a total of 43,000 officers, 1,018,270 enlisted men, for a period of one year.

The statements called for should be in sufficient detail to permit of full explanation of the estimate.

This is in confirmation of my verbal instructions of this morning.

HENRY G. SHARPE, *Quartermaster General*.

Estimated cost of providing temporary construction, etc., for an emergency force of 43,000 officers and 1,018,270 enlisted men for a period of one year.

Item No.

1. Construction of temporary buildings required for shelter of troops, animals, and supplies, at \$40 per capita.....	\$42,450,800.00
2. Maintenance of above construction, at 5 per cent.	2,122,540.00
3. Construction of temporary hospitals, at \$2 per capita.....	2,122,540.00
4. Maintenance of temporary hospital buildings, at 5 per cent.....	196,127.00
5. Construction of water and sewer systems, at \$1.75 per capita.....	1,857,222.50
6. Maintenance of water and sewer systems, at 10 per cent.....	185,722.25
7. Construction of electric-lighting systems, at 60 cents per man....	636,762.00
8. Maintenance of electric-lighting systems, at 10 per cent.....	63,676.20
9. Construction of roads, drainage, and clearing, at \$5 per man.....	5,306,350.00
10. Maintenance per year, at 10 per cent.....	530,635.00
11. Construction and maintenance of wharves, dredging, etc., at Coast Artillery posts based on requests now on hand, which are being received daily for these purposes.....	300,000.00
12. Rental of recruiting stations, at \$1.184 per man, and hire of lodgings, at 92 cents per man.....	2,142,440.00
13. Rental of camp sites, at \$2 per man per year.....	2,122,540.00
14. Rental, construction, and repair of target ranges, at \$2 per man per year.....	2,122,540.00
15. Disposal of garbage, at \$3 per man per year.....	3,183,810.00
16. Purchase of toilet paper, garbage cans, urinal cans, etc., at \$2 per man per year.....	2,122,540.00
17. Purchase of water, at \$4.80 per man per year.....	5,094,096.00
18. Purchase of electric current, at \$4.80 per man per year.....	5,094,096.00
Total.....	77,564,436.95

NOTES.

Item 1.—The amount estimated for under this item is based on a per capita of \$40, this per capita having been arrived at by using as a basis the actual cost of temporary buildings recently erected under the approved mobilization plans. Estimate is submitted for temporary buildings owing to the fact that canvas shelter is deemed expensive and it is doubtful whether the supply thereof would be sufficient to house an army of the size contemplated.

Item 2.—The amount herein estimated for maintenance of these buildings will be required to replace buildings destroyed by storms, fires, etc., and for making ordinary repairs. It is thought that the amount estimated for these purposes is reasonable and conservative.

Item 3.—The amount estimated for temporary hospitals is based on actual cost of similar accommodations recently constructed along the Mexican border.

Item 4.—Same as item 2.

Item 5.—This estimate is intended to cover construction of temporary water and sewer systems at various mobilization camps for troops, and is figured on a per capita basis of \$1.75, which recent experience has demonstrated will be required for these sanitary facilities at camps of this character.

Item 6.—Estimate submitted for maintenance of above water and sewer systems at 10 per cent of original cost is considered reasonable.

Items 7 and 8.—In preparing this estimate it has been assumed that mobilization camps will be lighted by electricity. If, however, these camps are to be lighted by mineral oil this estimate can be reduced to \$1,000,000.

Items 9 and 10.—It is considered absolutely necessary in large mobilization camps especially to provide for a system of roads. There will also be required a certain amount of grading and clearing for the necessary drilling and maneuvering of troops. Experience in the past has demonstrated that this work can not be satisfactorily performed by troop labor, and estimate is submitted for these purposes, on a per capita basis of \$5, which is considered reasonable and conservative.

Item 11.—Several requests are now in this office for construction of new wharves, repairs to existing wharves, and dredging channels at Coast Artillery posts. These requests now aggregate over \$100,000, and as similar conditions are known to exist at other Coast Artillery posts with respect to these items, it is estimated that at least \$300,000 would be a conservative estimate to cover these requirements throughout the country.

Item 12.—This estimate is based on the actual cost of the rental of recruiting stations and the hire of lodgings for recruits.

Item 13.—This estimate is intended to cover the rental of the necessary sites for mobilization camps, etc., including the necessary space for drilling and maneuver purposes, which will be necessary incident to the training of a volunteer army.

Item 14.—This estimate contemplates the rental, construction, and maintenance of target ranges at mobilization camps, etc.

Items 15, 16, 17, and 18.—Estimates under these items are based on the average cost per capita as stated, which past experience has demonstrated will be required for these purposes.

(Confidential.)

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, March 21, 1917.

From: The Adjutant General of the Army.

To: The Quartermaster General.

Subject: Estimates for equipment of Army of 1,000,000 men.

The Secretary of War desires that you prepare estimates for the supplies pertaining to your bureau needed to equip an army including the present Regular Army and the National Guard, of 1,000,000 men organized into 32 Infantry and 4 Cavalry divisions and Army corps troops sufficient for 12 Army corps. The estimate for the Quartermaster Department will include cantonment construction for such portion of the force as can not now be sheltered in Army posts in the United States. Cantonment construction to be of the type considered by the General Staff in its report on universal service.

By order of the Secretary of War:

WM. M. CRUIKSHANK,
Adjutant General.

Estimated cost of providing temporary construction, etc., for an emergency force of 43,000 officers and 1,034,270 enlisted men, after deducting accommodations now available in the United States for 70,000 officers and enlisted men, for a period of one year.

1. Construction of temporary buildings required for shelter of troops, animals and supplies at \$40 per capita.....	\$40,290,800.00
Temporary shelter for Coast Artillery supports.....	181,730.00
2. Maintenance of above construction at 5 per cent.....	2,023,626.50
3. Construction of temporary hospitals at \$2 per capita.....	2,014,540.00
4. Maintenance of temporary hospital buildings at 5 per cent.....	100,727.00
5. Construction of water and sewer systems at 75 cents per capita...	1,762,722.50
Water supply systems for Coast Artillery supports.....	230,741.00
6. Maintenance of water and sewer systems at 10 per cent.....	199,346.35
7. Construction of electric lighting systems at 60 cents per man....	604,362.00
8. Maintenance of electric lighting systems at 10 per cent.....	60,436.20
9. Construction of roads, drainage and clearing at \$5 per man.....	5,036,350.00
10. Maintenance per year at 10 per cent.....	503,635.00
11. Construction and maintenance of wharves, dredging, etc., at Coast Artillery posts based on requests now on hand, which are being received daily for these purposes.....	300,000.00
12. Rental of recruiting stations at \$1.184 per man, and hire of lodgings at 92 cents per man.....	2,119,296.08
13. Rental of camp sites at \$2 per man per year.....	2,014,540.00
14. Rental, construction, and repair of target ranges at \$2 per man per year.....	2,014,540.00

15. Disposal of garbage at \$3 per man per year.....	\$3, 231, 810.00
16. Purchase of toilet paper, garbage cans, urinal cans, etc., at \$2 per man per year.....	2, 154, 540.00
17. Purchase of water at \$4.80 per man per year.....	5, 170, 896.00
18. Purchase of electric current at \$4.80 per man per year.....	5, 170, 896.00
19. Purchase of ice boxes for preservation of food in camps at 25 cents per capita.....	269, 317.50
20. Sanitation at Coast Artillery supports.....	198, 240.00
	<hr/> 75, 653, 092.13

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF
Washington, May 29, 1917.

Memorandum for the Adjutant General of the Army.

Subject: Cantonment construction program.

The Secretary of War directs that the instructions previously given regarding the construction of cantonments for the National Army and the National Guard (WCD 6374-29) be amended to the following effect:

1. Cantonment for 16 National Army divisions will be constructed first and completed by September 1, 1917.
2. The Quartermaster General will be furnished with a copy of the accompanying memorandum (additional copy herewith) and informed that the plans for the construction of cantonments as indicated by the accompanying estimate of May 26, 1917, are approved except as follows:
 - (a) Fly screens except for kitchens and mess halls will be omitted.
 - (b) Refrigerating and ice plants will be omitted.
 - (c) Hospitals will be reduced so as to provide accommodations for the sick upon a 3 per cent basis instead of upon the basis of 5 per cent, as recommended by the Medical Department.
 - (d) The plans will be further modified in accordance with the remarks in paragraph 6 of the accompanying memorandum in all cases in which the omissions indicated will make the economy without resulting in loss of efficiency.
3. Construction of divisional cantonments for the National Guard will be postponed until otherwise ordered.
4. In case any site already selected for a National Army division cantonment on private land is located in the same divisional area with a site selected for a National Guard Division cantonment on public land, the department commander concerned be directed by telegraph to report at once by wire whether or not it is advisable to locate the cantonment for such National Army division upon the site selected for such National Guard division.
5. That all concerned be informed of the foregoing, and department commanders be instructed to report as soon as possible the sites selected for the National Army division cantonments, and informed that they will take no further action with respect to cantonments for the National Guard, except to recommend sites therefor, and that they will close no further contracts for such sites.

TASKER H. BLISS,
Major General, Acting Chief of Staff.

Approved by Secretary of War after personal consideration by him.

T. H. B.

[First indorsement.]

WAR DEPARTMENT,
ADJUTANT GENERAL'S OFFICE,
May 29, 1917.

To the Quartermaster General, for his information and guidance, attention being invited to the accompanying inclosures.

By order of the Secretary of War.

_____, Adjutant General.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, May —, 1917.

Memorandum for the Chief of Staff:

Subject: Cantonment construction program.

1. On May 27, 1917, the War College Division was informed that the Chief of Staff directed that a study be made of the question of cantonment construction in connection with existing conditions relating to supplies, labor, and transportation, and that the advisability of sending troops to Canada, England, or France for training in the near future be considered.

2. Conference was had with Col. I. W. Littell, Quartermaster Corps, in charge of cantonment construction, Office of the Quartermaster General, who stated in effect that investigation has shown that it will be physically impossible, under existing conditions relative to supplies, labor, and transportation, to construct cantonments for the 32 divisions as recommended in WCD 6374-29, May 4, 1917, within the specified time. He also stated that it is possible to construct the essentials of the 16 cantonments for the division of the National Army by September 1, 1917, by using all the money available for cantonments and by creating a deficiency. In other words, if he were given a free hand and not subjected to interference or compelled materially to change his plans, he could so far complete the cantonments for the 16 divisions of the National Army that they would be ready for occupancy by September 1, 1917; that before that date sufficient shelter and other essentials could be made ready in each cantonment to accommodate the training cadres and other detachments which should precede the divisional troops to prepare for their receptions.

The attached copy of a letter (marked "A"), dated May 25, 1917, from the committee on emergency construction of buildings and engineering works, indicate that Col. Littell's estimate of the situation is correct.

3. It is evident from the statements in this letter, which are in all essential particulars confirmed by information obtained indirectly from the Munitions Board and other reliable sources, that the construction of even these 16 cantonments would subject the resources of the country to a considerable strain and that no other construction of like character can be undertaken while this work is in progress without delaying its completion and at the same time materially disorganizing our agricultural and other industries. Consequently it appears necessary not to initiate the construction of cantonments for the National Guard or horse depots at this time. It is equally necessary, if the National Army cantonments are to be completed by September, 1917, that their construction commence without delay.

4. Therefore, in order to expedite the inauguration of this work, the question of shelter for the National Guard and for replacement troops will be reserved for consideration in a subsequent memorandum to be submitted in the near future and to obtain recommendations as to the advisability of sending troops outside of the United States for training.

5. Herewith is a table, marked "B," prepared in the office of the Quartermaster General, which shows a summary of estimates for cantonments for the National Army and National Guard (in all 32 divisions).

6. The following remarks with reference to the items in the column in this table headed "Possible omissions and substitutions," under the estimate of May 26, are submitted.

(a) "Substitution of latrine trenches for water-closets and urinals." The War College Division is of the opinion that while water-carried sewerage is generally advisable, it may be possible in certain cantonment sites where the lay and character of the ground is favorable to substitute earth latrines. Where water-carried sewerage must be installed, the character of the installation should be of as simple character as possible, both with a view to reducing the first cost and to be able to use the labor of troops for its maintenance. In this connection the type of latrines used in the cantonment of the Second Division at Texas City merits consideration.

(b) "Omission of steam heat for barracks at northern cantonments." As a rule this item should not be omitted because of the fire risk resulting from the use of stoves and also because the employment of steam heat will result in ultimate economy. However, it is possible that local conditions, even at northern cantonments, may make the use of stoves advisable.

(c) "Substitution of kerosene lamps for electric lights when current is not obtainable from existing sources." This should not be done, because of the resulting increased fire risk, and because economy will ultimately result from the use of electricity. Plants should not be constructed in cantonments where current can be obtained locally at reasonable prices.

(d) "Reduced sewerage if water-closets are omitted." Remarks in (a) above apply here.

(e) "Omission of laundries." As a rule the construction of laundries will be necessary. Intensive training will require practically all the time of the drafted force and the operation of Government laundries will result in better sanitary conditions. If they are omitted, either the men will be obliged to devote their recreation periods to washing clothes or the cantonments will be overrun by civilians soliciting and delivering laundry. However, if satisfactory laundry service at reasonable prices can be obtained locally, the construction of Government laundries may be omitted.

(f) "Reduction of railroad construction on assumption that railroad companies will build distribution tracks in cantonments at their own expense." It is desirable to effect this reduction if possible. However, our experience indicates that the railroads will not construct trackage within cantonments at their own expense. It therefore seems unwise to count on this reduction.

7. It is believed that the following deductions should be made:

(a) "Omission of fly screens except for kitchens." These cantonments will be first occupied next fall, when screens will not be absolutely necessary. However, it is believed that both the kitchens and mess halls should be screened before occupancy. Other screening, if required, could be supplied before the summer of 1918.

(b) "Omission of refrigerating and ice plants." This item can be omitted because supplies requiring refrigerating service could be furnished in refrigerator cars as needed.

(c) "Reduction in size of hospital below estimates submitted by the Medical Department." Our experience indicates that our normal sick rate is about 3 per cent. The Medical Department apparently has estimated on the basis of a 5 per cent sick rate. It is believed that the hospitals should be constructed on the 3 per cent basis.

8. The summary of estimates for cantonments for the National Army and National Guard submitted by the Quartermaster Corps, May 26, 1917, amounts to \$192,393,200 or \$96,196,600 for the cantonments for the 16 divisions of the National Army. (In the absence of accurate data it has been assumed that the cost of the 16 National Army division cantonments would be one-half of the estimated cost of the 16 cantonments for the National Army and the 16 for the National Guard, 32 in all. As a matter of fact, the 16 National Army cantonments will cost more than this assumed one-half. This is because troops will be attached to the National Army division and practically none will be attached to the National Guard.) The deductions recommended above would effect savings as follows:

(a) Omission of fly screens except for kitchens.....	\$1,369,600
(b) Omission of refrigerating and ice plants.....	2,140,000
(c) Reduction in size of hospital below estimate submitted by the Medical Department.....	4,176,000
Total deductions.....	7,685,600
Total estimate for cantonments for National Army (16 divisions).....	96,196,600
Total deductions recommended.....	7,685,600

Corrected estimate for cantonments for National Army (16 divisions) 88,611,000

The appropriation bill now pending before Congress carries an item of about \$77,000,000 for cantonments. Of this amount about \$9,000,000 have been obligated for cantonments for the Regular Army and about \$10,000,000 will be required for various supplies such as bunks, mattresses, etc.; \$58,555,000 will be available for the construction of cantonments for the National Army. The construction of these cantonments will, therefore, in accordance with the above-corrected estimate, create a deficiency of about \$29,956,000.

9. The War College Division is of the opinion that it is a matter of prime importance that accommodations for the 16 divisions of the National Army be ready for occupancy on the date set for the mobilization. If the mobilization is to be delayed because shelter is not then ready for them, or if they are required to assemble in cantonments which lack any of the essentials, the effect upon the country will be far from favorable.

10. Action is recommended now as indicated in the memorandum, herewith for The Adjutant General of the Army.

JOSEPH E. KUHN,
Brigadier General, General Staff,
Chief of War College Division,
Assistant to the Chief of Staff.

Mr. ANTHONY. How long after that date when you were called upon for specifications did you furnish the specifications?

Gen. LITTELL. We already had our plans.

Mr. ANTHONY. You had them ready?

Gen. LITTELL. We had standard plans.

Mr. ANTHONY. How long after you had furnished the plans, which, I presume, was really upon request, was construction commenced on these Army cantonments?

Gen. LITTELL. That estimate was submitted, I think, to the Secretary of War about February or March, and the construction of the cantonments was not begun until June.

Mr. ANTHONY. What was the cause in the delay in the commencement of construction?

Gen. LITTELL. In the first place, the camp sites were not selected. While the camp sites were being selected, we were building our organization to do this work, drawing the plans, and all that sort of thing, preparing the contracts.

Mr. ANTHONY. So that three or four months' time was consumed in selecting sites?

Gen. LITTELL. The bill appropriating the money was not passed until June.

Mr. ANTHONY. That would not have delayed the selection of the sites, would it?

Gen. LITTELL. No. The Quartermaster General's Office asked several times where these sites were to be, and as I stated previously, that matter was first turned over to the War College to determine the location of these sites, and they could not do it, and then later it was turned over to the department commanders to make the selections, and recommendations for the location of the sites.

Mr. ANTHONY. So that there was a delay. The sites for those cantonments could have been awarded at that time?

Maj. OURY. Not until the conscription bill became a law did they finally consummate the plans.

Mr. ANTHONY. But the department knew they were going to have an Army before that time?

Gen. LITTELL. I understand.

Mr. ANTHONY. I would not regard that as an excuse. General, the Quartermaster General's Department has always had a bureau of constructing quartermasters, has it not?

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. And it has always had a reputation of being fairly efficient, has it not?

Gen. LITTELL. I hope so.

Mr. ANTHONY. I have always heard that that was so. Your system has been heretofore to let the contracts to the lowest bidder.

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. And you had an organization at the time you were called upon to furnish the specifications, which was regarded as able to handle almost any problem that would be given to the Army?

Gen. LITTELL. We had been up to that time. Nothing like this had ever been tried before.

Mr. ANTHONY. Your organization was an able and competent organization of construction quartermasters, was it not?

Gen. LITTELL. We had a force in the construction department which was capable of handling anything the quartermaster's department had had up to that date, but they had never had anything that would compare in the slightest way with the enormity of this task.

Mr. ANTHONY. But you had been contemplating the housing of an additional army for several years, had you not? It had been in the plans of the department that if the emergency ever confronted the country we would call out an additional army of at least 500,000 men?

Gen. LITTELL. But we did not know we were going to have to build those cantonments in three months. It would have been entirely different in the matter of building those cantonments if we had had anywhere from 8 to 10 months in which to build them, because then you would have time to draw specifications.

Mr. ANTHONY. But you had the specifications prepared, did you not?

Gen. LITTELL. We had the plans prepared. The plans are all simple and they speak for themselves.

Mr. ANTHONY. What was the necessity for superimposing this civilian body over the bureau of constructing quartermasters? Was there any necessity for that, so far as the ability of the Army officers to carry out the work was concerned?

Gen. LITTELL. If we had had plenty of time to organize a division to do that work it probably would have been all right, but a time limit was set, and the time element was so very important that we did not have time to organize and look around to find out where to get these people.

Mr. ANTHONY. Was there anything that this Advisory Committee did that could not have been done by the Army officers?

Gen. LITTELL. No, sir; if we had had plenty of time.

Mr. ANTHONY. You had just as competent men as they had to do that work, did you not?

Gen. LITTELL. Possibly so; but we only had three there, myself, Maj. Marshall, and Maj. Oury.

Mr. ANTHONY. Three constructing quartermasters?

Maj. OURY. Three officers in that division.

Mr. ANTHONY. There are a large number of constructing quartermasters, are there not?

Gen. LITTELL. They are all over the United States, doing certain kinds of work, but they were not men who had any experience in doing anything of this kind.

Mr. ANTHONY. Was the board appointed to take over this work given supreme authority?

Gen. LITTELL. No, sir.

Mr. ANTHONY. You still had the right to change their plans?

Gen. LITTELL. Yes, sir. They were only acting in an advisory capacity.

Mr. ANTHONY. Was there ever any recommendation from that civilian board which you changed or failed to follow?

Gen. LITTELL. In the case of one of the contracts—I have forgotten whether it was one or two—the board made a recommendation which we did not agree to, and I called the attention of the Secretary of War to my opinion about it, and he referred it back to the board and they changed the recommendation.

Mr. ANTHONY. In the construction of these large cantonments, for the National Army, costing these immense sums of money, did not that construction go further than the plans which were in the mind of the Quartermaster Department officials; were they not more elaborate?

Gen. LITTELL. Yes, sir; they were.

Mr. ANTHONY. Do not military men, as a general rule, believe that an army should be simply housed, rather than extravagantly housed, with all modern luxuries and improvements?

Gen. LITTELL. After my experience with these cantonments, I should say no, because what they have there now, they practically demand, those who are on the spot. The buildings we have built them are not elaborate buildings. They are as simple as can be made to make them comfortable and healthy.

Mr. ANTHONY. Would it not have been much cheaper to have housed the National Army in smaller units and not have made these military cities so large?

Gen. LITTELL. I do not think so.

Mr. ANTHONY. You stated the other day that it cost \$220 per man to house these men.

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. I have in mind some of the smaller military camps which have been built under the system of competitive bidding, and not on the cost-plus basis, wherein such as the men who are in some of the technical corps of the Army are being housed at a cost of about \$70 per man. They are one-story barracks, heated by stoves, in the old-fashioned way, but the men are perfectly comfortable, and the officers say that the camps are perfectly satisfactory. Does not the difference in cost between \$70 and \$220 show a big waste of money in housing the men of the National Army?

Gen. LITTELL. You must remember that in the units you are speaking of, they are not including in that cost the sewers and the steam heat, and in some cases they are not including the post exchanges, and a lot of stables, and the remount station, and they are not including the grain elevators, and the scales, nor hospitals, nor brigade headquarters, nor division headquarters, nor barracks for foreign officers, and a thousand and one other things, such as truck train garages, and all that sort of thing.

Mr. ANTHONY. But is it not extravagance to construct barracks for the larger units? I have before me a copy of the hearings held by the Committee on Naval Affairs, which shows that in the construction of the smaller camps by the Navy, where they housed from 1,500 to 4,000 men, the cost would run from \$40 to \$100 a man, and in the larger camps it would run to almost as much as the cost for Army. Does it not appear to you that a great deal could have been saved by building smaller camps?

Gen. LITTELL. No, I do not think so, if you provide them with all the utilities they have demanded, such as water and sewers, and hot water for bathing, electric lights, laundries, post exchanges, theaters, and all sorts of things of that kind.

Mr. ANTHONY. One of the things I have noticed at the large camps has been steam pipes running above ground. Is that considered good engineering to heat the camp in that way, with the pipes running above the ground?

Gen. LITTELL. That was done for two reasons, and it was done on the recommendation of some of the best steam heating engineers we have in the country.

Mr. ANTHONY. What were their reasons?

Gen. LITTELL. First, to save the additional cost of digging the necessary trenches. We had to dig in each camp about 52 miles of trenches for water and sewers. If we had had to have done the same thing for the steam-heating pipes, it would have added very largely to the cost of the camp, and when the pipes go in the ground it is much more trouble to take care of them, and it is just as easy to insulate them above the ground as it is under the ground.

Mr. ANTHONY. Is there not a great loss of heat?

Gen. LITTELL. Not if it is properly insulated. The air around the pipe, if the pipe is properly insulated, will not draw away any more heat than the ground around the pipe.

Mr. ANTHONY. Have you heard that the use of steam heat has been one of the causes of illness in the camps?

Gen. LITTELL. I do not think the records will show that.

Mr. ANTHONY. I had an officer make this statement to me, that the buildings were overheated when the weather was not cold, and when the weather was cold they were not sufficiently heated, and that the men would be taken out to drill and practice and brought back to the cold buildings in a heated condition, and for that reason the buildings were not sanitary and healthy.

Gen. LITTELL. There is a great deal of that. We have the same thing in our own lives. We are always catching cold because our houses are overheated, and that is always the trouble with the modern improvements.

Mr. ANTHONY. You spoke of some of the camps having cost as much as \$10,000,000. Which of the camps cost that amount?

Gen. LITTELL. There is one camp that cost a little more than that. I think that was the camp at Yaphank.

Mr. ANTHONY. What was your original estimate of the cost of that camp?

Gen. LITTELL. It is hardly fair to compare that cost with our original estimates, because we have done so very much more construction since the original estimate was made. We never made an original estimate on all that we have constructed, but as I have stated before, every single week there is some new construction work in each of these camps.

Mr. ANTHONY. Here is a statement which I have before me that was made to a Member of Congress by the general engineer of one of these construction companies. He stated that his original estimate of the construction was \$3,000,000 for the camp, and that the final cost ran up to \$8,000,000. What are the causes of such a wide margin between the estimated cost and the actual cost?

Gen. LITTELL. In some cases we have to pay more for the materials because of the delay in the materials getting there, and the means of getting it there in time to carry on the construction, and we had to buy some of those materials in the open market.

Then our labor cost would be so much more than we had expected by reason of the higher rates we had to pay and the amount of overtime that we had, of necessity, to work in order to get the camps finished for the troops on the dates when we were ordered to take

care of them. That large amount of construction we did not contemplate in the beginning.

Mr. ANTHONY. The profit was limited on this first award of \$3,000,000 to \$250,000, as I understand it.

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. As the contractor completed his job, as it was awarded to him, and this supplemental work was given to him would he get an additional profit on that supplemental work.

Gen. LITTELL. No, sir. That is the reason the average profit is only between 2 and 3 per cent.

Mr. ANTHONY. The reason I asked that is that a Member of Congress has stated before another committee that in some of the Army camps, after the contractor completed his original job as allotted to him, he was given the job of building roads leading up to the camp, and in the camp, which amounted to large sums of money, on which he was given a profit.

Gen. LITTELL. No, sir.

Mr. ANTHONY. That statement is not correct?

Gen. LITTELL. No, sir.

Mr. ANTHONY. Do you believe this work could have been done by letting it out to the lowest bidder?

Gen. LITTELL. No, sir; I do not. I do not think you could get enough reliable bids, or enough bids from reliable contractors to have built half of the cantonments.

Mr. ANTHONY. I understand that the Navy did \$97,000,000 of emergency work of this character, and that they let the bids to the lowest bidder.

Gen. LITTELL. Have they had to do that within a time limit?

Mr. ANTHONY. I do not know. Do you know?

Gen. LITTELL. I have heard that they have not, but I do not know.

Mr. ANTHONY. I want to ask you in regard to the wages paid at these places. It has come to my knowledge that at some of the large Army camps, where the contract was on the cost-plus basis, a plumber would get as much as \$10 or \$12 or \$13 a day. In towns within a hundred miles of the cantonment plumbers were working at the normal rate of \$5 a day.

Gen. LITTELL. How many hours a day were they working?

Mr. ANTHONY. I do not know as to that.

Gen. LITTELL. Was there any double time?

Mr. LUNN. I would like to suggest that a short time ago the plumbers of Schenectady, N. Y., were drawing \$10 a day for eight hours' work.

Mr. ANTHONY. This was in the West.

Mr. KAHN. In the building of Camp Fremont they had to go to San Francisco for plumbers, and they had to take the men away from their families and take them to Camp Fremont, and they were also under the expense of keeping up their homes in San Francisco, so that there was also an additional expense if the men got the additional pay.

Mr. ANTHONY. That is true, but how do you account for the fact that where your contractors were building one of these cantonments, and carpenters were being paid 88 cents an hour off 100 miles away, a contractor who, having secured a contract for the military work by reason of being the lowest bidder under the competitive

system, was paying the union rate of 55 cents an hour for carpenter's work. Do you not think that is an example of extravagance under the cost-plus system?

Gen. LITTELL. Were they paying 88 cents an hour?

Mr. ANTHONY. That is my understanding.

Gen. LITTELL. I could not say about that.

Mr. ANTHONY. In this place where they were paying 55 cents an hour, as soon as it was known that the Government was going to do additional work, and the contractors who were doing the work received orders to go ahead on the cost-plus basis, the carpenters raised their price to 85 cents.

Gen. LITTELL. That matter of wages was regulated for us.

Mr. ANTHONY. In other words, under the cost-plus system, the labor proposition got away from you, did it not? You had no means of controlling it?

Gen. LITTELL. We had no means; no, sir.

Mr. ANTHONY. Whereas, if the work had been let to the lowest competitive bidder, the contractors would have made contracts with the union?

Gen. LITTELL. But the great majority of reliable contractors who could have done that work in the time it was required to be done, would not make a bid, knowing the trouble about labor.

Mr. ANTHONY. Under the cost-plus system you can control the price of raw materials, and you can control everything except the price of labor?

Gen. LITTELL. And no one else can. You will find in Pittsburgh that there are men getting from \$24 to \$30 a day in the mills and boys getting \$7 and \$8 and \$10 a day—by that I mean young men. A boilermaker's helper will get \$4 a day now, and he has nothing to do but hold a rivet and let somebody handle the other end of it.

Mr. ANTHONY. Would it be possible to put in the hearings the names of the Army camps, where the sites were changed after the original recommendations were made by the boards of officers appointed by the department commanders to select the sites?

Gen. LITTELL. I could not do that, because I do not know which ones were changed.

Mr. KAHN. Under whose jurisdiction would that be?

Gen. LITTELL. The Chief of Staff. Those probably are all on record in the Adjutant General's Office.

Mr. KAHN. Did I understand you to say that in February or March you began to make arrangements for these camps?

Gen. LITTELL. Not for these camps.

Mr. KAHN. Or for some similar camps for housing large armies?

Gen. LITTELL. We did not know. Mr. Kahn, what it was for. There was a great deal of talk at that time about national training, and the Quartermaster General got instructions from the War Department to prepare estimates for housing in cantonments a million and some few thousand men.

Mr. KAHN. Will you please put into the record the exact date when the Quartermaster General got that order, and from whom he got it?

Gen. LITTELL. Yes, sir; I can get that from the records.

NOTE.—This has been inserted in previous pages of the record.

Mr. KAHN. In regard to these large cities that Mr. Anthony refers to, the overhead expenses of maintaining the camps is materially reduced when they take in as large an area and house as many people. as compared to the small camps, is it not?

Gen. LITTELL. Yes, sir. If these camps should be divided—say, we could take one of these division camps and divide it into three brigade camps, each one of them would have to have the electric light, a sewage disposal plant, perhaps water purification, and all sorts of things of that kind, which would be a duplication.

Mr. KAHN. And would add materially to the expense?

Gen. LITTELL. There is no doubt about that.

Mr. KAHN. Which expense is avoided when these large camps are constructed?

Gen. LITTELL. It is much reduced.

Mr. GORDON. Not avoided: it is lessened proportionately, according to the number of men.

Gen. LITTELL. It would not be cut in half, but it is materially less.

Mr. KAHN. I want to ask you another thing about the construction of these camps. As I understand it, you entered into these agreements with these large contractors because they were able to turn over to the Government immediately their whole construction camps, and they did turn them over, and the smaller private contractors would not have been able to do that?

Gen. LITTELL. That was the idea, Mr. Kahn. They had large organizations which were used to doing large things, and it was conceded by everybody; in fact, we have a letter on file by some very prominent man here who told us it would be practically impossible to get those camps done, that it was an unheard of thing to build anything of that kind within that time, and I do not think we thought we were going to get them done, but we used every possible effort to do it.

Mr. KAHN. Did those contractors deliver the goods, as the saying is? Did they turn over these plants to you so that you could immediately begin the construction?

Gen. LITTELL. They did, and we considered that they did not profiteer any more than anyone else. There was no more profiteering by the contractors' side of it than the laborers' side of it.

Mr. ANTHONY. If you turned the Treasury over to individuals, it is possible to do almost anything, is it not?

Gen. LITTELL. Yes, it is; but it takes a good many things all taken together to do things like that in record time. If you cut down the time one-half in the building of a piece of road, or anything else, it is going to cost nearly twice as much money. You have got to employ so many more men, and your other expenses are greater.

Mr. KAHN. The Quartermaster General's department felt, and the country felt, I imagine, that we were at war, and that we had to provide these cantonments as speedily as possible so as to complete the armies to fight our battles, and the question of cost was not looked into as seriously as it would be in peace times.

Gen. LITTELL. The cost in most cases could not be considered. The work had to be done, and the only function we could exercise was to do what we could to keep it down as low as possible.

Mr. KAHN. You tried to do that?

Gen. LITTELL. Yes, sir.

Mr. McKENZIE. There was no effort made to keep the price of labor down, and is it not a fact that the price of labor was put high purposely in order that it would attract mechanics from all over the country to these places, so that they could get the men to do the work?

Gen. LITTELL. I do not know whether it was put up purposely or not, but we were ordered to pay the union scale of wages in each particular locality, and an agreement was made between the Secretary of War and Mr. Gompers that we would pay the union scale of wages in existence in the neighborhood on the 1st of June.

Mr. McKENZIE. But you did pay more than the union scale of wages, did you not?

Gen. LITTELL. Not that I know of. We would not allow that if we knew of any case where it was done.

Mr. McKENZIE. I have always understood that the price of labor was put up high for a purpose, and, of course, I approved of that purpose, if it was to get the men there to do this work. Suppose you had put the price of labor a little below the average union price over the country; you could not have gotten the men, could you?

Gen. LITTELL. The cantonments would not have been half done by this time.

Mr. McKENZIE. The idea was to attract men from all over the country, so that you could get this work done, otherwise you would not have gotten it done?

Gen. LITTELL. We tried in every possible way not to take the men away from other sources. At Camp Meade, a mill owner said that his men were leaving him and going to work at the camp and making more money than they made in his mill. We at once instructed the constructing quartermaster not to take any men on that came from that mill.

Mr. McKENZIE. What was this gentleman making in his mill?

Gen. LITTELL. I think he was making woolen goods or worsted.

Mr. McKENZIE. That was an industry necessary for the carrying on of the war?

Gen. LITTELL. My recollection is that it was a worsted mill.

Mr. McKENZIE. If he was just engaged in some ordinary business of manufacturing, I think you made a mistake in giving that order.

Gen. LITTELL. That was a man whom I think was making something for the Army. I do not remember whether it was cotton duck or woolen yarn.

Mr. CALDWELL. You said a few moments ago that some of the recommendations which were made by this Board or Committee of the Council of National Defense you did not approve of, and you took it up with the Secretary of War, who ordered it referred back to the board, and they changed their recommendations?

Gen. LITTELL. Yes, sir.

Mr. CALDWELL. What was the nature of the recommendations that they had made?

Gen. LITTELL. I do not mind telling you at all. It is nothing to the detriment of the board or to the contractor we had selected. The board was absolutely honest in its recommendation, and the contractor was a good one. They recommended a contracting firm, one of whose members was a member of the Advisory Board. I invited the attention of the Secretary of War to that fact, and also

stated that it might be better policy, and would avoid any possible criticism of the board or ourselves, if that firm was not given the contract, and the case was referred back to the Advisory Committee with that intimation, and they changed their recommendation.

Mr. CALDWELL. Would you have followed that far enough to recommend not giving a contract to the brother of one of the members of the board?

Gen. LITTELL. Not unless I knew that the brother of that contractor was in some way connected with the other brother, and that he was in some way interested. The fact that he happens to be a brother of a member of the firm, and the firm being a most excellent one, would not influence me in making any recommendation that they should not get the contract on that account.

Mr. CALDWELL. I do not say that I agree with the criticism, but I will say that I have heard quite a little criticism of the fact that some contractors who actually got these heavy contracts for the big can-tonments were related to one member of the board. For instance, I understand that one of the firms that got a contract was organized by one of the brothers, and another one of the firms that got a contract was practically controlled by one of the brothers, and another one of the firms that got a contract was an offshoot of one of these firms. You know whom I refer to?

Gen. LITTELL. Yes, sir. The firm that bears the name of this member of the board was organized by the father of these men, the one who is on the board and one who is in another concern, not that one. I understand that at one time both of the brothers were interested in this firm, but I have since ascertained that neither of them is now interested in the original firm, and that the brother has gone off and is a partner in another firm not bearing that name at all.

Mr. CALDWELL. Which now has one of the contracts?

Gen. LITTELL. Which now has one of the contracts, but the brother who is on the committee has nothing to do with either of them.

Mr. CALDWELL. In order to get our attention down to it, I understand that a certain corporation was an offshoot of those same concerns?

Gen. LITTELL. I do not know about that.

Mr. ANTHONY. I know the facts about that. I will state them for your information, because I presented the matter to that committee. Mr. Clough was for 14 years vice president of the Fuller Construction Co., and over a year previous to this proposition he severed his connection with the first company and organized the Clough-Bourine Corporation. The advisory committee had made a ruling that no corporation should take one of these contracts unless they had been in business for two years, and that shut out this corporation, which had considerable money and experience behind it. The committee afterwards reconsidered that rule and decided that as they were a separate company, and had ample previous experience, and were absolutely separated from the Fuller Co. there was no reason why that two years' limitation should apply against them, and they were given the work.

Gen. LITTELL. I might further say that the Secretary of War carefully investigated the relations existing between the member of the committee and this firm that bore his name, and his proposed

connection with the other firms as well as the connection with the other gentleman who was a member of the board, and the Secretary of War had a statement, which is, of course, practically a statement on honor from this member I referred to who is on the board, as to his exact relations.

Mr. CALDWELL. At the Yaphank cantonment, General—I was there quite a number of times—I noticed that when the work was first begun, the first thing they did was to chop a road through the underbrush that was there, and began driving over it after they had made a slight crown to the road. It was demonstrated in the beginning that the top soil there would not make a good road. Why was it that that work was continued for all those months with the enormous amount of hauling going on over those roads without making a good road?

Gen. LITTELL. Our original intention was to make a contract to get the road started, and if possible get the road so far completed that it could be used in connection with the construction work, and we did actually go to work making a contract for the construction of the roads. We picked out what we considered to be one of the largest road-construction road outfits in the United States and made a contract with them, and there was great pressure brought to bear to have that contract annulled so that the work could be given to the local people at the various camps. That was under consideration for some time, and that held up that part of the work for a long time, until the Secretary of War could hear both sides of the case and make his decision, and he finally decided to abrogate the contract. Then we had to make new contracts for each of the various camps for the construction of the roads.

Mr. CALDWELL. Was that pressure brought to bear by any Member of Congress?

Gen. LITTELL. I do not know, sir.

Mr. CALDWELL. There is one other thing that struck me down there. The scrub oak that covered the whole of that country was very small, and the largest tree that was there, on an average, I should say, was about the size of the calf of my leg; we will say about four inches in diameter. The roots of those trees, as demonstrated by the uprooting of them, spread through the surface of the soil, rather than growing down. Why did you not use a stump puller and pull those out, rather than cut them off and grub them out?

Gen. LITTELL. It was discovered that the roots from which the scrub oak grew were the stumps of big trees.

Mr. CALDWELL. Only in places.

Gen. LITTELL. I do not know how much of it there was.

Mr. CALDWELL. Possibly 1 out of 100. I have been there.

Gen. LITTELL. I saw the condition of the ground, and what they had to do, and Gen. Bell, who is a great man to clear ground, was very anxious to do the best he could on that ground, and therefore he urged the Secretary of War to allow him a certain sum of money to do the clearing with, and he took an Engineer contingent that was there, an Engineer regiment to pulling up the stumps. I understand they hooked on a traction engine and pulled them out.

Mr. CALDWELL. The point I want to know is if you pull the stumps out, why do you not pull the tree down, because the stumps were pulled out, and only a few days after the tree was cut over?

Gen. LITTELL. They probably did not know big stumps were under there, and they originally cut off the scrub, just to provide places for the buildings to be erected, and when they came to find it was necessary to clear off a lot of that scrub to provide drill grounds, they found all these big stumps there, and some provision had to be made for getting them out. We did not have the money to pay for pulling out those stumps, when we first started.

Mr. FIELDS. The traction engine pulled the stumps out, did it?

Gen. LITTELL. I understand they were very successful with that.

Mr. FIELDS. Then, if the force of the engine was sufficient to pull out the stump, it only stands to reason that it was easier to handle the stump of a tree rather than to handle the whole tree.

Gen. LITTELL. They did not think at first that it was necessary to pull out the big stumps, but then they found out later that the ground was unserviceable without taking out the stumps.

Mr. MCKENZIE. I think you have stated that where there were a number of bidders for the construction of one of the cantonments, the Secretary of War arbitrarily decided which one of the bidders should get the contract. Is that true?

Gen. LITTELL. No, sir; we did not call for bids.

Mr. MCKENZIE. I did not mean bids. There were a number of different firms undertaking to get the job of constructing these cantonments, such as the one you have spoken of, and then it was up to the Secretary of War to determine, after ascertaining all the facts as to their ability to perform the work, to decide which one of these firms should have the contract. Is that correct?

Gen. LITTELL. This is the way it was done: We notify the committee of the Council of National Defense that we are going to do some construction work at such and such a place and request their advice as to the selection of a contractor. They make a recommendation, which they send to the Council of National Defense, and it is acted on by them and approved or disapproved and sent back to the Quartermaster General's Department, and then it is sent from there to the Secretary of War with a recommendation that it be either approved or disapproved, and the Secretary of War makes a final decision. There have been some cases where it has become known before the papers got to the Secretary of War that such and such a contractor has been recommended, and then other contractors, or their representatives or their friends have gone to the Secretary of War and asked a suspension of that recommendation or asked him to reconsider.

Mr. MCKENZIE. If there were no unusual characteristics appearing about this proposition, the recommendation of the board would go through?

Gen. LITTELL. Yes, sir.

Mr. MCKENZIE. The reason I ask these questions is because of some criticism I heard in regard to the letting out of the work at Camp Grant, at Rockford, Ill. I understand that that work was given to a firm of contractors at Cleveland, Ohio, and that a number of very large Chicago firms who were interested in building had made an effort to get that job of work, but were turned down, and the contract was given to this firm of contractors from Cleveland, whom it was stated were railroad construction men. I do not know any-

thing about the facts, and I would be glad if it could be shown that nothing but that which was right was done in that matter.

Gen. LITTELL: Bates & Rogers were the construction people. I think they are Chicago people.

Mr. MCKENZIE. I do not know. I heard that statement made at the time.

Mr. GORDON. I do not know of any such firm of contractors in Cleveland. Do you know what their address is?

Gen. LITTELL. I can find out. I do not happen to have it in this table.

Mr. MCKENZIE. The point I was trying to get at was whether a firm located in Chicago would be disqualified because of their being located in Chicago.

Gen. LITTELL. I think this is a Chicago firm.

Mr. MCKENZIE. I am glad to know that.

Mr. GORDON. There are many things about this work that have been criticized, and a good deal of the criticism, in many instances, has no foundation in fact. That is possibly what has led to so many questions being asked here.

Gen. LITTELL. I would like to state an instance that came to me the other day. A Congressman stated to me that he wanted to get information. He stated that another Congressman who had just returned from one of these camps had been told by a man who he said was superintendent on the job that he was getting \$50 a day, and this Congressman asked me if that could be so, if the contractor was getting his 10 per cent on that man's salary. I told him that in the first place the contractor was not getting 10 per cent and that in the second place that man was not getting \$50 a day on our pay roll.

I got the man's name and the contractor's name and ascertained that the man was getting \$25 a day and that the contractor was paying him \$25 a day out of his pocket, so that the man was really getting \$50 a day. But the contractor considered that man so valuable that he was being paid \$50 a day. There are superintendents on some of these jobs that are getting \$15,000 a year, but we are not paying them that salary. They are getting a bonus and the contractor divides his profit with them.

Mr. GORDON. In what capacity was this man employed?

Gen. LITTELL. As general superintendent.

Mr. GORDON. Is it proper for a man to receive pay from both parties to a contract?

Gen. LITTELL. We can not stop a contractor from paying him anything he pleases.

Mr. GORDON. I would not think if the Government had a man on a piece of work as superintendent of construction—

Gen. LITTELL. This was a contractor's man.

Mr. GORDON. I understand that, but the Government pays him, you say, \$25 a day, and the contractor pays him out of his own pocket \$25 a day extra.

Gen. LITTELL. That is because he wants a man who will get the work done.

Mr. GORDON. Then he wants a man who will not kick on the kind of work he does. What is the purpose of the Government paying \$25 for that?

Gen. LITTELL. He is entirely a contractor's man.

Mr. GORDON. Why should the Government pay him at all?

Gen. LITTELL. We have to pay everybody on the job, under the cost plus contracts.

Mr. ANTHONY. Was not the contractor supposed to furnish his organization free?

Gen. LITTELL. No, sir.

Mr. ANTHONY. I thought in some of the contracts it was supposed that he would furnish his regular organization free.

Gen. LITTELL. That is his company organization. We do not pay the overhead charges. His company only pays the people who are right on the ground.

Mr. ANTHONY. What is your rule with reference to subcontractors, where you designate the contractor and he sublets some of the work? Would he get a profit on that subcontractor's work?

Gen. LITTELL. Yes, sir; he gets five per cent.

Mr. ANTHONY. And the subcontractor would get 5 per cent?

Gen. LITTELL. No; he just gets the amount of his contract.

Mr. ANTHONY. Would he let the subcontract on the cost-plus basis, or on the competitive basis?

Gen. LITTELL. He makes the contract for a certain sum.

Mr. ANTHONY. On a competitive basis?

Gen. LITTELL. No; just on the cost-plus basis.

Mr. LUNN. The chief contractor gets 5 per cent of the subcontractor's work?

Gen. LITTELL. Yes, sir; that is the usual custom.

Mr. LUNN. He gets a percentage on the whole contract, does he not?

Gen. LITTELL. Yes, sir.

Mr. LUNN. And then he lets out certain parts of it and gets an additional percentage on that?

Gen. LITTELL. Not to exceed \$250,000, in any event. That is all limited. That is the ordinary course of procedure under contracts.

Mr. SHALLENBERGER. We have had testimony as to how these cantonments were prepared, and we have had some discussion as to how the National Guard has been cared for. How have you housed and taken care of the Regular Army?

Gen. LITTELL. Many of them have been in camps and cantonments all along the Mexican border, and many of them are in the regular barracks, and in many cases where garrison accommodations in the way of barracks were not sufficient to take care of the expanded companies, we have built cantonment buildings right at the posts.

Mr. SHALLENBERGER. The point I have in mind is this: I have heard less complaint about the housing of the Regular Army, and I think also there has been less kicking among the men in the Regular Army than in the National Guard and in the National Army cantonments. You have not given them any better care than the other branches of the Army, have you?

Gen. LITTELL. It is very natural that they should be in better condition.

Mr. SHALLENBERGER. I wanted to be sure that it was not because you had housed them better.

Gen. LITTELL. The men in the Regular Army are eliminated from contact with these large numbers of men coming in from civilian life, who always have measles. There is not a transport that goes across the ocean that does not have on board from 25 to 30 cases of measles or mumps, and that is because there are so many recruits. I am referring now to the transports that have recruits on them, because some of the Regular troops will go without any measles at all; but you put 500 recruits on a vessel and you will have from 25 to 30 cases of measles or mumps. We are continually having that trouble at the recruiting rendezvous.

Mr. SHALLENBERGER. I have heard one or two of the gentlemen say that the National Guard was given second consideration, and has been without many of the things that the men in the National Army have had. In other words, that the National Army has been given a great deal more attention than the other branches of the service. Is there anything in that, because of the fact that the Regular Army and the National Guard, being men who voluntarily have gone into the service, are not as apt to complain and accept a soldier's fare better than the men who have been conscripted and who have had to go?

Gen. LITTELL. I do not think those who have been conscripted do that after they have been there for a week or two. I heard one man say if he had known it was so good he would have been there three months before.

Wage schedule.

The following shows the name, location, and capacity of the various camps constructed for the use of the Regular Army allowing 500 cubic feet of air space per man. These camps are located on Government reservations and target ranges are available except in the case of Vancouver Barracks.

Name.	Location.	Capacity.	Acreage.
Fort Benjamin Harrison.	Indiana.	4,802	2,417.81
Fort Douglas.	Utah.	4,368	2,995.00
Leon Springs.	Texas.	7,166	17,273.87
Fort Oglethorpe.	Georgia.	20,875	6,641.64
Presidio of San Francisco.	California.	3,923	1,479.94
Fort Riley.	Kansas.	4,560	19,446.73
Fort Sam Houston.	Texas.	806	1,245.11
Fort Snelling.	Minnesota.	4,181	2,361.75
Camp Robinson.	Sparta, Wis.	2,645	14,111.00
Vancouver Barracks.	Washington.	2,560	640.47

Those are all on Government reservations and target ranges are available at or near the posts.

Other camps for the training of troops in various branches of the service have been established as follows and buildings have been constructed, that on the 500-foot cubic basis will accommodate the men shown below. Target ranges are available in connection with Belvoir, American University, and Fort Leavenworth.

Name.	Location.	Capacity.	Acreage.
Engineers.....	Belvoir, Va., Government reservation.....	830	1,500
Do.....	American University, D. C., leased.....	1,759
Signal Corps.....	Camp Alfred Vail, N. J., leased.....	751	425
Medical Corps.....	Concentration camp, Allentown, Pa., leased.....	370	47
Student officers.....	Fort Leavenworth, Kans., Government reservation.	1,980	6,781.78
Total.....	5,690

Accommodations for recruits at various recruiting stations have been provided by which the capacity of these Government-owned posts has been increased as shown in the following table:

Name.	Location.	Capacity.	Acreage.
Columbus Barracks.....	Ohio.....	6,636	70
Jefferson Barracks.....	Missouri.....	6,104	1,980.91
Fort Logan.....	Colorado.....	3,776	953.06
Fort McJowell.....	California.....	5,700	640
Fort Slocum.....	New York.....	6,576	86.50
Total.....	28,792

Further expansion can be taken care of at Jefferson Barracks, Mo., and Fort Logan, Colo.

TOTAL CAPACITY OF EMBARKATION CAMPS.

Name of camp.	Mobile capacity.	Camp guard.	Total.
Merritt, Tenafly, N. J.....	28,933	3,755	52,682
Stewart, Newport News, Va.....	15,234	1,000	16,234
Hill, Newport News, Va.....	4,822	1,030	5,852

(Thereupon the committee adjourned to meet to-morrow, Friday, January 18, 1918, at 10.30 o'clock a. m.)

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Friday, January 18, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent (chairman) presiding.

STATEMENT OF MAJ. GEN. HENRY C. SHARPE, QUARTERMASTER GENERAL, ACCOMPANIED BY BRIG. GEN. I. W. LITTELL, LIEUT. COL. CHARLES P. DALY, MAJ. W. H. OURY, AND MAJ. R. C. MARSHALL, JR.—Concluded.

MILITARY POST EXCHANGES.

The CHAIRMAN. The next item is, "Military post exchanges, \$1,247,512."

You got an appropriation at the last session under this item of \$800,000.

Gen. SHARPE. Mr. Chairman, I would like to submit a table showing the amounts required for the current requirements and new construction, under each one of the items, and then another table showing the apportionment of the appropriation to the United States and the Philippine Islands, and then another table explanatory of each one of the items.

Col. DALY. There is a little correction to be made in the proviso in that item, Mr. Chairman, which appears in the last part of the item. That is due to a clerical error. The proviso now reads, "*Provided*, That no part of this appropriation shall be expended for personal services."

The proviso as it appeared in the act of October 6 read, "*Provided*, That not more than \$125,000 of this appropriation may be expended for personal services, and no person shall be employed hereunder at a rate of compensation exceeding \$1,800 per annum." The deficiency act of October 6 limited the amount to be paid out for personal services to \$125,000. In this appropriation we are asking \$250,000 for that purpose.

The CHAIRMAN. What is the reason for that?

Col. DALY. The increased activities and the necessity for increased personnel. Most of the features incorporated in this bill are based on an estimate made by the War Department Commission on Training Camp Activities.

Mr. Fosdick is the chairman of that commission. He was asked to come here this morning and explain the items, but I understand he is before the Committee on Appropriations now explaining the deficiency estimate for the same purpose.

Mr. GORDON. They are not asking for the same appropriation from two committees, are they?

Col. DALY. One is a deficiency. This is the appropriation for the next fiscal year, and there is a deficiency in the appropriation under this item for the fiscal year 1918, and that is being handled by the Committee on Appropriations.

Mr. ANTHONY. When you speak of using some of this money for personal services, do you mean you will pay the representatives of this Commission out of this money?

Col. DALY. The expenses of the commission and the employees hired by the commission to carry on this work.

Mr. ANTHONY. Did not that commission secure a large amount of money from the public for the purpose of carrying on its work?

Col. DALY. I understand there was a large subscription—I do not know the amount—for the purpose of being expended under the direction of this commission.

Mr. ANTHONY. Now, it is proposed to augment that public fund by using the money from this item for that purpose?

Col. DALY. Yes, sir. There are certain items in this appropriation that do not pertain to the activities of the War Department Commission on Training Camp Activities. These are listed under the various items, and Gen. Littell can tell you what those are.

The CHAIRMAN. Is there any other item under that estimate that you want to make a special explanation of?

Col. DALY. No, sir.

The CHAIRMAN. You say that accounts for the increase in the appropriation entirely, that is, the activities of the Training Camp Commission?

Col. DALY. Yes, sir.

Mr. GORDON. How much has been donated by private persons for this work?

Col. DALY. I do not know: We have no record of that.

Mr. GORDON. Do you not think this committee ought to be placed in a position so that it can know how much money is available from other sources before it is asked to increase the appropriation of last year?

Col. DALY. There was \$750,000 appropriated last year in the two deficiency acts. I do not recall the amount in the act of May 12.

Mr. GORDON. Who expends this money donated by private subscriptions?

Col. DALY. The Commission on War Department Training Camp Activities.

Mr. ANTHONY. Are they asking us to pay the personnel of their organization?

Col. DALY. That is included in this amount.

Mr. ANTHONY. So that they will have all the money contributed by the public to spend on the welfare of the soldiers?

Col. DALY. Yes, sir.

Mr. ANTHONY. How many secretaries have they employed? They have one at each camp, do they not?

Col. DALY. Yes, sir.

Mr. ANTHONY. How many of them are there, do you know?

Col. DALY. I do not know. They have, in addition to that, directors of athletics at each of the camps.

Mr. ANTHONY. I understand that embraces the work of these community houses?

Col. DALY. Yes, sir.

Mr. ANTHONY. And that this committee is furnishing money jointly with these communities for the maintenance of these houses after they are built?

Col. DALY. Yes, sir. There is a long statement of their activities in these hearings.

The personnel of the commission consists of Mr. Raymond B. Fosdick, chairman, and several members.

Their names will be inserted in the record.

Mr. FIELDS. Is not Dr. Claxton a member of that?

Col. DALY. He may be. This is a list of the personnel of the commission which we got from the commission.

Mr. KAHN. Have you any connection whatever with the buildings that they call hostess's houses, that I understand they are putting up at the various camps? I know they have one at Camp Lewis, at American Lake, that was put up by the Young Women's Christian Association, and the purpose of it is that when a relative of the soldier comes to the camp, that relative, especially if it be a female relative, can have a house where she can meet the soldier. It is a very good thing.

Gen. SHARPE. I saw one at Camp Jackson, at Columbia, and I understood it was put up out of the funds of the Young Women's Christian Association. They were given permission to erect it, and that was done at their expense.

Mr. KAHN. But they wanted from your department, in connection with that, as I now recall—I think there was a report made of it by Col. Stone—they wanted a drying room. The soldier frequently has to meet his parents when it is raining hard, and they wanted a little room built by your department so that the soldier can dry his clothes when he comes in to see his mother or his sister in just a few minutes, taking off his coat, and getting it dried. It makes it very much more convenient for him.

They have also recommended, as I understand it, that you put in a telephone service, so that they can call a soldier direct, or get word to his commanding officer direct from the hostess's house to the particular portion of the camp where he may be stationed. Have you taken any action on those recommendations at all?

Gen. LITTELL. I do not remember any recommendations for a telephone service, but they have made a request for heat and light and water connections.

Gen. SHARPE. We have asked a change in the verbiage of the law authorizing the use of those things. The law authorized the Young Men's Christian Association to have fuel provided for them, and we have asked to have the law changed so that all the different associations or organizations of that kind may be placed on the same basis.

There was a Jewish association that had a house established there, and under the law we could not furnish them with fuel, and the Knights of Columbus are also in the same position and we have asked for a modification of the law to give those organizations the same privileges as the Young Men's Christian Association now has.

Mr. KAHN. I went into the hostess' house at Camp Lewis. There were upward of 400 or 500 women relatives of soldiers who were visiting with their boys. Those mothers who had little babies in arms were shown to a little room where they had a number of little beds, with a nurse there, all provided by the Young Women's Christian Association, so that the baby could be taken care of while the mother was visiting with her boy. I thought that was a magnificent institution.

Mr. FIELDS. Do you not think the mother returns home better satisfied as a result of that?

Mr. KAHN. I am positive about that, and the purpose of asking these questions is to find out whether anything has been done by the Quartermaster's Department to better that service, because all the betterments we can give it will make the mother still more satisfied.

Gen. SHARPE. We are doing that in the Quartermaster's Department. The telephone service is now furnished by the Signal Corps, and I imagine they have taken the same cooperative attitude in the matter that we have.

Gen. LITTELL. We have assisted them in giving supervision for the construction of the buildings. Those buildings are built by private funds, and in some cases they ask to have our contractor build the building, and in every case where they so request, we comply with the request and also furnish such supervision as they want.

Mr. KAHN. I hope if the recommendations of Col. Stone come before you that they can be carried into effect because they will materially improve the conditions, and as was suggested by Mr. Fields, the mothers and the sisters and the wives of the men will go back home very much more better satisfied.

Gen. LITTELL. It is one of the best institutions they have there.

Col. DALY. The various activities of the commission are listed in a memorandum we have in regard to that.

The CHAIRMAN. You may insert that in the record.

(The memorandum referred to is as follows):

COMMISSION ON TRAINING CAMP ACTIVITIES, WAR DEPARTMENT.

CREATION AND PURPOSE.

The commission on training camp activities was created in April, 1917, by the Secretary of War for the purpose (a) of providing recreational facilities for soldiers in training camps, and (b) of enforcing the law relating to drinking and prostitution near Army encampments, and the sale of liquor to soldiers in uniform. A general order from The Adjutant General of the Army to the several department commanders, dated June 19, 1917, contains the following statement:

"The Secretary of War has created a 'commission on training camp activities' to act under his immediate direction. This commission will act as a clearing house for suggestions of various kinds in relation to the question of providing rational recreational and other facilities for men in training camps. This includes training camps now in operation and all military camps of the Regular Army, National Guard, and National Army.

"The functions of the commission will be largely advisory, but the Secretary of War expects to consult it upon the whole question of police regulations outside the limits of military camps.

"*Organization.*--The personnel of the commission is as follows: Raymond B. Foe-dick (chairman), Lee F. Hanmer, Thomas J. Howells, Marc Klaw, Joseph Lee, Malcolm L. McBride, John R. Mott, Charles P. Neill, Col. P. E. Pierce (U. S. Army), Joseph E. Raycroft, Jasper J. Mayer (secretary)."

The chairman, assisted by the secretary, is actively engaged in directing the work of the commission. The other members of the commission devote all or part of their time to supervising one or more of the several activities of the commission. Much of the work of the commission is carried on by private organizations which have given their services to the Government.

The main activities of the commission may be classified as follows:

1. Providing recreational facilities--
 - (a) Inside camps.
 - (b) In communities adjoining camps.
2. Providing educational facilities.
3. Supervising work of post exchanges.
4. Organizing work of law enforcement--
 - (a) Providing recreational facilities.
 - (b) Inside camps.
5. Work of private organizations.

In organizing the recreational facilities within the camps the commission has used the services of private organizations, especially of the Young Men's Christian Association, the Knights of Columbus, and the Young Men's Hebrew Association. During the first few months of the war the Secretary of War permitted no other organizations but those mentioned above to operate within the encampments, but on October 31 he decided that thereafter fraternal and similar organizations would be admitted to the camps, subject to the approval of the commanding officers, and in accordance with rules made by the Secretary of War.

The Young Men's Christian Association, under the direction of John R. Mott, who is a member of the commission, has become a considerable factor in the social life of the camps. From 8 to 13 recreational and social buildings in each National Army cantonment and at least six buildings in each National Guard camp are being erected by this organization. In these buildings and elsewhere in the camps the Young Men's Christian Association is providing facilities for social intercourse and various kinds of entertainment.

Other social and fraternal organizations in the camps are carrying on work similar to that of the Young Men's Christian Association. On October 15, 1917, the Knights of Columbus were operating 65 halls in the various training camps. The Young Men's Hebrew Association has identified itself in this work with the Young Men's Christian Association.

ATHLETICS.

The recreative athletics of the camps are being organized under Joseph E. Raycroft, a member of the commission. The supervision of this work in each camp is in the hands of a divisional athletic council, supplemented by regimental councils and such organizations in the companies as are necessary. The immediate direction of the recreative athletics in each camp is in the hands of the sports director, who is a representative of the commission. These sports directors cooperate with the representative of the Young Men's Christian Association and the Knights of Columbus who are assigned to athletic work. Athletic equipment is being supplied to each regiment by the commission.

Because boxing has been found to be a valuable introduction to bayonet fighting the commission is laying emphasis on instruction in boxing. An advisory committee of five boxing experts has been organized to advise the commission concerning training in boxing, and boxing instructors are being appointed for the National Army cantonments.

MASS SINGING.

The commission is developing mass singing in camps. An advisory committee on mass singing, called the national committee on Army and Navy camp music, has been created, and the commission is appointing song leaders in all the camps. This work is in charge of Lee F. Hanmer, a member of the commission. A committee of camp song leaders has compiled a song book, entitled "Songs of the Soldiers and Sailors," which is being sold at cost through the post exchange.

ENTERTAINMENTS.

In each of the 16 National Army cantonments the commission has built a fully equipped modern theater building seating 3,000 people. The work of arranging dramatic programs for these liberty theaters is in charge of Marc Klaw, who is a member of the commission, and who is assisted in his work by a committee of 23 theatrical men and an advisory committee of 21 men prominent in various walks of life.

In each National Army cantonment and each National Guard encampment, there has been erected a tent seating 2,000 people in which Chautauqua entertainments are provided. In some camps the Young Men's Christian Association Auditorium also is used for these programs, and in many camps there are two Chautauqua tents. The management of these liberty theaters is in charge of Harry P. Harrison, for the commission.

To these liberty theaters and liberty entertainments admission fee of 5 to 25 cents is charged. Receipts and disbursements are supervised by the commission, whose object is to furnish good, wholesome entertainment at prices necessary to cover only the cost of providing the entertainment.

LIBRARIES.

At the request of the commission and under its supervision library facilities are being provided by the American Library Association. Library buildings have

been erected in the 32 National Army and National Guard camps, and trained librarians direct the distribution of books and magazines through the Young Men's Christian Association and the Knights of Columbus buildings and company barracks. Books are also provided for the smaller camps, as well as being sent to the troops in Europe.

1. PROVIDING RECREATIONAL FACILITIES.

(b) *In communities adjoining camps.*—The placing of the social and recreational facilities of the communities adjoining the camps at the disposal of the soldiers is in charge of the Playground and Recreation Association of America, of which Joseph Lee, president, is a member of the commission. This association has sent out 100 representatives, and has helped in organizing 100 communities. The plan of the representatives is to establish in each camp community a committee of prominent men and women, each of whom become chairman of a subcommittee designated to organize some well-defined social or recreational group. Through these groups clean entertainments and wholesome environments are made possible on the vast scale necessary to provide for the large number of soldiers who spend part of their leisure in the communities near camp.

2. PROVIDING EDUCATIONAL FACILITIES.

The educational work of the commission has been organized under a committee consisting of five men prominent in the educational world. This committee is providing courses in the camps in all subjects for which there is sufficient demand. It is utilizing the services of the educational department of the Young Men's Christian Association university extension courses, and such other facilities as the local communities can offer. The committee is devoting special attention to instruction in French, and is offering courses in which a vocabulary of 600 to 700 French words can be learned during the regular training of the soldier. In some camps the committee has met with the problem of teaching the English language to soldiers of foreign extraction. In one National Army cantonment 2,000 men are learning to read and write English.

Under the direction of the American Social Hygiene Association and the Young Men's Christian Association the commission has undertaken in the camps a wide educational campaign in sex hygiene. The organization of this educational work is under Walter Clarke, of the American Social Hygiene Association. The campaign includes lectures, moving-picture exhibits, and the distribution of literature.

3. SUPERVISING WORK OF POST EXCHANGES.

By General Order No. 110 of the War Department, dated August 21, 1917, the commission has been directed to assist and supervise the work of providing post exchanges or Army stores for the National Army. The commission appointed a committee, consisting of Malcolm L. McBride and Lee F. Hanmer, of the commission, and Capt. E. A. Buchanan, United States Army, of which Mr. McBride was the chairman, to carry on the provisions of the above order.

A division exchange officer was appointed and stocks and fixtures were purchased for exchanges in each of the National Army cantonments.

In each cantonment there is an exchange building for each regiment or the approximate equivalent thereof in which tobacco, candy, toilet articles, and other things which add to the comfort and contentment of the soldier are offered for sale.

The net profits are distributed in the form of dividends to organizations within the camp and are expended only in accordance with War Department regulations in the interest of the soldier. The division exchange officer and the organization provided by this commission has contributed particularly to effecting the consolidation of orders of stock for exchanges in each camp. Under present conditions and in view of the great quantities of merchandise turned over daily in these camps this is an important consolidation. The lack of warehouses for the use of these exchanges has handicapped this feature of the business materially, but it is hoped that later the War Department will provide these.

The main purpose of the exchange is to place merchandise in the hands of the soldiers at a reasonable price.

4. ORGANIZING WORK OF LAW ENFORCEMENT.

The commission has been specially charged with the duty of assisting to enforce sections 12 and 13 of the Army act, approved May 18, 1917, providing for the control

of alcohol and prostitution near camps, and the prohibition of the sale of liquor to soldiers in uniform. Under the authority granted by this act the Secretary of War has issued regulations dated July 25, 1917, forbidding the sale of alcoholic liquors or the setting up of houses of prostitution within 5 miles of any camp.

To enforce the provisions of these regulations and to carry out Secretary Baker's policy of suppressing segregated districts near camps the commission has organized a division of law enforcement, under the direction of Bascom Johnson, who is assisted by lieutenants detailed from the Medical Department of the Army. This division is aided in its work by the staffs of such organizations as the American Social Hygiene Association, the Committee of Fourteen of New York, the Committee of Fifteen of Chicago, and the Bureau of Social Hygiene of New York. The actual enforcement of the law is turned over to the Department of Justice, the local provost guards, and the State and municipal authorities.

In its duty of law enforcement the commission is working in close cooperation with the Medical Department of the Army and the Public Health Service, which are also interested in preventing the evils of strong drink and prostitution. Both these services are developing medical facilities for the treatment of venereal diseases.

The commission is arousing the local communities and the State and municipal authorities to their responsibility in preserving the health and well being of the soldiers. The Secretary of War has sent letters to the governors of the States, to the chairmen of the State councils of defense, and to the mayors of cities, and the sheriffs of counties in the neighborhood of all military training camps, explaining the purpose of the commission on training camp activities and the policies of the War Department in regard to alcohol and prostitution, and requesting cooperation. In arousing the camp communities to their responsibility toward the soldiers, the commission is assisted by the subcommittee for civilians' cooperation in combating venereal diseases, which has circulated several pamphlets calling upon local populations to protect the soldiers.

By cooperating with the State and local authorities the commission has succeeded in securing the abolition of the segregated districts in 20 communities, and military welfare commissions to aid in the work of vice repression have been appointed by the governors of California and Arkansas.

SOURCES OF REVENUE.

The work under the commission is paid for (a) out of the funds of private organizations serving as agents for the commission, (b) out of contributions by private individuals, and (c) to a small extent out of congressional appropriations for certain specific purposes.

Col. DALY. In addition to the activities listed in this memorandum the commission has a section that looks after the work of law enforcement with respect to the sales of alcoholic liquors near the camps, and prostitution. They handle all of that.

Mr. McKENZIE. Does this appropriation cover the post exchanges in France, or is it confined to those in our country?

Col. DALY. It covers the troops abroad. We have a recommendation for a change in the language in this part of the act. The appropriation "Military post exchanges" now provides for the repairs to buildings erected at private cost, in the operation of the act approved May 31, 1902. That confines it to the Young Men's Christian Association exclusively. We want to change the act to read in this way, "Repairs to buildings constructed under the authority of the Secretary of War by any organization for the promotion of the social, physical, intellectual, or moral development of the troops in the camps and in the field." That will include the Knights of Columbus, the Young Men's Hebrew Association, and other associations. They are excluded now; they do not get the privileges that the Young Men's Christian Associations do, because that is authorized by law at the present time.

Mr. SHALLENBERGER. Do you not think that ought to be limited to those authorized?

Col. DALY. That is what is proposed. A similar provision will have to be put in the appropriation for regular supplies, to provide for heat and light, which is now allowed to the Young Men's Christian Association, if it is approved, to allow heat and light to these other organizations which may be authorized.

I wanted to ask, Mr. Chairman, permission to submit to the committee the proposed change in this particular provision, under the appropriation "Regular supplies and waters and sewers." We will have to add a similar provision in the appropriation for waters and sewers, in order to provide for the furnishing of water.

Mr. SHALLENBERGER. Is this the only item in the bill that proposes to furnish money for these particular things you have mentioned?

Col. DALY. Yes, sir.

Mr. SHALLENBERGER. I have read that it is intended, in France, to put some city other than Paris in charge of the American troops, and have that city prepared for a place of rest for the troops when they come away from service in the trenches, that they may go there instead of going to Paris, and have all of the city facilities entirely turned over to our men for entertainment and rest, in order to do away with the temptations that ordinarily would surround them in a large city. Is there such a thing as that in contemplation?

Col. DALY. Not such a large project. There is nothing for the troops in France other than the post exchanges.

Mr. SHALLENBERGER. Who would know whether or not that is contemplated? I saw it stated that one of the most serious things in connection with the maintenance of an army is the trouble that the English troops have had in going to and returning from London, and that the French troops have had in going to and returning from Paris, that is, the great temptations that confront them in the large cities, and it was said that that was a matter of great seriousness.

Col. DALY. That would come within the jurisdiction of this commission on training camp activities.

Mr. DAVIDSON. I would like to ask whether in connection with these activities there has been any very strong demand for the extension of this privilege to other fraternal societies, whether there has been any difficulty in taking care of that question so as to avoid any idea that favoritism was being shown to any particular fraternal society?

Col. DALY. I do not think these organizations are considered as fraternal organizations which we speak of in here. The Knights of Pythias and the Masonic bodies, of course, are considered as fraternal organizations. They are not included in this provision.

Mr. DAVIDSON. None of them are included, but there was a demand made in some places for some of them, and that was refused, and properly so, I think. I wanted to know to what extent that had gone, and whether that had been satisfactorily explained, so that all of the fraternal societies realize the advisability of not duplicating this kind of work.

Col. DALY. I think so. There are none of those fraternal societies included in this provision.

Mr. ATHONY. I understood that some of the fraternal orders did raise large sums of money, such as the Eagles and the Elks: that

they raised a million dollars for war purposes. How do they use that money, in cooperation with the War Department or independently?

Col. DALY. They are cooperating, as I understand it, with this Commission on Training Camp Activities.

Mr. ANTHONY. So that without having an official status they are working with this commission?

Col. DALY. Yes, so I understand.

Mr. FIELDS. You referred to somebody who had charge of the enforcement of law. Whom did you refer to?

Col. DALY. I was referring to this same Training Camp Activities Commission. They handle that.

Mr. FIELDS. How is that commission succeeding, under the prohibition and social evil amendments in the law?

Col. DALY. I could not tell you anything about that.

The details of the estimate are as follows:

Military post exchanges, fiscal year 1919:

Deficiency act June 15, 1917.....	\$500,000
Deficiency act Oct. 6, 1917.....	250,000
Total.....	750,000

Military post exchanges.—For continuing the construction, equipment, and maintenance of suitable buildings at military posts and stations for the conduct of the post exchange, school library, reading, lunch, amusement rooms, and gymnasium, including repairs to buildings erected at private cost, in the operation of the act approved May thirty-first, nineteen hundred and two; and repairs to buildings constructed under the authority of the Secretary of War by any organization for the promotion of the social, physical, intellectual, and moral development of troops in camp and in the field; for the rental of films, purchase of slides, supplies for and making repairs to moving-picture outfits, and for similar and other recreational purposes at training and mobilization camps now established, or which may be hereafter established, to be expended in the discretion and under the direction of the Secretary of War, \$1,247,512: *Provided*, That not more than \$250,000 of this appropriation may be expended for personal services and no person shall be employed hereunder at a rate of compensation exceeding \$1,800 per annum.

RECAPITULATION.—ESTIMATE, "MILITARY POST EXCHANGES," FISCAL YEAR 1919

United States and Philippine Islands.

Item No.	Purpose.	Appropriation, fiscal year 1918.	Estimate for fiscal year 1919.			Estimate per capita 2,952,000 officers and enlisted men.
			Present strength.			
			Current requirements.	New construction.	Total.	
315	Construction of suitable buildings at military posts and stations for the conduct of the post exchanges, school, library, lunch, amusement room, and gymnasium.	\$23,600		\$68,367	\$68,367	\$0.023
316	Equipment of buildings at military posts and stations for the conduct of the post exchange school, library, reading, lunch, amusement rooms, and gymnasium.	9,600	\$922,900		922,900	.313
317	For the maintenance of buildings at military posts and stations for the conduct of post exchanges, school, library, lunch, amusement rooms, and gymnasiums.	20,500	35,500		35,500	.012
318	Repair of buildings erected at private cost	700	500		500	.0002

Estimate.....		\$50,367.00	\$50,367.00		\$18,000.00	\$18,000.00	\$68,367.00
Appropriated fiscal year 1918.....		7,100.00	7,100.00		16,500.00	16,500.00	23,600.00
Expended fiscal year 1917.....		253.62	253.62				253.62

REMARKS.

United States.—The amount estimated for under this item is to provide for new construction of buildings at military posts and stations for the conduct of post exchanges, etc., at various posts in the United States as per list of projects as follows:

Fort Barry, Cal., post exchange building..... \$12,000

The size of this building is to be approximately 25 by 60 feet and of frame construction with slate roof. It is required to replace old temporary buildings built by the Engineer Department which are unsightly and unsuited to the purpose and should be destroyed or removed.

Fort Columbia, Wash., heating plant for gymnasium..... \$1,578

The size of this building is undetermined, but is to have a heating capacity of 1,325 square feet and to provide for a hot-water heating system. The climate at this post is damp and only stoves are now used in the building. The heating plant is to make the building comfortable and the project is considered essential.

Fort Screven, Ga. Addition to post exchange building to house war-game instruction..... \$10,500

Size of building 34 feet 10 inches by 49 feet 10 inches, and is to be of concrete with tile roofs in order to be more secure from damage by heavy storms and to reduce fire risk. This building is to be used to house war game instructions, as required by G. O. 12, W. D. 1914.

Fort Shafter, H. T., addition to building No. 23 (P. E.) \$18,750

Second-story addition to No. 23. The size of building is 44 by 52 feet, and it is of frame construction. This addition is needed in order to accommodate a regiment with gymnasium and library.

Fort Terry, N. Y., addition of wing to post exchange building No. 49..... \$2,850

The size of the building is 10 by 23 feet, and it is to be of brick construction. The building is needed to provide additional storage facilities and to make a place for crating and handling of goods. The project is considered essential.

Fort Totten, N. Y., construction of bowling alleys, and alterations in gymnasium building No. 28..... \$1,689

The size of this building is 26 feet 11 inches by 102 feet 11 inches, and it is to be of wood construction. The building is needed to provide additional bowling alleys for the amusement of the troops at this post. The project is considered essential.

Fort Dade, Fla., school to accommodate 35 scholars..... \$3,000

The size of this building is to be 40 by 20 feet, and it is to be of wood construction. It is to be used as a school house and room for war games. The project is considered essential.

Expenditures under this item for fiscal year 1917 were for the installation of a boiler for post exchange and gymnasium at Fort Lawton, Wash., at a cost of \$235.

Philippine Islands.—The amount called for by the department authorities for this item is \$18,000, which is \$1,500 more than the estimate for the fiscal year 1918. It is

estimated that the above amount will be required for new construction of additions and modifications to the present post exchange at all posts in the Philippine Department. This increase is necessary due to the increase in garrison strength, and until the garrison of each post is definitely known no modification will be made in the post exchanges, for which reason the estimate is based upon the requirements of the department as a whole.

Item military post exchanges 316.—Equipment of buildings at military posts and stations for the conduct of the post exchange, school, library, reading, lunch, amusement rooms, and gymnasium.

[Estimate fiscal year 1919, \$922,900.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$918,000.00	\$918,000.00	\$4,900.00	\$4,900.00	\$922,900.00
Appropriated fiscal year 1918.....	7,600.00	7,600.00	2,000.00	2,000.00	9,600.00
Expended fiscal year 1917..	13,630.07	13,630.07	3,418.00	3,418.00	17,048.07

REMARKS.

United States.—For the fiscal year 1918 there was allotted for the purposes of equipment the sum of \$7,600. The total cost of equipment for 1917 according to records of this office was \$19,629.09.

Supplies.—The supplies to be purchased under this item consists of apparatus for gymnasiums, tables, chairs, bookcases, office desks, etc., for reading rooms, and chairs, stage settings, moving-picture outfits, etc., for amusement rooms.

Services.—The services called for under this item consist of contract and job services; also hire, and will be required for keeping in repair gymnastic apparatus, bowling alleys, and equipment, including moving-picture machine for chaplain's outfit.

Based on a strength of 2,952,000 officers and men for 1919, and exclusive of outfits already on hand at permanent stations, it is estimated there will be required 1,500 moving-picture outfits, including graphophones, organs, etc., at a cost of \$600 each, or a total of \$900,000.

Philippine Islands.—\$4,900 is called for under this item by the Philippine authorities for fiscal year 1919, which is \$2,900 more than the estimate for fiscal year 1918. It is to provide for the purchase of bowling alleys and incidentals thereto, for the installation at all posts that are not provided with this equipment. Supplies, \$4,300; services, \$600.

Item military post exchanges 317.—For the maintenance of buildings at military posts and stations for the conduct of post exchanges, school, library, lunch, amusement rooms, and gymnasiums.

[Estimate fiscal year 1919, \$35,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$27,500.00	\$27,500.00	\$8,000.00	\$8,000.00	\$35,500.00
Appropriated fiscal year 1918..	13,500.00	13,500.00	7,000.00	7,000.00	20,500.00
Expended fiscal year 1917.....	17,670.43	17,670.43	4,632.00	4,632.00	22,302.43

REMARKS.

United States.—The total amount estimated under this item is \$27,500, and is entirely for current requirements at permanent posts.

Philippine Islands.—The estimate for the Philippine Islands under this item is \$8,000, which is \$1,000 more than the estimate for the fiscal year 1918. This sum is required for the necessary repairs to post exchanges and gymnasiums at all posts in the Philippine Department.

Item military post exchanges 318.—Repair of buildings erected at private cost.

[Estimate fiscal year 1919, \$500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....				\$500.00		\$500.00	\$500.00
Appropriated fiscal year 1918.....	\$200.00		\$200.00	500.00		500.00	700.00
Expended fiscal year 1917.....	418.77		418.77	500.00		500.00	918.77

REMARKS.

United States.—There is no estimate made under this item. Following is a list of posts where Y. M. C. A. buildings have been erected at private cost under the act approved September 30, 1902: Fort Leavenworth, Kans.; Columbus Barracks, Ohio; Fort Hancock, N. J.; Fort Slocum, N. Y.; Fort Monroe, Va.; and Fort Wm. McKinley, P. I. An allotment for repairs to these buildings is made each year and has been included under item 317.

Philippine Islands.—Four hundred dollars is called for the department authorities under this item and is the same as estimated for the fiscal year 1918. This amount is required for repairs to Memorial Hall and Y. M. C. A. building at Fort Wm. McKinley.

Item military post exchanges 319.—Rental of films.

[Estimate fiscal year 1919, \$80,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$79,500.00		\$79,500.00	\$1,000.00		\$1,000.00	\$80,500.00
Appropriated fiscal year 1918.....	1,700.00		1,700.00				1,700.00
Expended fiscal year 1917.....	1,675.00		1,675.00	454.16		454.16	2,129.16

REMARKS.

United States.—The cost for fiscal year 1917 under this item is \$1,675. The funds estimated for under this item are required for rental of films for the moving-picture machines, which were purchased for chaplain's equipment appropriated for in the fiscal year 1915. Sixty-six of these machines were provided for use in the United States and Philippine Islands. The estimated cost for rental of films for each of the 59 moving-picture machines furnished for use in the United States is approximately \$72 each. It is not intended that the amount allowed by this office is to cover the total expense; this amount is to assist post authorities in their special feature films and a major part of the expense is to be borne as usual by post exchange funds. The amount estimated for permanent posts is a slight increase over that estimated for 1918. It is estimated that \$75,000 of the total \$79,500 for the United States under this item will be required for the rental of films for moving picture outfits at cantonment camps based on the supposition that 1,500 machines are purchased to accommodate the increase in the Army to 2,952,000 officers and men.

Philippine Islands.—The amount called for under this item is \$1,000. No estimate is made for fiscal year 1918.

Item military post exchanges 320.—Purchase of slides.

[Estimate fiscal year 1919, \$76,460.]

	United States.			Philippine Islands.			
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	Grand total.
Estimate.....	\$76,100.00	\$76,100.00	\$360.00	\$360.00	\$76,460.00
Appropriated fiscal year 1918.....	575.00	575.00	360.00	360.00	935.00
Expended fiscal year 1917.....	1,675.00	1,675.00	106.10	106.10	1,781.10

REMARKS.

United States.—The slides estimated for under this item are stereopticon slides used in the moving-picture machines purchased as a part of the chaplain equipment from funds of the fiscal year 1915 to constitute an amusement feature at the post. It is estimated that it will cost approximately \$15.15 per machine to provide slides for the 59 moving-picture machines used in the United States. Slides will cost about \$0.75 each and those for which the amounts stated will be used are intended as special feature slides. The amount estimated will provide for approximately 20 slides, and this will be only a part of those actually used at the post. The main cost will therefore be borne from the profits of the post exchange. It is estimated that \$75,000 of the total amount estimated under this item will be required for the purchase of slides for moving-picture-machine outfits, based on an assumption of 1,500 additional outfits being purchased to accommodate the increase in the Army to 2,952,000 officers and men.

Philippine Islands.—The amount \$360 under this item is that called for by Philippine authorities, and is to provide for the purchase of slides for moving-picture machines provided for the Philippine Islands in connection with chaplain's outfits.

It is the same amount as estimated for the fiscal year 1918.

Item military post exchange 321.—Supplies for making repairs to moving-picture outfits.

[Estimate fiscal year 1919, \$63,285.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$62,265.00	\$62,265.00	\$1,020.00	\$1,020.00	\$63,285.00
Appropriated fiscal year 1918.....	1,325.00	1,325.00	1,020.00	1,020.00	2,345.00
Expended fiscal year 1917.....	3,950.00	3,950.00	208.85	208.85	4,158.85

REMARKS.

United States.—It will cost approximately \$35 or \$40 per machine to repair the 59 moving-picture machines provided for use in connection with the chaplain equipment for the United States. The amount estimated as being required for moving-picture machines at permanent posts is \$2,265, which is a slight increase over the estimated requirements for 1918, and is to allow for additional cost of repairs on account of advance of material, etc. Sixty thousand dollars of the total amount estimated under this item is estimated as being required for the repairs of moving-picture outfits based on the assumption that the 1,500 additional outfits will be purchased to accommodate the increase in the Army to 2,952,000 officers and men.

Philippine Islands.—One thousand and twenty dollars is called for by the department authorities under this item and is the same amount estimated for the fiscal year 1918. It is intended for making necessary repairs to the moving-picture machines in the Philippine Islands.

ROADS, WALKS, WHARVES, AND DRAINAGE.

The CHAIRMAN. The next item is, "Roads, walks, wharves, and drainage, \$3,043,443." There was appropriated under this item at the last session of Congress \$18,139,965, so that you are asking for only about one-sixth as much this year as you got at the last session of Congress.

Gen. SHARPE. I have tables giving the amount, and explaining the various items.

The CHAIRMAN. That gives information as to what you spent last year, and what you have contracted for to date?

Gen. SHARPE. Yes, sir.

Col. DALY. All the money under the appropriation for roads and walks has been spent. We have a large deficiency under that item.

Mr. ANTHONY. Where was that money spent, in making roads at the training camps largely?

Gen. LITTELL. At the training camps and posts.

The CHAIRMAN. What is the amount of the deficiency?

Gen. LITTELL. It is something over \$18,000,000.

Mr. ANTHONY. Can you put in the record a table or a statement giving the amount expended for roads and walks at each of the camps?

Gen. LITTELL. I can do that.

Mr. ANTHONY. What is the largest amount spent for roads and walks at any one of the camps?

Gen. LITTELL. You would like to have that amount stated for each post?

Mr. ANTHONY. Yes.

Gen. LITTELL. We have tables showing the amount expended for roads and walks, including drainage.

Mr. ANTHONY. Have you that arranged so that you can tell how much was spent at any one post for that purpose?

Gen. LITTELL. Yes, sir.

The following statement shows the total amounts expended at the various cantonments and camps up to and including the dates mentioned under the appropriation "Roads, walks, wharves, and drainage:"

National Army cantonments.

Location.	Date.	Roads, walks, wharves, and drainage.	Location.	Date.	Roads, walks, wharves, and drainage.

R. W. W. & D. Item 322.—Construction of roads.

[Estimate fiscal year 1919, \$330,681.]

United States.

Philippine Islands.

	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	Grand total.
Estimate.....	\$305,681.00		\$305,681.00	\$25,000.00		\$25,000.00	\$330,681.00
Appropriated fiscal year 1918.....	100,300.00		100,300.00	15,000.00		15,000.00	100,315.00
Expended fiscal year 1917.....	83,866.89		83,866.89	56,900.00		56,900.00	140,766.89

REMARKS.

Supplies.—The supplies to be procured under this item consist of articles such as stone, cement, lime, and other class "D" articles as may be required to construct roads.

Services.—The services to be procured under this item consist of hire of laborers, etc., job and contract services for the construction of roads.

United States.—All funds under this item will be required exclusively for new construction. From the amount estimated for new construction in the United States, it is contemplated to do as much new construction as possible. The most essential projects which it is hoped can be carried out are:

Schofield Barracks, Hawaii, construction of roads	\$156,000
Fort Huachuca, Ariz., roads, walks, and drainage for new buildings recently constructed	15,750
Plattsburg Barracks, N. Y., reconstructing main highway through this reservation	18,000
Fort Sill, Okla., continuing the construction of roads, drains, etc.	30,000
West Point, N. Y., rebuilding with asphalt macadam surface road which is now in very bad condition	3,781
Fort Williams, Me., one road roller	3,263
Jeffersonville depot, additional trackage to the depot so that loading a second time may be unnecessary (3,000 feet)	11,250
Philadelphia depot, railroad siding	25,500
Fort Sheridan, Ill., resurfacing roads other than the Sheridan Road	30,000
Fort H. G. Wright, N. Y., construction and repair of roads	7,637
Total	305,681

Philippine Islands.—The amount estimated for (\$25,000), is the same as that submitted by the department authorities. It is \$10,000 more than the amount appropriated for the fiscal year 1918 and is \$31,900 less than the amount expended for the fiscal year 1917. It is estimated that this amount will be required for the construction of extensions to road systems in the several roads in the departments due to increase in garrison.

R. W. W. & D., Item 322a.—Repairs to roads.

(Estimate, fiscal year 1919, \$727,500.)

	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate	\$700,000.00		\$700,000.00	\$27,500.00		\$27,500.00	\$727,500.00
Appropriated, fiscal year 1918	137,000.00		137,000.00	18,000.00		18,000.00	155,000.00
Expended, fiscal year 1917	107,079.61		107,079.61	32,392.00		32,392.00	139,471.61

REMARKS.

Supplies.—Under this subitem material and tools are purchased for the repair of roads.

Services.—Either job or contract services are procured under this subitem, whichever is available, considering the magnitude of the work and the conditions generally.

United States.—All funds under this subitem will be needed to meet current requirements, which is for the repair of existing roads at all military posts and stations and cantonments. The amount of the estimate is about \$592,920.39 greater than the cost for 1917, and \$563,000 greater than the apportionment for 1918. The increase is made necessary on account of the greater amount of roads to be taken care of; also on account of the calling into the Federal service of the National Army, National Guard, and the increase in the Regular Army. The estimate at stations other than for cantonments is based upon the estimate for 1918, plus a small increase due to the increase in the cost of material and labor. The estimate is as follows:

For stations other than for cantonments	\$200,000
For cantonments	500,000
Total	700,000

The estimate for cantonments is based upon one-half the per capita cost for 1918, multiplied by the number of men in the various cantonments.

Philippine Islands.—The amount of the estimate (\$27,500), is the same as called for by the department authorities. It is \$9,500 more than the amount appropriated for the fiscal year 1918 and \$4,892 less than the cost for the fiscal year 1917. The amount estimated for is for current repairs to roads at several posts in the department. The funds allotted for the fiscal year 1918 were insufficient to keep the roads in first-class condition and the funds called for, herewith, are the minimum that should be allowed.

R. W. W. & D., Item 323.—Construction of walks.

[Estimate fiscal year 1919, \$66,655.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$61,155.00	\$61,155.00		\$5,500.00	\$5,500.00	\$66,655.00
Appropriated fiscal year 1918.....		50,000.00	50,000.00				50,000.00
Expended fiscal year 1917.....		8,279.05	8,279.05		10,000.00	10,000.00	18,279.05

REMARKS.

Supplies.—Under this item are purchased cement, lumber, lime, sand, gravel, etc., for the construction of walks.

Services.—Under this item job or contract services are procured and labor hired, as may be deemed necessary for the construction of walks.

United States.—The funds estimated for under this item will be used for new construction only. The amount is about \$52,875.95 more than the cost for 1917 and \$11,155 more than the apportionment for 1918. From the funds estimated for the United States it is contemplated to carry out as many projects as possible. Some of the more essential are:

Fort Mason, Cal., completing construction work at the Army supply depot, paving, curbs, walks, steps, etc.....	\$60,000
Fort McKinley, Me., concrete step and walk.....	1,155
Total.....	61,155

Philippine Islands.—The amount of the estimate (\$5,500) is the same as that called for by the department authorities. No estimate was submitted for this item under the fiscal year 1917. The amount estimated for is required for the construction of new walks at the several posts in the department as required by the ordinary improvement and increase of garrisons.

R. W. W. & D. Item 323-a.—Repairs to Walks.

[Estimate fiscal year 1919, \$153,217.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....			\$153,217.00				\$153,217.00
Appropriated fiscal year 1918.....			20,000.00			\$5,000.00	25,000.00
Expended fiscal year 1917.....			6,587.28			3,548.67	10,135.95

REMARKS.

Supplies.—The supplies to be procured under this subitem consist of lumber, nails, gravel, sand, cement, etc., needed to keep existing walks in repair during the fiscal year.

Services.—The method of handling these repairs is the same as for road repairs.

United States.—The funds estimated for will be required to meet current requirements. The estimate is about \$146,629.72 more than the cost for 1917 and about \$133,217 more than the apportionment for 1918. Old wooden walks require greater expenditures each year, therefore, this increase is thought to be necessary.

Philippine Islands.—No estimate is submitted for the fiscal year 1919.

R. W. W. & D. Item 324. Construction of wharves.

[Estimate fiscal year 1919, \$632,675.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$299,675.00	\$299,675.00		\$333,000.00	\$333,000.00	\$632,675.00
Appropriated fiscal year 1918.....		88,000.00	88,000.00				88,000.00
Expended fiscal year 1917.....		34,719.20	34,719.20		38,500.00	38,500.00	73,219.20

REMARKS.

Supplies.—The supplies to be purchased under this item consist of lumber, nails, cement, etc., required in the construction of wharves.

Services.—The services under this item consist of the hire of labor or procurement of job or contract services as may be necessary for the construction of wharves.

United States.—The funds estimated for will be required exclusively for new construction. The estimate is based upon the estimate for 1918 with a slight increase on account of the increase of labor and materials and is about \$264,955.80 more than the cost for 1917 and about \$211,675 more than the apportionment for 1918. Furthermore, the increase is made necessary by the greater amount of new construction estimated for.

From the amount estimated for new construction in the United States, it is contemplated to undertake the following projects if possible:

Fort Caswell, N. C., moving boathouse to a new location.....	\$1,844.00
Honolulu, Hawaii, permanent reconstruction of wharf recently transferred from the Navy to the War Department.....	195,000.00
Fort Monroe, Va., strengthening the main 12-inch I beams with creosoted yellow pine timber.....	4,257.00
Replacing 14-inch rods in 273 bays of the structure at this post.....	7,781.00
Fort Standish, Mass., extending wharf.....	3,930.00
Fort Strong, Mass., derrick on quartermaster wharf.....	1,000.00
Fort Travis, Tex., construction of wharf.....	2,625.00
Charleston, S. C., construction of an extension to the North Pier of the Customhouse Wharf, and legislation authorizing transfer of the entire wharf to the control of the War Department from the Treasury Department.....	70,500.00
Fort Totten, N. Y., repairs to long wharf.....	5,738.00
Total.....	299,675.00

Philippine Islands.—The amount of the estimate (\$333,000) is the same as submitted by the department authorities. Our estimate was submitted for the fiscal year 1918 under this item. The amount requested for the fiscal year 1919 is in excess of the cost for the fiscal year 1917 by the amount of \$294,500. This increased amount estimated for is required as shown by notes submitted by the department authorities, viz:

Fort Mills and subposts.—Fort Hughes: For construction of new wharf of reinforced concrete, the present wooden wharf having entirely failed, supplies, \$18,000; services, \$9,000. This wharf is absolutely essential and the short life of the present wooden wharf constructed by the Corps of Engineers has demonstrated that a permanent structure is required.

Fort Mills: For construction of permanent wharf and breakwater, supplies, \$153,600; services, \$102,400. This is required to furnish accommodations for transports and

other boats that land at Fort Mills; the wharf to be so constructed that it will act as a breakwater for protection of all small crafts, including those in the mine-planter service, that are required to be stationed at Fort Mills, and the project should be undertaken in the fiscal year 1919 without fail. (Garrison: A Third, Engineers; First Company Second Aero Squadron, Ninth, Band, and 17 companies, Coast Artillery Corps, Thirteenth Infantry, Fifth and Eleventh Battalions, Philippine Scouts.

Ludlow Barracks: For reconstructing wharf with reinforced concrete; supplies, \$15,000; services, \$10,000. Garrison: Sixth and Eighth Battalions, Philippine Scouts. The present wooden wharf has failed entirely, making it necessary to handle all cargo by scows. It is desired to reconstruct with reinforced concrete the former wharf head. For extensions to present wharves at all posts in the department: Supplies, \$5,000; services, \$2,500. This sum is the average amount that has been required in previous years for the unforeseen new construction that is required to the wharves.

Piers A and B: For construction of concrete docking: Supplies, \$10,000; services, \$7,500. The present Piers A and B adjacent to the main transport Pier No. 1 have concrete piles and wooden dock, and it is the intention when funds are available to construct reinforced concrete docking on both of these piers thereby making them permanent.

R. W. W. & D. Item 324a.—Repairs to wharves.

[Estimate fiscal year 1919, \$84,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate	\$55,000.00		\$55,000.00	\$29,000.00		\$29,000.00	\$84,000.00
Appropriated fiscal year 1918	37,000.00		37,000.00	24,000.00		24,000.00	61,000.00
Expended fiscal year 1917	21,189.62		21,189.62	3,000.00		3,000.00	24,189.62

REMARKS.

Supplies.—The supplies to be purchased under this subitem consist of lumber, nails, cement, wire, etc., required to keep existing wharves in repair.

Services.—Either job or contract services are procured or labor hired as may be deemed most advantageous to the Government.

United States.—The funds estimated for will be required exclusively for current requirements. The amount is approximately \$33,810.38 more than the cost for 1917 and about \$18,000 greater than the apportionment for 1917. The increase is made necessary by the greater amount of repairs to be made. No funds are estimated for at cantonment camps.

Philippine Islands.—The amount of the estimate is the same as that submitted by the department authorities. It is \$5,000 more than the apportionment for 1918 and \$26,000 more than the cost for 1917. * The funds are required for repairs to all wharves in the department, supplies, \$20,000; services, \$9,000. Wharves are maintained at the following posts in the department:

Fort Mills and all subposts.
 Fort San Pedro, Iloilo.
 Camp Eldredge.
 Sissiman Bay.
 Calumpit Point.
 Fort William McKinley.
 Fort Wint.
 Estado Mayor, Manila.
 Port Reservation, Manila (3).
 Camp Keithley.
 Camp Overton.
 Warwick Barracks.
 Medical Supply Depot.

R. W. W. and D. Item 325.—Employees, for the pay of.

[Estimate fiscal year 1919, \$85,800.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$82,800.00		\$82,800.00	\$3,000.00		\$3,000.00	\$85,800.00
Appropriated fiscal year 1918.....	2,700.00		2,700.00	3,000.00		3,000.00	5,700.00
Expended fiscal year 1917.....	31,534.98		31,534.98	3,000.00		3,000.00	34,534.98

REMARKS.

United States.—The amount estimated for is for current requirements and is necessary to cover the pay of one engineer on road roller at \$900 per annum, one laborer at \$600 per annum, and one laborer at \$720 per annum, making a total of.....

For miscellaneous employees..... \$2,220

Total..... 4,600

The funds estimated for will be required exclusively for current requirements. The amount is approximately \$51,265.02 more than the cost for the fiscal year 1917 and about \$81,100 greater than the apportionment for 1917. The estimate for the payment of miscellaneous employees at cantonment camps is submitted in the amount of \$78,200 under this item. This is based upon one-half the per capita cost for 1918, multiplied by the number of men in the various cantonments. The estimate is therefore, as follows:

For stations other than for cantonments..... \$4,600

For cantonments..... 78,200

Total..... \$2,800

Philippine Islands.—\$3,000 is the amount of the estimate called for by the department authorities. This is the same amount that was appropriated for the fiscal year 1918 and the cost for 1917.

R. W. W. & D., Item 326.—Drainage, for the disposal of.

[Estimate fiscal year 1919, \$284,643.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$237,000.00	\$39,643.00	\$276,643.00	\$8,000.00		\$8,000.00	\$284,643.00
Appropriated fiscal year 1919.....	32,000.00	10,000.00	42,000.00	3,000.00		3,000.00	45,000.00
Expended fiscal year 1917.....	18,626.31	9,313.16	27,939.47	9,000.00		9,000.00	36,939.47

REMARKS.

Supplies.—The supplies to be procured under this item consist of various materials to keep the existing drainage systems in repair, as well as to construct new systems.

Services.—Under this item are procured either job or contract services or labor hire as may be deemed to the best interests of the Government, considering the character and extent of the work.

United States.—The funds estimated for will be required both for new construction and current requirements, as follows:

For current requirements, for stations other than for cantonments.....	\$37,000
For current requirements, for cantonments.....	200,000
Total.....	237,000

The estimate is about \$248,703.53 more than the cost for 1917 and about \$234,643 greater than the apportionment for 1918. The estimated cost at stations other than for cantonments is \$37,000. This estimate is based upon the estimate for 1918 with a slight increase due to the increase in cost of labor and material. The estimate for cantonments is \$200,000. This estimate is based upon one-half of the per capita cost for 1918, multiplied by the number of men in the various cantonments. The increase of this estimate is also due to the increase in the Regular Army, the mustering into the Federal Service of the National Guard and the National Army.

As much of the following new work as is possible will be carried out from the funds allowed for new construction under this item for the United States:

Fort Armstrong, Hawaii: Temporary repairs if undertaken will consist of filling all openings to the exposed face of the sea-wall with stone and concrete and resetting such capstones as need it, \$1,500.

R. W. W. & D. Item 327.—Dredging channels.

[Estimate fiscal year 1919, \$54,734.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$11,500.00	\$38,234.00	\$49,734	\$5,000.00	\$5,000.00	\$54,734.00
Appropriated fiscal year 1918.....	4,000.00	4,000.00	6,000.00	6,000.00	10,000.00
Expended fiscal year 1917.....	12,869.00	12,869.00	12,869.00

REMARKS.

Supplies.—None.

Services.—Under this item are procured contract services to keep the channels at the various posts dredged to their proper depth. The channels to most of the posts require dredging annually to maintain a depth sufficient for the harbor boats that ply in them.

United States.—All of the funds will be needed for current requirements. The amount of the estimate is \$36,865 more than the cost for 1917 and \$45,734 greater than the apportionment for 1918.

As much of the following new work as is possible will be carried out from the funds allowed for new construction under this item for the United States:

Fort Caswell, N. C., for services of a dredge to open channel and basin to boathouse.....	\$7,500
Fort Moultrie, S. C., dredging channel and wharf basin.....	30,734
Total.....	38,234

Philippine Islands.—The amount of the estimate (\$5,000) is \$1,000 less than the amount apportioned for 1918. No funds were apportioned for 1917, therefore no cost is reported. The funds are required for necessary dredging adjacent to the wharves in the Philippine Islands during the fiscal year 1919.

R. W. W. & D. Item 328. Care and improvement of grounds at military posts and stations.

[Estimate fiscal year 1919, \$623,580.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$561,000.00	\$38,538.00	\$599,538.00	\$24,000.00	\$24,000.00	\$623,580.00
Appropriated fiscal year 1918.....	52,000.00	52,000.00	3,000.00	3,000.00	55,000.00
Expended fiscal year 1917.....	36,341.55	36,341.55	14,500.00	14,500.00	50,841.55

REMARKS.

Supplies.—The articles to be purchased under this item include trees, shrubbery, seed, sodding, and the necessary tools and implements for care of grounds.

Services.—The services to be procured consist of the hire of laborers, gardeners, etc., to keep the grounds in condition.

United States.—All funds will be required exclusively for current requirements. The estimate is about \$572,638.45 more than the cost for 1917 and \$568,580 greater than the apportionment for 1918. The estimated cost at stations other than for cantonments, and for cantonments is as follows:

For stations other than for cantonments.....	\$73,000
For cantonments.....	488,000
Total.....	561,000

This estimate is based upon one-half of the per capita cost for 1918, multiplied by the number of men in the various cantonments. The increase of this estimate is due to the increase in the Regular Army, the mustering into the Federal service of the National Guard and the National Army.

As much of the following new work as is possible will be carried out from the funds allowed for new construction under this item for the United States:

Front Royal Remount Depot, Va., removing timber, clearing underbrush, draining meadows, etc.....	\$6,000
Vancouver Barracks, Wash.:	
Clearing and grubbing 160 acres of land.....	21,600
Cutting 3,500 cords of wood.....	9,188
Hauling and ricking 3,500 cords of wood, at 50 cents.....	1,750
Total.....	38,538

Philippine Islands.—The amount estimated for (\$24,000) is the same as that submitted by the department authorities. It is \$21,000 more than the amount apportioned for the fiscal year 1918 and \$9,500 more than the cost for the fiscal year 1917. The funds are required for repair and improvement of grounds at all posts in the department; supplies, \$4,000; services, \$2,000. This is the minimum amount that should be allowed.

Fort Hughes (subpost to Fort Mills).—For the filling of a lagoon which is at such an elevation that it can not be drained into the sea and at present is a menace to the health of the command, services \$18,000. The corps of Engineers estimate that about 72,000 cubic yards of filling is required which it is the intention to obtain from the adjacent waters with a suction dredge.

BARRACKS AND QUARTERS.

The CHAIRMAN. I want to ask you a question in regard to the appropriation for barracks and quarters. There are a number of provisos there. Are any of those provisos new?

Col. DALY. Yes, sir; the proviso that reads:

Provided further, That the following described part of the naval reservation at Bishops Point, island of Oahu, Territory of Hawaii, is hereby transferred to and placed under the control and jurisdiction of the War Department for use for military purposes: Beginning at an iron bolt driven in the coral at the northwest corner of the Bishop Point Naval Reservation and running thence with the north line of the reservation by true azimuths and distances as follows: First, azimuth two hundred and ninety-three degrees forty-nine minutes four hundred and thirty feet to concrete monument; second, azimuth twenty-three degrees forty-nine minutes three hundred and seventy-five feet to the high-water line, and thence along the high-water line to the point of beginning; containing three acres, more or less: *Provided further*, That there is hereby reserved to the use of the Navy Department a right of way over the said military reservation from the remaining portion of the naval reservation on Bishops Point to and upon any landing which may be built from the shore of the military reservation to water of sufficient depth to permit naval launches to moor alongside the said landing.

That is a new item.

There is another one on page 45:

And provided further, That in time of war, or when war is imminent, the Secretary of War is hereby authorized, in his discretion, to rent or lease any building or part of building in the District of Columbia that may be required for military purposes.

That is new. That was asked for in the legislation that was presented to the Committee on Appropriations, but was not allowed. The reason for that is this: The law now requires that in order to rent buildings in the District of Columbia we must first get specific authority from Congress in advance for each particular building. There is no authority of law to create a deficiency in that, and in the operation of that law it has hindered the Secretary of War from providing necessary storage and office facilities, outside of the departmental service in the District of Columbia. We have no authority of law to rent additional storage facilities than what is specifically provided for in this act.

Mr. FIELDS. You have authority to rent office buildings, do you not?

Col. DALY. For the departmental service, but not for the department at large. We have offices here that are not a part of the departmental service. They are called offices for the department at large, such as the depot quartermaster, or the medical supply depot. Take the case of Washington Barracks, where we recently had a fire that destroyed the storehouse. We had to get another storehouse, and we have gotten one in the District of Columbia, but there is no authority of law for that.

The CHAIRMAN. You asked that last year of the Committee on Appropriations, and they refused it?

Col. DALY. They struck it out.

Gen. SHARPE. I think the reason they did not carry it in the bill was because it had not been included in the legislation that this committee had recently passed.

Mr. KAHN. General, I notice in many parts of the city signs out showing that the building is a part of the military establishment at this time.

Gen. SHARPE. Those are for the War Department.

Mr. KAHN. I understand. Do you pay the money for the rental of those buildings?

Gen. SHARPE. No, sir; that is paid out of an appropriation made in the sundry civil bill, for the use of the Secretary of War.

Mr. KAHN. Was that put in that bill as a war measure?

Gen. SHARPE. I do not think so.

Mr. KAHN. Would they have jurisdiction over that matter in peace times?

Gen. SHARPE. Yes, sir; they have jurisdiction over it.

Mr. KAHN. Have you had called to your attention, or has the Quartermaster General's Department had called to its attention the difficulty in finding quarters for the great number of clerks that have been coming to Washington, and has a proposition been made to you to construct barracks for those clerks?

Gen. SHARPE. I do not know of any proposition to construct barracks, but the matter has been brought up individually to our department, and I know it has been brought up in a more or less official way to the office of the Secretary of War. The clerks are all obtained through the Chief Clerk of the War Department.

Mr. KAHN. That is a very serious question.

Gen. SHARPE. That is a very serious question, sir.

Mr. KAHN. I have been told that the War Department is renting substantial apartment houses for office purposes, and now proposes to build barracks for sleeping purposes. It seems to me the better plan would be to use the well-constructed houses for sleeping purposes, and build barracks for office purposes.

Mr. ANTHONY. Is there a real emergency in the matter of housing Government clerks?

Gen. SHARPE. It is so reported to us.

Mr. ANTHONY. I notice in the advertising columns of the daily papers, two or three columns of advertisements offering rooms for rent in private houses to individuals. It does not seem to me there is any emergency.

Mr. FIELDS. Many times they carry those advertisements after the houses are full up.

Mr. KAHN. There is a real emergency.

Mr. ANTHONY. They certainly would not pay for the insertion of advertisements if they had no rooms to rent.

Gen. SHARPE. We only get individual reports from individual employees. The chief clerk of the War Department reported to me the other day the case of a young lady who arrived here to take an appointment as a clerk, and she was furnished with a list of some houses where quarters could be obtained. I think that list was gotten from the chamber of commerce. They have a committee there which furnishes the list.

She went to every one of these places and found out that while they did desire tenants some time before, that every one of the rooms had been rented, and she finally met some other young lady who had recently arrived here, and was given accommodations by her for the night, after having walked all around town and having gone to some 8 or 10 different places. Then she went down to the office from which she had obtained this list and struck off the places she had visited and where she knew it would be useless for anyone to go again looking for rooms.

Maj. OURY. I understood there was a request before the Committee on Appropriations for funds for building an office building for the various departments at a cost of \$3,000,000.

Mr. FIELDS. A young lady called at my office a few days ago. She was going from house to house looking for accommodations, and she

said to Mrs. Fields: "I have been to all of the houses advertising rooms, and to all I could find where they had a card in the window, and was not able to find a room, and now I am going from house to house to see if I can not find some private family who will take me in."

Col. DALY. We know it is a bad situation. We keep a list of the vacant rooms, and we furnish that list to all the new clerks who want rooms, and we know that when we do find vacant rooms very often the price is such that the clerks can not pay it.

Mr. SHALLENBERGER. Is it not true that what is most needed is a regulation of the prices of these rooms?

Col. DALY. Yes; the rooms that ordinarily rent for from \$10 to \$12 have now gone up to \$25 or \$30, and a clerk beginning at a thousand dollars a year can not afford to pay that rent.

Mr. McKENZIE. Is it not true that it is much more difficult for young ladies to get rooms than it is for men?

Col. DALY. Yes.

Mr. ANTHONY. If we keep on increasing Government work here, we will soon have an army of 100,000 clerks for an army of a million men, and it looks to me as if we were overdoing it.

The CHAIRMAN. What have you to say in regard to the proviso in reference to Bishops Point?

Gen. SHARPE. That is in reference to the exchange of property between the Navy Department and the War Department.

The CHAIRMAN. That exchange was authorized by an act of Congress passed at the last session, was it not?

Col. DALY. No, sir; I think not.

The CHAIRMAN. I know we passed some act authorizing the Navy and the Army to make some exchange over there.

Col. DALY. We had an item in the bill, but this is a different proposition.

The CHAIRMAN. I wish you would explain the necessity for this proviso.

Col. DALY. The gist of it is in the letter of Col. Hunter, of December 16.

The CHAIRMAN. As I understand it, the transfer has already been made, and you just want congressional approval: that is the right of way that is provided for?

Col. DALY. Yes, sir.

BARRACKS AND QUARTERS, PHILIPPINE ISLANDS.

The CHAIRMAN. The next item is, "Barracks and quarters, Philippine Islands, \$4,266,830." At the last session of Congress you got an appropriation under that item of \$500,000.

Gen. SHARPE. I have a table giving the estimates, and then notes explaining each one of the items.

The CHAIRMAN. I wish you would put those in the record.

(The matter referred to is as follows:)

Estimate "Barracks and quarters, Philippine Islands," fiscal year 1919.

Item No.	Purpose.	Appropriation fiscal year 1918.	Estimate for fiscal year 1919.			
			Present strength.			Estimate per capita 19,541 officers and enlisted men.
			Current requirements.	New construction.	Total.	
329	Shelter and protection of officers and enlisted men.....	\$180,000.00		\$3,698,050.00	\$3,698,050.00	\$189.24600
330	Repairs.....	300,000.00	\$300,000.00		360,000.00	18.42300
331	Payments of rents.....	6,500.00	59,930.00		59,930.00	3.06700
332	Building sites.....					
333	Additions to existing military reservations.....		10,000.00		10,000.00	.51200
334	Shelter for animals and supplies.....	2 400.00		48 800.00	48,800.00	2.49700
335	All other buildings.....	18,000.00		90,050.00	90,050.00	4.60800
	Total.....	486,900.00	429,930.00	3,836,900.00	4,266,830.00	218.35300

B. & Q., P. I., Item 329.—Shelter and protection of officers and enlisted men.

[Estimate fiscal year 1919, \$3,698,050.]

Philippine Islands (for new construction):

Estimate.....	\$3,698,050
Appropriated, fiscal year 1918.....	160,000
Expended, fiscal year 1917.....	185,000

REMARKS.

This estimate (\$3,698,050) is the amount called for by department authorities. It is \$3,538,050 more than the amount apportioned for the fiscal year 1918 and \$3,513,050 more than the cost for the fiscal year 1917. The funds called for are required for the following work, viz:

For screening all posts in the department. Supplies, \$20,000; services, \$10,000. Efforts have been made to complete the screening in all present buildings in the department, which is about 70 per cent completed. No funds are available for new construction that has been undertaken since the fiscal year 1916 and the sum stated in the minimum amount that should be allowed, so that this work of screening can continue, the system being to first screen all sleeping quarters and mess facilities, and, as funds become available, the remainder of the building.

Camp John Hay.—For the construction of a barrack for service corps men and other employees: Supplies, \$4,000; services, \$2,000.

Camp Stotsenburg.—For the construction of five double sets of noncommissioned officers' quarters building: Supplies, \$10,000; services, \$4,000. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$900; services, \$350. For the construction of one double set of officers' quarters to replace building No. 59, which is past repair: Supplies, \$5,000; services, \$2,000. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$1,000; services, \$400. For the construction of these three additions to barracks Nos. 314, 343, and 345: Supplies, \$2,500; services, \$1,200.

Fort Mills.—For construction of necessary barracks and quarters to complete the construction of a scout garrison: Supplies, \$17,000; services, \$9,000. The present nipa buildings were past repair in the fiscal year 1917 and are being rebuilt as funds become available; the sum asked for is the amount estimated that will be required to complete the project and includes one field officer's quarters. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$3,400; services, \$1,800.

For construction of barracks for Hospital Corps: Supplies, \$20,000; services, \$10,000. The Quartermaster General advised in the fifth indorsement, dated December 21, 1916, No. 632-CR (Fort Mills), that Hospital Corps dormitory should be provided for from "Barracks and quarters, Philippine Islands" funds.

For San Pedro (Iloilo).—For construction of one double set of noncommissioned officers' quarters buildings: Supplies, \$2,000; services, \$1,000. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$400; services, \$200. For construction of one barracks for Scout company building: Supplies, \$6,000; services, \$3,000. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$1,400; services, \$600. It is estimated that one of the present temporary buildings will be past repair and require construction during the fiscal year.

Fort Wm. McKinley.—For construction of five double sets of noncommissioned officers' quarters buildings: Supplies, \$10,000; services, \$6,000. For the necessary, plumbing, electric lighting, water and sewer connections: Supplies, \$2,000; services \$1,200. These quarters are absolutely required to furnish accommodations for the noncommissioned staff officers entitled to quarters. For construction of barracks for service corps men building: Supplies, \$7,000; services, \$3,800. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$1,400; services, \$800. For construction of barracks for provost guard building: Supplies, \$4,000; services, \$2,000. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$800; services, \$400. There are no accommodations for the provost guard, and it will be necessary to construct a building sufficient to accommodate the members of the guard that are detached from their companies.

Manila.—Estado Mayor & Cuartel de Infanteria: For remodeling present buildings: Supplies, \$18,000; services, \$9,000. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$3,600; services, \$1,800. The buildings at this post are of old Spanish construction, some of which were of very temporary character, and will require complete remodeling as the present arrangements are insanitary and the class of construction in no way suited for the accommodation of troops.

For the authorized increments to complete the Army:

Fort Wm. McKinley.—For construction of accommodations for three regiments of infantry, viz., barracks and quarters: Supplies, \$745,100; services, \$372,550. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$172,000; services, \$86,000. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$40,000; services, \$20,000. For constructions of accommodations for one aero company of Signal Corps, viz., barracks and quarters: Supplies, \$30,000; services, \$14,000. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$9,000; services, \$4,000. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$350; services, \$150. For construction of accommodations for one ambulance company, viz., for barracks and quarters: Supplies, \$11,400; services, \$5,700. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$2,800; services, \$1,400. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$3,200; services, \$1,800. For construction of accommodations for one field hospital company, viz., for barracks and quarters: Supplies, \$12,500; services, \$6,200. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$2,750; services, \$1,400. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$350; services, \$150. For construction of accommodations for one field company, Signal Corps, viz., for barracks and quarters: Supplies, \$29,800; services, \$14,900. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$7,500; services, \$3,200. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$350; services, \$150. For construction of accommodations for two Field Artillery Regiments, one heavy and one mountain, viz:

For barracks and quarters: Supplies, \$500; services, \$250,000. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$111,000; services, \$35,000. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$30,000; services, \$15,000. For construction of accommodations for one company of engineers, viz: For barracks and quarters: Supplies, \$24,700; services, \$12,300. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$6,000; services, \$3,000. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$10,700; services, \$5,300.

Fort Mills.—For construction of accommodations for battalion headquarters and two companies of engineers, viz: For barracks and quarters: Supplies, \$56,800; services, \$20,300. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$13,800; services, \$6,900. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$24,600; services, \$12,200.

Camp Stotsenburg.—For construction of accommodations for one regiment of cavalry, viz: For barracks and quarters: Supplies, \$267,000; services, \$133,000. For the

necessary plumbing, electric lighting, water and sewer connections: Supplies, \$65,800; services, \$32,800. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$16,700; services, \$8,300. For construction of accommodations for one ambulance company, viz: For barracks and quarters: Supplies, \$12,000; services, \$6,000. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$3,000; services, \$1,400. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$400; services, \$200. For construction of accommodations for one field hospital company, viz: For barracks and quarters: Supplies, \$12,800; services, \$6,300. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$3,100; services, \$1,500. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$350; services, \$150. For necessary changes in present artillery post to accommodate one regiment of light artillery, viz: For barracks and quarters: Supplies, \$67,000; services, \$33,000. For the necessary plumbing, electric lighting, water and sewer connections: Supplies, \$30,000; services, \$15,000. For the necessary roads, walks, drainage, and improvement of grounds: Supplies, \$4,700; services, \$2,300. The present accommodations consist of 3 battery barracks and 11 sets of officers' quarters of concrete, the remainder of the post being of very temporary construction. The funds asked for will be utilized in the necessary repairs and remodelling of the present temporary quarters.

B. & Q., P. I., Item 330.—Repairs.

[Estimate fiscal year 1919, \$340,000.]

Philippine Islands (for current requirements):

Estimate.....	\$360,000
Appropriated fiscal year 1918.....	300,000
Expended fiscal year 1917.....	525,000

REMARKS.

The amount of this estimate is \$360,000. It is \$60,000 more than the amount apportioned for 1918 and \$165,000 less than the cost for the fiscal year 1917. The funds called for are required for current repairs to buildings at all posts in the Philippine Department. The remarks on page 118 of the hearings before the Military Affairs Committee of the Army appropriation bill for 1918 states the requirements clearly, and the additions asked for over the fiscal year 1918 are those required to accommodate the increments authorized or to be authorized.

B. & Q., P. I., Item 331.—Payment of rents.

[Estimate fiscal year 1919, \$59,930.]

Philippine Islands (for current requirements):

Estimate.....	\$59,930
Appropriated fiscal year 1918.....	6,500
Expended fiscal year 1917.....	10,000

REMARKS.

This is the same amount as called for by the department authorities. It is \$9,000 less than the cost for the fiscal year 1917 and \$5,500 less than the amount apportioned for 1919. No explanation is given for this decrease. There has been added \$58,930 under this item for the payment of rentals in China; therefore the total amount of this item for 1919 is \$59,930. The estimate under this item is made up as follows:

For payment of rents in Philippine Islands.....	\$1,000
For payment of rents for troops in China:	
Rental of barracks.....	53,000
Rental of quarters for noncommissioned officers and enlisted men.....	1,000
Rental of stables.....	600
Rental of storehouses.....	3,570
Rental of buildings for other military purposes.....	760
Total.....	59,930

B. & Q., P. I., Item 332.—Building sites.—No estimate for fiscal year 1919 submitted.

B. & Q., P. I., Item, 333.—Additions to existing military reservations.

[Estimated fiscal year 1919, \$10,000.]

Philippine Islands (for current requirements): Estimate. \$10,000.

REMARKS.

This is the amount of estimate submitted by the department authorities. No estimate was received for the fiscal year 1918, nor is any cost reported for the fiscal year 1917. It is estimated that these funds will be required for the purchase of private claims within certain military reservations that will be required so as to remove nuisances, or purchase the land adjacent to target ranges, all within military reserve.

B. & Q., P. I., Item 334.—Shelter for animals and supplies.

[Estimated fiscal year 1919, \$48,800.]

Philippine Islands (for new construction):

Estimate.....	\$48,800
Appropriated fiscal year 1918.....	2,400
Expended fiscal year 1917.....	30,000

REMARKS.

The amount of this estimate (\$48,800) is \$18,800 more than the cost for the fiscal year 1917, and it is \$46,400 more than the amount apportioned for the fiscal year 1918. The funds are required for the following work:

Camp McGrath.—For necessary remodeling of the present storehouse and stables: Supplies, \$1,000; services, \$500.

Camp Stotsenburg.—For construction of quartermaster storehouse: Supplies, \$5,000; services, \$2,500. This is required to replace building No. 332, which is past repair. For galvanized-iron roofs for Cavalry stables and grooming sheds: Supplies, \$23,000; services, \$4,100. Stables Nos. 88, 92, 93, 94, 97, 98, and 99 and the grooming shed are now roofed with nipa, which is past repair. The remainder of the stables has been roofed with galvanized iron, and it is necessary to remove the menace from fire and the constant cost of repairs by replacing the present nipa roofs with galvanized iron. The funds asked for are the minimum that should be allowed. For construction of a wagon shed: Supplies, \$800; services, \$400. It is the intention to construct a shed for the shelter of animals at the corral for those animals that are required to remain in the harness awaiting local calls.

Fort Mills.—For construction of one quartermaster storehouse: Supplies, \$4,000; services, \$2,000. To facilitate the handling of supplies on the Infantry level a storehouse will be required for the Infantry regiment at Fort Mills. For construction of quartermaster stable, forage, and wagon shed: Supplies, \$3,000; services, \$1,500. The present accommodations for quartermaster stables, forage, and wagon shed are insufficient.

B. & Q., P. I., Item 335.—All other buildings.

[Estimate fiscal year 1919, \$90,050.]

Philippine Islands (for new construction):

Estimate.....	\$90,050
Appropriated, fiscal year 1918.....	18,000
Expended, fiscal year 1917.....	25,000

REMARKS.

This estimate for \$90,050 is the same as that submitted by the department authorities. It is \$65,050 more than the cost for the fiscal year 1917. It is noted that the Philippine Island authorities state that \$18,000 was estimated for the fiscal year 1918. However, as stated on page 119, hearings on the appropriation bill for 1918 states that no estimate was submitted for the fiscal year 1918. The funds estimated for are required for the following purposes:

Camp Stotsenburg.—For construction of one latrine and bath in quartermaster corral: Supplies, \$500; services, \$250. For the necessary extensions to wagon shed and ordnance magazine: Supplies, \$2,000; services, \$1,000. For construction of corral fences: Supplies, \$2,100; services, \$900. The funds asked for above are required

for the reason that there are no latrine facilities at the quartermaster corral and the wagon sheds will not accommodate the present equipment. The corral fences are past repair and originally consisted of a very makeshift construction from materials on hand. For construction of chapel: Supplies, \$13,000; services, \$7,000. In the fifth indorsement, from Office of the Quartermaster General, No. 631.4-CR (Camp Stotsenburg), the Quartermaster General stated that this project would be listed in his office for consideration.

Fort Mills.—For construction of two subguardhouses: Supplies, \$3,000; services, \$1,500. It is necessary to provide shelter for the guards stationed in the barrio at Fort Mills that are on duty for the protection of the wharves and the portion of the post at the new low level. The other building will be repaired for outpost No. 11, which is a considerable distance from the main garrison. For the construction of garage: Supplies, \$1,000; services, \$500. These funds are required to convert the corral on the "top side" into a garage for eight auto trucks. For construction of wagon shed: Supplies, \$2,000; services, \$800. For construction of two boathouses: Supplies, \$12,000; services, \$6,000. These proposed boathouses are for the accommodations of boats used in connection with the coast defenses of Manila and Subic Bays. At present there are no means for providing shelter for these boats. This estimate was forwarded from this department for the fiscal year 1918, but was not included in the estimate of Congress. For construction of a building to accommodate the female nurses on duty at hospital at this post: Supplies, \$7,000; services, \$3,500. This building was included in estimates of former years, but was never authorized, and is part of the project for a complete hospital at Fort Mills. At present there are no accommodations for female nurses.

Fort Wm. McKinley.—For construction of a building to accommodate the female nurses on duty at hospital at this post: Supplies, \$10,000; services, \$5,000.

Manila depot quartermaster.—For renewal of roofs on the depot buildings: Supplies, \$9,000; services, \$2,000. The present depot buildings were constructed to last a short time, and the present galvanized iron roof and part of the roof framing is absolutely in need of renewing, and unless funds are provided for that were estimated for by this department in previous fiscal years for construction of permanent depot buildings on the Manila Fort Reservation, the above funds will have to be supplied. The estimated cost of all the construction on the Fort Reservation, as submitted on previous estimate, amounts to \$250,000 and this department recommends that steps be taken to secure at least \$100,000 so that this work can be started, as it is feared that the present depot building may be destroyed by a typhoon at any time.

The CHAIRMAN. The amount you ask this year under this item is a tremendous increase over the amount you received at the last session of Congress. You are asking for a little over eight times the amount you got at the last session.

Gen. SHARPE. The notes show what it is proposed to construct.

The CHAIRMAN. What are the main items included in that large increase?

Gen. LITTELL. The new construction of Camp Hay for an increased number of troops, and also at Camp San Pedro. That is one of the best reservations in the Philippine Islands. It is a magnificent place for Cavalry troops, and it has been desired for a number of years to station most of the Cavalry there. In fact, they have practically all of the Cavalry stationed there. It is about 50 miles from Manila.

The buildings originally constructed there were of the most temporary kind, and they have been going to pieces for many years. A project was approved four or five years ago for the reconstruction of the post, and they started in to build a number of concrete buildings, beginning with the Artillery contingent. It is a good post for mounted troops. There are plenty of drill grounds; the reservation is a large one, and there is plenty of room for maneuvers and for target ranges for the artillery. This is for the purpose of replacing all of the old buildings, which are very much dilapidated. Some of them were built by soldier labor and Chinese carpenters. They are nothing but bare frames of buildings, covered with batten.

The CHAIRMAN. What is the amount of new construction at that camp?

Gen. LITTELL. There is another point in regard to that that I did not bring out, and that is that the increments of the Regular Army have been added, the last four increments have been added all at once, and that also requires additional quarters for the troops.

The CHAIRMAN. We were told when we passed the bill taking in the Philippine Scouts, that they practically did not have any troops there now, and that they were almost depleted of the Regular troops.

Gen. LITTELL. I think they have a good many troops there yet.

Mr. ANTHONY. They told us they had about 1,100, and those troops were largely Coast Artillery.

Mr. KAHN. Where is Camp Hay?

Gen. LITTELL. It is at a place called Baguio, up in the mountains in the northern part of the island.

The CHAIRMAN. None of this increase in the appropriation was asked for because of the provisions of the new legislation recently enacted, taking in the Philippine Scouts and the Constabulary?

Gen. LITTELL. No, sir.

Mr. MCKENZIE. The fact that the Regular Army was increased to its full war strength by the addition of a number of increments provided in the national defense act would not make it necessarily follow that we have to build additional barracks in the Philippine Islands, would it?

Gen. SHARPE. This is asked for because the barracks were all constructed for the smaller-sized units. They were only to hold 98 men in the Infantry companies.

Gen. LITTELL. Then it was increased to 100, and then the strength was made 150, and then it was increased again to 200, and now there are 250 men in a company.

Mr. MCKENZIE. That would mean an increase under the regulations in the size of the unit, but it would not necessarily follow that instead of having 10,000 troops in the Philippine Islands we would have about 20,000, would it?

The CHAIRMAN. On the contrary, during the war, we would have less.

Mr. MCKENZIE. It seems to me there is not any connection between the increase of the Regular Army and the building of barracks in any particular locality in our jurisdiction.

Col. DALY. We have in these notes the details as to what the funds estimated are to be used for. They are not in concrete form, but they are in great detail. We can put in a statement showing the amount asked for in each place, and for what it is asked, so that the committee can readily see what we want the money for.

The CHAIRMAN. Is the proviso under this item an old proviso?

Col. DALY. Yes, sir; that is an old proviso.

SHOOTING GALLERIES AND RANGES.

The CHAIRMAN. The next item is, "Shooting galleries and ranges, \$343,110." The amount appropriated under this item at the last session was \$6,059,540, and you are asking for a much smaller amount this year, necessarily.

Gen. SHARPE. I have tables showing the total amount asked for with the division under the different items, and an explanation of the amounts required under the various items.

(The table referred to and the details of the estimate are as follows:)

Shooting galleries and ranges, fiscal year 1919.

Deficiency act Oct. 6, 1917..... \$6, 014, 540

RECAPITULATION.

Estimate "Shooting galleries and ranges," fiscal year 1919.

UNITED STATES AND PHILIPPINE ISLANDS.

am No.	Purpose.	Estimate for fiscal year 1919.				Estimate per capita, 2,952,000 officers and enlisted men.

Expended fiscal year 1917.....	\$2,334.02		\$2,334.02		1,000.00	1,000.00	3,334.02

REMARKS.

United States.—No construction projects are listed to be done during the fiscal year 1919.

Philippine Islands.—The estimate called for by department authorities under this item (\$10,400) is to provide for the replacement of rang houses and the construction of new ones where required in the several posts in the department; supplies, \$2,000; services, \$900. The increase over the estimate for 1918 is due to the recall of the funds originally allotted the department for the fiscal year 1917.

Fort Mills.—For construction of shelter for target range: Supplies, \$5,000; services, \$2,500.

S. G. & R. Item 350.—Shooting galleries for small-arms target practice.

[Estimate, fiscal year 1919, \$1,500.]

Philippine Islands (for new construction):

Estimate.....	\$1,500
Appropriated fiscal year 1918.....	1,500

REMARKS.

United States.—No projects are listed to be done under this item for the fiscal year 1918.

Philippine Islands.—The amount estimated for by the Philippine authorities under this item is \$1,500, which is the same as that estimated for 1918. No cost is reported for 1917.

The amount estimated for is required for replacement of buildings used as shooting galleries and for the construction of new ones where required at all posts in the Philippine Department.

S. G. & R. Item 351.—Ranges for small-arms target practice.

[Estimate fiscal year 1919, \$21,900.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....					\$21,900.00	\$21,900.00	\$21,900.00
Appropriated fiscal year 1918.....							
Expended fiscal year 1917.....	\$18,420.65		\$18,420.65				18,420.65

REMARKS.

United States.—No estimate for the fiscal year 1919.

Philippine Islands.—\$21,900 is estimated as being required by the department authorities for fiscal year 1919. Nothing was estimated for under this item for the fiscal years 1918 or 1917.

The above amount is required for necessary increases required for the several ranges in the department due to the increase of garrison by increments for all posts affected: Supplies, \$9,000; services, \$6,000.

Camp John Hay.—For reconstruction of a range at that post: Supplies, \$2,300; services, \$1,500.

Camp Stotsenburg.—For necessary retaining walls and additional pit houses at the several butts: Supplies, \$300; services, \$400.

Augur Barracks.—Concrete bases for targets: Supplies, \$200; services, \$100.

Camp Overton.—For construction of butts: Supplies, \$1,000; services, \$600.

S. G. & R. Item 352.—Repairs incident thereto.

[Estimate fiscal year 1919, \$168,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$158,000.00	\$158,000.00	\$10,000.00	\$10,000.00	\$168,000.00
Appropriated fiscal year:							
1918.....	25,652.00	25,652.00	7,500.00	7,500.00	33,152.00
Expended fiscal year							
1917.....	13,918.27	13,918.27	4,685.00	4,685.00	18,603.27

REMARKS.

The sum of \$25,652 appropriated for this item for the fiscal year 1918. The amount estimated for stations other than for cantonments is based upon the estimate for 1918 plus a slight increase for material and labor. The estimate for 1919 is as follows:

Henry Barracks, P. R.—Repair of target ranges.....	\$3,000
For stations other than for cantonments.....	30,000
For cantonments.....	125,000

Total..... 158,000

The amount estimated for cantonments is based upon one-half the per capita cost for 1918 multiplied by the number of men in the various cantonments.

The supplies to be purchased consist of lumber, stone, cement, and such other articles as may be required to repair butts, markers, building on ranges, etc.; also necessary tools, lawnmowers, etc., required to keep the grounds in a suitable condition for target practice.

The services to be provided consist of both job and contract services required in making necessary repairs to ranges and buildings such as storehouses for target material, telephone booths, shelter for markers, indoor shooting galleries, etc.

United States.—Estimates for repairs to ranges, etc., are submitted with the annual estimates of March 1, and a separate estimate, and are considered in connection with the annual estimates and apportionments made to the various departments at the beginning of the fiscal year. Special requisitions are also received through the year for the necessary repairs which could not be anticipated when annual allotment is made.

All of the above amounts will be required to meet current requirements.

The amount estimated for is the minimum amount that will be required to keep the various ranges in repair.

Philippine Islands.—The amount submitted by the department authorities under the item is \$10,000 and is required for current repairs to ranges at all posts in the department. The increase over 1918 estimate is made necessary by the additional increments.

It is an increase of \$2,500 over the estimate for fiscal year 1918. Explanation of increase is not given.

S. G. & R. Item 353.—Expenses incident thereto.

[Estimate fiscal year 1919, \$105,800.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$104,000.00		\$104,000.00	\$1,600.00		\$1,600.00	\$105,600.00
Appropriated fiscal year 1918.....	3,000.00		3,000.00	1,000.00		1,000.00	4,000.00
Expended fiscal year 1917.....	2,227.48		2,227.48	500.00		500.00	2,527.48

REMARKS.

United States.—The services to be procured under this item consist of the rental of land for target practice and for all other services not otherwise provided for incident to the operations of target ranges, etc.

This estimate is based upon the estimate for 1918 plus a small increase for labor and material, and is as follows:

For stations other than for cantonments.....	\$35,000
For cantonments.....	69,000
Total.....	104,000

The estimate for cantonments is based upon one-half the per capita cost for 1918 multiplied by the number of men in the various cantonments.

The following target ranges were rented during the fiscal year 1917:

Brownsville, Tex.....	\$1.00
Clackamas, Oreg.....	2,499.97
Colchester, Vt.....	276.00
Edsall, Va.....	750.00
Total.....	3,476.97

In view of war conditions, all of the sum estimated for will be required to meet current requirements.

Philippine Islands.—The amount of the estimate under this item as submitted by the Philippine authorities is \$600 more than that estimated for the fiscal year 1918. No explanation is given for the increase.

Item 354, S. G. & R.—Flour for paste for making targets.

[Estimate fiscal year 1919, \$33,210.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$33,000		\$33,000	\$210		\$210	\$33,210
Appropriated fiscal year 1918.....	2,684		2,684	164		164	2,848
Expended fiscal year 1917.....	800		800	82		82	882

REMARKS.

The above estimate is in accordance with paragraph 1215, item 8, Army Regulations, 1913, which is as follows:

"Flour: For paste used in target practice. For each troop or company, 50 pounds, and for each battery of Field Artillery, 100 pounds, during the practice season."

United States.—This estimate is as follows:

For stations other than for cantonments.....	\$8,000
For cantonments.....	25,000
Total.....	33,000

The estimates for cantonments is based upon one-half the per capita cost for 1918 multiplied by the number of men in the various cantonments. The increase of this estimate is due to war conditions and to the increase in the advance in cost of flour.

Philippine Islands.—\$210 is estimated for under this item, an increase of \$45.50 over the 1918 estimate. It is required for the supply of flour for making paste, used for making targets at the various ranges at posts in the Philippine Department.

Item 355, S. G. & R.—Hire of employees.

[Estimate fiscal year 1919, \$2,500.]

	United States.			Philippine Islands.			Grand total.
	Current require-ments	New construc-tion.	Total.	Current require-ments.	New construc-tion.	Total.	
Estimate.....				\$2,500		\$2,500	\$2,500
Appropriated fiscal year 1918.....				2,000		2,000	2,000
Expended fiscal year 1917.....				1,251		1,251	1,251

REMARKS.

United States.—No estimate is submitted under this item.

Philippine Islands.—The Philippine authorities estimate for \$2,500, which is \$500 more than the amount appropriated for the fiscal year 1918. No explanation is given as to this increase.

The CHAIRMAN. How do you arrive at that amount for shooting galleries at this time?

Gen. SHARPE. That is figured on a per capita of \$11.63 for 2,952,000 men. That is practically based on an army of 3,000,000 men.

The CHAIRMAN. Last year you got over \$6,000,000 and now you are only asking for a little over \$343,000.

Maj. OURY. The amount appropriated last year was required for fitting up 32 ranges. A good deal of the amount of the item in the previous bill, covering shooting galleries and ranges was for leases. I think there was approximately \$2,000,000 for that purpose. That is not yet entirely expended, although it is probably all obligated for the different National Army and the National Guard camps. When that is expended, the amount that is necessary to maintain and keep up these galleries and ranges will be nothing like as large as the amount asked for in that item under previous appropriation bills. This is largely for maintenance, and not for new construction.

The CHAIRMAN. Then you will not have any new construction?

Maj. OURY. Practically every regular post has its old target range. For the National Army and the National Guard camps it was necessary to construct new ones. They have been built at a cost varying from fifty to one hundred thousand dollars. I believe that we have had to pay \$500,000 for leases in the Central Department, and that amount is for leases on those particular ranges that are all located in the Central Department.

The CHAIRMAN. I wish you would put in the record a statement showing exactly what you spent on these ranges, and how you arrived at this amount of \$343,000.

Maj. OURY. We can do that.

Col. DALY. We have that under each item, covering the estimate for \$343,107.

(The matter referred to is as follows:)

There has been expended to date, under the appropriation "Shooting galleries and ranges," for target ranges at the various cantonments, \$2,700,500.50 as follows:

NATIONAL ARMY CANTONMENTS.

Camp Devens, Ayer, Mass.....	\$58,000.00
Camp Upton, Yaphank, L. I.....	52,115.00
Camp Dix, Wrightstown, N. J.....	111,100.00
Camp Meade, Annapolis Junction, Md.....	50,865.00
Camp Lee, Petersburg, Va.....	50,000.00
Camp Jackson, Columbia, S. C.....	52,000.00
Camp Gordon, Atlanta, Ga.....	85,500.00
Camp Sherman, Chillicothe, Ohio.....	50,000.00
Camp Taylor, Louisville, Ky.....	75,000.00
Camp Custer, Battle Creek, Mich.....	52,004.00
Camp Grant, Rockford, Ill.....	40,000.00
Camp Pike, Little Rock, Ark.....	50,000.00
Camp Dodge, Des Moines, Iowa.....	50,000.00
Camp Funston, Fort Riley, Kans.....	50,000.00
Camp Travis, Fort Sam Houston, Tex.....	50,000.00
Camp Lewis, American Lake, Wash.....	51,175.50
	<hr/>
	927,759.50

NATIONAL GUARD MOBILIZATION CAMPS (M. F. S.)

Camp Greene, Charlotte, N. C.....	129,200.00
Camp Wadsworth, Spartanburg, S. C.....	147,900.00
Camp Hancock, Augusta, Ga.....	119,000.00
Camp McLellan, Anniston, Ala.....	144,500.00
Camp Sevier, Greenville, S. C.....	95,200.00
Camp Wheeler, Macon, Ga.....	94,850.00
Camp MacArthur, Waco, Tex.....	105,500.00
Camp Logan, Houston, Tex.....	85,000.00
Camp Cody, Deming, N. Mex.....	108,800.00
Camp Doniphan, Fort Sill, Okla.....	112,200.00
Camp Bowie, Fort Worth, Tex.....	105,400.00
Camp Sheridan, Montgomery, Ala.....	112,200.00
Camp Shelby, Hattiesburg, Miss.....	163,500.00
Camp Beauregard, Alexandria, La.....	74,800.00
Camp Kearney, Linda Vista, Cal.....	92,091.00
Camp Fremont, Menlo Park, Palo Alto, Cal.....	81,600.00
	<hr/>
	1,772,741.00

(Gross total)..... 2,700,500.50

Under this appropriation the total amount estimated for the fiscal year 1919 is \$343,110, of which amount \$33,800 is for new construction and \$309,310 for current requirements.

The construction estimated for items 349-350 and 351 are entirely for use in the Philippine Islands. Item 352, calling for \$168,000, is for repairs incident to shooting galleries and ranges, of which \$10,000 is required for the Philippine Islands and \$158,000 for the United States. Of this latter amount, \$125,000 is estimated as being required for cantonments in the United States based upon one-half the per capita cost for 1918 multiplied by the number of men in the various cantonments estimated to be approximately 1,200. Item 353, calling for \$105,600, is for expenses incident to shooting galleries and ranges in the United States and Philippine Islands, of which \$1,600 is required for the Philippine Islands, and \$104,000 for the United States. Of this latter amount, \$69,000 is estimated as required for the various cantonments based upon one-half the per capita cost for 1918 multiplied by the number of men in the various cantonments. Item 354 calls for \$33,210, of which \$33,000 is required for the

United States, \$25,000 of which is for the use of the various cantonments, based upon one-half the per capita cost for 1918 multiplied by the number of men in the various cantonments. Item 355 is for the hire of employees in the sum of \$2,500, which is estimated entirely for the Philippine Islands.

Answering the fourth paragraph of memorandum you are informed that there was nothing estimated for the lease of target ranges for use at cantonments at the time this estimate was prepared, there being no data on hand to determine the amount required. One million dollars should be called for under item 353 of this appropriation under the item "Expenses incident thereto," based upon information recently received from the National Army and National Guard cantonments, and for additional camps and stations that may be established in the future. This will make a total of \$1,105,600 for this item and \$1,343,110 for the entire appropriation.

MAINTENANCE, ARMY WAR COLLEGE.

The CHAIRMAN. The next item is "Maintenance, Army War College: For supplying the necessary fuel for heating the Army War College Building at Washington Barracks, and for lighting the building and grounds; also for pay of a chief engineer at \$1,400; an assistant engineer, at \$900; carpenter, at \$1,000; four firemen, at \$720 each; one elevator conductor, at \$720; in all, \$12,200." There is a slight increase there over the amount of \$10,700 appropriated at the last session of Congress.

Gen. SHARPE. The total amount asked for is \$12,780. There is a supplemental estimate of \$500 additional.

Col. DALY. The original estimate was for \$12,200.

Gen. SHARPE. The supplemental estimate provides for an increase in the pay of the assistant engineer to \$1,000, and then the four firemen are to be increased from \$720 to \$840. As I say, there are four of those firemen and that makes an increase of \$100 in the pay of the assistant engineer and an increase of \$480 in the pay of the firemen.

The CHAIRMAN. You are asking for an increase in what?

Gen. SHARPE. We are asking for an increase in the pay of one assistant engineer and four firemen. The assistant engineer is getting \$100 increase in his pay, and the four firemen are to get an increase of \$120.

Col. DALY. In addition to that, there is a carpenter put in at \$1,000, who was not in the 1918 appropriation.

The CHAIRMAN. That accounts for the total of \$12,780?

Col. DALY. There are other items included in that.

Mr. McKENZIE. What is the necessity for the employment of a carpenter, especially down there? You have carpenters in your department, have you not?

Gen. SHARPE. We have them only for posts. The War College is treated as if it were a part of the War Department. At the barracks there we have enlisted carpenters of our department stationed, but we do not have them in the War College.

Mr. ANTHONY. Is there sufficient carpentry work down there to keep a carpenter busy?

Gen. SHARPE. That request came from the president of the War College.

Mr. ANTHONY. What do the firemen do; do they attend to the heating of the building?

Gen. SHARPE. Yes, sir.

Mr. ANTHONY. Do they supply their own light at the War College, or do they buy the light?

Col. DALY. I think they generate their light.

Mr. KAHN. In the language of the item it says, "For lighting the building and grounds." And that is one of the purposes of the appropriations?

Gen. LITTELL. That is for the purpose of buying the material and the cost of purchasing the light.

Mr. ANTHONY. I wondered whether they had a generator there or not.

Gen. LITTELL. It is purchased.

Mr. ANTHONY. How do they use four firemen there?

Gen. LITTELL. They have a pumping plant there, and that increase was put in by direction of the Chief of Staff.

Mr. SHALENBURGER. There is just one building there that they have to heat?

Gen. LITTELL. Yes, sir. The increases were put in by direction of the Chief of Staff.

Estimate for the fiscal year, 1919, "Maintenance Army War College."

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, January 2, 1918.

Memorandum for the Chief of Staff:

Subject: Increase in pay of assistant engineer and firemen at Army War College.

1. The appropriation "Maintenance, Army War College," as submitted to Congress for the fiscal year 1919, provides among other things for the pay of an assistant engineer at \$900, and of four firemen at \$720 per annum.

2. When the estimate of this appropriation was prepared in August, 1917, it was not foreseen that any difficulty would be experienced in getting qualified men for these positions at the compensations named. Since that time, however, the War College has lost the services of several of its experienced men who have resigned to accept positions on the outside at greatly increased wages over that which they were receiving from the Government. In view of the keen competition existing in the labor market at the present time and the mounting cost of living there would seem to be no other alternative than to give these men an increase in pay if we are to obtain, and to be able to hold after they are obtained, men who are competent to fill these positions.

3. It is accordingly recommended that the pay of the assistant engineer at the War College be increased from \$900 to \$1,000 per annum, and of the four firemen from \$720 to \$840 per annum for the fiscal year 1919.

4. Draft of memorandum to the Quartermaster General to carry this recommendation into effect herewith.

D. W. KETCHAM,
Colonel, General Staff,
Acting Chief of War College Division.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, January 4, 1918.

Memorandum for the Quartermaster General:

The Secretary of War directs that in connection with the appropriation "Maintenance, Army War College, 1919," a special estimate be submitted to Congress increasing the pay of the assistant engineer from \$900 to \$1,000 per annum, and of the four firemen from \$720 to \$840 per annum.

JOHN BIDDLE,
Major General, Acting Chief of Staff.

RENT OF BUILDINGS, QUARTERMASTER CORPS.

The CHAIRMAN. The next item is, "Rent of buildings, Quartermaster Corps: For rent of buildings, and part of buildings in the District of Columbia for military purposes during the fiscal year 1919, \$100,015.10." The appropriation at the last session of Congress was \$79,100, so that there is an increase of nearly \$25,000 in that item. Where does that increase come in?

Gen. SHARPE. I have a list giving the designations of the buildings which were appropriated for in 1917 and 1918 and also what is contemplated in the estimates for this year. There is a decrease for the rent of the laboratory for the Signal Corps.

The CHAIRMAN. The amount asked for is \$2,100 this year.

Col. DALY. We have here a comparison of the rentals. There is increase in one item of \$48,000 for the rental of the medical warehouse, medical supply depot, a new building constructed especially for the medical supply depot, and taken under a six-year lease. That building was completed in October. The Committee on Appropriations appropriated in the deficiency act \$36,000, covering the rental of that building for the balance of the fiscal year. The rental is \$4,000 a month. That is an additional item of \$48,000.

Mr. ANTHONY. What return to the owner of the property is that rental based upon? Do you know the cost of that building? That was constructed especially for the Government—for the use of the Government—the entire building?

Col. DALY. Yes, sir.

Mr. ANTHONY. What is the cost of the building and the value of the ground?

Col. DALY. We are paying 28.4 cents a square foot for that building. The space rented is 192,000 square feet.

Mr. FIELDS. Is that the floor space?

Col. DALY. Yes. The assessed valuation of the building and land is \$361,249.

Mr. ANTHONY. So that the owner will almost get the value of the property back under the six years' rental agreement?

Col. DALY. Yes, sir. Then there is an increase in the estimate of \$2,000 for additional space for the medical school, \$7,200 for the rental of the Lemon Building. That rental was formerly paid by the War Department from their appropriation. But they have vacated the building and turned it over to the Quartermaster Department and we are assuming the rent.

Mr. ANTHONY. Would it not have been better business for the Government to have built a medical storehouse?

Col. DALY. I should think so. The next increase is for space for the aviation section of the Signal Corps, \$1,320. A laboratory for the Signal Corps, \$4,938 for a warehouse and \$510 for a corral.

Mr. KAHN. Those are increases?

Col. DALY. Those are increases.

Mr. QUIN. How many cars are in the garage for which you pay a rental of \$1,500?

Col. DALY. I do not know. I will have to find that out and put it in the record.

NOTE.—There are 22 cars in the garage, including 6 belonging to the White House.

Then there is a warehouse at \$4,938. That is an additional warehouse located at 1514 Eckington Place, rented for the depot quartermaster. The available space there for Government use is 57,184 square feet. The assessed valuation of the building ground is \$50,449 and the monthly rental is \$411.50.

The corral, for which a rental of \$510 is asked, is located at the southwest corner of Nineteenth Street and Virginia Avenue, and is rented for the depot quartermaster. It has 24,357 square feet. The assessed valuation of the building and ground is \$19,745.

The CHAIRMAN. Why do you call it a corral?

Col. DALY. It is a small building, and it is inclosed with a fence and the animals are put in there for exercise.

Mr. KAHN. Does the Government occupy the entire warehouse at 1514 Eckington Place, or only a part of it?

Gen. SHARPE. The entire building is occupied by the Government.

Mr. KAHN. Is that the total rent you pay for it?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. I will ask you to put a detailed statement of those items in the record.

(The statement referred to is as follows:)

Rental of buildings, District of Columbia, fiscal year 1919.

Deficiency act June 15, 1917.....
Deficient act Oct. 6, 1917..... \$37,875.00

[Appropriation "Rent of buildings, District of Columbia."]

Statement of square feet available for use of Government, cost thereof per month, assessed valuation of buildings and land, monthly rental rate, etc., and percentage total rental paid on assessed valuation, in connection with the present rentals by the War Department, in Washington, D. C., as itemized in the estimate for fiscal year 1919 under appropriation "Rental of buildings, District of Columbia."

Garage, stable, and storehouse, 236-233 Nineteenth Street NW. (entire building occupied by the Government):	
Available space for Government use.....	square feet.. 27,370
Rate paid per square foot per month (garage, \$0.024; stable and storehouse, \$0.014).....	\$0.038
Assessed valuation of building and land.....	\$24,795
Monthly rental (garage, \$125; stable and storehouse, \$300).....	\$425
Total rental per annum (garage, \$1,500; stable and storehouse, \$3,600).....	\$5,100
Aviation Section, Signal Corps, Mills Building (two floors occupied by the Government):	
Available space for Government use.....	square feet.. 4,511
Rate paid per square foot per month.....	\$0.062
Assessed valuation of building and land.....	\$245,666
Monthly rental.....	\$280
Total rental per annum.....	\$3,360
Stable, Nineteenth Street and Virginia Avenue NW. (entire building occupied by the Government):	
Available space for Government use.....	square feet.. 20,790
Rate paid per square foot per month.....	\$0.0107
Assessed valuation of building and land.....	\$19,506
Monthly rental.....	\$225
Total rental per annum.....	\$2,700
Corral, southwest corner Nineteenth Street and Virginia Avenue NW. (entire building occupied by the Government):	
Available space for Government use.....	square feet.. 24,357
Rate paid per square foot per month.....	\$0.0017
Assessed valuation of building and land.....	\$9,743
Monthly rental.....	\$42.59
Total rental per annum.....	\$510
Office, depot quartermaster, 32 Seventeenth Street NW. (entire building occupied by the Government):	
Available space for Government use.....	square feet.. 7,024
Rate paid per square foot per month.....	\$0.0279
Assessed valuation of building and land.....	\$19,048
Monthly rental.....	\$208.33
Total rental per annum.....	\$2,499.96
Warehouse, 1514 Eckington Place NE. (entire building occupied by the Government):	
Available space for Government use.....	square feet.. 37,184
Rate paid per square foot per month.....	\$0.0087
Assessed valuation of building and land.....	\$50,449
Monthly rental.....	\$411.50
Total rental per annum.....	\$4,938
Office dispensary, northwest corner Connecticut Avenue and L Street (two floors occupied by the Government):	
Available space for Government use.....	square feet.. 4,448
Rate paid per square foot per month.....	\$0.0561
Assessed valuation of building and land.....	\$85,391
Monthly rental.....	\$250
Total rental per annum.....	\$3,000
Laboratory, Signal Corps, 1710 Pennsylvania Avenue NW. (entire building occupied by the Government):	
Available space for Government use.....	square feet.. 4,881
Rate paid per square foot per month.....	\$0.0358
Assessed valuation of building and land.....	\$72,114
Monthly rental.....	\$175
Total rental per annum.....	\$2,100

Aviation Section, Signal Corps, Munsey Building (4 rooms occupied by the Government):

Available space for Government use.....	square feet..	1, 050
Rate paid per square foot per month.....		\$0. 1047
Assessed valuation of building and land.....		\$1, 138, 742
Monthly rental.....		\$110
Total rental per annum.....		\$1, 320

Army Medical School, 464 Louisiana Avenue NW. (6 floors and subbasement occupied by the Government):

Available space for Government use.....	square feet..	39, 066
Rate paid per square foot per month.....		\$0. 0279
Assessed valuation of building and land.....		\$96, 614
Monthly rental, including heat and light.....		\$1, 000
Total rental per annum, including heat and light.....		\$12, 000

Field Medical Supply Corps, 21 M Street NW. (first floor and basement occupied by the Government):

Available space for Government use.....	square feet..	66, 826
Rate paid per square foot per month.....		\$0. 0105
Assessed valuation of building and land.....		\$107, 649
Monthly rental.....		\$663, 925
Total rental per annum.....		\$7, 967. 10

Field Medical Supply, First and M Streets, NE. (entire building occupied by the Government):

Available space for Government use.....	square feet..	192, 000
Rate paid per square foot per month.....		\$0. 209
Assessed valuation of building and land.....		\$361, 249
Monthly rental.....		\$4, 000
Total rental per annum.....		\$48, 000

Office, depot quartermaster, 1729 New York Avenue NW. (entire building occupied by the Government):

Available space for Government use.....	square feet..	15, 696
Rate paid per square foot per month.....		\$0. 0261
Assessed valuation of building and land.....		\$63, 018
Monthly rental.....		\$600
Total rental per annum.....		\$7, 200

It is not believed that the assessed valuations represent the true value of the different properties. For instance, the building wherein the office of the depot quartermaster is located, 532 Seventeenth Street NW., is assessed at \$19,048. It is thought that the building could not be purchased for twice that amount.

Item 362.—Rental of buildings, District of Columbia.

[Estimate fiscal year 1919, \$100,015.10.]

	United States.			Philippine Islands.			Grand total

Estimate.....	\$100, 015. 10	\$100, 015. 10	\$100, 015. 10
Appropriated fiscal year 1918.....	42, 225. 10	42, 225. 10	42, 225. 10
Expended fiscal year 1917.....	42, 039. 10	42, 039. 10	42, 039. 10

REMARKS.

There have been no expenditures under items 363, 363a, 364, 365 (rental of quarters) during the fiscal year 1917 under this appropriation, nor were any amounts estimated for these purposes during the fiscal year 1918. No amount is, therefore, recommended under the above-mentioned item numbers.

The services to be procured under this item are the rental of offices, storehouses, garages, stables, recruiting stations, etc., in the District of Columbia.

Below is a list showing the buildings or portions of buildings rented in the District of Columbia during the fiscal year 1917 under this item.

Location and use:	Rate per annum
First and M Streets NE., field medical supply depot.....	\$7,967.10
Connecticut Avenue and L Street, office attending surgeon.....	3,000.00
Dupont Storage Co., garage.....	1,500.00
Dupont Storage Co., stable and warehouse.....	3,600.00
1514 Eckington Place, storehouse and stable.....	4,938.00
Virginia Avenue NW., stable and warehouse.....	2,700.00
1710-1712 Pennsylvania Avenue NW., Signal Corps laboratory.....	2,100.00
532 Seventeenth Street NW., office depot quartermaster.....	2,500.00
460 Louisiana Avenue NW., Army Medical School.....	8,680.00
1140 Fifteenth Street NW., storage campaign badges.....	54.00
Mills Building, Seventeenth Street, office Aviation Corps.....	5,000.00
Total.....	42,039.10

Proposed rentals fiscal year 1918.

Location and use:	
First and M Streets NE., field medical supply depot.....	\$7,967.10
Connecticut Avenue and L Streets, office attending surgeon.....	3,000.00
Dupont Storage Co., garage.....	1,500.00
Dupont Storage Co., stable and warehouse.....	3,600.00
1514 Eckington Place, storehouse and stable.....	4,938.00
Virginia Avenue NW., stable and warehouse.....	2,700.00
1710-1712 Pennsylvania Avenue NW., Signal Corps laboratory.....	2,100.00
532 Seventeenth Street NW., office depot quartermaster.....	2,500.00
480 Louisiana Avenue NW., Army Medical School.....	7,920.00
Mills Building, Seventeenth Street, office Aviation Corps.....	5,000.00
Recruiting stations, miscellaneous.....	1,000.00
Total.....	42,225.10

Proposed rentals fiscal year 1919.

Location and use:	
238 Nineteenth Street NW., garage.....	\$1,500.00
236 Nineteenth Street NW., stable and storehouse.....	3,600.00
Mills Building Aviation Section, Signal Corps.....	3,360.00
Nineteenth Street and Virginia Avenue NW., stable.....	2,700.00
Southwest corner Nineteenth Street and Virginia Avenue NW., corral.....	510.00
532 Seventeenth Street NW., office depot quartermaster.....	2,500.00
1729 New York Avenue NW., office depot quartermaster.....	7,200.00
1514 Eckington Place NE., warehouse.....	4,938.00
Northwest corner Connecticut Avenue and L Street, office and dispensary.....	3,000.00
1710 Pennsylvania Avenue NW., laboratory, Signal Corps.....	2,100.00
Munsey Building, Aviation Section, Signal Corps.....	1,320.00
464 Louisiana Avenue NW., Army Medical School.....	7,920.00
Do.....	2,400.00
21 M Street NW., Field Medical Supply Corps.....	7,967.10
Recruiting offices, miscellaneous.....	1,000.00
Army medical supply depot (now being erected).....	48,000.00
Total.....	100,015.10

Increase of fiscal year 1919 over fiscal year 1918, \$57,790.

Item 353.—Rental of buildings, District of Columbia: Rental of quarters for officers: No estimate is submitted for rental of quarters for officers, as all officers on duty in Washington are on a commutation status.

Item 363a.—Rental of buildings, District of Columbia: Rental of quarters for nurses: No estimate is submitted for rental of quarters for nurses, as all nurses on duty in Washington are on a commutation status.

Item 354.—Rental of buildings, District of Columbia: Rental of quarters for non-commissioned officers: No estimate is submitted for rental of quarters for noncommissioned officers, as well as noncommissioned officers on duty in Washington are on a commutation status.

Item 355.—Rental of buildings, District of Columbia: Rental of quarters for privates: No estimate is submitted for rental of quarters for privates, as all privates on duty in Washington are on a commutation status.

Maj. OURY. Referring again to the estimate for shooting galleries and ranges, I am under the impression that we have omitted from this amount the money necessary to continue the leases during the next fiscal year. Of course, the majority of the Regular Army ranges are owned outright by the Government, but in the cases of many of the National Army camps those ranges have been leased from the people in the locality of the camp. Some of them are several miles from the regular camp. While we have provided for the necessary needs to pay for those until the end of the fiscal year, it seems to me we have omitted that sum.

The CHAIRMAN. That would come in in a supplemental estimate? Maj. OURY. Yes.

CLAIMS FOR DAMAGES.

The CHAIRMAN. The next item is, "Claims of damages to and loss of private property, \$10,000." The amount appropriated under this item at the last session of Congress was \$20,000.

Col. DALY. We have had appropriated \$20,000.

The CHAIRMAN. You are asking for \$10,000 this year?

Col. DALY. The normal requirements under the appropriation have been \$5,000, but because of the large increase of the Army and the movement of troops, we have had more damages to pay.

The CHAIRMAN. I suppose you can tell pretty well, up to date, how much of the \$20,000 that was appropriated last year has been used.

Col. DALY. We have about \$2,600 of that amount unexpended, but we have claims in, not adjudicated, that will reduce it.

Mr. QUINN. What do those claims consist of?

Mr. DALY. They consist of damages to crops and fences, and damages due to heavy gun fire, the breaking of windows, due to heavy gun fire. The claims are only allowed, when the damage is due to the movement of troops. If the damage is done by an individual, that is a tort, and it does not come out of this amount.

The CHAIRMAN. What about damages for horses?

Col. DALY. We have no authority to pay any such damages under this appropriation.

Gen. SHARPE. Where a man claims he was injured by a truck operated by one of our motor drivers—

The CHAIRMAN. You do not pay any claims like that?

Gen. SHARPE. No, sir.

The CHAIRMAN. This list we have here is a list of the claims filed which were denied?

Gen. SHARPE. Yes, sir.

Mr. KAHN. As I understand it, the Auditor for the War Department has to approve the claim?

Col. DALY. He pays it. The claim is presented to the War Department and examined by the Quartermaster General's Office, and then it goes to the Secretary of War for approval, and he sends it to the Auditor for the War Department for payment.

CLAIMS FOR DAMAGES TO AND LOSS OF PRIVATE PROPERTY.

Deficiency act October 6, 1917, \$15,000.

"For payment of claims for damages to and loss of private property incident to the training, practice, and operations of the Army that have accrued, or may hereafter accrue, from time to time, to be immediately available and to remain available until

expended: *Provided*, That settlement of such claims shall be made by the Auditor for the War Department, upon the approval and recommendation of the Secretary of War, where the amount of damages has been ascertained by the War Department, and payment thereof will be accepted by the owners of the property in full satisfaction of such damages, \$10,000."

In this connection it may be remarked that during the year from October 1, 1916, to October 1, 1917, claims of this character aggregating \$12,726.87, which have been approved, or are ready for approval, have been received. Of this, 42 claims amounting to \$4,998.79 have been paid from the appropriation of \$5,000 in the Army act approved April 27, 1917, leaving claims on file aggregating \$7,728.08. These claims will be paid out of the appropriation of \$15,000 for damage claims in the urgent deficiency appropriation act just approved, which will leave a balance of that appropriation of \$7,271.92 for the payment of claims hereafter accruing. As during the past year, claims amounting to nearly \$13,000 have been received, and in view of the fact that on account of the mobilization of a large Army, this class of claims will doubtless be largely increased, it is considered that in addition to the balance of the appropriation in the urgent deficiency act, an additional appropriation of \$10,000 will be required to care for all such claims as may be received from this date to the end of the next fiscal year.

[Seventh Indorsement.]

WAR DEPARTMENT,
JUDGE ADVOCATE GENERAL'S OFFICE,
November 15, 1917.

To the SECRETARY OF WAR:

1. The views of this office are requested upon the question whether certain claims for damages which it is alleged resulted from a collision between a Government truck and a buggy in which the claimants were riding, should be paid. The facts as found by the surveying officer appointed to investigate the claim are substantially as follows:

On September 6, 1917, F. E. Taylor, accompanied by B. C. Broom, were traveling down Bland Street, Charlotte, N. C., in a buggy. The truck in charge of Ray H. Cummings, Motor Truck Company No. 104 of the Quartermaster Reserve Corps, approached rapidly from the rear and Mr. Taylor turned out of the street and close to the curb to allow the truck to pass. While passing at a distance of about 3 feet a tail gate chain on the truck, which had been made fast at the start of the journey but had jarred loose as a result of traveling over the rough roads characteristic of that section of the country, and not noticed by those on the truck, caught in the wheel of the buggy, turning it around, throwing the occupants out, and dragging the buggy about 50 feet before the driver of the truck realized the situation. The horse and buggy were injured considerably, and both Mr. Taylor and Mr. Broom received various bruises and scratches and were badly shocked. It is found that the accident was not due to any negligence on the part of driver Cummings.

Mr. Taylor presented a claim for \$500 for personal injuries and \$65 for damages to his horse and buggy. The claim presented by Mr. Broom is for \$100, for personal injuries. The Quartermaster General states, if the item for damage to the property be given favorable consideration, he sees no objection to administrative approval in the amount claimed, \$65.

2. The applicable provision of the Army appropriation act for the fiscal year 1918, approved May 13, 1917, is—

"For payment of claims for damages to and loss of private property incident to the training, practice, and operations of the Army that have accrued, or may hereafter accrue from time to time, to be immediately available and to remain available until expended: *Provided*, That settlement of such claims shall be made by the Auditor for the War Department, upon the approval and recommendation of the Secretary of War, where the amount of damages has been ascertained by the War Department, and payment thereof will be accepted by the owners of the property in full satisfaction of such damages, \$5,000."

3. If the damage sustained to the horse and buggy of Mr. Taylor was incident to the operations of the Army, then the Secretary of War would be justified in approving so much of his claim as relates to the damage to the horse and buggy.

The word "operations" as used in the statute is not sufficiently broad to include maintenance, and used as it is with the words "training" and "practice," and because of its military significance, it would indicate movement and activity.

4. Accordingly, the character of the claim for which payment is contemplated by the statute as falling within the meaning of the term "incident * * * to the operations of the Army," is a claim having as its basis a damage which has been occasioned by an act done in connection with some movement or activity of the Army.

The motor truck at the time of the collision was not being used in the movement of troops, but in the maintenance of the Army. Therefore, the collision, which resulted in the alleged damage, was not incident to the operations of the Army.

5. It is the opinion of this office, therefore, that the damage here claimed was not incident to the "operations" of the Army within the purview of this statute, and that the Secretary of War may not, therefore, recommend payment.

S. T. ANSELL,
Acting Judge Advocate General.

[Eighth indorsement.]

WAR DEPARTMENT,
November 17, 1917.

To the QUARTERMASTER GENERAL.

The foregoing opinion of the Acting Judge Advocate General is approved.

BENEDICT CROWELL,
Assistant Secretary of War.

VOCATIONAL TRAINING.

The CHAIRMAN. The next item is "Vocational training, \$75,000." The appropriation made under this item last year was \$250,000. What is the cause of the decrease in that estimate?

Col. DALY. The movement of troops, and the war. It is not possible to carry on that work under the present conditions. This \$75,000 asked for here is for the purchase of textbooks, tools, equipments, and machinery. The equipments and the machinery and the tools are for use of the Disciplinary Barracks at Fort Leavenworth, in taking the men sent there for confinement and giving them vocational training. The textbooks are for distribution at various camps.

Mr. FIELDS. In how many camps have you classes organized in this training?

Col. DALY. I can not answer that.

Mr. FIELDS. Where can we get that information?

Col. DALY. I think you can get that from The Adjutant General.

Mr. SHALLENBERGER. They are principally in the Disciplinary Barracks, are they not?

Col. DALY. This particular appropriation applies to the Disciplinary Barracks, but the purpose of the act and of the appropriation of \$250,000 was to take up at the various posts.

Mr. FIELDS. I think last year you had 24 classes organized at the various posts, and I was interested in knowing what work had been done.

Mr. KAHN. How much of the \$250,000 appropriated last year have you expended?

Col. DALY. \$212,985.

Mr. KAHN. For what purpose?

Col. DALY. At the Disciplinary Barracks. I will put that in the record.

Mr. ANTHONY. Because of the employment of the Army in the field, it has been impracticable to establish vocational training as originally intended by the bill?

Col. DALY. Yes, sir. They have established some at the camps; there have been noncommissioned officers' schools established, and a certain expenditure has been made for that purpose.

Mr. ANTHONY. Because of the fact that at the Disciplinary Barracks you had a large number of comparatively inactive men you are unable to put in there vocational training in agriculture?

Col. DALY. Yes, sir.

Mr. ANTHONY. I might state that I understand it is thought there will be about 5,000 in the near future in the Disciplinary Barracks, and it is intended to use them largely in the intensive development of the ground there.

Col. DALY. Yes, sir. That is the principal expenditure out of the \$250,000 made for that purpose.

Mr. KAHN. How many acres of ground have you there?

Mr. ANTHONY. There are about 300 acres in the prison farm proper now, and they are starting to clear 1,000 acres of timberland, owned by the Government, and never used before.

Mr. FIELDS. How do the men take to the vocational training at the Disciplinary Barracks?

Col. DALY. I am not familiar with that. Gen. McCain can tell you about that.

Mr. KAHN. I have visited the Disciplinary Barracks at Alcatraz Island, in San Francisco Bay, and there they are teaching the men shoemaking, and laundry work, and industries of that kind. The men take to it very kindly.

Mr. SHALLENBERGER. Was it intended under that law that a man should have to get into the Disciplinary Barracks before he got the training?

Mr. ANTHONY. No, but they had these men there, and the idea was that that would give them a start in training these men for vocations which they could follow, and enable them to live useful lives afterwards, when they either return to the Army as soldiers or go out into civil life.

Gen. SHARPE. The idea is to overcome the great objection always made to prison confinement where you would require them to carry brick from one side of a yard to the other.

Mr. SHALLENBERGER. My idea was entirely different about that, that it was not to be applied to prison life at all, but primarily to educate a soldier in some useful vocation after he came out.

Gen. SHARPE. That is true, but it was intended also to have vocational training in the prison itself.

Mr. SHALLENBERGER. My idea of it was that it was not to be expended in the prisons and that that was contrary to the intention of Congress. But I am not objecting to that at all.

Mr. KAHN. I think you have a false idea of what the Disciplinary Barrack is.

A man upon going into the Disciplinary Barrack is given a chance to rehabilitate himself and serve out the balance of his term in the Army. There are cases of desertion where the soldier gives himself up. He is tried by a court-martial and his sentence, instead of keeping him in prison altogether, allows him to still go on with his training as a soldier, giving a certain number of hours a day to his duty as a soldier, and the balance of the day he would be confined in the prison. But to take away the burden of that, they give him a chance to learn some useful trade, and probably when he gets an honorable discharge from the Army he can go out and earn his own living.

Mr. FIELDS. I think that money is well expended, but I think it should not be confined to the Disciplinary Barracks.

Mr. ANTHONY. In time of peace it would be used for vocational training in the arts and sciences.

Mr. FIELDS. It is practically impossible to carry it on now.

Mr. SHALLENBERGER. The colonel stated that noncommissioned officers' schools have been established at certain camps. Could not that money be properly used from this fund for the noncommissioned officers' schools? That is training a man in his duties as a soldier, is it not?

Gen. SHARPE. We do not understand it that way. This is for the purpose of giving him some trade or occupation.

Mr. SHALLENBERGER. In response to a question as to whether or not the training was being carried on, I understood you to say, Col. Daly, that noncommissioned officers' schools had been established, and that the expenses of those schools would not be paid out of this fund.

Col. DALY. No, sir.

(The details of the estimate are as follows:)

Vocational training.

Objects of expenditure.	Estimated, 1919.	Expended, 1917.
Textbooks.....	\$3,000.00	\$4,000.00
Tools.....	5,000.00	6,000.00
Equipment and machinery.....	67,000.00	112,965.00
Total.....	75,000.00	122,965.00

PURCHASE OF LAND, JEFFERSONVILLE.

The CHAIRMAN. The next item is "Purchase of land, addition to Jeffersonville, Ind., depot: For purchase of approximately 12 acres of land as an addition to the reservation of the Jeffersonville, Ind., depot of the Quartermaster Corps, \$23,000." That is a new item.

Gen. SHARPE. I have a very full and complete statement in regard to this property, which amounts to 12.188 acres.

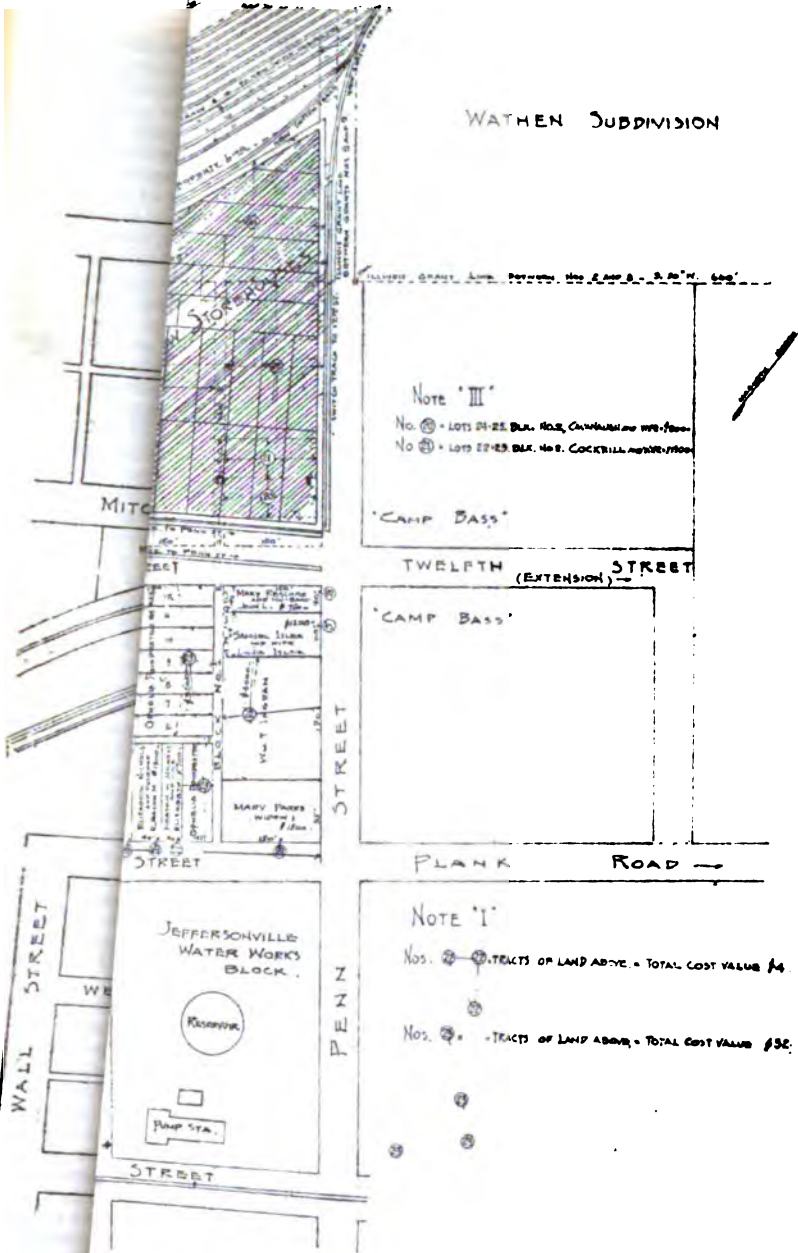

WAR DEPARTMENT,
OFFICE OF THE DEPOT QUARTERMASTER,
Jeffersonville, Ind., November 22, 1917.

From: Depot Quartermaster, Jeffersonville, Ind.
To: Quartermaster General, Washington, D. C.
Subject: Purchase of land at Jeffersonville, Ind.

Your letters of October 29 and November 14, advising that your office has included in the estimates fiscal year 1919, submitted for action of Congress an item covering approximately twelve acres of land, at an estimated cost of \$23,000 for the enlargement of the Jeffersonville depot reservation, and requesting specific information to enable your office to properly explain the item when hearings in connection therewith are had.

The property lying just to the east of the present reservation which is shown in blue print, Appendix A, is a tract of ground consisting of 12.188 acres, the smaller portion of this ground being vacant while the larger portion has been divided up into city lots, and has, as indicated in the blue print, improvements of various character thereon, consisting largely of small homes, most of which have no practical value except in so far as they represent the individual holdings of the owners, and therefore the cost of this addition is necessarily enhanced as these homes can not be appropriated without proper remuneration to the owners thereof.

The following is a description of the individual holdings:

1. Beginning at the intersection of Tenth and Mechanic Streets on southwest corner, and continuing thence in a westerly direction 215 feet more or less, to Fulton Street, in the city of Jeffersonville; thence about 200 feet more or less to a stake; thence in a westerly direction 215 feet more or less to the eastern line of Mechanic Street; thence in a southerly direction to point of beginning. This property is owned by John Rauschenberger, and is at present under lease for the sum of \$150 per annum, with an option to purchase for \$3,200.

2. Beginning at a point in the western line of block 122, 208 $\frac{1}{8}$ feet from the northwest corner thereof; thence on said line northwardly 30 $\frac{3}{8}$ feet; thence eastwardly and parallel with the southern line of said lot 126 $\frac{1}{8}$ feet; thence southwardly 32 $\frac{1}{8}$ feet; thence westwardly to the place of beginning. Beginning at a point 126 $\frac{1}{8}$ feet east of the southwest corner of northern half of block 122, thence north 30 feet; thence 38 $\frac{1}{8}$ feet to Fulton Street; thence south on Fulton 30 $\frac{1}{8}$ feet; thence westwardly 70 $\frac{3}{8}$ feet to the place of beginning.

This property is owned by Edgar Wayman and Laura Wayman, his wife, the improvements thereon being a two-story frame house, these owners declining to option. Appraisement made by three real estate men in the city of Jeffersonville affix value of \$200 for the ground and \$1,600 for the improvements thereon.

3. Beginning at part of block 122 of the enlargement of the city of Jeffersonville, being the northern half of block 122, excepting, however, the strip of ground which begins at the southwest corner of said northern half and runs thence with the western line of said block northwardly 30 $\frac{3}{8}$ feet to a stake, thence eastwardly and parallel with the southern line of said block 126 $\frac{1}{8}$ feet to a stake, thence at right angles southwardly 32 $\frac{1}{8}$ feet to a stake, thence westwardly and parallel with the southern line of said block to the place of beginning.

This property is owned by the Emily Honer's estate, and it being impossible to secure an option thereon an appraisement has been made by three real estate men in the city of Jeffersonville, who affixed price of the ground at \$1,500 and the improvements thereon, a two-story frame house, at \$1,200, making a total of \$2,700.

4. Beginning at the southwest corner of block 123, thence eastwardly with the northern line of Eleventh Street 50 feet to a stake, thence northwardly on a line parallel with the western line of said block to the place of beginning.

On this lot is located a frame two-story house, the front part of which is used as a grocery store, the rear and upper part being used as a residence, together with stables and necessary outbuildings, which the owner in September optioned for the sum of \$3,200, but this option has now expired, and the owner refuses absolutely to extend or make a new figure thereon. Owner Samuel W. Isler, and Linnie Isler, his wife.

5. The same owner holds real estate in survey No. 2, of the Illinois grant, Clark County, State of Indiana, being 20 feet off the south side of lot 14, all of lot 15, and 15 feet off the north side of lot 16 in block 1, of Eliza A. Reed and William T. Ingram's subdivision of part of letter "A," survey No. 2, of the Illinois grant.

There is situated hereon a one-story frame building which this owner in September optioned at \$1,200, and at the present time Samuel Isler has granted an extension on this option for a period of four months, but his wife, Linnie Isler, refuses absolutely to option at this figure, which, as a matter of course, makes the option of no value.

In the estimation of real estate men in the city of Jeffersonville the original option on both pieces of property herein described is rather high.

6. Beginning at a point on the northern line of Eleventh Street 50 feet eastwardly from the southwest corner of block 123, thence eastwardly with the northern line of Eleventh Street 25 feet to a stake, thence northwardly on a line parallel with the western line of said block 123 to a stake in the southern line of a 10-foot alley, thence westwardly with the southern line of said alley 25 feet to a stake, thence southwardly on a line parallel with the western line of said block 123 to the place of beginning.

There is situated thereon a one-story frame cottage which this owner, Dora Ryle and Charles O. Ryle, her husband, have executed an option to sell for \$1,000.

7. Beginning at a point on the northern line of Eleventh Street 125 feet eastwardly from the southwest corner of block 123, thence eastwardly with the northern line of Eleventh Street to the southeast corner of said block 123, thence northwardly with the western line of Fulton Street 120 feet to a 10-foot alley, thence westwardly with the southern line of said alley to a point 125 feet eastwardly on the western line of said block 123, thence southwardly on a line parallel with the western line of said block 123 to the place of beginning.

There is located thereon a two room frame cottage, with kitchen attachment, which owner, Eva Miss, widow, has optioned for the sum of \$700.

8. Beginning at a point on the eastern line of Mechanic Street 55 feet southwardly from the northwest corner of block 123; thence southwardly with the eastern line of

Mechanic Street 22 feet to a stake; thence eastwardly on a line parallel with the northern line of said block to a stake in the western line of Fulton Street; thence northwardly with the western line of Fulton Street 22 feet to a stake; thence westwardly on a line parallel with the northern line of said block to the place of beginning.

9. Also real estate in said block 123, beginning at a point on the eastern line of Mechanic Street, 160 feet southwardly from the northwest corner of said block 123; thence southwardly with the east line of Mechanic Street, 98 $\frac{7}{8}$ feet to a stake; thence eastwardly on a line parallel with the northern line of said block 123 to a stake on the western line of Fulton Street; thence northwardly with the western line of Fulton Street 98 $\frac{7}{8}$ feet to a stake; thence westwardly on a line parallel with the northern line of said block 123 to the place of beginning.

Oscar G. Miller, and Clara L. Miller, his wife, have executed an option covering descriptions 8 and 9 for the sum of \$1,500, covering real estate and improvements thereon, which consist of three one story frame cottages.

10. Beginning at a point on the east line of Mechanic Street 130 feet southwardly from the northwest corner of block 123; thence southwardly with the east line of Mechanic Street 25 feet to a stake; thence eastwardly on a line parallel with the northern line of said block 123 to a stake in the western line of Fulton Street; thence northwardly with the western line of Fulton Street 25 feet to a stake; thence westwardly on a line parallel with the northern line of said block 123 to the place of beginning.

Alexander Lee and Minnie Lee, his wife, have executed an option on the above real estate, including a one story frame cottage, for the sum of \$200.

11. Beginning at a point on the east side of Mechanic Street 105 feet southwardly from the northwest corner of block 123; thence southwardly with the east line of Mechanic Street 25 feet to a stake; thence eastwardly on a line parallel with the northern line of said block 123 to a stake in the western line of Fulton Street; thence northwardly with the western line of Fulton Street 25 feet to a stake; thence westwardly on a line parallel with the northern line of said block 123 to the place of beginning.

The owner, Belle Strong, widow, has optioned this real estate, including a one-story frame cottage thereon, for the sum of \$500.

12. Beginning at a point on the east line of Mechanic Street 75 feet southwardly from the northwest corner of block 123; thence southwardly with the east line of Mechanic Street 30 feet to a stake; thence eastwardly on a line parallel with block 123; thence southwardly with the east line of Mechanic street 30 feet to a stake; thence eastwardly on a line parallel with the north line of said block to the west line of Fulton Street; thence northwardly with the west line of Fulton Street 30 feet to a stake; thence westwardly on a line parallel with the northern line of said block 123 to place of beginning.

Edgar I. Coombs and Catherine Coombs, his wife, have optioned this real estate with the improvement thereon, a one-story frame cottage, for the sum of \$800.

13. Beginning at the northwest corner of block 123 thence southwardly with the east line of Mechanic Street 30 feet to a stake, thence eastwardly on a line parallel with the northern line of said block to a stake in the western line of Fulton Street, thence northwardly with the western line of Fulton Street 30 feet to the northern line of said block, thence westwardly with the northern line of said block to the place of beginning. Also that part of said block 123 beginning at a point on the eastern line of Mechanic Street 52 feet southwardly from the northwest corner of said block, thence southwardly with the eastern line of Mechanic Street three feet to a stake, thence eastwardly on a line parallel with the northern line of said block 123 to a stake in the western line of Fulton Street, thence northwardly with the western line of Fulton Street 3 feet to a stake, thence westwardly on a line parallel with the northern line of said block to the place of beginning.

The owner, Lucy Dry, widow, has executed an option on this real estate and a one-story frame cottage thereon for the sum of \$600.

14. Beginning at a point on the east line of Mechanic Street, 30 feet southwardly from the northwest corner of block 123, thence southwardly with the east line of Mechanic Street 22 feet to a stake, thence eastwardly on a line parallel with the northern line of said block to a point in the western line of Fulton Street, thence northwardly with the western line of Fulton Street 22 feet to a stake, thence westwardly on a line parallel with the northern line of said block to the place of beginning.

Eugene Townsend and Ida Townsend, his wife, have optioned this real estate, without improvements, for the sum of \$125.

15. Lot No. 1, and 5 feet off the west side of lot No. 2 in block No. 1 of Eliza A. Reed, and William T. Ingram's subdivision of part of letter A, survey No. 2, Illinois grant,

plat of which subdivision is recorded on page 28 of plat book 4 in the office of the recorder of Clark County, State of Indiana.

Lewis Daniel Hutt, widower, the owner, has executed an option on this real estate, together with the improvement thereon, a one-story frame cottage of five rooms, for \$1,500.

16. Twenty-five feet off the east side of lot 2, and 15 feet off the west side of lot 3, in block No. 1, of Eliza A. Reed and William T. Ingram's subdivision of part of letter A, survey No. 2, of Illinois grant, plat of which subdivision is recorded on page 28, of plat book 4, in the office of the recorder of Clark County, State of Indiana.

The owners, Elizabeth Nichols and Reasom M. Nichols, her husband, have executed an option covering this real estate with the improvement thereon, consisting of a one-story frame house, for \$1,300.

17. Fifteen feet off the east side of lot 3 and 15 feet off the west side of lot 4, in block 1, of Eliza A. Reed and William T. Ingram's subdivision, part of letter A, survey No. 2, of the Illinois grant, plat of which subdivision is recorded on page 28 of plat book 4, in the office of the recorder of Clark County, State of Indiana.

Reasom M. Nichols and Elizabeth Nichols, his wife, owners of this real estate, have executed an option covering said real estate together with the improvement thereon, a one-story frame cottage, for the sum of \$700.

18. Lots 23, 24, and 25, and 5 feet off the south side of lot 22, in block 1, of Eliza A. Reed and William T. Ingram's subdivision, part of letter A, survey No. 2, of the Illinois grant, plat of which subdivision is recorded on page 28 of plat book 4, in the office of the recorder of Clark County, State of Indiana.

The owner, Mary J. Parks, widow, has executed an option covering this real estate, together with the improvement thereon, a two story frame house, for the sum of \$1,500.

19. Lot 13 and 64 feet off the north side of lot 14, in block 1, of Eliza A. Reed and William T. Ingram's subdivision, part of letter A, survey No. 2, of the Illinois grant, plat of which subdivision is recorded on page 28 of plat book 4, in the office of the recorder of Clark County, State of Indiana.

Mary Reschar and John L. Reschar, her husband, have executed an option covering this real estate, together with the improvement thereon, a one-story frame cottage, for the sum of \$750.

20. Lots 24 and 25, in block 2, of Eliza A. Reed and William T. Ingram's subdivision, part of letter A, survey No. 2, of the Illinois grant, plat of which subdivision is recorded on page 28 of plat book 4, in the office of the recorder of Clark County, State of Indiana.

Frank T. Cavanaugh and Cecelia Cavanaugh, his wife, owners, have executed an option covering this real estate and improvement thereon, consisting of a one-story frame cottage, for the sum of \$800.

21. Lots 22 and 23, in block 2, of Eliza A. Reed and William T. Ingram's subdivision, part of letter A, in survey No. 2, of the Illinois grant, a plat of which subdivision is recorded on page 28 of plat book 4, in the office of the recorder of Clark County, State of Indiana.

Jas. H. Cockrill and Carrie Cockrill, his wife, have executed an option covering this real estate, together with improvement thereon, consisting of a one-story frame cottage, for the sum of \$1,500.

22. All of the east half of block No. 2 of Eliza A. Reed and William T. Ingram's subdivision of part of letter A, survey No. 2, of the Illinois grant, plat of which subdivision is recorded at page 28 of plat book 4, in the office of the recorder of Clark County, State of Indiana, except lots 22, 23, 24, and 25; also all of block 138 in the city of Jeffersonville, Clark County, Ind.

William T. Ingram and Anna L. Ingram, his wife, have optioned this property, without any improvements thereon, for the sum of \$3,750.

23. Part of said block 123, fronting about 65 feet on Eleventh Street, from a point 125 feet east of Mechanic Street, eastwardly and extending back northwardly to an alley, also all of the west half of said block 1 in said subdivision except 15 feet off the east side of lot 3 and 15 feet off the west side of lot 4, sold to Reasom M. Nichols, and 25 feet off the east side of lot 2 and 15 feet off the west side of lot 3, sold to Elizabeth Nichols, and lot 1 and 5 feet off the west side of lot 2, sold to Lewis Daniel Hutt, also all of the west side of block 2 in said subdivision.

Ophelia Poindexter, Flora C. Stannard, and others, grantees of Eliza A. Reed, by Jas. E. Poindexter, attorney in fact, have executed an option to sell all of the above-described real estate, without improvements thereon, for the sum of \$3,200.

24. Approximately two acres in part of letter A, survey No. 2, of the Illinois grant, Eliza A. Reed and William T. Ingram's subdivision, now owned by the Louisville & Jeffersonville Bridge & Railroad Co., is under lease, but not possible to secure an option. In order to acquire title, condemnation proceedings will have to be instituted.

This covers entirely the property lying to the east of the reservation. The streets and alleys passing through have all been temporarily vacated for Government purposes, by the city council, and the county commissioners, and all streets and alleys will be permanently vacated, thus adding materially to the acreage of the east.

Adding an estimate of \$1,000 for the property now under lease from the Louisville & Jeffersonville Bridge & Railroad Co., on which no option has been secured, the total amount estimated as necessary for the purchase of real estate and improvements lying on that portion east of the depot is \$33,775 for the 12 188/1000 acres, and authority to purchase on this side is urgently recommended as an immediate necessity.

25. Beginning at the southeast corner of block 119, in the city of Jeffersonville; thence northwardly with the west line of Watt Street, 40 feet to a stake; thence westwardly on a line parallel with the south line of said block to a stake in the east line of a 10-foot alley; thence southwardly with the east line of said alley to a stake in the south line of said block to the place of beginning.

Minnie Reeder, widow, owner, has executed an option for the above property in sum of \$1,500, covering real estate and a 2-story frame house thereon.

26. Beginning at a stake in the west line of Watt Street, 40 feet northwardly from the southeast corner of said block 119; thence northwardly with the west line of Watt Street 60 feet to a stake; thence westwardly on a line parallel with the south line of said block 119 to a stake in the east line of a 10-foot alley; thence eastwardly on a line parallel with the south line of said block to the place of beginning.

Martin A. Conroy, widower, has executed an option on this property, together with the improvement thereon, a one-story frame house, for the sum of \$1,000.

27. Beginning at a stake in the west line of Watt Street, 100 feet northwardly from the southeast corner of said block 119; thence northwardly with the west line of Watt Street, 60 feet to a stake; thence westwardly on a line parallel with the south line of said block 119 to a stake in the east line of a 10-foot alley; thence southwardly with the east line of said alley, 60 feet to a stake, thence eastwardly on a line parallel with the south line of said block 119 to the place of beginning.

Maggie Saffel, widow, has executed an option on this real estate, including a two-room frame cottage thereon, for the sum of \$720.

28. Beginning at a stake in the west line of Watt Street, 160 feet northwardly from the southeast corner of said block 119; thence northwardly from the west line of Watt Street, 58 feet 4 inches to a stake; thence westwardly on a line parallel with the south line of said block 119 to a stake in the east line of a 10-foot alley; thence southwardly with the east line of said alley, 58 feet 4 inches to a stake; thence eastwardly on a line parallel with the south line of said block 119 to the place of beginning.

The owners, Nellie Fisher and John Fisher, her husband, have executed an option on this and property described in paragraph 36 below, for the sum of \$850, both lots having small frame cottages thereon.

29. Beginning at a stake in the west line of Watt Street, 218 feet 4 inches northwardly from the southeast corner of said block 119; thence northwardly with the west line of Watt Street, 25½ feet to a stake; thence westwardly on a line parallel with the south line of said block 119 to a stake in the east line of a 10-foot alley; thence southwardly with the east line of said alley, 25½ feet to a stake; thence eastwardly on a line parallel with the south line of said block, 119 feet to the place of beginning.

This property is owned by Annie Mitchell, colored, who refuses to execute an option, although she did on September 18 make an option for a period of 60 days for the sum of \$500, but this option has expired.

30. Beginning at a stake in the west line of Watt Street, 243 feet 10 inches northwardly from the southeast corner of said block 119; thence northwardly with the west line of Watt Street, 32 feet 10 inches to a stake; thence westwardly on a line parallel with the south line of said block 119 to a stake in the east line of a 10-foot alley; thence southwardly with the east line of said alley, 32 feet 10 inches to a stake; thence eastwardly on a line parallel with the south line of said block to the place of beginning.

Bracie Dry and Chris Dry, her husband, on the 19th day of September, executed an option on this real estate and one-story frame cottage thereon for the sum of \$500, but this option having expired, they now refuse to extend.

31. Beginning at a stake in the west line of Watt Street 276 feet and 8 inches northwardly from the southeast corner of said block 119; thence northwardly with the west line of Watt Street 58 feet 4 inches to a stake; thence westwardly in a line parallel with the south line of said block 119 to a stake in the east line of a 10-foot alley; thence southwardly with the east line of said alley 58 feet and 4 inches to a stake; thence eastwardly on a line parallel with the south line of said block to the place of beginning.

John W. Belden, unmarried, has executed an option covering this real estate and one-story frame cottage thereon for the sum of \$650.

32. Beginning at a point on the west line of Watt Street 45 feet from the northwest corner of said block 119 and extending thence southwardly with the west line of Watt Street 35 feet; thence westwardly on a line parallel with the north line of said block to a stake in the east line of a 10-foot alley; thence northwardly with the east line of said alley 35 feet to a stake; thence eastwardly on a line parallel with the north line of said block to the place of beginning.

Also all right, title and interest in a strip of ground 5 feet in width, extending from said alley to said Watt Street along the northerly side of the parcel hereinbefore described.

Martha Hardin, widow, refuses to execute an option on this piece of property, and appraisement thereon indicates the total value to be \$350.

33. Beginning at a stake in the west line of Watt Street 25 feet southwardly from the northeast corner of said block 119; thence southwardly with the west line of Watt Street 20 feet to a stake; thence westwardly on a line parallel with said block 119 in the east line of a 10-foot alley; thence northwardly on the east line of said alley 20 feet to a stake; thence eastwardly on a line parallel with the north line of said block to the place of beginning.

Melvina Broker, widow, has executed an option on this real estate with one-story frame cottage thereon for the sum of \$475, but option expired on the 27th day of November and will not be renewed.

34. Beginning at the northeast corner of block 119; thence southwardly with the west line of Watt Street 25 feet to a stake; thence westwardly on a line parallel with the north line of said block to a stake in the east line of a 10-foot alley; thence northwardly on the east line of said alley 25 feet to a stake in the north line of said block 119; thence eastwardly with the north line of said block to the place of beginning.

Being the life estate divided to Sallie Heady by the will of Elizabeth Brooker, deceased, probated in the Circuit Court, Clark County, in the State of Indiana, recorded at page 223 of will record K. This being a life estate the property can not be sold, and in order to acquire it must be through condemnation proceedings. The value is estimated to be approximately \$500.

35. Beginning at the southwest corner of block 119; thence northwardly with the east line of Walnut Street 78 $\frac{1}{2}$ feet to a stake; thence eastwardly on a line parallel with the south line of said block 119 to a stake in the west line of a 10-foot alley; thence southwardly with the west line of said alley 78 $\frac{1}{2}$ feet to a stake in the south line of said block 119; thence westwardly with the south line of said block 119 to the place of beginning.

William T. Ingram and Anna L. Ingram, his wife, have executed an option on this property for the sum of \$780.

36. Beginning at a stake in the east line of Walnut Street 78 $\frac{1}{2}$ feet from the southwest corner of said block 119; thence northwardly with the east line of Walnut Street 25 feet to a stake; thence eastwardly on a line parallel with the south line of said block 119 to a stake in the west line of a 10-foot alley; thence southwardly on the west line of said alley 25 feet to a stake; thence westwardly on a line parallel with the south line of said block 119 to the place of beginning.

Minnie Fisher and John Fisher, her husband, owners, have executed an option on this property, together with that described in paragraph 28, including improvements for the sum of \$50.

37. Beginning at a stake in the east line of Walnut Street 103 $\frac{1}{2}$ feet northwardly from the southwest corner of said block 119; thence northwardly with the east line of Walnut Street 103 $\frac{1}{2}$ feet to a stake; thence eastwardly on a line parallel with the south line of said block to a stake in the west line of a 10-foot alley; thence southwardly with the west line of said alley 103 $\frac{1}{2}$ feet to a stake; thence westwardly on a line parallel with the south line of said block 119 to the place of beginning.

Alfred C. Pfau and Bessie Pfau, his wife, decline to execute an option on this property which is of comparatively small value, presumably \$500.

38. Beginning at a stake on the east line of Walnut Street 206 feet $\frac{1}{2}$ from the southwest corner of said block 119; thence northwardly with the east line of Walnut Street 103 $\frac{1}{2}$ feet to a stake; thence eastwardly on a line parallel with the south line of said block 119 to a stake in the west line of a 10-foot alley; thence southwardly with the west line of said alley 103 $\frac{1}{2}$ feet to a stake; thence westwardly on a line parallel with the south line of said block 119 to the place of beginning.

Lewis Cohen and Annie Cohen, his wife, owners, have executed an option on this property, including three one-story frame cottages, for the sum of \$3,000.

39. Beginning at the northwest corner of said block 119; thence southwardly along the east line of Walnut Street 103 $\frac{1}{2}$ feet to a stake; thence eastwardly on a line parallel with the north line of said block to a stake in the west line of a 10-foot alley; thence

northwardly with the west line of said alley 103 $\frac{1}{2}$ feet to the north line of said block; thence westwardly with the north line of said block to the place of beginning.

Alfred C. Pfau and Bessie Pfau, his wife, owners, decline to execute an option on this and also property indicated in paragraph 37. An approximate estimate of the value of real estate and improvements is \$500.

40. Beginning at a point on the easterly line of block 118 where the same is intersected by the southeasterly line of the right of way of the Pittsburgh, Cincinnati, Chicago & St. Louis Railway, which point is 281 feet northwardly from the southeast corner of said block; thence southwardly with the easterly line of said block to the northeasterly line of Tenth Street; thence westwardly with the southerly line of said block 110 feet more or less to the southeasterly line of said right of way; thence northwardly with the southeasterly line of said right of way to the place of beginning.

William T. Ingram and Anna L. Ingram, his wife, have executed an option on this real estate, including a one-story frame cottage thereon, for the sum of \$1,220.

41. Plot shown as circle 41 in Appendix A, owned by Jonas G. Howard, unmarried, without improvements, has not been optioned, but is appraised at approximate value of \$800.

Plots of ground 42, 43, 44, 45, 46, 47, 48, and 49, all having a depth of 150 feet, and fronting 415 $\frac{1}{2}$ feet on Locust Street, in the city of Jeffersonville, have improvements of various character, all frame, occupied generally by owners whose names are shown in Appendix A, but can not be optioned. Estimated value of the entire block, \$10,000.

50. Circle 50 being block 126 in the city of Jeffersonville, owned in its entirety by the Louisville & Jeffersonville Bridge Co. The unoccupied portion, as shown by map, is appraised at \$2,000, but no option can be secured.

51. Being parts of block 125 in the city of Jeffersonville, owned by the Pittsburgh, Cincinnati, Chicago & St. Louis Railway Co., and which the company refuses to option or sell, comprising an area of perhaps three-fourths of an acre, and which would be valuable because of lying immediately along the railroad, but no appraisal has been made.

Also unoccupied portions of block 62 owned by the same company.

52. Beginning at the southeast corner of block 125; thence northwardly with the west line of Watt Street 49 feet to a stake; thence westwardly on a line parallel with the south line of said block to a stake in the east line of a 15-foot alley; thence southwardly with the east line of said alley 49 feet to a stake in the south line of said block 125; thence eastwardly with the south line of said block to the place of beginning.

This real estate, including a partially constructed brick church building with a one-story frame parsonage to the rear, is owned by the trustees of the African Methodist Episcopal Church, and can not be optioned.

Same has been appraised at \$3,500, owners insisting that \$7,000 is a small consideration.

53. Beginning at a stake in the west line of Watt Street, 49 feet north from the southeast corner of said block 125; thence northwardly with the west line of Watt Street 20 feet to a stake; thence westwardly on a line parallel with the south line of said block 125, 115 feet to a stake; thence southwardly on a line parallel with the west line of Watt Street 20 feet to a stake; thence eastwardly and on a line parallel with the south line of said block 125 to the place of beginning.

Illis Froman, widow, executed a 60-day option on this real estate, and one-story frame house thereon on the 26th day of September, 1917, for the sum of \$500, but declines now to renew this option.

54. Beginning at a stake in the west line of Watt Street, 69 feet northwardly from the southeast corner of block 125; thence northwardly with the west line of Watt Street 20 feet to a stake; thence westwardly on a line parallel with the south line of said block 125 to a stake in the east line of a 15-foot alley; thence southwardly with the east line of said alley 20 feet to a stake; thence eastwardly on a line parallel with the south line of said block 125 to the place of beginning. The consideration for this property is stated in paragraph 59.

55. Beginning at a stake in the west line of Watt Street 89 feet northwardly from the southeast corner of said block 125; thence northwardly with the west line of Watt Street 20 feet to a stake; thence westwardly on a line parallel with the south line of said block 125 to a stake in the east line of a 15-foot alley; thence southwardly with the east line of said alley 20 feet to a stake; thence eastwardly on a line parallel with the south line of said block 125 to the place of beginning.

Washington Blakemore, unmarried, owner, executed an option on the 26th day of September covering this property and one-story frame cottage thereon for the sum of \$500, but this option has expired and can not now be renewed.

56. Beginning at a stake in the west line of Watt Street 109 feet northwardly from the southeast corner of block 125; thence northwardly with the west line of Watt Street 30 feet to a stake; thence westwardly on a line parallel with the south line of said block 125 to a stake in the east line of a 15-foot alley; thence southwardly with the east line of said alley 30 feet to a stake; thence eastwardly on a line parallel with the south line of said block 125 to the place of beginning.

William A. Wilhite and Amanda Wilhite, his wife, on the 2d day of October, 1917, executed an option covering this property and the one-story frame house located thereon for the sum of \$700, but this option has expired, and it has not been possible to renew same.

57. Beginning at a stake in the west line of Watt Street 139 feet northwardly from the southeast corner of said block 125; thence northwardly with the west line of Watt Street 30 feet to a stake; thence westwardly on a line parallel with the south line of said block 125 to a stake in the east line of a 15-foot alley; thence southwardly with the east line of said alley 30 feet to a stake; thence eastwardly on a line parallel with the south line of said block 125 to the place of beginning.

Margaret Hall, widow, on the 29th day of September, 1917, executed an option on this real estate and one-story frame house thereon for the sum of \$600, but this option has not been renewed for the reason that it has been impossible to locate the owner, who is temporarily absent.

58. Beginning at a stake in the west line of Watt Street 169 feet northwardly from the southeast corner of said block 125; thence northwardly with the west line of Watt Street 31 feet to a stake; thence westwardly on a line parallel with the south line of said block 125 to a stake in the east line of a 15-foot alley; thence southwardly with the east line of said alley 31 feet to a stake; thence eastwardly on a line parallel with the south line of said block 125 to the place of beginning.

George H. Holzbog and Anna M. Holzbog, his wife, have executed an option on this real estate and one-story frame cottage thereon for the sum of \$500.

59. Part of block 125 of the enlargement of the city of Jeffersonville, beginning at a stake in the west line of Watt Street an equal distance between the north and south line of said block 125; thence northwardly with the west line of Watt Street 45 feet to a stake; thence westwardly on a line parallel with the south line of said block 125 to a stake in the east line of a 15-foot alley; thence southwardly with the east line of said alley 45 feet to a stake equal distance between the north and south lines of said block; thence eastwardly on a line parallel with the south line of said block 125 to the place of beginning.

David Truehart, widower, owner of the above property and property described in item 54, and one-story frame house thereon, has executed option for the sum of \$1,400, covering all. This option has expired, and there is some reluctance to renew.

60. Beginning at a stake in the west line of Watt Street 45 feet northwardly from a stake equal distance from the north and south lines of said block; thence northwardly with the west line of Watt Street 15 feet to a stake; thence westwardly on a line parallel with the south line of said block to a stake in the east line of a 15-foot alley; thence southwardly with the east line of said alley 15 feet to a stake; thence eastwardly on a line parallel with the south line of said block to the place of beginning.

Edward Kehoe and Minnie R. Kehoe, his wife, have executed an option on the above real estate, including a one-story frame cottage thereon, for the sum of \$700.

61. Beginning at a stake in the west line of Watt Street 60 feet northwardly from a stake equal distance from the north and south line of block 125; thence northwardly with the west line of Watt Street 54.9 feet to a stake; thence westwardly on a line parallel with the south line of said block 125 to a stake in the east line of a 15-foot alley; thence southwardly with the east line of said alley 54.9 feet to a stake; thence eastwardly on a line parallel with the south line of said block 125 to the place of beginning.

Butler Truehart et al. have executed an option on this real estate, including one-story frame cottage thereon, for the sum of \$1,400.

62. Piece of real estate owned by the Pittsburgh, Cincinnati, Chicago & St. Louis Railway Co. is covered in item 51 herein.

63. Beginning at a stake in the east line of a 15-foot alley running northwardly and southwardly through said block 125, which said stake is 49 feet northwardly from the intersection of said alley and the south line of said block 125; thence northwardly with the east line of said alley 20 feet to a stake; thence eastwardly on a line parallel with the south line of said block 125, 55 feet to a stake; thence southwardly on a line parallel with the west line of Watt Street 20 feet to a stake; thence westwardly on a line parallel with the south line of said block 125 to the place of beginning.

Thomas Froman and Clara Froman, his wife, have executed an option on this real estate, together with a one-story house thereon, for the sum of \$400.

All of the property enumerated herein lying to the west of the present reservation is estimated at \$36,095, all of which values are considered excessive, and due to some

legal complications it is the opinion that said property should be taken under condemnation proceedings, which would probably reduce the cost under this figure 25 per cent.

The immediate acquiring of title to property on the east is urgently recommended, as already temporary warehouses have been or are in the course of construction thereon.

The property lying to the west is especially desirable, inasmuch as this arrangement brings within the Government reservation valuable railroad trackage in addition to that at present enjoyed and affords additions to the reservation now occupied for open storage and which will sooner or later become a real necessity.

W. S. Wood, Colonel, Q. M. Corps, D. Q. M.

The CHAIRMAN. What is the reason given for the purchase of this land?

Gen. SHARPE. It is absolutely necessary to expand the grounds there in order to enable the depot to undertake its activities. It is one of the best located depots you could possibly get, for the reason that while it is adjacent to a large city, where you can get your operatives that are required at the depot, you do not have to go in to the city to load your freight trains. They are right on the main line track, and they can be loaded without any of the switching trouble you have in almost every other place, where we are doing manufacturing.

The CHAIRMAN. What are you going to do with the 12 acres? You are not going to put up more buildings, are you?

Gen. SHARPE. We have the buildings there now. It is all leased now, and there is a great deal of additional property leased with other buildings on it.

Mr. FIELDS. Will this 12 acres be enough to meet the requirements of the depot?

Gen. SHARPE. Col. Wood, who is in command of the depot, thinks not. He has been rather urgent that we should buy another large piece of property.

The estimate was submitted with the idea that this was adjoining the property that the Government already owns, and it would be more desirable to lease the other land and put the temporary construction on there during the war. After the war is over I think we can get along very well with the present working space, what we are asking for in this bill, provided we can get some money to reconstruct the buildings, which are very old, and which are really occupying a lot of space there in such a way that we can not take full advantage of the ground we have, because of the character of the construction.

Mr. KAHN. This will amount to \$2,000 an acre?

Gen. SHARPE. That is because many small homes are located there. People have built their homes there.

Mr. KAHN. Will you have to buy the land from them?

Gen. SHARPE. Yes, sir.

Mr. KAHN. Is not \$2,000 an acre a pretty good price for property in that neighborhood?

Gen. SHARPE. This is practically developed property and town lots.

Mr. FIELDS. You spoke of the labor a while ago. Have they had any trouble in getting labor there?

Gen. SHARPE. Not that I know of.

Mr. FIELDS. There has been considerable development in the depot within the last year?

Gen. SHARPE. An enormous development. On one item alone Col. Wood has developed the work so that they are turning out over 10,000 shirts a day.

Mr. FIELDS. How many trunk lines operate out of that town, or have terminals there?

Col. DALY. There are two at the depot.

Mr. FIELDS. I think there are five in the town.

Col. DALY. Jeffersonville is served by the following railroads: Baltimore & Ohio, Cleveland, Cincinnati, Chicago & St. Louis, and Pennsylvania lines; and Louisville, Ky., across the Ohio River from Jeffersonville, Ind., by Baltimore & Ohio, Chesapeake & Ohio, Chicago, Indianapolis & Louisville, Cleveland, Cincinnati, Chicago & St. Louis, Illinois Central, Louisville & Nashville, Louisville, Henderson & St. Louis, Pennsylvania lines, and Southern Railway.

Mr. FIELDS. Is not that depot making practically all the shirts that the Army uses?

Col. DALY. A large portion of them; some few are being made at Philadelphia, but Jeffersonville practically makes them all.

Mr. FIELDS. I was there in November and went all through the plant, and it seems to me they have a good system there.

Gen. SHARPE. They have a good system, but they have a very poor plant.

Mr. FIELDS. I was thinking of the business system.

Gen. SHARPE. That is very good, but Col. Wood would get out much better work if the buildings were adapted to the present business necessities.

Col. DALY. There is a lot of lost space and lost motion in the operation of the depot under the present conditions.

Mr. SHALLENBERGER. I suppose the land is being rented.

Col. DALY. Yes, sir.

Mr. SHALLENBERGER. Would it not be economy to buy it?

Col. DALY. I do not think the rental is so very high. I think it is about \$800.

Mr. SHALLENBERGER. This has been investigated by the proper authorities, and they have reported that this is a fair price?

Col. DALY. Yes; and there is a report describing each piece of property.

Mr. SHALLENBERGER. Is there any money being asked for in any other place for this particular plant?

Col. DALY. There is money being asked for in the sundry civil bill for the buildings.

Mr. FIELDS. How many people are employed there?

Gen. SHARPE. They will turn out 10,000 shirts a day, and that means over 10,000 operatives, just on the shirts. I think they have about 11,000 operatives on the shirts alone.

NOTE.—The following are employed at Jeffersonville:

Permanent employees.....	622
Temporary employees.....	3,311
Pieceworkers.....	120
Sewing women (as pieceworkers).....	21,000

The CHAIRMAN. You could not tell us, I suppose, to what extent the present temporary structures cover the land you desire to purchase?

Gen. SHARPE. No; I could not. I will insert that information.

NOTE.—From 60 to 70 per cent of the area is covered by temporary construction.

Col. DALY. I think all the land it is proposed to purchase is covered with buildings, except one corner.

The CHAIRMAN. Under a lease?

Col. DALY. The buildings were erected by Government funds, and the land is under lease.

The CHAIRMAN. For how long a time?

Col. DALY. Just a year's lease.

The CHAIRMAN. Do you know how much rental the Government is paying?

Col. DALY. I think it is \$800.

The CHAIRMAN. \$800 a year for the 12 acres?

Col. DALY. I do not think we have all the 12 acres. There is one part occupied by a tenant whom we have not been able to get out.

The CHAIRMAN. What I can not understand is this: If the structures amounted to anything, why you would put up structures on land for which you only had an annual lease.

Col. DALY. We had to do that in order to get some place to store the things.

The CHAIRMAN. You can put the full information in regard to this item in the record.

Col. DALY. Yes, sir; it has been inserted.

The CHAIRMAN. The next several items are personal items for relief. Those items have been explained many times.

Col. DALY. I think these are all new items.

The CHAIRMAN. Will you put in the record a statement explaining each one of the items?

Gen. SHARPE. Yes, sir.

(The statements follow:)

HEADQUARTERS NORTHEASTERN DEPARTMENT,
OFFICE OF THE QUARTERMASTER,
Boston, Mass., Aug. 10, 1917.

From: Capt. Frank Geere, Quartermaster Corps.

To: Quartermaster General, Washington, D. C.

Subject: Congressional relief from disallowance by the auditor.

1. Request that steps be taken to obtain my relief by act of Congress for \$29, which was dropped on my October, 1916, account current at Nogales, Ariz., but which was disallowed by the auditor.

2. This sum represents a shortage in a cash shipment of \$116,000 received from the United States Subtreasury at New Orleans, La., as part of an invoice to me by Capt. John P. Hasson, Quartermaster Corps, at El Paso, Tex.

3. When this shipment was received by me, on breaking the sealed packages, there was found to be a shortage in the amount of \$29. Through error I receipted for the entire amount of the invoice, including this \$29 and obtained a survey on the latter. This survey, recommending that I be authorized to drop that sum from my next account current, was duly approved and the report of survey was filed with my October, 1916, account as a voucher on which same was dropped.

4. The auditor, in a different sheet dated May 8, 1917, disallows this amount dropped by survey report, stating "Officer is not entitled to credit for shortage of \$29 on finding of board of survey that the assistant treasurer, New Orleans, was responsible for same in view of the fact that the assistant treasurer denies said responsibility." In a second different sheet dated June 19, 1917, the auditor further remarks, "Credit can not be allowed for shortage in cash unless relieved by act of Congress. He should account for the above-named amount." By reason of this disallowance I have taken up the \$29 on an account current supplementary to my final account current of December, 1916.

5. I have no duplicate copy of this survey to submit with this letter, but must refer you to the copy filed with my account current in the office of the auditor for the War Department, which contains all the evidence in the case to show that although I receipted for this \$29 it never came to my hands and was not actually a part of the shipment in question.

FRANK GEERE,
Captain, Quartermaster Corps.

[First indorsement.]

WAR DEPARTMENT,
OFFICE OF THE QUARTERMASTER GENERAL,
August 23, 1917.

To the AUDITOR FOR THE WAR DEPARTMENT:

1. It is requested that this office be furnished with a copy of the survey proceedings mentioned by Capt. Geere in the within communication and stated as being on file with his account current for October, 1916.

By authority of the Quartermaster General.

THOMAS CRUSE,
Brigadier General, Quartermaster Corps.

[Second indorsement.]

AUGUST 25, 1917.

From: The Auditor for the War Department.

To: The Quartermaster General, United States Army, Washington, D. C.

Herewith is report of survey requested in first indorsement. Please return same to this office for file.

H. R. BARTY, *Auditor.*

[Third indorsement.]

WAR DEPARTMENT,
QUARTERMASTER GENERAL'S OFFICE,
September 1, 1917.

To the Adjutant General of the Army:

Recommending authority to include in relief estimates to be submitted to Congress for the fiscal year 1919, an item relieving Capt. Frank Geere, Quartermaster Corps, United States Army, of accountability for \$29 found deficient in a shipment of \$116,000.

By authority of the Quartermaster General.

D. L. BRAINARD,
Colonel, Quartermaster Corps.

AUGUST 31, 1917.

To the Estimate Branch:

Forwarded for such action as may be deemed proper, attention being invited to the request of the Auditor for the War Department that the report of survey be returned to his office when it has served its purpose.

THOMAS CRUSE,
Brigadier General, Quartermaster Corps.

[Fourth indorsement.]

WAR DEPARTMENT,
ADJUTANT GENERAL'S OFFICE,
September 4, 1917.

To the Quartermaster General:

The recommendation contained in the third indorsement hereon is approved.
By order of the Secretary of War:

JOSEPH F. JANDA,
Adjutant General.

PROPERTY SUBMITTED FOR SURVEY PERTAINING TO CAPT. FRANK GEERE, QUARTERMASTER CORPS.

Gold and silver coin, \$29. ▴■

Found short in a shipment of 12 sacks sealed and said to contain \$116,000 received from Wells, Fargo & Co. express, shipped on B/L No. 2348 by Maj. William Elliott, Quartermaster Corps, depot quartermaster, El Paso, Tex., as per Exhibits A, B, and C, accompanying.

I do solemnly swear that the articles of public property named hereon were lost, destroyed, or damaged, in the manner stated, while in the public service.

L. M. RHODES,
Clerk, Quartermaster Corps.

Sworn to before me, and subscribed in my presence, this 18th day of September 1916.

SYDNEY SMITH,
First Lieutenant, United States Army, Retired, Summary Court.

I certify that the loss, destruction, damage, or unserviceability of the articles of public property named hereon was occasioned by unavoidable causes, and without fault or neglect on my part; and that each article listed hereon with a view to elimination by destruction, has been examined by me personally, has never been previously condemned, has become unserviceable in the manner stated herein, and is, in my opinion, worthless for further public use.

FRANK GEERE,
Captain, Quartermaster Corps.

To ———, who, by order of the commanding officer, is appointed surveying officer on the articles of public property named hereon.

J. S. DEAN,
Lieutenant Colonel, Adjutant General, District Adjutant.

I have examined all available testimony in this case, and it is my belief that the bags of gold coin referred to in statement and accompanying certificates and affidavits were short thirty dollars (\$30.00) and one bag of silver in same shipment was over one dollar (\$1.00) making a total shortage in the shipment of twenty-nine dollars (\$29.00). I believe further that the counts made upon receipt of the coin at Nogales were carefully made; that every reasonable precaution was taken to safeguard the public property, and that the loss occurred through no carelessness, fault, or neglect of the responsible and accountable officer. I believe further that the shortage is probably chargeable at the United States Mint, New Orleans, La., and that the replies to inquiries are not specific and clear as to the facts in this case, but are general and irrelevant to this case and not made in proper form as requested.

RECOMMENDATIONS.

That the responsible and accountable officers, Captain Frank Geere, Q. M. C., and Major William Elliott, Q. M. C., be relieved from further responsibility for the said sum of twenty-nine dollars (\$29.00), and that the said sum of twenty-nine dollars (\$29.00) be charged against the Assistant United States Treasurer at New Orleans, Louisiana.

WESLEY KING,
Major, Judge Advocate General's Department.

The property recommended to be destroyed has been personally inspected by me and has no salable value.

E. H. PLUMMER,
Brigadier General Commanding.

NOGALES, ARIZ., August 28, 1916.

We, the undersigned commissioned officers of the Quartermaster Corps, certify that on August 26, 1916, we counted the coin contained in 12 sacks received from the Wells Fargo & Co. Express, shipped on bill of lading No. 2348 from Maj. William Elliott, Quartermaster Corps, El Paso, Tex., and said to contain \$116,000.

That the seals on these sacks were intact and had not been tampered with, and that the count showed the contents to be \$115,971 in ten and five dollar gold pieces and silver dollars.

That we were assisted in this count by Mr. L. M. Rhodes, civilian pay clerk, Quartermaster Corps, who found the same difference.

That these funds were carefully resacked and deposited in the vaults of the First National Bank of Nogales, Ariz., and a second count was made on August 27, 1916, by ourselves and Mr. Rhodes, with the result that the same shortage was found as before.

In view of the above it is believed that an error was made in making up these packages prior to their shipment.

FRANK GEERE,
Captain, Quartermaster Corps.

F. B. SHELLY,
Second Lieutenant, Quartermaster Corps.

NOGALES, ARIZ., September 18, 1916.

STATE OF ARIZONA.

County of Santa Cruz, City of Nogales, ss:

Personally appeared before me, the undersigned authority, one L. M. Rhodes, a civilian clerk in the employ of the Quartermaster Corps, United States Army, who, being first duly sworn, deposes and says:

That on August 26, 1916, he assisted Capt. Frank Geere, Quartermaster Corps, in counting the contents of 12 sacks received from Wells, Fargo & Co. Express at Nogales, Ariz., which was shipped on bill of lading No. 2348, dated August 26, 1916, by Maj. William Elliott, Quartermaster Corps, El Paso, Tex., and was said to contain \$116,000.

That the seals on these sacks when received were unbroken and the sacks had no appearance of having been opened or tampered with and that the seals were broken by Capt. Geere in my presence.

That Capt. Geere, Second Lieut. F. B. Shelley, and myself counted the contents and found them to contain \$115,971.

That the money was resacked and placed in the vaults of the First National Bank of Nogales, Ariz., and was again counted by the above-named officers and myself on August 27 with the same result obtained on August 26.

That from the foregoing facts it is my belief that this shortage, to wit, \$29, occurred during the making up of the packages prior to shipment.

L. M. RHODES,

NOGALES, ARIZ.

Subscribed and sworn to before me this 18th day of September 1916.

SYDNEY SMITH,

First Lieutenant, United States Army, Retired, Summary Court.

UNITED STATES WAR DEPARTMENT,
QUARTERMASTER CORPS,
El Paso, Tex., August 26, 1916.

Received from William Elliott, major Q. M. Corps, by the Wells Fargo & Co. Express Company the public property hereinafter described, in apparent good order and condition (contents and value unknown), to be forwarded subject to conditions stated on the reverse hereof, from El Paso, Texas, to Nogales, Arizona, by said company and connecting lines, there to be delivered in like good order and condition to as marked

SST 220.

Capt. Frank Geere, Q. M. Corps, Nogales, Ariz.

6 sacks,	\$110,000.00 in gold
6 sacks,	6,000.00 in silver

116,000.00

U. S. property.

S. O. 187 Hd. So. Dept., July 25, 1916.

D. Q. M., San Fee, Cal.

QUARTERMASTER BASE,
Nogales, Ariz., August 28, 1916.

From: Disbursing officer.

To: Capt. John P. Hasson, Q. M. Corps, El Paso, Tex.

Subject: Transfer of funds.

1. Reference your invoice dated August 28, 1916, for one hundred twenty-five thousand (\$125,000.00) dollars, pay of the Army 1917, L/A 2-1712, inform you that on counting the first shipment of one hundred sixteen thousand (\$116,000.00) dollars, of this amount there was found to be only one hundred fifteen thousand nine hundred seventy-one (\$115,971.00) dollars in the twelve sacks billed, in connection with which certificate and affidavits are enclosed.

2. Apparently the shortage occurred at the bank in making up the sacks.

3. Request that the difference of twenty-nine (\$29.00) dollars be sent me by check, when your invoice will be receipted.

FRANK GEERE,
Captain, Q. M. Corps.

[First indorsement.]

OFFICE DEPOT QUARTERMASTER,
El Paso, Tex., August 30, 1916.

To CAPT. FRANK GEERE, captain, Q. M. Corps, Nogales, Ariz.

1. This shipment of one hundred sixteen thousand (\$116,000) dollars was made to you on the 25th and consisted of five sacks of gold in tens, twenty thousand dollars each, one sack gold, fives, ten thousand, six sacks silver, one thousand dollars each. It was part of a shipment received from the mint at New Orleans and came in on the same train that it was subsequently shipped on. The money was not taken from the train, but was merely retagged with your name by me.

2. In view, then, of this discrepancy request you state more fully just in which sack this shortage occurred and that you mail me the "count slips" that should be in each sack.

3. These sacks were sealed and received from the quartermaster at New Orleans and bore stamp of mint count.

JOHN P. HASSON,
Captain, Q. M. Corps.

[Second indorsement.]

DISBURSING OFFICER, Q. M. BASE,
Nogales, Ariz., September 3, 1916.

To Capt. JOHN P. HASSON,
Q. M. Corps, El Paso, Tex.

1. Returned. There were no "count slips" in any of the sacks, and on some of the tags there was no amount stated on same.

2. In view of this it is not possible to state in which sack or sacks the shortage existed, nor as to the exact coins that were short. It is known, however, that there was one silver dollar ahead in one sack and from this fact it would appear that there were three ten-dollar gold pieces short in one or more of the other sacks.

3. The receipt for your invoice of the \$125,000.00, of which this shipment was a part, is being held here until the investigation of this shortage is completed, when it will be accomplished. A statement to that effect will be filed with my account current for August if this matter is not completed by that time, and it is suggested that you do the same.

FRANK GEERE, Captain, Q. M. Corps.

[Third indorsement.]

OFFICE DEPOT Q. M.,
El Paso, Tex., September 6, 1916.

To Maj. JOHN STAFFORD, U. S. A., retired,
A. G. M., New Orleans, La.

1. The facts in the case of this shipment were as follows: On August 25th the shipment of money was received from you as follows: Ten sacks of gold, \$200,000, in tens; seven sacks of gold, \$130,000, in fives; and fifteen sacks of silver standard. Two sacks of halves, two sacks of quarters, one sack of dimes, one sack of nickels and one sack of pennies. Under instruction from the Department Quartermaster to expedite a shipment if possible that night, to Nogales, I met the train containing this shipment

and without taking the money off the car, immediately transhipped five sacks of tens, \$100,000; one sack of fives, \$10,000; and six sacks of standard, \$8,000; making this first shipment of \$116,000 noted in this letter of Captain Geere.

2. From Captain Geere's second indorsement it would appear that in this gold shipment, there were three ten-dollar pieces short and in the silver there was one one-dollar ahead, making a total shortage of twenty-nine dollars (\$29.00).

3. As this shipment was received in the original sacks bearing stamp of United States Mint and as such was accepted by the bank here, I presumed that the transshipment to Nogales would be accepted in the same way and so accomplished your cash receipt. Your assistance is requested in trying to locate this shortage and, as you can see, my cash receipt from Captain Geere for \$125,000 is being held up pending the outcome of this shortage.

JOHN P. HASSON, *Captain, Q. M. Corps.*

(Fourth indorsement).

OFFICE QUARTERMASTER CORPS,
New Orleans, La., September 9, 1916.

To Capt. JOHN P. HASSON, *Asst. D. Q. M., El Paso, Tex.*

1. The seventeen sacks of gold constituting the shipment in question were personally received by me from the assistant treasurer at the Treasury in the original sacks, each of which bore a certified stamp of the count as made by special examiners of the Treasury Department, with the quantity marked thereon.

2. It is practically impossible that the error existed in the gold as all sacks were weighed, found to contain the exact correct weight; they were further balanced with each other, and two sacks were opened and counted and found to be correct, which two sacks were again used as a balance for the others.

3. The silver is recounted as received by the assistant treasurer and each sack sealed and tagged and bears the initials of the man who did the counting, also after being counted and sacked each sack is weighed. From the above it is clear that it is almost impossible for this mistake to have occurred at New Orleans.

4. These funds were received by me at the Treasury in person and there transferred to the Wells, Fargo Express Co., receipt being secured for the same on the spot within the guarded inclosures of the Treasury.

5. In this connection, attention is invited to the fact that only about one-third of the shipment was sent to Capt. Geere and that no discrepancies were found in the remainder of the shipment.

6. The undersigned is of the opinion that the shortage in question could have only occurred at Nogales, Ariz. It is clearly shown throughout this communication that the original packages were received in tact; that they were not tampered with. There fore the shortage could have only occurred at either the Treasury at New Orleans or at Nogales, and there is very little possibility of the error having occurred here as the money is handled by experts who are employed at nothing else.

JNO. STAFFORD,
Major U. S. A., Ret., A. Q. M., Quartermaster.

[Fifth Indorsement.]

OFFICE D. Q. M.,
El Paso, Tex., September 15, 1916.

To Captain Frank Geere, *Q. M. Corps, Nogales, Ariz.*

1. Returned, inviting your attention particularly to paragraph 2 of the fourth indorsement.

2. Under the conditions surrounding this shipment I can not see where the responsibility lies with my count, and the regulations governing such shipments are silent on such matters. I believe that it would be to the best interests of both of us to consider this shipment as coming within the provisions of #868 Army Regulations, 1913.

JOHN P. HASSON,
Captain, Q. M. Corps.

A true copy of letter and indorsements:
OLIVER S. PERRY,
Captain 2nd Montana Infantry.

NOGALES, ARIZ., *September 21, 1916.*

We, the undersigned commissioned officers, certify that at 1.30 p. m. on August 26, 1916, we went to the office of the Wells, Fargo & Co. Express at Nogales, Arizona, to receive a shipment of one hundred sixteen thousand (\$116,000) dollars in gold and silver coin, shipped from the quartermaster depot at El Paso, Texas, as part of the sum of one hundred twenty-five thousand (\$125,000) dollars for the payment of troops.

That we were accompanied by a detail of one noncommissioned officer and seven privates from the provost guard as guard during the handling of these funds.

That at the express company's office the room was cleared of every one except the cashier and one of the company's employees, Captain Geere, Lieutenant Shelly, and Mr. L. M. Rhodes, a quartermaster civilian clerk, while these sacks were removed from the safe and checked.

That the sacks were all sealed and these seals were intact.

That the sacks were carried in one trip from the express office across the walk to an auto truck, with the guards surrounding those carrying the sacks, and that the truck, with the guards, Captain Geere, and Mr. Rhodes on it, proceeded direct to the offices of the base quartermaster and the sacks were similarly carried into the room used as Captain Geere's office.

That the doors of this office were then closed and locked, a guard of two military policemen stationed outside each entrance, Captain Geere, Lieutenant Shelly and Mr. Rhodes only remaining inside, and that these three then proceeded to cut the seals of the sacks and count the coin, which was done in full sight of all three.

That this was done by actually counting the coins and not by stacking and sizing the stacks against each other. With the exception of four or five sacks, the contents of each was counted separately and then the change for each organization was sacked together. Of these sacks not first separately counted, two were taken as original packages, without counting, and so used in making up some organization's change, and the other three—one of ten (10.00) dollar gold pieces, one of five (5.00) dollar gold pieces and one of one (1.00) dollar silver pieces—were not first counted separately, as it was getting late, but were used directly for making up the change packages.

That the total of these packages and the remaining coin not made into such packages aggregated one hundred fifteen thousand nine hundred seventy-one (\$115,971) dollars.

That several of the sacks received from the express company had no values marked on the tags, but only the name of the shipping officer.

That none of the sacks contained any count slips, such as were usually placed in sacks from the mint with the count and checker's initials thereon.

That, as it was 7.30 p. m. when the count was completed, it was decided to recount on the following day, so the sacks, each labeled with the amount of its contents, were placed on the autotruck and taken, under the same guard, to the First National Bank of Nogales, where they were placed in the vaults of the bank in the presence of Captain Geere, Lieutenant Shelly, and Mr. Rhodes.

That the following day, August 27, 1916, Captain Geere, Lieutenant Shelly, and Mr. Rhodes went to the First National Bank at 1.30 p. m., and again counted this coin, this time actually counting every coin and checking the contents of the sacks as they had been made up and labeled the previous day.

That this count was made by all three, sitting at the same table in full view of each other, Mr. Richardson, assistant cashier of the bank, and one of his employees, with two military policemen as guards, being in another part of the room in sight of the table.

That from the foregoing facts we believe it was impossible for any of the coins to have been dropped or lost during either count, and that the shortage of twenty-nine (\$29.00) dollars occurred prior to receipt of the money at Nogales, and that the shortage existed in one of the four or five sacks not separately counted or used as an original package at the first count.

That as one of the sacks of silver dollars, supposed to contain one thousand (1,000.00) dollars, was found to contain one (1.00) dollar over, we believe that there were gold pieces short in the other sacks to the amount of thirty (30.00) dollars.

FRANK GEERE,
Captain, Quartermaster Corps.

F. B. SHELLY,
Second Lieutenant, Quartermaster Corps.

NOGALES, ARIZ., September 21, 1916.

STATE OF ARIZONA,

County of Santa Cruz, Town of Nogales, ss:

Personally appeared before me, the undersigned authority, one L. M. Rhodes, a civilian clerk in the employ of the Quartermaster Corps, U. S. Army, who, being first duly sworn, deposes and says:

That at 1.30 p. m. on August 26, 1916, he accompanied Captain Frank Geere and Lieutenant F. B. Shelly, Q. M. C., to the office of the Wells, Fargo & Co. Express at Nogales, Arizona, to receive a shipment of one hundred sixteen thousand (\$116,000.00) dollars in gold and silver coin, shipped from the Quartermaster depot at El Paso, Texas, as part of the sum of one hundred twenty-five (\$125,000.00) dollars for the payment of troops.

That they were accompanied by a detail of one noncommissioned officer and seven privates from the provost guard, as guard during the handling of these funds.

That at the express company's office the room was cleared of every one except the cashier and one of the company's employees, Captain Geere, Lieutenant Shelly and himself, while these sacks were removed from the safe and checked.

That the sacks were all sealed and these seals were intact.

That the sacks were carried in one trip from the express office across the walk to an auto truck, with the guards surrounding those carrying the sacks, and that the truck with the guards, Captain Geere, and himself on it, proceeded direct to the office of the base quartermaster and the sacks were similarly carried into the room used as Captain Geere's office.

That the doors of this office were then closed and locked, a guard of two military policemen stationed outside each entrance. Captain Geere, Lieutenant Shelly and himself only remaining inside, and that these three then proceeded to cut the seals of the sacks and count the coin, which was done in full sight of all three.

That this was done by actually counting the coins and not by stacking and sizing the stacks against each other. With the exception of four or five sacks, the contents of each was counted separately, and then the change for each organization was sacked together. Of these sacks not first separately counted, two were taken as original packages, without counting, and so used in making up some organization's change, and the other three—one of the ten (10.00) dollar gold pieces, one of five (5.00) dollar gold pieces and one of one (1.00) dollar silver pieces—were not first counted separately as it was getting late, but were used directly for making up the change packages.

That the total of these packages and the remaining coin not made into such packages aggregated one hundred fifteen thousand nine hundred seventy-one (\$115,971.00) dollars.

That several of the sacks received from the express company had no values marked on the tags, but only the name of the shipping officer.

That none of the sacks contained any count slips, such as are usually placed in sacks from the mint with the count and checker's initials thereon.

That, as it was 7.30 p. m. when the count was completed, it was decided to recount on the following day, so the sacks, each labeled with the amount of its contents, were placed on the autotruck and taken, under the same guard, to the First National Bank of Nogales, where they were placed in the vaults of the bank in the presence of Captain Geere, Lieutenant Shelly, and himself.

That the following day, August 27, 1916, Captain Geere, Lieutenant, Shelly, and himself went to the First National Bank at 1.30 p. m. and again counted this coin; this time actually counting every coin and checking the contents of the sacks as they had been made up and labeled the previous day.

That this count was made by all three, sitting at the same table in full view of each other, Mr. Richardson, assistant cashier of the bank, and one of his employees, with two military policemen as guards, being in another part of the room in sight of the table.

That from the foregoing facts, he believes it was impossible for any of the coins to have been dropped or lost during either count, and that the shortage of twenty-nine (29.00) dollars, occurred prior to receipt of the money at Nogales, and that the shortage existed in one of the four or five sacks not separately counted or used as an original package at the first count.

That as one of the sacks of silver dollars, supposed to contain one thousand (1,000.00) dollars, was found to contain one (1.00) dollar over, we believe that there were gold pieces short in the other sacks to the amount of thirty (30.00) dollars.

And further deponent sayeth not.

L. M. RHODES.

Subscribed and sworn to before me this 21st day of September, 1916.

SYDNEY SMITH,

1st Lieut., U. S. A., Retired, A. Q. M.,

Summary Court.

HEADQUARTERS NOGALES DISTRICT,
Camp Stephen Little, Nogales, Ariz., September 21, 1916.

From: Survey officer.

To: Assistant Treasurer U. S., New Orleans.

Subject: Shortage \$29 shipment of money from Maj. William Elliott, Q. M. C., August 26, 1916, to Capt. Frank Geere, Q. M. C., Nogales, Ariz., received by Wells, Fargo Express, El Paso, Tex.

1. Reference is had to inclosed copies of report of survey and attached affidavit, certificates, copy of B/L, and correspondence.

2. For purpose of enabling survey officer to make report and recommendations, as by Army Regulations provided, request is made upon assistant United States treasurer at New Orleans for certificates of officers and affidavits of any persons who assisted in making and sealing the packages of gold and silver referred to in the accompanying orders.

3. Particular attention is directed to the statement in joint certificate of Capt. Frank Geere and Lieut. Shelly, and to affidavit of L. M. Rhodes, this date, to the absence of tags, seals, and count slips, other than Wells, Fargo tags. It is requested that certificates and affidavits submitted show the counting of this money, its tagging and sealing, with what kind and character of seals, what disposition was made of "count slips," if any, and what marks or notations, if any, were made on or in the several sacks designating contents. Certificate of Capt. John P. Hasson, Q. M. C., is also requested covering details of shipment to Capt. Frank Geere, Q. M. C., Nogales, and this communication will be forwarded to Capt. Hasson at El Paso, Tex., with accompanying papers for that purpose. Certificate of Maj. John Stafford, U. S. A., retired, A. Q. M., quartermaster at New Orleans, is requested covering details of shipment to Capt. Hasson at El Paso.

4. Please expedite.

WESLEY E. KING,
Major, Judge Advocate, Nogales District.

NEW ORLEANS, LA., September 25, 1916.

WESLEY E. KING,
Major, Judge Advocate, Nogales, Ariz.

SIR: Referring to your letter of the 21st instant, relative to a shortage of \$29 in a shipment of coin from Maj. William Elliott, Q. M. C., August 23, 1916, to Capt. Frank Geere, Q. M. C., you are advised that all packages or coin shipped from this office are tagged with the amount of the contents stated thereon and the date and the initials of the person putting up the packages.

The only exception to the rule is in the case of bags of new gold coin received from the mint which bear no tags but have the amount stamped thereon. Any shortage in such coin, when delivered to Maj. Stafford in the office, would have been discovered upon its being weighed against carefully counted test bags.

Your attention is invited to the statement of Maj. John Stafford as to the manner in which this particular shipment was handled in this office. This statement is strictly in accordance with the facts in the case.

The papers submitted by you are returned herewith.

Respectfully,

JOHN BURKE,
Treasurer United States, in charge ad interim of
Office of Assistant Treasurer, United States.
GEO. FORT,
Assistant Treasurer United States.

APRIL 27, 1917.

Hon. JOHN BURKE,
Treasurer of the United States,
Washington, D. C.

DEAR MR. BURKE: I am handing you herewith a file of correspondence relative to the loss of \$29 disclosed in the accounts of Capt. Frank Geere, Quartermaster Corps, U. S. Army, and have to request that you review the correspondence and advise me, with a view to placing the responsibility. The correspondence appears to make it quite clear that Capt. Geere did not receive the money, but pending investigation I am withholding credit in his accounts.

Trusting that I may be favored with an early reply, with the return of these papers, I remain,

Respectfully, yours,

Auditor.

TREASURY DEPARTMENT,
OFFICE OF TREASURER,
Washington, April 28, 1917.

AUDITOR FOR THE WAR DEPARTMENT,
Washington, D. C.

SIR: With reference to your letter of the 27th instant requesting this office, if possible, to place the responsibility for a shortage of coin in a shipment of \$116,000 made to Capt. Frank Geere at Nogales, Ariz., you are advised that I was in charge of the subtreasury at New Orleans at the time this shipment was made and remember the transaction distinctly.

The gold coin was put up in bags containing \$5,000 each, under lead seals. Four of these bags were placed in a larger bag, which was also sealed with a lead seal. A test bag was prepared by counting one of these \$5,000 bags in the presence of Maj. Stafford, and the same was used as a balance bag in balancing the other coin composing the shipment. The scales upon which this coin was balanced would show a variance of weight between a silver 10-cent piece and a copper penny, so that if a single coin had been removed from any bag it would have been easily discernible.

I am not in a position to advise as to the placing of responsibility, but can only state that the coin referred to was delivered to Maj. Stafford in the subtreasury, and that it was all there at that time.

The correspondence forwarded with your letter of the 27th instant is returned herewith.

Respectfully,

GEO. FORT, Assistant Treasurer.

(Relief of Col. Thos. G. Hanson, \$181.26.)

JANUARY 10, 1917.

The COMPTROLLER OF THE TREASURY,
Washington, D. C.

1 The auditor for the War Department has made disallowances in part of five vouchers for February, March, April, May and June, 1916, in difference sheet No. 3, certificate No. 39976, dated December 15, 1916, and as I do not agree with the auditor's findings as set forth therein, appeal from such disallowances is hereby made, as follows: February, 1916. Voucher 102:

- "Item 105. Press work has been paid for on the basis of two tokens and the statement is made that this item was run through the press twice on account of down rules. The contractor has been paid double price for composition and the rules should have been set in the form, thus obviating the necessity of running this item through the press twice. Overpayment 25 cents.
- 106. Same remarks as to previous item: overpayment 50 cents.
- 125. Payment should have been made for two tokens instead of four; overpayment 50 cents.
- 128. Overpayment account of presswork 25 cents.
- 129. Overpayment account of presswork \$2.25.
- 133. Overpayment of \$3.00 on these items on account of presswork.
- 134. Overpayment of \$3.00 on these items on account of presswork.
- 135. Overpayment of \$3.00 on these items on account of presswork.
- 136. Overpayment of \$1.00 on these items on account of presswork.
- 137. Overpayment of \$1.00 on these items on account of presswork."

* * * * *

In this connection attention is invited to paragraph 6 of letter dated December 12, 1916, from Lieut. Colonel W. D. Newbill, Q. M. Corps, appealing from similar disallowances of the auditor on items of printing furnished by the same contractor, Blair-Murlock & Co.

With reference to items 133, 134, and 135, as submitted to the auditor, it is maintained that the work is properly classed as double-price composition. The contract provides "No allowance will be made for machine ruling when used in lieu of printed ruling." No charge is made for machine ruling as such, and as the ruling was necessary, the allowance for presswork appears to be entirely proper. The size of the paper used made it necessary to run it through the press twice, the largest press available being 12 by 18, while the paper is 14 by 18. It is also submitted that the price charged for this job is a reasonable one; that work for which provision can not possibly be made is bound to be presented to the contractor from time to time, due to the exigencies of

the service; that the Government desires only a reasonable return for the money expended for services and material provided by the contractor; and that any reputable printer will certify that the work performed on his job entitles the contractor to the prices charged by him and the allowance made by me.

The instructions for the work on items 136 and 137 are as follows:

"Fifty each of inclosed forms marked 'Copy,' weight of paper and horizon-ruling to be the same as that on paper attached marked 'Sample.' Care will be taken to see that the sheets are the same size as sample copies, and that ruling and spacing are exactly the same, except as to horizontal ruling provided above."

2. February. Voucher 102:

"Item 107. Presswork on this item should have been paid for on the basis of 16 tokens; overpayment \$4.

115. Overpayment on account of presswork, 75 cents.

119. Payment should have been made for 28 tokens. No allowance for running job through press twice can be made where double price composition has been paid. Overpayment \$18."

* * * * *

Item 107 is a pamphlet consisting of 8 sheets printed on both sides. It is maintained that this entitled the contractor to 16 tokens for each 250 copies, or 32 tokens for 500 copies.

Item 115 is a pamphlet consisting of 4 sheets printed on both sides, or 8 tokens.

Item 119 consists of 6 sheets printed on both sides, 12 tokens, and the cover, 1 token, 13 tokens in all for the job; 800 copies, making the total of 52 tokens as paid.

* * * * *

3. February. Voucher 102:

"Item 109. The contractor has charged the regular price for composition on this item plus a charge of \$40.40 for special work. This item can not properly be classed as special work but should have been paid for at the regular rates for composition and presswork. Overpayment \$20.40.

110. Payment should have been made for 9,047 ems and 12 tokens. Overpayment \$3.40.

120. Payment should have been made at the regular rates for composition, presswork, and perforating; overpayment 46 cents.

121. Payment should have been made for 2,173 ems and 1 token; overpayment \$1.29.

126. Composition \$2.58, presswork \$4.50, overpayment \$4.90.

127. This is the same composition as the previous item. Payment should only have been made for two tokens; overpayment \$3.48."

* * * * *

In connection with these items the contract provides "Special work, including composition and presswork complete—Letter and note headings and envelopes—* * * For first 100 or less, 60 cents; for subsequent 100, 20 cents"; and further, "That the contractor shall furnish the necessary material and skilled labor to do promptly all printing and ruling and furnish the paper and cardboard for same that required."

It is submitted that this is special work as contemplated in the contract in that the items are letterheads; that the contractor is entitled to an allowance for composition in view of the excessive amount of composition required over that contained in an ordinary letterhead; further, that as the stock is furnished by the party of the first part the contractor is deprived of any profit which would accrue on material furnished, which may be required under the contract.

4. February. Voucher 102:

"Item 138. Composition on this item should have been paid for on the basis of may be 5,630 ems per page for 25 pages and 1,890 ems for one page, a total of 148,890 ems; overpayment, \$61.61.

139. Composition should have been paid for on the basis of 4,536 ems per page for 78 pages, and 1,470 ems for one page, making a total of 353,803 ems. 40 tokens is the proper charge for presswork. Overpayment of \$55.22."

These items are indexes to general and special orders. The same remarks as to ruling and presswork apply as in paragraphs 1 and 2 of this letter.

5. * * *

6. * * *

7. * * *

8. Copies of the work in question obtained from the office of the department quartermaster, Western Department, are inclosed. It is requested that the inclosures be returned to that office when no longer required.

TREASURY DEPARTMENT,
Washington, April 9, 1917.

Appeal No. 26651.

1. Lieutenant Colonel Thomas G. Hanson, Quartermaster Corps, U. S. Army, applied January 22, 1917, for revision of the action of the Auditor for the War Department in disallowing, per settlement No. 39976, dated December 15, 1916, credit in part for certain payments, in the amount of \$666.61, hereinafter enumerated, made to the Blair-Murdock Company, of San Francisco, Cal., for printing under contract of June 14, 1916.

2. The items disallowed will be considered in groups, as follows:
"February, 1916. Voucher 102:

"Item 105. Presswork has been paid for on the basis of two tokens and the statement is made that this item was run through the press twice on account of down rules. The contractor has been paid double price for composition and the rules should have been set in the form, thus obviating the necessity of running this item through the press twice; overpayment, 25.

106. Same remarks as to previous item; overpayment, 50 cents.

125. Payment should have been made for two tokens instead of four; overpayment, 50 cents.

128. Overpayment account of presswork, 25 cents.

129. Overpayment account of press work, \$2.25.

133, 134, 135. Overpayment of \$3.00 on these items on account of presswork."

136, 137. Overpayment of \$1.00 on these items on account of presswork."

* * * * *

3. In decision of March 21, 1917 (80 MS. Comp. Dec., 1192), involving similar charges in the accounts of Lieutenant Colonel W. D. Newbill, Quartermaster Corps, U. S. Army, under this same contract, it was said:

4. "The decision in this case depends upon the determination of the proper method of counting impressions for work performed under the contract; and, with respect to this question, the contractor provides, in article 9, as follows:

5. "Presswork.—A token consists of 250 impressions, and where the press on hand is large enough to print with one impression two or more pages of the job or book forms the allowances for presswork will be in accordance therewith, viz: One impression only for each copy of a job, etc., regardless of the number of pages that can be properly placed at one time on the largest press named in the contract, printed and cut to suit the purpose required."

6. "It will be seen from the article quoted that the unit of measure with respect to payment therein provided was the token, which was to consist of 250 impressions. In connection with the computation of impressions, in view of the provision of this article to the effect that, where the press on hand is large enough to print, with one impression, two or more pages of a job, etc., the allowance for presswork would be in accordance therewith—that is, on the basis of one impression and of the fact that, in article 2 of the contract, the contractor is expressly required to have one press measuring at least 12 x 18", it would appear that, in computing the number of impressions, the basis was to be the greatest number of pages of a job that properly could be printed at one impression on the presses at hand, the nature of each job being taken into consideration, without regard to what press had actually been used or the number of impressions that had actually been made.

7. "In other words, under the provisions of this contract the contractor, in printing the jobs, was to be paid on the basis of the least number of impressions that might have been made had the work been done in a 'workmanlike' manner as provided in article 1 of the contract."

8. In this connection it is noted that in article 2 of the contract it is stated that the presses which would be furnished by the contractor were as follows: 8" x 12" Gordon, 10" x 15" Gordon, 10" x 15" Gordon, 12" x 18" Gordon.

9. All of the above-enumerated items, with the exception of items 133, 134, and 135, come within the ruling announced in the foregoing decision of March 21, 1917, and the disallowances made by the auditor are therefore proper, and are affirmed.

10. Items 133, 134, and 135 consist of printing estimate blanks on sheets of paper 14" x 18". It is contended that, in order to print these blanks on the 12" x 18" press, which is the largest one specified under the contract, it was necessary to run through the press twice. The samples furnished do not have the appearance of having been run through the press twice. They appear to have been printed on a cylinder or other larger press. At any rate, even if they were run through the press twice, the charge for presswork is excessive, as only four tokens should be charged in that case for each of the three items. The auditor's disallowance is affirmed.

"2. February. Voucher 102:

"Item 107. Presswork on this item should have been paid for on the basis of 16 tokens; overpayment, \$4.00.

115. Overpayment on account of presswork, 75 cents.

119. Payment should have been made for 28 tokens. No allowance for running jobs through press twice can be made where double-price composition has been paid. Overpayment, \$18.00."

* * * * *

11. All of these items, except item 61, represent printing of pamphlets on sheets printed on both sides. Presswork is charged on the basis of one token for each 250 sheets. The auditor allows one token for each 250 impressions of two sheets each, as in each case two sheets could have been printed at one impression with presses specified by contract, and disallowed the balance. These disallowances are in accord with the ruling in the foregoing decision of March 21, 1917, and are affirmed.

12. Item 61 consists of printing 20,000 small recruiting cards on both sides. Payment was made for 160 tokens, 80 for each side. Both sides of the cards apparently were, or should have been, set up and printed with one impression of the press. In this way 10 000 cards could have been printed on the front side and 10 000 on the reverse side in 40 tokens. Then, by reversing the cards and running them through the press again, they could have been printed on the remaining side in 40 tokens, making a total of 80 tokens necessary for the job, provided only two forms could be set up and printed in the press at one time. (80 MS. Comp. Dec., 257, Jan. 22, 1917.) The cardboard used, as specified by the contract, is 22" x 28", making it possible to set up and print more than two forms with one impression. However, in the absence of evidence to the effect that this was actually done, no further disallowance will be made in this case. In the future, such items should be investigated before payment is made. The auditor's disallowance is affirmed.

"3. February. Voucher 102:

"Item 109. The contractor has charged the regular price for composition on this item plus a charge of \$40.40 for special work. This item can not properly be classed as special work, but should have been paid for at the regular rates for composition and presswork. Overpayment, \$20.40.

110. Payment should have been made for 9,047 ems and 12 tokens. Overpayment, \$3.40.

120. Payment should have been made at the regular rates for composition, presswork, and perforating; overpayment, 46 cents.

121. Payment should have been made for 2,173 ems and 1 token; overpayment, \$1.29.

127. This is the same composition as the previous item. Payment should only have been made for two tokens; overpayment, \$3.48.

126. Composition, \$2.58; presswork, \$4.50; overpayment, \$4.90."

* * * * *

13. These items have been paid for as letter headings, but, from the samples furnished, they appear to be letter forms with markings upon the left-hand margin showing divisions of page, and requiring a type form nearly the full size of the page. This printing does not constitute letter headings or other special work under the terms of the contract, and payment should have been made as for ordinary printing at the regular rate of 25 cents per 1,000 ems for composition and 25 cents per token of 250 impressions, or fraction thereof, for presswork and perforating, as provided by the contract. (79 MS. Comp. Dec. 505, November 18, 1916.) The auditor's disallowances are affirmed.

"February. Voucher 102:

"Item 138. Composition on this item should have been paid for on the basis of 5,880 ems per page for 25 pages and 1,890 ems for one page, making a total of 148,890 ems. 42 tokens is the proper charge for presswork. Overpayment, \$61.61."

14. "139. Composition should have been paid for on the basis of 4,536 ems per page for 78 pages, and 1,470 ems for one page, making a total of 353,808 ems. Forty tokens is the proper charge for presswork. Overpayment, \$55.22."

15. These items represent printing in pamphlet form of indexes to general and special orders. The composition in item 138 is 3½ by 5½ inches for 25 pages, which, in six-point type, and allowing for double-price composition, is equivalent to 42 by 70 by 2 inches, or 5,880 ems for each page. The outside page is 3½ by 3½ inches, or 1,890 ems, making a total of 148,890, as allowed by the Auditor. The presswork

should have been paid for on the basis of 42 tokens, as allowed by the Auditor, as two sheets could easily have been printed with one impression.

16. The composition in item 139, allowed at price-and-one-half, is equivalent to 4,536 ems for 78 pages, and 1,470 ems for one page, and 40 tokens for presswork. The Auditor's disallowances are affirmed.

17. * * *

18. * * *

19. * * *

20. These items represent printing of circulars to bidders, 8½ by 28 inches, printed on both sides. The amounts paid for composition have been allowed by the Auditor. His disallowances consist of overcharges for presswork and amount of paper necessary to be used. Payment has been made on the basis of 6 tokens for each 250 circulars, it being necessary to make four impressions to print each sheet, and it is alleged that two pages of each sheet were run through the press a second time on account of down rules. The down rules should have been set in the form in the first instance, making the additional impression of two pages unnecessary. (80 MS. Comp. Dec., 1192, Mar. 21, 1917.) The size of the paper used was 22 by 34 inches, so that two circulars could easily have been printed from one sheet of paper. Payment has been made on the basis of one sheet of paper for each circular. The Auditor's disallowances are affirmed.

21. * * *

22. * * *

23. * * *

24. * * *

25. * * *

26. Revision is limited to items of which revision is requested, and the right of revision as to the remainder of the account is reserved.

W. W. WARWICK, *Comptroller*.

MAY 22, 1917.

Request for refundment.

Mr. RALPH K. BLAIR.

207 Highland Avenue, Buffalo, N. Y.

SIR: The Comptroller of the Treasury has suspended the sum of \$666.61 in my accounts for amounts paid for printing during the fiscal year 1916. Of the sum suspended \$485.35 was paid to the National Surety Co., which they have been requested to return, and which they are returning, leaving a balance paid the Blair-Murdock Co. of \$181.26.

2. In view of the fact that this latter amount was as stated above, paid to the Blair-Murdock Co. of which you were a member as evidenced by your signing the contract for printing for the fiscal year in question, I respectfully request that you refund to me the sum paid you (\$181.26) at your earliest convenience in order that my accounts may be cleared of the entire suspension in this case.

3. In this connection you are advised that if you do not refund, I shall be forced to pay this amount out of my salary, as the money was paid to your company in good faith, and as I have gone to the last court of recourse in an effort to have the suspension removed you can readily understand my efforts in trying to get refundment from you. An early return of the overpayment in question will be deeply appreciated.

4. I expect at any time to be ordered away from my present station.

Yours, truly,

THOMAS G. HANSON,
Lieut. Col., Q. M. Corps.

WAR DEPARTMENT,
HEADQUARTERS, WESTERN DEPARTMENT,
OFFICE OF THE DEPARTMENT QUARTERMASTER,
San Francisco, Cal., February 28, 1916.

From: Department Quartermaster,

To: National Surety Company, No. 105 Montgomery Street, San Francisco, California.

Subject: Contract for printing Blair-Murdock Co., F. Y. 1916.

1. In the matter of contract entered into by The Blair-Murdock Company, of San Francisco, California, with the United States Government (dated June 14th, 1915), for furnishing necessary material and labor, etc., for printing, etc., required at headquarters, Western Department, during the fiscal year commencing July 1st, 1915,

and ending June 30th, 1916, you are advised, as surety under said contract, that said contractor is not now, nor for some days past, observing or performing the conditions of said agreement, that "The contractor must be prepared to keep the office open and ready for work from 9.00 a. m. until 4.30 p. m., daily, Sundays and legal holidays excepted, to promptly comply, and to furnish proof and finish work without delay, so as not to retard public business."

2. Under the circumstances of the failure of the contractor to do work required under the contract and to comply with the stipulations of the contract according to the true intent and meaning thereof, notice is hereby given of the procedure authorized to be taken under conditions recited herein, i. e., "to supply the deficiency by purchase in open market, special contract, or in such other manner as the contracting officer may elect, and the contractor shall be charged with the expense and additional cost, if any, resulting from such failure."

3. Definite advice is required as to whether the National Surety Company, as surety, as aforesaid, elects to take over the Blair-Murdock Company's contract and continue the same to date of completion. In the event the National Surety Company elects to take over the said contract the Department Quartermaster should be informed of the agency through which the printing shall be accomplished.

4. Notice is given that printing required at headquarters, Western Department, is being purchased in the open market pending reply to this letter of notification of the failure of the contractor, The Blair-Murdock Company, to perform work under its contract.

5. Copy of contract referred to herein is enclosed for your information, special reference being had to paragraphs 3 and 17 thereof.

6. For your further information, it may be remarked that the bond as executed by the National Surety Company, to cover the said contract, is of date June 14th, 1915, and in amount of \$1,000.00.

7. There is also enclosed copy of letter addressed to the Blair-Murdock Company, under date of February 26th, 1916, bearing upon the subject and to which no definite reply has been received to date.

8. Copy of this communication has been furnished the Blair-Murdock Company.

9. Immediate reply is requested.

Colonel, Q. M. Corps,

The BLAIR-MURDOCK Co.,
68 Fremont St., City.

Following letter recd., in reply to above:

SAN FRANCISCO, CAL., Mar. 3, 1916.

DEAR SIR: Replying to your esteemed favor of February 28th, beg to advise that the National Surety Company elects to take over the Blair-Murdock contract and continue same to date of completion, viz, July 1st, 1916.

You will please send your orders for printing under said contract to H. M. Alexander, 45 Ecker St., and oblige,

Yours, truly,

NATIONAL SURETY COMPANY,
New York.

Original filed in the P. & M. Branch. No. 486.4. West. Dept.

CANADIAN AEROPLANES, LIMITED,
Toronto, Ont., July 5, 1917.

Colonel W. D. NOWBILL,
216 Pine St., San Francisco, U. S. A.

DEAR SIR: Your letter of June 24th just received. I do not understand not having received your letters of April 2nd and May 17th, spoken of in your communication, as mail should have been forwarded to me here.

I left the Blair-Murdock Co. in July, 1916, and have had nothing to do with the company since that time. I would suggest that you communicate with Charles A. Murdock, who was still interested in the company after I left.

I am very sorry that I can not be of more assistance to you in straightening out this matter, but as I lost heavily in that company I can not see my way clear to assume any more of the obligations outstanding against it.

Yours, very truly,

R. K. BLAIR.

WAR DEPARTMENT,
HEADQUARTERS WESTERN DEPARTMENT,
OFFICE OF THE DEPARTMENT QUARTERMASTER,
216 Pine Street, San Francisco, Cal., August 13, 1917.

From: Colonel Thomas G. Hanson, Q. M. Corps.

To: Quartermaster General of the Army.

Subject: Inclusion of \$181.26 in remedial legislation for relief of Colonel Thomas G. Hanson.

1. Inclosed herewith are two copies of correspondence relative to an overpayment to the Blair-Murdock Company of \$181.26, on voucher 102, my accounts for February, 1916, with request that they be submitted to the Secretary of War for inclusion in remedial legislation for my relief against the suspension by the auditor, which was confirmed in a decision of the comptroller April 9, 1917.

2. On June 14, 1915, the Blair-Murdock Company, a corporation existing under the laws of the State of California, entered into contract to furnish labor and material for the necessary printing for headquarters, Western Department, San Francisco, Cal., and on or before Feb. 28, 1916, the company failed before I had any knowledge of the suspension against me.

3. The inclosed are extract copies of the following correspondence:

A-1 to A-3. Appeal from disallowance by the auditor.

B-1 to B-4. Decision of the comptroller affirming the disallowance by the auditor C. Letter to Ralph K. Blair, May 22, 1917, requesting refundment, to which no reply was received.

D-1 to D-2. Correspondence with the National Surety Company relative to failure of the Blair-Murdock Company, and taking over the contract for printing.

E. Final answer from Ralph K. Blair, stating that he can not refund \$33.25 overpaid the said corporation by Major Willard D. Newbill. Efforts to locate other members of the corporation resulted in failure.

THOS. G. HANSON,
Colonel, Q. M. Corps.

[First indorsement.]

WAR DEPT., Q.M.G.O.,
Aug. 20, 1917.

TO THE ADJUTANT GENERAL OF THE ARMY.

It is recommended that authority be granted to include in the estimate for support of the Army, fiscal year 1919, an item for the relief of Col. Thomas G. Hanson, Q. M. C., in within mentioned sum of \$181.26.

HENRY C. SHARPE,
Quartermaster General.

[Second indorsement.]

WAR DEPT., A. G. O.,
Aug. 22, 1917.

To the QUARTERMASTER GENERAL.

1. Approved as recommended in the 1st indorsement hereon.
By order of the Secretary of War:

T. O. MURPHY,
Adjutant General.

(Relief of Col. W. D. Newbill, \$39.25.)

FEB. 28, 1916.

From: Department quartermaster.

To: National Surety Company, No. 105 Montgomery Street, San Francisco, Calif.

Subject: Contract for printing—Blair-Murdock Co., F. Y. 1916.

1. In the matter of contract entered into by the Blair-Murdock Company, of San Francisco, California, with the United States Government (dated June 14, 1915), for furnishing necessary material and labor, etc., for printing, etc., required at headquarters, Western Department, during the fiscal year commencing July 1st, 1915, and ending June 30, 1916, you are advised, as surety under said contract, that said contractor is not now, nor for some days past, observing or performing the conditions of said

agreement, that "The contractor must be prepared to keep the office open and ready for work from 9.00 a. m. until 4.30 p. m., daily, Sundays and legal holidays excepted, to promptly comply, and to furnish proof and finish work without delay, so as not to retard public business."

2. Under the circumstances of the failure of the contractor to do work required under the contract and to comply with the stipulations of the contract according to the true intent and meaning thereof, notice is hereby given of the procedure authorized to be taken under conditions recited herein, i. e., "to supply the deficiency by purchase in open market, special contract, or in such other manner, as the contracting officer may elect, and the contractor shall be charged with the expense and additional cost, if any, resulting from such failure."

3. Definite advice is required as to whether the National Surety Company, as surety as aforesaid, elects to take over the Blair-Murdock Company's contract and continue the same to date of completion. In the event the National Surety Company elects to take over the said contract, the Department Quartermaster should be informed of the agency through which the printing shall be accomplished.

4. Notice is given that printing required at headquarters, Western Department, is being purchased in the open market pending reply to this letter of notification of the failure of the Contractor, the Blair-Murdock Company, to perform work under its contract.

5. Copy of contract referred to herein, is enclosed for your information, special reference being had to paragraphs 3 and 17 thereof.

6. For your further information, it may be remarked that the bond as executed by the National Surety Company, to cover the said contract, is of date June 14, 1915, in amount of \$1,000.

7. There is also enclosed copy of letter addressed to the Blair-Murdock Company, under date of February 26, 1916, bearing upon the subject, and to which no definite reply has been received to date.

8. Copy of this communication has been furnished the Blair-Murdock Company.

9. Immediate reply is requested.

Colonel, Q. M. Corps.

The BLAIR-MURDOCK Co.,
68 Fremont Street, City:

Following letter received in reply to above:

SAN FRANCISCO, CAL., March 3, 1916.

NATIONAL SURETY Co.,
New York.

DEAR SIR: Re Blair-Murdock Co.

Replying to your esteemed favor of February 28, beg to advise that the National Surety Co. elects to take over the Blair-Murdock contract and continue same to date of completion, viz, July 1, 1916.

You will please send your orders for printing under said contract to H. M. Alexander, 45 Ecker Street, and oblige

Yours, truly,

Original filed in P&M Branch No. 486.4 West Dept.

Appeal No. 26570.

MARCH 31, 1917.

Lieut. Col. W. D. Newbill, Quartermaster Corps, United States Army, applied December 19, 1916, for revision of the action of the Auditor for the War Department in disallowing, by settlement No. 39731, dated November 18, 1916, credit in part for certain payments, hereinafter more specifically explained, made to the Blair-Murdock Co. of San Francisco, Cal., for printing under that company's contract of June 14, 1916, the amount of the disallowance being \$13.

With respect to the items here involved the auditor in his disallowance states:

October, 1915.

Vou. 171: Disallowed in part Nov. 18, 1916: S.S.&T/1916..... \$2.00

PAYMENT FOR JOB PRINTING.

No. 27, 1,500 copies of Bulletins No. 52, 12 tokens, for which \$3 are charged for instead of 6 tokens, or \$1.50, the correct amount, making an overpayment

Two pages of this job could be printed at one impression.

No. 151, 300 copies G. C. M. O. No. 389, 4 tokens are charged and paid for for 2 tokens, the correct amount, or 50 cents, making an overpayment of 50

er, 1915.

Disallowed in part Nov. 18, 1916. S. S. & T/1916..... \$1.75

PAYMENT FOR JOB PRINTING.

No. 65, 1,750 copies G. O. No. 16, 224 tokens, at 25 cents, or \$56, are charged for instead of 217 tokens or \$54.25, the correct amount, making an over- of \$1.75.

an examination of the above item discloses the fact that it should have been in 112 tokens and that suspension should have been made in the sum of ad of \$1.75. The item consists of 32 pages of 8 by 10 inches, and two of res should have been printed on one side at the same time, as the contractor as 12 by 18 inches. These two pages should then have been printed on the e at the same time. In this manner 250 copies of the entire job (32 pages) ave been printed in 16 tokens and 1,750 copies in 112 tokens. In view of that the original suspension was made in the sum of \$1.75 this office can disallow any sum in excess of said amount. However, the printer has rpaid in the sum of \$28 and the full amount thereof should be refunded. ction is not taken it will be necessary for this office to have settlement No. opened by the Comptroller in order that the further sum of \$26.25 may be ad.

b.

Disallowed in part Nov. 18, 1916. S. S. & T/1916..... \$9.25

oucher covers payment in favor of the Blair-Murdock Co. for printing during th of December. Item 1. Special Orders No. 262. Payment for press- s been made on the basis of 10 tokens. This figure has been arrived at by the contractor 4 tokens for 300 copies of the completed special order, whereas kens should have been allowed for the 300 copies. Overpayment on this ounts to \$0.50. A similar overpayment has been made on items 3, 4, 8, 10, 6, 17, 18, 20, 21, 23, 24, and 26.

6—G. O. No. 29.—Payment for presswork on this item should have been the basis of 6 tokens instead of 12.

8—List of supplies.—As the contractor has been paid for double-price com- , the rules should have been set in the form, thus obviating the necessity of this item through the press twice. Total overpayment on this voucher of presswork, \$9.25.

ecision in this case depends upon the determination of the proper method ing impressions for work performed under the contract; and, with respect uestion, the contract provides in article 9, as follows:

work.—A token consists of 250 impressions, and where the press on hand ough to print with one impression two or more pages of the job or book form, wances for presswork will be in accordance therewith, viz: One impression each copy of a job, etc., regardless of the number of pages that can be properly it one time on the largest press named in the contract, printed and cut to purpose required."

I be seen from the article quoted that the unit of measure with respect to t therein provided was the token, which was to consist of 250 impressions. ection with the computation of impressions, in view of the provisions of this o the effect that, where the press on hand is large enough to print, with one ion, two or more pages of a job, etc., the allowance for presswork would be ance therewith; that is, on the basis of one impression and of the fact that, le 2 of the contract, the contractor is expressly required to have one press, ng at least 12 by 18 inches, it would appear that, in computing the number ssions, the basis was to be the greatest number of pages of a job that properly e printed at one impression on the presses at hand, the nature of each job ken into consideration, without regard to what press and actually been used umber of impressions that had actually been made.

In other words, under the provisions of this contract the contractor, in printing the jobs, was to be paid on the basis of the least number of impressions that might have been made had the work been done in a "workmanlike" manner as provided in article 1 of the contract.

In this connection it is noted that in article 2 of the contract it is stated that the presses which would be furnished by the contractor were as follows: Eight by 12 inches Gordon, 10 by 15 inches Gordon, 10 by 15 inches Gordon, 12 by 18 inches Gordon.

The items of the disallowance will now be considered in order.

Voucher No. 171, October, 1915; item 27, Bulletin No. 52.—The job involved in this item was a single sheet printed on both sides. The page size of the job was such that 2 pages might easily have been printed at one impression on the presses at hand, the paper being turned after the initial impression of each copy. But 1,500 impressions would thus be necessary, which, under this contract, constituted 6 tokens, on which basis payment should have been made.

The action of the auditor as to this item is affirmed.

Voucher No. 171, October, 1915, item No. 51, General Court-Martial Order No. 389.—This job is of the same page size as the one involved in item 27, and is in all other respects similar thereto. For the same reasons stated with respect to item 27, the action of the auditor as to the item here involved is affirmed.

Voucher No. 235, December, 1915, item No. 65, General Order No. 16, Headquarters, Western Department.—This job is finished in pamphlet form and consists of 32 job pages. The size of the job page in this case is 8 by 10 inches, and accordingly it is apparent that two such pages might easily have been printed at one impression on the contractor's 12 by 18 inch Gordon press. Only 16 impressions would thus have been required for one copy of the entire job, or 28,000 impressions (112 tokens) for the 1,750 copies under the order. The action of the auditor in disallowing \$1.75 as to this item is affirmed and, since the entire overpayment amounted to \$28, an additional disallowance of \$26.25 is made on this revision.

Voucher No. 123, January, 1916, item 1, Special Order No. 262.—The facts in this case with respect to printing conditions are identical with those in item No. 27. For the same reasons stated with respect to that item, the action of the auditor as to the item here in question is affirmed.

Voucher No. 123, January, 1916, item 96, General Order No. 29.—The action of the auditor with respect to this item is affirmed, for the same reasons stated with respect to item No. 27.

Voucher No. 123, January, 1916, item No. 98, rules printed on page relative to list of supplies.—Here both the vertical and the horizontal rules should have been set in the form and printed at the same time. The action of the auditor is accordingly affirmed.

The total disallowance of \$13 made by the auditor is affirmed and, for reasons hereinbefore stated, upon his revision a certificate of difference in the sum of \$26.25, on account of additional disallowance, will issue.

Revision is limited to the items of which revision is requested, and the right of revision as to remainder of the account is reserved.

W. W. WARWICK, *Comptroller.*

DEPARTMENT QUARTERMASTER, WESTERN DEPARTMENT,
December 12, 1916.

COMPTROLLER OF THE TREASURY,
Washington, D. C.

Appeal from disallowance by auditor.

1. In difference sheet No. 7, certificate No. 39731, dated Nov. 21, 1916, the Auditor for the War Department has made disallowances in part of three vouchers—for October, and December, 1915, and January, 1916—and as I do not agree with the auditor's finding, as set forth in the difference sheet referred to, appeal from such disallowances is hereby made, as follows:

October, 1915.

Voucher 171. Disallowed in part, November 18, 1916: S. S. & T./1916: \$2.00.

PAYMENT FOR JOB PRINTING—ITEM 327.

1,500 copies of Bulletin No. 52, 12 tokens, for which \$3 are charged and paid for, instead of 6 tokens, or \$1.50, the correct amount, making an overpayment of \$1.50. Two pages of this job could be printed at one impression.

135: Disallowed in part November 18, 1916: S. S. & T/1916: \$1.75.

of General Orders, No. 29, is attached. The auditor's finding is based on an impression only for each copy of this item, while I maintain, as in all the above items, that the contractor is entitled to two impressions where a single copy is printed on both sides, and that the amount charged and paid for is properly accounted for under the contract.

6. "Item 98—List of supplies.—As the contractor has been paid for double-price composition the rules should have been set in the form, thus obviating the necessity of running this item through the press twice. Total overpayment on this voucher account of presswork, \$9.25."

Copy of the list of supplies is attached. There are two kinds of rules in this item and it is impracticable to set horizontal and vertical rules at the same time; therefore, it was necessary to run the work through the press twice. This is the position taken in discussing the matter with the auditor, and in addition it was stated that it was believed the Government desired only a fair and reasonable return for the money expended. It is believed that any reputable printer will certify that the work performed on these press items gives the Government a fair and reasonable return and that the contractor is entitled to the prices charged and the allowances made in each item.

WILLARD N. NEWBILL,

Major, United States Army (Retired), Acting Quartermaster.

APRIL 2, 1917.

Mr. RALPH K. BLAIR,

Care of Curtiss Aeroplane Company, Buffalo, N. Y.

Disallowance by comptroller.

1. In connection with the contract entered into by the Blair-Murdock Co. with the United States for printing, covering the period July 1, 1915, to June 30, 1916, you are advised that the Comptroller of the Treasury has disallowed certain payments made by me to the Blair-Murdock Co. for items of printing during the months of October and December, 1915, and January, 1916, amounting to \$39.25.

2. This disallowance is due to a misinterpretation by me of the provisions of the contract, section 9, which reads:

"A token consists of 250 impressions, and where the press on hand is large enough to print with one impression two or more pages of the job or book form, the allowance for presswork will be in accordance therewith, viz: One impression only for each copy of a job, etc., regardless of the number of pages that can be properly placed at one time on the largest press named in the contract, printed and cut to suit the purposes required."

3. The disallowance of the comptroller is final, and unless the amount is restored to the United States by the contractor it will be necessary for me to do so from personal funds.

4. It is therefore requested that the Blair-Murdock Co., or its successors or assigns, assume this obligation, and in order to close the account send me a draft for the amount involved, \$39.25, for deposit with the Treasurer of the United States to my official credit.

W. D. NEWBILL,

By H. H. SARGENT,

Major, United States Army (Retired), Acting Quartermaster.

MAY 7, 1917.

[Lieut. Colonel W. D. Newbill, Q. M. Corps.]

Mr. RALPH K. BLAIR,

c/o Curtiss Aeroplane Company, Buffalo, N. Y.

Disallowance by comptroller.

1. Inclosed herewith is a copy of a letter written you under date of April 2, 1917, covering disallowance by the comptroller in my accounts of \$39.25, due to overpayment made you for printing.

2. To date I have received no reply to that letter, and for the purpose of settling my accounts a prompt refundment by you of the amount in question would be greatly appreciated.

W. D. NEWBILL,

By _____,

Major, United States Army (Retired), Acting Quartermaster.

JUNE 24, 1917.

K. BLAIR,
ghland Ave., Buffalo, N. Y.
 r refundment.

pril 2, 1917, and again on May 7, 1917 a letter was written you c/o Curtis Co., Buffalo, N. Y., requesting that you refund to me the sum of \$39.25 by the Comptroller of the Treasury in my accounts for the period July 1, 1916.

in question was an overpayment made by me to the firm of Blair-Murdock ating done under a contract in force during the fiscal year 1916. Every made to have the disallowance removed, without success, as the comptroller a clear case of overpayment, and the amount in question should therefore d to the United States. As stated above, two letters have already been u on this subject, and up to date I have not received a reply to either.

ere is a possibility of these letters having gone astray in the mails I take o again request that the amount disallowed be repaid to me in the form or a post office money order made out in favor of the Department Quarter- eastern Department.

action in this matter by you would be deeply appreciated for the reason ndment is not made soon the amount disallowed will be stopped against nd as the same was paid by me in good faith to the company of which you mber it only appears just that you should bear the responsibility for the that it should not be paid out of my personal salary.

g to hear from you in the near future, I am,
 irs truly,

By W. D. NEWBILL,
 H. H. SARGEANT,
Major U. S. Army, Retired, Acting Quartermaster.

CANADIAN AEROPLANES, LIMITED,
Toronto, Ontario, July 5, 1917.

D. NEWBILL,
ine Street, San Francisco, United States America.

IR: Your letter of June 24, just received. I do not understand, not having your letters of April 2 and May 17, spoken of in your communication, as mail ve been forwarded to me here.

he Blair-Murdock Co. in July, 1916, and have had nothing to do with the since that time. I would suggest that you communicate with Charles A. , who was still interested in the company after I left.

orry that I can not be of more assistance to you in straightening out this ut as I lost heavily in that company I can not see my way clear to assume of the obligations outstanding against it.

urs, very truly,

R. K. BLAIR.

Department Quartermaster.
 rtermaster General of the Army.

Inclusion of \$39.25 in remedial legislation for relief of Willard D. Newbill.

losed herewith are two copies of correspondence relative to the recovering i, overpayment to the Blair-Murdock Co., on voucher 171, October, 1915, her 135, December, 1915, \$28; and voucher 123, January, 1916, \$9.25; with that they be submitted to the Secretary of War for inclusion in remedial on for my relief against the suspension by the auditor in the sum of \$39.25.

June 14, 1915, the Blair-Murdock Co., a corporation existing under the laws tate of California, entered into a contract to furnish labor and material for the y printing for Headquarters, Western Department, San Francisco, Cal., and

on or before February 28, 1916, the company failed before I had any knowledge of the suspensions against me.

3. The inclosed copies of correspondence are as follows:

A-1 to A-3: Appeal from disallowance by auditor.

B-1 to B-7: Decision by the comptroller affirming the disallowance to the auditor.

C: Letter to Ralph K. Blair, May 2, 1917, inclosing copy of letter sent him April 2, 1917, marked "D."

E: Letter to Ralph K. Blair, June 24, 1917.

F: Final answer from Ralph K. Blair, stating that he can not refund the \$39.25 overpaid the said corporation.

G: Correspondence with the National Surety Co. relative to failure of the Blair-Murdock Co. and continuing furnishing the necessary printing under the terms of the contract.

WILLARD D. NEWBILL, *Colonel, Quartermaster Corps.*

t: Loss of public funds.

nclosed herewith is one copy of report of board of officers convened at head-
rs, Coast Defenses of Cristobal, Fort De Lesseps, Canal Zone, August 7, 1917, per
aph 1, S. O. 130. This board was convened to investigate, report upon, and make
mendations regarding the loss of certain public funds for which Capt. Lewis J.
; Quartermaster Officers' Reserve Corps, is accountable. The proceedings of
ard are approved and it is recommended that the necessary steps be taken to
ngress to relieve Capt. Emery of his accountability for \$139, the total amount
him in transferring funds from the bank at Cristobal to Fort Sherman.

conditions at Pier 11, where the harbor boats are docked, are such that it is
ly dangerous to load freight, but is dangerous to persons in boarding harbor boats
dock there. At the present time no other place is available for these boats to
nd there will not be any other place until such time as a new dock is construct-
mction with the Headquarters Canal Department of Cristobal. It would
from the proceedings of the board that Capt. Emery exercised due care on the
on of this accident and that the loss of the funds was not through any neglect on
rt.

A. G. CRONKHITE,
Brigadier General, Commanding.

GDG/TAS-(AGO 123.05).

WAR DEPARTMENT,
JUDGE ADVOCATE GENERAL'S OFFICE,
October 17, 1917.

72-510.

TO THE ADJUTANT GENERAL:

1. In the matter of the report of the board of officers convened at headquarters, Coast Defenses of Cristobal, Fort de Lesseps, Canal Zone, August 7, 1917, per paragraph 1, Special Orders No. 130, referred to this department for remark, it appears from a review of the proceedings that the board fixed the responsibility for the loss on August 6, 1917, of certain Government funds for which Capt. Lewis J. Emery, Quartermaster Officers' Reserve Corps, was responsible.

2. In effect, the board considered certain affidavits and examined all available witnesses to the transaction. The investigation disclosed that on August 6, 1917, as coast defense quartermaster, Capt. Emery drew an official check for the payment of troops at Fort Sherman, Canal Zone; that the money was drawn from the bank, was placed in four bags and taken to dock 11 in quartermaster truck, from which it was proposed to transfer the money to the steamer *A. G. Forse*. The testimony disclosed that it was customary to call on "near-by enlisted men" to assist in such transfer. On the date in question it became necessary, in order to reach the boat, to pass through a box car the floor of which was about 5 feet above the guardrail of the dock to which the boat was anchored and that the guardrail of the boat was about 1 foot below the dock. Capt. Emery directed one Sergt. Brooks to assist in such transfer and to pass the bags from the car to a man on the dock; that Sergt. Brooks passed the sack which he had to Corpl. Squibbs and then jumped down and carried the sack onto the boat. Capt. Emery likewise instructed Corpl. Hennings, but Corpl. Hennings, however, disobeyed such instructions and jumped with the bag of money lying in the crook of his elbow; that when he landed on the deck the jolt of landing caused the bag to fall from his arms; and that, in so falling, the string and seal around the neck of the bag was loosened, causing about \$300 to be scattered over the boat, while the remainder of its contents fell overboard. It further appeared that the sack contained \$1,150; that there was recovered of this amount the following: Three hundred and twenty-two dollars from the deck of the boat; \$273 from the bag at the bottom of Limon Bay; and \$416 from the bottom of the bay by a diver from the U. S. S. *Tallahassee*. The difference, \$139, represents the amount which apparently fell into the water and was not recovered by the diver, who, it appears, worked for a period of two days at a depth of 30 feet in attempting to recover all money which had escaped from the bag when it fell overboard. The above and foregoing is substantially a digest of the evidence submitted to the board convened, as before stated, for the purpose of fixing the responsibility, if any, of Capt. Lewis J. Emery.

3. After closely examining and considering all of the testimony, including that of "the bank officials, and all the circumstances leading up to the loss of funds," as stated by the board, it was concluded that the loss of the \$139 was occasioned by an accident and through no fault or neglect of Capt. Emery, the responsible and account-

icer. The board expressly found and concluded "that all due care was used in handling and transporting this money." Then, by way of general conclusion, it recommended that Capt. Emery be relieved of the responsibility and ability for the loss of the said \$139. It is the opinion of this office that the findings of the board are justified and that could be considered as conclusive. And this office is of the further opinion steps should be taken to have Congress relieve Capt. Emery from his accountability for the loss of the \$139, and to that end it is recommended that the following private bill be submitted to Congress:

An Act for the relief of Lewis J. Emery.

enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby, authorized directed to pay to Lewis J. Emery, captain, Quartermaster Officers' Reserve out of any moneys in the Treasury not otherwise appropriated, the sum of \$139, the amount of a certain sum of money which was accidentally lost at Cristobal, Zone, on the sixth day of August, nineteen hundred and seventeen, in trans- said money, which belonged to the United States of America, from the bank of Sherman, in said zone, which said money was in no way lost by, through, or as a result of the fault, neglect, or omission of the said Lewis J. Emery.

HERBERT A. WHITE,
Acting Judge Advocate General.

[Fifth Indorsement.]

WAR DEPARTMENT,
ADJUTANT GENERAL'S OFFICE,
October 27, 1917.

The Quartermaster General, approved as recommended by the Judge Advocate General in the preceding indorsement.
Order of the Secretary of War:

L. W. DEWEY, *Adjutant General.*

PROCEEDINGS OF A BOARD OF OFFICERS WHICH MET AT CRISTOBAL, CANAL ZONE, PURSUANT TO THE FOLLOWING ORDER.

ALL ORDERS, } HEADQUARTERS COAST DEFENSES OF CRISTOBAL,
No. 130. } *Fort de Lesseps, Canal Zone, August 7, 1917.*

A board of officers to consist of—

Capt. Earl Biscoe, Coast Artillery Corps,
Capt. Wade H. Carpenter, Coast Artillery Corps, and
Capt. James W. Lyon, Coast Artillery Corps.

met at 1 p. m. this date to investigate and report upon and fix the responsibility for the loss on August 6, 1917, of certain Government funds for which Capt. J. Emery, quartermaster, Officer Reserve Corps, was responsible.

The proceedings will be submitted in quadruplicate.
Order of Col. Lamoreux.

T. A. TERRY,
Captain, Coast Artillery Corps, Adjutant.

CRISTOBAL, CANAL ZONE, August 7, 1917.

A board met pursuant to the foregoing order at 2 p. m. this date.
Present:

1. Earl Biscoe, Coast Artillery Corps.
2. Wade H. Carpenter, Coast Artillery Corps.
3. James W. Lyon, Coast Artillery Corps.

The board then proceeded with the investigation of the loss of Government funds on August 6, 1917.

The following witnesses were called before the board and closely examined. Affidavits of each attached herewith (certificate of Capt. Lewis J. Emery, quartermaster, Officer Reserve Corps, and Mr. Cecil F. Hicks).

1. Lewis J. Emery, quartermaster, Officers' Reserve Corps, A.
2. Sgt. 1st Class Bruno B. Brooks, Quartermaster Corps, B.
3. Sgt. Jesse W. Anderson, Quartermaster Corps, C.

Corpl. Walter A. Hennings, Coast Artillery Corps, Fifth Company, Fort Sherman, D.
Pvt. 1st Class Clarence M. Squibb, Coast Artillery Corps, Fifth Company, Fort Sherman, E.

Serzt. George L. Gault, Quartermaster Corps, F.

Pvt. 1st Class George E. Outlaw, Quartermaster Corps, G.

Pvt. Walter D. Higginbottom, Coast Artillery Corps, First Company, Fort Sherman, H.

Mr. Cecil F. Hicks, assistant cashier Commercial National Bank, I.

From all the testimony available, including the bank officials, the circumstances leading up to the loss of funds were as follows:

The money, \$23,580.44 in coin, to pay the troops at Fort Sherman was put up by the bank in four money bags and tied and sealed with the bank seal. A Government check to cover the amount was given the bank by Capt. Lewis J. Emery, quartermaster, Officers' Reserve Corps.

The four bags were loaded into the Quartermaster Corps truck by quartermaster employees, under the supervision of Capt. Lewis J. Emery, quartermaster, Officers' Reserve Corps, and Serzt. (First Class) Bruno B. Brooks, Quartermaster Corps (pay clerk), and proceed to Pier 11, Panama Railroad, Cristobal, Canal Zone. At Pier 11 the truck was unloaded and the four money bags were carried to an empty box car, the floor of which was on the main dock level, standing on the sea track next to the boat running to Fort Sherman. The floor of this car was about 5 feet above the guard rail of the dock to which the boats tie up. The guard rail of boat was about 1 foot below the dock.

One Corp. Walter A. Hennings, Fifth Company Coast Artillery Corps, Fort Sherman, Canal Zone, who was waiting for the boat to go to Sherman to be paid, was called upon by one Serzt. George L. Gault, Quartermaster Corps, to assist in carrying the money from the truck to the boat. It had been a long established custom to call on any soldier standing around to assist in handling the heavy sacks of money. Instructions had been given this day to hand the sacks of money from the box car to the guard rail of the dock and then to the boat. One sack of gold had thus been passed. Corp. Hennings who was carrying a sack containing 1,150 silver dollars in his arms, which sack weighed between 60 and 70 pounds, jumped with the sack in his arm from the floor of the box car to the wharf. His arms were not strong enough to hold the sack when he landed and the sack slipped through his arm and hit the rail of the boat in such a way that the heavy cord tied around the mouth of the sack and running through the lead seal was cut on the metal of the boat rail. The mouth of the sack opened and silver dollars were strewn over the boat deck and into the water. The bag itself went overboard with some money in it.

A diver from the U. S. S. *Tallahassee* was put to work immediately and worked for two days recovering money from the soft mud at the foot of the pier piles. The bag itself was recovered with about 200 silver dollars intact. The bag was undamaged and all of the loose money was lost out of the mouth of the bag.

The bottom where the money fell is very soft and muddy, making it extremely difficult to recover the loose silver dollars (the water was about 30 feet deep).

The following money was recovered:

From boat deck.....	\$322
From bag at the bottom.....	273
From the bottom.....	416
Total.....	1,011

The board is of the opinion that the loss of \$139 was occasioned by an accident and through no fault or neglect of the responsible and accountable officer, Capt. Lewis J. Emery, quartermaster, Officers' Reserve Corps. That all due care was used in the handling and transporting this money.

The board recommends that the responsible and accountable officer, Lewis J. Emery, quartermaster, Officers' Reserve Corps, be relieved of the responsibility and accountability of the loss of one hundred and thirty-nine dollars (\$139).

There being no further business before it, the board adjourned sine die.

E. BISCOE,
Captain, Coast Artillery Corps, President.

J. W. LYON,
Captain, Coast Artillery Corps, Recorder.

W. H. CARPENTER,
Captain, Coast Artillery Corps, Member.

AUGUST 11, 1917.

Approved.

T. N. LEMOREUX.

A.

FORT DE LESSEPS, CANAL ZONE, August 10, 1917.

pt. L. J. Emery, quartermaster, United States Reserves, certify that the
g facts are correct to the best of my knowledge and belief:

August 6, 1917, as coast defense quartermaster, I drew an official check for pay-
troops at Fort Sherman, Canal Zone. The money was drawn from the bank
bags and taken to Dock 11, in Quartermaster Corps truck; there Sergt. First
Brooks (pay clerk) and Pvt. Outlaw started to carry the money from truck to
the sacks were very heavy (payment being made in gold and silver), and
Gault, Quartermaster Corps, and Corpl. Henninges, Coast Artillery Corps,
Company, Fort Sherman, assisted in carrying the bags.

It was necessary to pass through a box car down to the dock and then to the boat,
master tug *Major Albert G. Forse*. When in the box car I directed that the
money be passed down from car to dock. Sergt. Brooks passed the sack he had to Corpl.
Gault on the dock then jumped down and carried the sack on the boat; Corpl.
Henninges was next, and as he stepped to car door I called to him to pass the bag down,
of which he jumped, the sack slipped from his arms, struck the the guard
boat, which cut the seal, and the contents spilled partially on the boat and
partly in the water. I had the money on the boat gathered up, and went imme-
diately to the telephone and arranged with Commander Gross, United States Navy,
to send a diver from the *Tallahassee* to hunt for the money.

The sack which dropped contained \$1,150; the same afternoon, August 6, \$658 was
lost, August 7, \$119, August 8, \$223, and August 9, \$11, leaving a loss of \$139.
The water where the money dropped was about 30 feet deep and a thick, muddy
bottom, making recovery very difficult.

L. J. EMERY,

Captain, Quartermaster, United States Regulars.

B.

F. FORT DE LESSEPS, Canal Zone, ss:

Initially appeared before me the undersigned authority, one, Sergt. First Class
W. Brooks, Quartermaster Corps, who being duly sworn according to law
and says:

August 6, 1917, when the automobile arrived at the Pier 11, at about 1.45 p. m.
two bags of money, the pay rolls for Fort Sherman, Canal Zone, and my slicker
were taken for the boat. I had gone a few yards when Sergt. George L. Gault, Quarter-
master Corps, came and offered to help, due to the fact that the bags were getting
heavy, and I was on the verge of putting them down. As it has been a custom ever
to have been here, December 16, 1916, to call on nearby enlisted men to help
he move the money, due to its weight, I gave one of the bags to Sergt. Gault. I was the
one to go on board the steamer *A. G. Forse*. In getting on this boat it was neces-
sary to go from the platform of the dock, through a box car, then to the string piece,
then to the boat. When I got through the box car I passed my bag of money to
First Class Clarence M. Squibb, First Company, Fort Sherman, Canal Zone, who
was on the stringpiece, picked up the bag of money, and went on board the steamer
Forse. When I got on board the steamer I heard Capt. Emery tell Corpl. Walter
Henninges, Fifth Company, Coast Artillery Corps, Fort Sherman, Canal Zone, to
pass the bag to the man on the dock. Instead of this the corporal jumped with the
money lying in the crook of his elbow. When he landed on the deck the jolt
caused the bag of money to fall out of his arms. When it fell it hit the
rim of the steamer; the force of the blow caused the string and seal, put on
the bag, to come off, and about \$300 scattered on the boat, the remainder fell
board. In falling overboard the open end of the bag was turned towards the
mouth of the bay and beyond a doubt a large amount of its contents left the bag and
scattered over the bottom of Limon Bay.

Bruno W. Brooks,

Sergeant, First Class, Quartermaster Corps.

Witnessed and subscribed before me this 8th day of August, 1917.

T. A. TERRY,

Captain, Coast Artillery Corps, Adjutant.

C.

POST OF FORT DE LESSEPS,
Canal Zone, ss:

Personally appeared before me, the undersigned authority, one Sergt. J. W. Anderson, Quartermaster Corps, who, being duly sworn according to law, deposes and says:

That on August 6, 1917, about 1 p. m., while assisting Capt. Emery to get aboard the steamer *Forse* with the money to pay the troops at Fort Sherman, Corporal Hennings, Fifth Company Coast Artillery Corps, Fort Sherman, Canal Zone, was carrying a bag containing silver dollars and when he jumped from car to dock, dropped the bag so that it fell, striking the guard-rail of boat, bursting open. The bag and part of the loose money fell overboard and about \$300 fell on to the deck of boat.

This at Cristobal, Canal Zone, about 1 p. m., August 6, 1917.

Further deponent saith not.

OF FORT DE LESSEPS,
Canal Zone.

Personally appeared before me, the undersigned authority, one Sergt. George L. Quartermaster Corps, who, being duly sworn according to law, deposes and says: I am delivering some quartermaster supplies to Dock 11 with United States motor boat. I observed the paymaster's clerk and Pvt. Outlaw carrying four bags of money to the dock; they were very heavy, and I relieved Sergt. Brooks of one of the bags and started down the dock with it. The two bags that Pvt. Outlaw had were heavier than the one I was carrying and I also took one from him. I proceeded to the boat that was docked alongside the pier, and there was a box car between the boat and the upper part of the dock, and the only way to get to the boat was by going through the car. As the two bags I was carrying became so heavy that I could not carry both, I asked Corp. Hennings to carry one into the car for me, which

in getting the money into the car Sergt. Brooks got down into the boat to receive the money. Corp. Hennings took the bag he had carried into the car in his arms, and in supporting the other, and jumped from the car to the dock, and as he struck the force of the jump plus the weight of the money was so great that it forced the car open and the bag slipped out of his hands, striking the dock slightly, and the guardrail of the boat, where the string broke, scattering the money over the deck and in the water, and the bag rolled overboard.

at Cristobal, Canal Zone, about 1 p. m., August 6, 1917.
 Her deponent saith not.

Spencer, Sam.

Memorandum for Capt. Daly:

Appropriations for payment of loss of and damage to property incident to the training, practice, and operations of the Army would be applicable to loss of live stock from target practice, if the injuries be accidental. But in this case it is held by the Judge Advocate General, whose view is concurred in by the Assistant Secretary of War, that the injuries resulted from the tort of the officer in charge and that he, and not the Government, is personally liable for the damages. I know no existing law which will authorize payment of the claim from public funds; to make such a payment would be an assumption by the Government of the personal liability of one of its officers—which is beyond the scope of executive authority. The question of relief of Maj. Harlee is one for consideration by Congress.

I. N. T.

FORT NIAGARA, N. Y., June 13, 1917.

From: Capt. A. F. Commiskey, Cavalry, Detached Officers' List, surveying officer, National Matches, 1916.

To: Col. S. W. Miller, executive officer national matches, 1916.

Subject: Report of cattle killed and wounded at the national matches.

1. In compliance with special order No. 14, headquarters national matches (copy of order attached hereto), dated November 22, 1916, Washington, D. C., I submit the following:

On October 9, 1916, five cattle were killed and three cattle wounded on the rifle range at State camp, Fla., by rifle fire during the shooting at the national matches, 1916.

The cattle were as follows:

1 brindle steer, 2 years old, value.....	\$20.00
1 brown milch cow, 5 years old, value.....	40.00
1 yellow-pied milch cow, 4 years old, value.....	40.00
1 yellow-pied milch cow, 6 years old, value.....	40.00
1 dun-pied steer, 3 years old, value.....	30.00

attle wounded were as follows:

-pied steer, 3 years old, damage.....	\$10.00
dun-pied steer, 4 years old, damage.....	10.00
-pied white milch cow, 3 years old, damage.....	10.00

ese cattle were the property of Mr. Sam Spencer, Route B, Jacksonville, Fla. im is made in two letters from the owner of the cattle for damages (see letters "Exhibits A" and "B," attached hereto).

e cattle were on the range which was fenced in, government property, and n by the officer in charge of the range, Maj. William C. Harlee, United arine Corps, assistant executive officer national matches.

gh Maj. Harlee's attention was called to the fact that the cattle were on the e, considering the loss of time and therefore expense to the Government ould be caused by the suspension of the firing, decided to continue the firing, used the killing and wounding of the cattle.

of the opinion that his decision was justified by the fact and circumstances. j. Harlee's statement marked "Exhibit C" attached hereto.)

e owner of the cattle was aware of the fact that firing was going on at the ge. This cattle has been driven off and he had not prevented their return nge.

of the opinion that in this he partially contributed to the cause of the killing attle. (See statement of Charles Slater, quartermaster sergeant, first class, l Guard, Florida, marked "Exhibit D," attached hereto.)

w now enforced in Duval County, Fla., where the range is situated, seems to ttle to go at large and does not require them to be within fences on the owner's See letters from United States district attorney, southern district, Florida, "Exhibit E," attached hereto.)

nsidering all the evidence I have been able to obtain, I am of the opinion damages claimed are caused by the rifle firing on the range; that it was not ble for Maj. Harlee to stop the firing and drive the cattle off, and that the e cattle, Mr. Sam Spencer, was not entirely at fault for having his cattle nge.

efore recommend that he be allowed damages as follows: Twenty-five dollars animal killed and \$10 for each animal wounded; \$155 in all.

ason for allowing \$25 for each animal killed is that this was Mr. Spencer's m as to the value of the cattle. (See letter from Mr. Sam Spencer, dated 18, 1916, Jacksonville, Fla., marked "Exhibit A," attached hereto.)

ceived the last letter from Mr. Sam Spence at Fort Niagara, N. Y., on the a., 1917. I wrote him as required by paragraph 3, Circular 22, War Depart- ashington, D. C., dated April 18, 1910. (Letter marked "Exhibit F," attached

ply accepting the findings of this report was received at Fort Niagara, N. Y., 1917. (Letter dated June 12, 1917, marked "Exhibit G," attached hereto.)

By order of the Secretary of War:

EDWARD T. DONNELLY,
Adjutant General.

[Fifth indorsement.]

WAR DEPARTMENT,
JUDGE ADVOCATE GENERAL'S OFFICE,
July 16, 1917.

To THE ADJUTANT GENERAL:

1. Mr. Sam Spencer, rural route B, Jacksonville, Fla., presents a claim for \$155 as damages for 5 head of cattle killed and 3 injured on the Black Point Rifle Range, Fla., October 9, 1916, being \$25 for each animal killed, and \$10 each for those wounded. The cattle strayed onto the rifle range during the national matches there; came within range of the rifles during practice; and were struck by bullets from the rifles during the practice. Under the local law it was permissible for the animals to run at large, and, although it appears they had been driven off the rifle range the previous day, they had again strayed onto the range through a gate that had been left open by some one. The officer in charge of the practice at the time was advised of the presence of the animals on the range and of their proximity to danger from the rifle firing, but he considered that he would not be justified in discontinuing the rifle practice long enough to remove the animals. His statement is as follows:

"When it was reported to me, during the middle of the forenoon, that several cattle were behind the butts, I did not deem the loss of the cattle commensurate with the loss of time necessary to stop work and drive off the cattle. One hundred and fifty targets, used by about 50 teams of about 1,000 shooters from all parts of the country, as far west as California and Alaska and served by about 600 officers and men, were in operation, and to drive off the cattle it would have been necessary to suspend plans, all this, and moreover, to disjoin a program upon which all plans were made and dates set for future movements. I therefore considered that it would be more advisable to continue the firing and risk shooting the cattle, and gave directions accordingly."

2. In view of the circumstances mentioned, the case is referred to this office for an opinion as to the legal points involved, the Quartermaster General suggesting the question as to "the liability of the Government for the killing of the animals while trespassing on Government land, and for those injured but not killed and which were in possession of the owner according to the latest knowledge."

3. It appears quite plain from the facts stated that the claimant is legally entitled to recover the amount of damages sustained by him in the killing and injuring of his cattle. The law on this point is thus stated in Bigelow on Torts:

"A word may be added in regard to trespassing animals. The law is very plain and natural; trespassing will seldom justify killing or maiming, or even detaining upon a claim for anything more than reimbursement of necessary expenses and payment of damage done. And if detained, the animals must be taken care of and properly treated. On the other hand, if driven away, that must be done without unnecessary violence: such violence would be trespass. For example, the defendant finding the plaintiff's horse straying upon his premises, sets a dog upon it, and the horse is seriously hurt. The defendant is liable in damages."

4. There is, of course, the question of liability of the owner of the cattle for their trespassing upon the Government reservation. This is governed by the local laws.

bove, it was lawful for the cattle to run at large, since the locality has the once law. Section 1223, Florida Compiled Statutes, set forth the requirement the character and construction of fences as inclosures against cattle running and section 1234 provides:

trespass or damage be committed on any garden, orchard, plantation, or, not being fenced or inclosed as above provided, by the eruption, breaking in of any cattle, horse, sheep, goat, or swine, the owner of the same shall be liable to answer for such trespass, or to make good or satisfy any damage or loss that shall happen or be committed by reason thereof: and in case any person shall kill, hurt, or destroy, or cause to be killed, maimed, hurt, or destroyed any animal so trespassing or breaking into any garden, orchard, plantation, or, not fenced or inclosed in manner as by this chapter is directed, such person shall be liable to make good to the owner thereof all such injuries and damages he shall thereby: the same to be recovered before any court having jurisdiction of the same.

As it appears in this case that the cattle strayed upon a rifle range through the fault of the claimant without claimant's fault it would seem clear in view of the statute quoted above that he could not be held liable for any damage that may have been caused by the cattle.

It would seem equally clear that the claimant is entitled to recover for damages sustained by him on account of the shooting of his cattle. But as the fault was that of the animals under the circumstances was a tort the officer responsible is not liable. His duty in directing the rifle matches did not legally require him to proceed with the firing in disregard of the presence of the cattle when he knew they were within rifle range, as would have been the case had he been directing military operations in war. It is well settled that the United States is not liable for the torts of its officers or agents, but they alone are legally responsible for the same. Digest of Opinions, J. A. G., page 242 and note 4.

As the officer technically directing the rifle matches at the time is regarded as liable for the damages claimed in this case, the explanation which he makes is not sufficiently satisfactory to justify the department in recommending to Congress that the department assume the obligation and that Congress appropriate the necessary funds for the settlement of the claim. I recommend that this be done. The claimant appears to be reasonable.

BLANTON WINSHIP,
Acting Judge Advocate General.

and:

WM. M. INGRAHAM,
Assistant Secretary of War.

SPECIAL ORDERS, No. 14.

The appointment of a board of officers not being practicable, Capt. A. F. Commiskey, Cavalry, detached officers' list, quartermaster, is appointed surveying officer to make report required by Circular No. 22, War Department, Washington, April 18, 1910, as to the alleged loss or damage to certain cattle, the property of Mr. Sam Spencer, Route B, Jacksonville, Fla., alleged to have been killed or injured by rifle fire during the national matches held at State camp, Jacksonville, Fla., October 9-25, 1916.

S. W. MILLER,
Colonel of Infantry, Detached Officers' List.
Executive Officer.

EXHIBIT A.

JACKSONVILLE, FLA., October 18, 1916.

Col. S. W. MILLER,
Executive Officer National Rifle Match, State Camp Grounds, Black Point, Fla.

SIR: I have the honor to report to you that on Monday, October 9, 1916, the following cattle, belonging to me, were shot and killed by the riflemen on the range: One brindle steer 2 years old, 1 brown milch cow 5 years old, 1 yellow-pided milch cow 4 years old, 1 yellow-pided milch cow 6 years old. And the following cattle, belonging to me, were wounded by them to such an extent that they are a total loss: One yellow-pided steer, 1 dun-pided steer, 1 white and dun-pided steer, 1 yellow and white pided milch cow. The dun-pided steer has since died.

These cattle were all good range cattle and in fine condition and were worth at least \$25 per head.

I shall be glad to furnish you all detailed information in this matter you may require. These cattle were in plain view behind the targets when the shooting began, and the attention of the officer on the grounds was called to this fact by the keeper of the camp grounds, who suggested that the cattle should be driven out before the shooting began, but there was no effort made to do so, and the shooting began and the cattle were killed as stated.

All my cattle were driven out of the grounds the day before, but the gate was left open Sunday night and so the cattle got in that night and were killed next day.

I request you to give this matter proper direction for the settlement and secure payment as soon as possible.

Thanking you for your courtesies,

Yours, very respectfully,

SAM SPENCER,
Route B, Jacksonville.

A true copy.

EXHIBIT B.

JACKSONVILLE, FLA., November 29, 1916.

MR. ARCHIBALD F. COMMISKEY,
Captain of Cavalry, United States Army,
War Department, Washington, D. C.

DEAR SIR: Yours of the 23d duly received and appreciated.

I am pleased to observe you have been appointed surveying officer to make report on my claim for loss of cattle killed and wounded on the rifle range at Black Point, Fla., on October 9, 1916, as reported by my letter of October 18, 1916.

The number and description and value of the cattle killed outright:

1 brindle steer, 2 years old.....	\$20.00
1 brown milch cow, 5 years old.....	40.00
1 yellow-pied milch cow, 4 years old.....	40.00
1 yellow-pied milch cow, 6 years old.....	40.00

The number and description and value of those which have died from the wounds received:

1 dun-pied steer, 3 years old.....	\$30.00
------------------------------------	---------

per of those wounded and not killed, description and value, with statement on made of same:

ow-pied steer, \$30; shot through shoulder, crippled badly; damage at least my possession.

and dun-pied steer, 4 years old, \$30; shot through hip, crippled badly; least \$10; still in my possession.

ow and white-pied milch cow, 3 years old, \$40; shot in hind leg; damage at still in my possession.

EXHIBIT B.

ppreciate your kind assistance in getting this claim before Congress next nd having the claim paid as soon as possible, as I can not well afford the loss venience, but I am confident from what the officers told me here that the is to treat me right at once.

g you again for your continued courtesies, I am rs, very truly.

SAM SPENCER,
Route B, Jacksonville.

EXHIBIT C.

T OF MAJ. WILLIAM C. HARLEE, U. S. M. C., ASSISTANT EXECUTIVE OFFICER NATIONAL MATCHES, 1916, CONCERNING SHOOTING OF CERTAIN CATTLE.

t was reported to me, during the middle of the forenoon, that several cattle nd the butts, I did not deem the loss of the cattle commensurate with the e necessary to stop work and drive off the cattle. One hundred and fifty sed by about fifty teams of about 1,000 shooters from all parts of the country t as California and Alaska and served by about 600 officers and men were in , and to drive off the cattle it would have been necessary to suspend all this, eover, to disjoin a program upon which all plans were made and dates set ; movements. I therefore considered that it would be more advisable to the firing and risk shooting the cattle, and gave directions accordingly.

: Cattle on rifle range.

[Fourth indorsement.]

lying with request for further information on the attached subject, you are that I was directed by the adjutant general of Florida to see that all cattle iven off the State camp grounds not later than Sunday, October 8, 1916, and te in the afternoon had all the cattle we could find except my own three cows out of the gate and the gate closed.

Monday October 9, at about 3 o'clock, I noticed that there were quite a large of cattle directly behind the 200-yard butts and about 500 yards from the butts ected the range officer's attention to them; he said that Maj. Harlee's attention en called to the cattle and the major had ordered the firing to continue. ; a little later advised that three head of the cattle had been hit and called the of some of the cattle up on the telephone and advised him that some of his cattle n the rifle range and in danger of being killed and that firing would commence lock the next morning; he said he would come over early in the morning and em out.

DEPARTMENT OF JUSTICE,
OFFICE OF UNITED STATES DISTRICT ATTORNEY,
SOUTHERN DISTRICT OF FLORIDA,
Jacksonville, Fla., November 13, 1916.

Col. SAMUEL WARREN MILLER,
United States Infantry, Washington, D. C.

SIR: I have been delayed in answering your verbal request given to the clerk concerning the matter of the cattle killed during the rifle shoot at Black Point. I have been out of the city at Washington and also for a term of court at Key West.

There is no law in force in Duval County requiring the owner of cattle to keep his cattle fenced up; the so called no-fence law being in force in some counties but not in Duval.

I understand this is the information you wanted; if I can give you any further information in the matter, please let me know.

Inclosed you will find the papers left in the office.

Yours, very truly,

United States Attorney,
By FRED BOTTS,
Assistant United States Attorney.

JACKSONVILLE, FLA., *January 2, 1917.*

Capt. ARCHIBALD F. COMMISKEY,
War Department, Washington, D. C.

SIR: Referring to your communication of November last, with reference to the injury of certain cattle at the Black Point Rifle Range, Black Point, Fla., I beg to say that a very strenuous term of court has prevented this matter from being properly investigated up to this time.

I have looked up the statutes and am unable to find any provision covering a matter of this kind. In the absence of a special statute of course suit could not be brought against the Government, and it seems to me, therefore, that it is optional in this case whether or not the Government will pay this claim, depending, it seems to me, upon what recommendation the military authorities should make.

I am of the opinion that the matter should be presented to and handled entirely by the military authorities, as they are in position to secure information that would show whether or not the claim is just.

Yours, very truly,

United States Attorney.
By FRED BOTTS,
Assistant United States Attorney.

SAM SPENCER.

The F. H. & A. H. Chappell Co. Anthracite and Bituminous Coal. 286 Bank Street.]

NEW LONDON, CONN., July 18, 1917.

OF THE QUARTERMASTER,
*Headquarters Northeastern Department,
25 Huntington Avenue, Boston, Mass.*

in of Capt. F. J. Burnham.)

Herewith enclosed please find four bills for advertising, which were contracted at the time that I recruited a motor truck company for the Quartermaster Corps.

At the time that these advertisements were inserted in the local papers I had not had instructions from your office to the effect that the department had no authority to allow any payments for bills for advertising.

It would seem to me that if this matter were taken up properly with the department that these bills could be paid. I have interviewed the various newspapers and they are not inclined to contribute this advertising, inasmuch as they have not contributed from time to time advertising for similar purposes. May I hear from you in regard to the enclosed?

We have received several inquiries from a number of the young men who have been inducted into this motor truck company as to when they are liable to be called out. Can you give me any information regarding this?

Very respectfully, yours,

HENRY C. CHAPPELL.

HEADQUARTERS NORTHEASTERN DEPARTMENT,
OFFICE OF THE QUARTERMASTER,
Office of the Quartermaster, Boston, Mass., July 20, 1917.

Quartermaster.

Capt. Henry C. Chappell, Q. M., U. S. R., care F. H. & A. H. Chappell Co., Bank St., New London, Conn.

Subject: Vouchers for advertising.

In reference to your letter of the 18th instant, you are advised that Par. 499 A. R. prohibits the publishing of advertisements prior to obtaining authority from the War Department. With a view of taking the matter up with the War Department and obtaining, if possible, authority to pay these accounts, Request for Authority to Issue, on Standard Form No. 2, is enclosed herewith for your signature.

Also each of the accounts enclosed with your letter above referred to have been put on proper form for settlement and are enclosed herewith. Attached to each of these forms is a memorandum explaining the action to be taken in each case in settling, signing the voucher, and so forth.

Please have all papers properly completed and signed and return same to this office together with this letter, at your earliest convenience.

In direction of the Quartermaster:

FRANK GEERE,
Captain, Q. M. Corps.

[First Indorsement.]

OFFICE OF THE QUARTERMASTER GENERAL,

September 5, 1917.

To: The Department Quartermaster, Northeastern Dept., No. 25 Huntington Avenue,
Boston, Mass.

1. Returned, inviting attention to the fact that the publication of the advertisement without the prior written authority of the Secretary of War was in violation of the law (sec. 3828, R. S.) and Army Regulations (A. R. 599), which are explicit and mandatory. Besides these restrictions the Comptroller of the Treasury has declined to approve payment of any such accounts. See decision reported in 5th Comp. Dec., 166, dated October 15, 1898, and which was published in G. O. No. 2, A. G. O., 1899.

2. The following instructions were given by the Assistant Secretary of War in a memorandum to the Quartermaster General under date of January 20, 1906:

* * * "When advertisements are published without antecedent authority, as required by Army Regulations and these instructions, the officer who is responsible for the failure to secure it will be required to pay the newspaper accounts from his private funds and look to Congress for reimbursement * * *."

These instructions have not been revoked.

3. It is also noted that in the matter of arranging the advertisement the provisions of paragraph 504 A. R. were not observed.

4. In view of the facts in this case, the ruling quoted in the preceding paragraph is applicable.

By authority of the Quartermaster General:

CHAS. P. DALY,

Captain, M. S., Q. M. Corps.

[Second Indorsement.]

OFFICE QUARTERMASTER,

NORTHEASTERN DEPARTMENT,

Boston, Mass., September 8, 1917.

To Henry C. Chappell,
286 Bank Street, Boston, Mass.

1. Returned, inviting attention to preceding indorsement.

2. It is suggested that you pay these accounts, taking receipts for same, and then forward same to the Quartermaster General of the Army, asking that steps be taken to obtain congressional relief, filing copies of all papers in the case in support of your claim.

By direction of the Quartermaster:

FRANK GEERE,

Captain, Q. M. Corps.

HENRY C. CHAPPELL,
Capt. Conn. N. G. Ret.

OCTOBER 13, 1917.

QUARTERMASTER GENERAL, UNITED STATES ARMY,

Washington, D. C.

SIR: During the month of May I was requested by the quartermaster of the Northeastern Department, Boston, to establish a recruiting station for the purposes of recruiting a motor truck company for the Northeastern Department, also some quartermaster clerks.

In compliance with this request I gave up practically 10 days from my business, devoting it to the interest of the Government, and secured the applications of over 75 motor truck drivers and clerks. A complete company of motor truck drivers was mustered into the service, together with several clerks. These men are now all in the service.

After lengthy correspondence with the Northeastern Department, I am informed that I exceeded my authority in contracting for \$58.50 worth of advertising bills, said advertising being placed in the local daily press.

I herewith inclose all the papers and correspondence in regard to the matter and respectfully ask that steps be taken to obtain congressional relief.

I respectfully request the favor of a reply.

Very truly, yours,

HENRY C. CHAPPELL,
New London, Conn.

[First Indorsement.]

OFFICE OF THE QUARTERMASTER GENERAL,

October 16, 1917.

To the Secretary of War for his consideration.

2. In view of the assistance rendered by Mr. Henry C. Chappell, as shown by these papers, it is recommended that authority be granted for submittal of an estimate to Congress for reimbursement of the amount necessarily expended by him in paying the newspaper advertising accounts in question.

By authority of the Quartermaster General:

D. L. BRAINARD,
Brigadier General, Q. M. C., N. A.

[Second Indorsement.]

WAR DEPARTMENT, *October 17, 1917.*

To the Quartermaster General.

Approved.

WM. M. INGRAHAM,
Acting Secretary of War.

To Estimates Branch for necessary action.

TREASURY DEPARTMENT,
OFFICE OF THE AUDITOR FOR THE WAR DEPARTMENT,

Washington.

To the disbursing officer:

Suspensions on this difference sheet show items upon which final action has not yet been taken, for the reasons stated. They have not yet been passed to your credit because, for these reasons, it appears that you may not be entitled to such credit, and they have not been disallowed, because it is desired to give you an opportunity to remove the apparent objections thereto. These objections are subject to removal by satisfactory explanation, or, if such explanation can not be made, then by a refundment of the amounts noted as overpayments.

A suspension indicates that final action has not yet been taken by this office; hence no appeal can be taken to the Comptroller of the Treasury on such items, he having no jurisdiction over accounts until after the auditor has taken final action, either by allowing or disallowing. You will understand, therefore, that your reply should be made to the auditor and not to the Comptroller.

If your explanation is satisfactory, or refundment is made, the auditor will remove the suspension. If, however, you do not agree, in whole or in part, with the auditor's finding as set forth in the difference sheet, and he does not accept your view as set forth in your reply, the item will be disallowed in a subsequent settlement, when you will have the right of appeal to the Comptroller.

Items shown on the difference sheet as disallowed, as distinguished from suspended, are under the jurisdiction of the comptroller for the period of one year from date of disallowance (which date appears opposite the item), and any appeal from such item

should be addressed directly to the Comptroller of the Treasury, and not to this office. Such appeals, to be entertained, must be filed so as to reach the comptroller within one year from the date of the disallowance.

Respectfully,

J. L. BAITY,
Auditor for the War Department.

Statement of differences.

[D. S. No. 1, Certificate No. 41721, dated July 13, 1917.]

TREASURY DEPARTMENT,
OFFICE OF AUDITOR FOR WAR DEPARTMENT,
Washington, D. C., July 13, 1917.

HENRY L. NEWBOLD,
Major, Field Arty, U. S. A.,
Office Chief of Staff, War Dept., Washington, D. C.

SIR: You are hereby advised that a settlement has been made of your Quartermaster Corps accounts at Constantinople, Turkey, from November 4, 1916, to April 30, 1917, under bond dated None, 19—, and a balance found due the United States which differs from the balance stated by your account current for the period last mentioned as shown by copy of difference sheet herewith, which includes all outstanding differences and charges from the books of the Treasury.

Auditor's balance due the United States.....	\$2, 251. 31
Officer's balance due the United States.....	74. 26
Difference.....	2, 177. 05

An immediate reply to this difference sheet is requested.

True copy.

Respectfully,

J. L. BAITY, Auditor.
By J. L. ANDERSON.

(Major Henry L. Newbold, quarter ending March 31, 1917.)

Vou. 1. Suspended: S. S. & T./1917..... \$19. 44

Cablegram 45 words to War College Division 5.40 ltq., @3.60=\$19.44. The copy of the cablegram filed with voucher does not appear to be a copy of the cablegram actually sent. A copy of the cipher telegram as sent is required.

Account current—April 1 to 30, 1917.

Disallowed July 13, 1917: Fay/1917.....	\$1, 820. 84
S. S. & T./1917.....	326. 77
Officer takes credit for loss on sale of check #3, \$2,728.10, April 12, 1917, alleged to be \$1,394.36.....	1, 394. 36
Loss on sale of check #4, \$1,534.04, April 24, 1917, alleged to be.....	763. 25
Total.....	2, 157. 61

Officer's cash account of account current from April 1 to 30, 1917, shows the following statements:

Sale of check #3, \$2,728.10 yielding at the rate of \$9.00 U. S. to the ltq. (Turkish pound) 303.1227 ltq. This amount of Turk. pounds is the equivalent of officer's pay voucher #1, January 1 to March 31, 1917, \$1,333.74, computed at the rate of Treas. Dep. Cir. on values of foreign coins of 0.044 for the gold piaster.

Sale of check No. 4, \$1,534.04, yielding at the rate of \$8.757 U. S. to the ltq. 175.1795 ltq. This amount of Turk. pounds is equivalent to officer's pay voucher #5, April 1 to 30, 1917, \$440.79, computed at the rate of Treas. Dep. Cir. on values of foreign coins of 0.044=100.1795 ltq. and to vou. 3, for services paid to interpreter and clerk, November 1, 1916, to April 15, 1917, at \$60.00 per month. \$330.00, S. S. & T./1917, computed at the rate of 0.044, mentioned above, representing 75.00 ltq. Total, \$770.79 at 0.044 equivalent to 175.1795 ltq.

In view of the above statements the alleged loss appears to be based on the following figures:

Check #3 in payment of pay vou. 1.....	\$2, 728. 10
Actual amount of pay vou. 1.....	1, 333. 74
Loss charged to pay, etc.,/1917.....	1, 394. 36
Part check #4, in payment of pay vou. 5, computed thus: $100.1795 \times 8.757 =$	877. 27
Actual amount of pay vou. 5.....	440. 79
Loss charged to Pay, Army/1917.....	436. 48
Part check #4, in payment of voucher 3, computed thus: $75.00 \times 8.757 =$	656. 77
Actual amount of voucher 3.....	330. 00
Loss charged to S. S. & T./1917.....	326. 77

These checks, Nos. 3 and 4, dated April 12 and 24, 1917, were drawn on the eve of officer's departure from Turkey, they cover pay and services, beginning January, 1917, and November 1, 1916, respectively, it is evident that the rates of \$9.00 and \$8.757 are the ones existing on April 12 and 24, 1917, and not on the dates on which said pay and services for each month were due. It appears that the rates prior to April were more favorable, besides above rates are gold rates. Debts incurred in Turkey in Ltq. without specifying gold are payable in paper, the Ltq. being worth on December 31, 1916, \$3.60, as shown by evidence of Banque d'Athènes Constantinople, December 30, 1916, attached to account current, quarter ending December 31, 1916. The interpreter was hired at \$60.00 per month, if he refused to take a check on the Treasurer of the U. S. he was entitled to the equivalent of his pay of \$60.00 for December, 1916, at the rate of exchange of the Turkish currency in circulation, which was on December 31, 1916, \$3.60, a Turkish pound. Under these conditions no loss results to the U. S. Government. Officer's method of payment means that he charges to the United States nearly \$120.00 a month for an agreement made at \$60.00, and which as per allotment should not exceed \$30.00 a month.

It appears that officer's method of payment by check drawn on the Treasurer of the United States against the Treasury circular equivalent of his pay and service vouchers is not due to any exigency and no evidence is furnished to show that the officer had to sustain an actual loss or a deduction made by the bank for handling or cashing his pay check on the Treasurer of the U. S. It appears that officer is of the opinion that the decision of the Comptroller of the Treasury, July 16, 1915, re Lt. Col. Spencer Cosby, France, applies to Turkey without reserve and that he is entitled to account for a loss when a comparison between the current commercial rate and the one of the Treas. Dep. Cir. favors the showing of a loss by exchange.

The check #3, drawn for \$2,728.10 exceeds the amount of pay vou. 1, \$1,333.74 by \$1,394.36. The check #4, drawn for \$1,534.04 exceeds the amount of pay vou. 5, \$440.79, by \$1,093.25, and the amount of service vou. 3, \$330.00 by \$763.25.

The foregoing demonstrates plainly that officer's case is not a parallel one to the cases of Lt. Col. Spencer Cosby and Major J. A. Shipton, treated in the Decisions of the Comptroller of the Treasury, dated July 16 and 28, 1915, because said officers were reduced to draw their pay in local currency, having no other funds on hand and could therefore not take advantage of the current commercial values of the foreign currency by drawing their checks on the Treasurer of the United States in payment of their pay vouchers.

Officer's case is in line with the decision of the comptroller, dated January 28, 1916, in the case of Surgeon General of Public Health Service, China. In view of the foregoing the excess payments of \$326.77, S. S. & T., 1917, and \$1,830.84, pay, etc., of the Army, 1917, are not proper charges against the United States and are now disallowed. Further, officer's attention is called to the fact that the alleged loss by exchange of \$1,830.84 represents 103% of officer's vouchers for pay for four months, amounting to \$1,774.53. Assuming that he would apply above method of charging loss by exchange to the total amount of one year's pay, he would draw \$5,492.52 in addition to his annual pay as fixed by law and regulation. It follows that the \$600.00 appropriated by Congress under pay, etc., of the Army for payment of exchange, was not intended to cover such items as computed by officer by comparing the current commercial rate of exchange with the rate published on the Treasury Department Circular.

Total difference, \$2,177.05.

THE TREASURY DEPARTMENT,
Washington, November 17, 1917.

Appeal No. 27392.—A. R. G.

Lieut. Col. H. L. Newbold, Field Artillery, U. S. Army, applied September 22, 1917, for revision of the action of the Auditor for the War Department in disallowing (settlement No. 41721 of July 13, 1917) the amount of \$2,157.61 in his quartermaster accounts while military attaché at Constantinople, Turkey.

The amount represents the difference between the amount paid for Turkish gold with which to pay the officer's salary and his clerk's salary, and the amount of those salaries in United States money.

The officer states that at the time (April, 1917) he was under orders to leave Turkey because of the severance of diplomatic relations, and it was necessary for him to pay off his clerk and pay his own salary in order to meet his traveling and other expenses; that the paper money had depreciated—the difference between gold and paper being 250 and 290%; that a check on the United States could not be sold except at a prohibitive loss; and hence he purchased Turkish gold and paid the salaries in gold.

(Check No. 3, dated April 12, 1917, was issued in favor of G. N. Baker for \$2,728.10. In connection therewith it is certified that at the rate of \$9 to the Turkish pound, the proceeds amounted to 303.1227 Ltq. in gold, equivalent at the mint valuation of \$4.40 to the pound to \$1,333.74. The difference between the amount of the check and the amount received in gold, according to this computation, is \$1,394.36.

The American consul certified that the existing rate of exchange there at the time for bills drawn upon Washington was \$9, payable in Turkish gold pound.

Check No. 4, dated April 24, 1917, is reported to have been issued to M. Rouso for \$1,534.04. In connection therewith it is certified that at the rate of \$8.757 to the Turkish pound the proceeds amounted to 175.1795 Ltq. in gold, equivalent at the mint valuation of \$4.40 to the Ltq. to \$770.79. This check is still outstanding. According to this computation, the difference between the amount of the check and the amount received is \$763.25.

The American consul certified that the rate of exchange there at the time for bills drawn upon Washington was \$8.757, payable in Turkish gold.

Who were G. N. Baker and M. Rouso is not disclosed. The transactions do not appear to have been made through banking channels at least so far as concerns check No. 3, the endorsements on it showing that it passed from G. N. Baker to the order of Catherine Anderson Baker, and from her to the order of the National City Bank, of New York City, which obtained payment July 26, 1917.

The transactions show checks for a total of \$4,262.14, purchasing Turkish gold which had a United States mint value of \$2,165.15.

It is apparent that the gold coin was procured under abnormal conditions. Whatever may be the propriety for using the mint value under ordinary conditions it can not be taken as the proper comparative value with respect to these transactions.

If the money cost more than the coin it represented, it was because of its being gold as distinguished from Turkish paper money and not because of exchange conditions with the United States.

Under the conditions reported by the officer exchange is practically destroyed, and the transactions become bargains and sales, limited only by what can be gotten out of the buyer.

It involves extraordinary expenses for which the ordinary appropriations (Pay of the Army, 1917, and supplies, services, and transportation, Q. M. C., 1917), are not available.

The claim of the officer for such expense is of a class that properly addresses itself to Congress for relief.

The disallowance by the auditor is affirmed.

W. W. WARWICK, *Comptroller*.

CAMP ROBINSON, WIS.,
September 18, 1917.

From: Lieut. Col. H. L. Newbold, Field Artillery.

To: The Comptroller of the Treasury, Treasury Department, Washington, D. C.

Subject: Appeal from action of the Auditor for the War Department.

1. In view of your decision of July 16th and 28th, 1915, in the case of Majors Cosby and J. A. Shipton, respectively, regarding the cost of exchange incurred by military attachés in their capacity as acting quartermasters and for the further reason that I believe the payments as made credits claimed by me were justified in reason and fairness, I have the honor to appeal from so much of the action of the Auditor for the War Department sheet No. 1, certificate No. 41721, dated July 13, 1917, as disallows the amounts of \$1,830.84 and \$326.77, pertaining to my quartermaster money account.

for the quarter ended April 30, 1917, rendered by me as acting quartermaster while major of Field Artillery and military attaché at Constantinople, Turkey.

2. In connection with this subject, I desire to state that on my arrival at Constantinople, Turkey, in the latter part of 1916, I found the money market in such condition that payment of my salary by myself as acting quartermaster would cost the Government what seemed to be an exorbitant amount of exchange and, therefore, I arranged to have my pay accounts for October, November, and December, 1916, paid in the United States and placed to my credit with a bank in this country so that my brother could arrange to ship to me United States gold through the State Department diplomatic pouch such amounts as I required to meet my personal expenses. The last gold shipment from the United States was received through my brother just before the rupture of diplomatic relations with Turkey about April 20. This method of obtaining gold, therefore, was not available after that date, which compelled me to buy Turkish gold with which to pay the salaries of myself and my clerk in order that I might close my office and have funds necessary to travel back to the United States. There was also a real possibility that I would be interned, though this was not a proper diplomatic procedure. In December, 1916, I cabled the War Department to furnish me with \$5,000 United States gold by shipment through the State Department diplomatic pouch, but received neither the money nor a reply to the cablegram. A copy of such cablegram is filed with my accounts in the Auditor's office. The American Ambassador at Constantinople and all of his attachés, including myself, having received orders from the State Department to leave that place and return to the United States, I was compelled to pay myself as acting quartermaster the salary due me to include April 30, 1917, as well as my clerk, who was a Greek and absolutely needed the money due him in order that he might meet his expenses as he had accepted a position with the military attaché by reason of which he was unable to obtain other employment at Constantinople under the conditions then existent.

3. The conditions in Turkey were extraordinary, the economic conditions being dependent upon the price of gold, as Turkish paper money was printed whenever funds were needed and no gold was deposited to guarantee the redemption of this paper and it had none except the open statement by the Germans that they guaranteed it. Therefore, Turkish paper money depreciated (the difference between Turkish gold and Turkish paper was between 250 and 290 %) and the prices of supplies and services rose in proportion to its depreciation, then they further rose to correspond with shortages of goods in a blockaded country. For example, bread rose to 7½ times normal prices, and sugar to 60 times normal prices; other things varying between these prices. It was on account of this high cost of living that the State Department gave an increase of some 20 or 30 % to the salaries of the embassy officers in Constantinople, to cover the increased cost of living; and all State Department salaries were paid in gold. In this case, in Turkey, a blockaded country in war, and with diplomatic relations severed with the United States, which ended all means of communication (as Germany controlled the only railroad, through Bulgaria, Serbia, and Austria) it was almost impossible to sell a check on the United States in Constantinople except at a prohibitive loss. And furthermore, it was absolutely necessary that I pay myself this salary in order to meet my traveling expenses, being under orders to leave the country, also to meet other expenses contracted in Constantinople or to be incurred. The question is whether or not officers of the Army are to have their salaries depreciated. For gold is the universal standard of the world, and paper currency and checks fluctuate with the redeemable value in gold of the paper currency and the exchangeable value of the check. Following the practices obtaining in the case of the Naval Officers on duty on the *Scorpion*, who were paid under the instructions of the Navy Department the equivalent of their salaries in Turkish gold, based on the bullion or mint rate of one pound equals \$4.40 United States currency, and with the understanding that this was the accepted rate for Army quartermasters, I ascertained the amount for which I would have to draw my check in order to obtain the number of pounds in Turkish gold at the rate of \$4.40 to which I would be entitled as salary and then exchange such check for said gold. As the contract with my clerk and interpreter called for a salary of \$60 per month United States currency, I followed the same method in making payment of his salary. This action was in conformity with the practice of the State Department at that place in connection with the payment of the employees of the office of the Ambassador. It would have been a great injustice to this clerk to have paid him the equivalent of his salary in Turkish paper money and I believe that he was properly entitled under his contract and under the circumstances to payment of such equivalent in Turkish gold, as I had no United States gold with which to make such payment and could not get it. Furthermore, it would not have been fair to him to have compelled him to accept a check on the Treasurer of the United States for the amount

of his salary when the rate of exchange was so unfavorable. Such action would have been tantamount to the Government's refusal to comply with its contract, regardless of what may have been allowed under the law.

4. The effect of the argument presented by the auditor in support of his action simply means that in my case and the case of my interpreter I had one of two ways open to make payment of our salaries: (a) Show payment of vouchers by check, which involves no question of exchange so far as the Government is concerned, the payee taking check received in payment and cash it as payees by check must do accepting whatever local money they can get for it, or (b) draw an official disbursing officer's check for cash for the amount in dollars that the voucher calls for and exchange such check for local money then show payment of voucher by cash receipting same for number of units of local money received as equivalent to the number of dollars voucher calls for, which also involves no loss or gain by exchange so far as the Government is concerned. To follow either of these methods would require no appropriation for loss by exchange because no loss could occur. Every man of finance knows that there is a loss by exchange, both foreign and domestic, and when that much is admitted, the argument of the auditor fails. The payment by the Government of salaries or obligations fixed in terms of United States currency by the use of foreign money not only involves the question of exchange paper but also the question of concession or ascertaining real equivalent of United States gold dollars in the units of the foreign money used. That is to say without considering the question of exchange the real equivalent of a pound in Turkish gold is considered as \$4.40 United States gold. In Constantinople \$4.40 in United States gold would probably be at all times equivalent commercially with slight variations if any, to one pound Turkish gold. But there was an enormous difference between the comparative commercial value of United States gold and United States checks as compared with Turkish pound gold when I offered my United States Treasury checks for Turkish gold. That country commercially did not want United States checks or paper as the financial houses there could not use it to advantage at anywhere near par value. I did not want their paper money as it was of uncertain value and as I was leaving the country I could not use it except at a prohibitive loss. Consequently to obtain Turkish gold, which was the only money obtainable with an intrinsic value, the equivalent of my salary in United States gold, I was compelled to draw my official check for cash for more than twice the amount called for in United States currency by the vouchers which were paid with the proceeds.

5. With respect to the auditors statement that my case falls under the decision of your office of January 23, 1916, in the case of the Public Health Service in China, I see no analogy existing between that case and mine. It appears to me that the principle of the decisions referred to in paragraph 1, above, have made application to my case and under the circumstances shown herein in addition to the facts shown by my accounts in question, I should be given full credit as claimed by me in such accounts.

6. The fact that Congress appropriated only \$600 to cover cost of exchange incurred by quartermasters would not appear to have any bearing on this case as under a decision of your office the amounts appropriated for specific items unless otherwise limited may be exceeded provided the total of the appropriation of which they form a part be not exceeded. I understand from information obtained in the War Department that this item of \$600 for exchange has been regularly estimated for several years back without change because, under your decision referred to above, as long as any amount was appropriated for this purpose as much as was needed, subject to the limitations stated, could be expended, some years more than \$600 being spent for loss by exchange and other years less.

7. Your reply should be addressed to me care of The Adjutant General of the Army, Washington, D. C.

Yours respectfully,

H. L. NEWBOLD.

[Paraphrase.]

Cipher telegram sent the Department of State.

DECEMBER 16, 1916.

AMERICAN LEGATION, Copenhagen.

678 to Copenhagen 2339 to Washington Dec. 16, 1 p. m.

For president War College, to be referred to the Navy Department.

On account of the ruinous rate required in making exchange drafts the Military Attaché requests five thousand dollars gold coin to be sent him by the collier *Cress* or in the diplomatic pouch for Army pay and the like.

ELKUS, American Ambassador.

A true copy:

FREDERICK WIRTH, jr.

AMERICAN EMBASSY,
CONSTANTINOPLE, TURKEY,
February 19, 1917.

Maj. H. L. NEWBOLD,
U. S. Military Attaché, Constantinople.

DEAR SIR: The following is a statement of the cost of telegram sent by this embassy for account of the military attaché, on December 16, 1916:
Date, Dec. 16th/16. Destination, Chief War College, Washington. Words, 45.
Piasters, 54C.

Will you kindly forward the above sum to the embassy for its reimbursement.

FREDERICK WIRTH,
Chief Clerk of Embassy.

The above-mentioned telegram was sent on official business through the American embassy, Constantinople, and the State Department to the War College Division, War Department.

I further certify that the rate of exchange for the payment of the above-mentioned piasters for this telegram, was at the rate of \$3.60 per lira (100 piasters), and that said money was obtained by me at this rate.

H. L. NEWBOLD,
Major, F. A. Military Attaché.

Receipt for cash expended for cablegrams.

Received February 19, 1917, from Maj. H. L. Newbold, military attaché, in person and in cash, the sum of five hundred forty piasters, equal \$19.44, in payment in full for the above bill, which is hereby certified to be correct and just and for which payment has not heretofore been received.

(Sgd.) FREDERICK WIRTH,
Chief Clerk of Embassy.

A true copy:

H. L. NEWBOLD, Major, F. A.

PLATTSBURG BARRACKS, N. Y.,
November 21, 1917.

From: H. L. Newbold, colonel 16th Field Artillery.
To: Adjutant General of the Army, Washington, D. C.
(Through Chief Army War College).
Subject: Request for relief from Congress.

1. In view of the action of the Auditor of the War Department in disallowing (settlement No. 41721 of July 13, 1917) the amount of \$2,157.61 in accounts of Colonel H. L. Newbold, 16th F. A., U. S. A., then major, while military attaché at Constantinople, Turkey, and the action of the Comptroller of the Treasury on his appeal No. 27392, relief from Congress is requested, as the comptroller states, in his action of November 17, "the claim is of a class that properly addresses itself to Congress for a relief."

[First indorsement.]

WAR DEPARTMENT, A. G. O.,
December 4, 1917.

To the Quartermaster General, who is directed to submit an estimate to Congress to relieve Colonel H. L. Newbold of \$2,157.61, the amount of money which the Comptroller of the Treasury rules he is accountable for to the United States.

By order of the Secretary of War:

JOHN S. JOHNSTON,
Adjutant General.

RIFLE RANGES FOR CIVILIAN INSTRUCTION.

The CHAIRMAN. On pages 71 and 72 there are items for rifle ranges for civilian instruction. The amount of the appropriation for the purpose last year was \$320,000, and you are asking this year for \$1,720,000.

Col. DALY. Our estimate is only \$20,000, the same as last year. The rest of that, I think, is for ordnance.

The CHAIRMAN. Your estimate only covers the first estimate of \$20,000?

Col. DALY. Yes, sir; that is the same as last year.

The CHAIRMAN. Did you expend the \$20,000 you got last year?

Col. DALY. Not all of it. I will give you a statement in regard to the balance.

Rifle ranges, civilian instruction.

	Estimated, fiscal year 1919.	Expended, fiscal year 1917.
Clerical services.....	\$2,400.00	\$1,230.58
Supplies and materials.....	16,800.00	17,368.09
Office supplies.....	600.00	208.64
Travel expenses.....	200.00	53.47
Total.....	20,000.00	18,859.78

The CHAIRMAN. The next item, on page 72, is under the head of "Civilian military training," and the item is for "Civilian military training camps, \$6,018,000."

The first part of that comes under your jurisdiction?

Col. DALY. We furnish the clothing, camp maintenance, transportation, the structures, the water, the fuel, and also cover the matter of damages resulting from field exercises. The second section of that refers to ordnance.

The CHAIRMAN. My recollection is that Gen. Babbitt said that he did not think that was necessary this year. What have you to say about that?

Col. DALY. We have a sufficient unexpended balance, Mr. Chairman, to take up our needs under that item, but that balance is not available for the fiscal year 1919. If that balance were made available for the year 1919, we would not need this money.

The CHAIRMAN. How much is that balance?

Col. DALY. I will have to get that amount for you.

Mr. ANTHONY. Is it the opinion of the War Department that it is inadvisable to carry on this training during the war?

Col. DALY. So far as we are concerned, we have not been in a position to furnish the equipment. That is the reason the money we got last year has not been expended.

The details are as follows:

Deficiency act June 15, 1917.....	\$3,440,000
Deficiency act Oct. 6, 1917.....	1,240,000
Total.....	4,680,000

Status of following appropriations, January 10, 1918:

	Amount appropriated.	Expended.	Available balance.
Quartermasters' supplies, equipment, etc., Reserve Officers' Training Corps:			
1917-18.....	\$1,215,000.00	\$88,112.98	\$1,126,887.02
1918.....	3,170,000.00	211,614.84	2,958,385.16
(Above, act May 12, 1917.)			
Civilian military training camps:			
1916-17 (act Aug. 29, 1916).....	936,682.00	925,182.00	11,500.00
1817-18 (act June 15, 1917).....	3,440,000.00	3,439,547.34	452.66
1918 (act May 12, 1917).....	\$3,281,000.00		
1918 (act Oct. 6, 1917).....	1,240,000.00	4,621,000.00	4,589,330.16

* Deficit.

WAR DEPARTMENT,
OFFICE OF THE QUARTERMASTER GENERAL OF THE ARMY,
FINANCE AND ACCOUNTING DIVISION,

he CHAIRMAN. The next item is under the heading "Reserve
ps," and the item is for "quartermaster supplies, equipment, etc.,
erve Officers' Training Corps, \$2,135,671." The amount appro-
ted last year was \$4,385,000, so that you are asking now for less
half the amount you got last year.

ol. DALY. The principal expenditure under that item is for com-
tation of subsistence to the students of the senior grade, author-
l in the act of June 3, 1916, and extended by a subsequent act.

he CHAIRMAN. You will put a statement in the record showing
ctly the items you want for next year's appropriation, and also
atement showing what you have expended on the last year's
ropriation, and the balance on hand.

ol. DALY. Yes, sir.

The details are as follows:)

Quartermaster supplies, equipment, etc., for Reserve Officers' Training Corps.

Objects of expenditure.	Estimated, 1919.	Expended, 1917.
mutation of rations, 9,700 students 334 days, at 35 cents per day each.....	\$1,239,175	\$2,620,000
sistence, 10,000 students in camp and en route, 32 days, at 35 cents per ay each.....	112,000	316,506
l in camps, 10,000 students, 30 days.....	4,000	13,300
ht in camps.....	2,000	6,200
it of camp sites.....	6,000	8,000
s and kitchen shelter.....	31,393	228,000
nsportation, personnel and equipment.....	28,500	115,000
e of teams.....	4,000	6,000
age for animals.....	6,000	13,000
orms and equipage.....	660,000	580,000
ster supply.....	4,000	8,000
tionery and forms.....	1,000	3,800
pairs, replacements, and maintenance.....	7,600	16,308
Total.....	2,135,671	3,934,100

Funds furnished disbursing officers of the Quartermaster Corps to and including Nov. 30, 1917, from funds made available in the act approved May 12, 1917.

APPROPRIATION "QUARTERMASTER SUPPLIES, EQUIPMENT, ETC., RESERVE OFFICERS' TRAINING CAMPS."

MILITARY EQUIPMENT OF SCHOOLS AND COLLEGES.

The CHAIRMAN. The next item, on page 75, is "Quartermaster's supplies for military equipment of schools and colleges, \$84,505." Will you put in the record a statement in regard to this item similar to the one you put in in regard to the preceding item?

Col. DALY. Yes, sir. If the same provision is made in the case of this item, we will not need this money. We have a sufficient balance under last year's appropriation, if that balance is made available for the fiscal year 1919.

Objects of expenditure.	Estimated, 1919.	Expended, 1917.
Shelter tents, poles, and pins.....	\$54,000.00	\$30,000.00
Heavy tentage and camp equipment.....	27,000.00	12,000.00
Transportation charges.....	3,505.00	2,000.00
Total.....	84,505.00	44,000.00

(Thereupon, the committee adjourned to meet Monday, January 21, 1918, at 10.30 a. m.)

ARMY APPROPRIATION BILL, 1919.

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Tuesday, January 8, 1918.

The committee this day met, Hon. S. Hubert Dent (chairman), presiding.

The CHAIRMAN. The Secretary of War requested me to give a hearing this morning to Gen. Richardson, in reference to the Alaskan items in the bill, inasmuch as Gen. Richardson has been ordered to Camp Lee.

STATEMENT OF BRIG. GEN. W. P. RICHARDSON, ACCOMPANIED BY MAJ. J. C. MEHAFFEY.

The CHAIRMAN. General, I believe the only Alaska item in the bill is on page 47, for "Construction, repair, and maintenance military and post roads, bridges, and trails, Alaska: For the construction, repair, and maintenance of military and post roads, bridges, and trails, Territory of Alaska, \$100,000." You had \$500,000 last year?

Gen. RICHARDSON. Yes, sir; that was made available for two years, and is available until June 30, 1919.

The CHAIRMAN. How much of that amount have you expended?

Gen. RICHARDSON. There will be available of that amount about \$150,000 for field work next year. That covers the overhead expenses for this winter, and certain purchases and shipments of supplies. I could not give you the exact amount that is expended to date, but we have worked it out in the way I explained. I would like to explain to the committee that this additional estimate of \$100,000 was put in because of the increased cost of labor and supplies, generally, in addition to the \$500,000 appropriated last year, and made available for two years. The Secretary of War wished me to explain that to the committee, and also the conditions that exist and anything the committee would like to know in reference to the reasons for asking for this additional amount.

I note the appropriation says, "Construction, repair, and maintenance." I would suggest, Mr. Chairman, if you think it proper, that the word "construction" be eliminated, as this money is entirely for repair and maintenance, and that will, as I understand it, not make the item subject to a point of order, which was raised against the item last year.

You may remember, Mr. Chairman, that the Secretary of War, anticipating a further hearing in reference to this item when the Congress reconvened after the 4th of March, wrote a letter in which he stated that in case the entire appropriation should be granted, he would not submit further estimates for the extension of this work unless specifically authorized to do so, because it would mean that

the old question would be brought up again, and a point of order raised against the item on the floor of the House. I am familiar with that letter, and with the reasons for it, and I wanted to explain that the Secretary, anticipating a further hearing, had written that letter to you, Mr. Chairman.

In pursuance of that same policy, this estimate was approved only because of the conditions which confronted us, in reference to the increased cost of labor and materials, and this estimate is only for \$100,000, to cover that increased cost.

It is badly needed, I can assure you, and with the amount appropriated last year and this additional amount, we will try to bring to as near a degree of completion as possible the roads that are being constructed, the work already laid out. Of course, the roads are never actually completed.

The CHAIRMAN. You think the \$500,000 that has been appropriated and made available for two years, with this additional amount of \$100,000, to cover the increased cost of material labor, will be sufficient? You are asking for this increased amount, only because of the increased cost of labor and material?

Gen. RICHARDSON. Yes, sir. I was detailed to take charge of this work and given the responsibility for it, and I have tried to make good on it. It has been a very difficult matter. There is a great wilderness in Alaska, with no roads or trails, and we started in with that condition confronting us. I am not responsible for the law, nor for being detailed on that work, and I have come before the committee to state the conditions as to what is needed. If that country needs any help in the world, it needs it in the way of wagon roads and trails. The railroad is all right, but it will be a good many years before it will pay its operating expenses. Congress will have to appropriate large sums of money to support that line of railroad. It will take a vast extension of roads and trails to act as feeders for the railroad before it can be made to pay. I am not responsible for that, nor am I seeking money to build feeders for the railroad, but to complete the work, as far as possible, or at least to get to as nearly a full degree of completeness as is possible the work that has already been laid out, and which is under course of construction.

My annual report gives a very brief history of the operations of the board and it states the conditions that exist now, and there is also a statement from the engineer officer covering the engineering features, the engineering difficulties, and there are also some small maps.

I wish to state further, Mr. Chairman and gentlemen of the committee, that there has been a new organization formed to take charge of this work, composed of officers who have been specially selected and commissioned in the Engineer Reserve Corps, the senior of whom is Capt. Waugh, who comes from the Bureau of Public Roads of the Department of Agriculture as a skilled highway engineer, and who has had a good deal of experience in road building. I believe they are competent to continue the work.

His two assistants are men who have been trained with our board, and I have been relieved from that duty, and the work has now been placed under the general direction of the Chief of Engineers of the Army by order of the Secretary of War, and I speak in behalf of that

for the future. I hope the committee, which has been generous in its appropriations for this work, will see its way clear to give support to the work in the future as liberally as it has in the past. reputation and the credit of the department and the commission concerned in this work, and I believe it to be of vast importance to the Territory. If the Territory needs anything, if there is any way in which the Government can help the Territory more than in the past, it is in completing the pioneer roads and trails.

My whole purpose in coming before the committee this morning was to explain the reason why this \$100,000 appears in this estimate, when \$500,000 was appropriated last year and made available for two years.

I hope the committee will grant the additional appropriation. I wanted to explain the present status of the work and what its future will probably be. I think the War Department is the best agency of the Government to undertake work of that kind in a frontier country like Alaska. Alaska will be a wilderness for a number of many years to come.

We have, at the present time, one very good road from Valdez to Fairbanks. It needs surfacing, and further improvements. That is a 400 hundred miles and over in length, inclusive of the branch line to Pitmeena. Automobiles travel over that road, but we do not encourage them, because we have no money to make an automobile road.

They have covered that distance in 24 hours running time. That road crosses two mountain ranges, and a number of streams, which have been bridged, except two across which there are fords, and the people get a great deal of benefit from it. All the work is transferred over that road.

The War Department were to relinquish control over that road it would go to pieces, because there is no other agency to look after that road which reaches from the coast to Fairbanks, and we are going to get it completed so that it will stand up against the conditions of the country which it serves, and that is the principal work we have been doing.

TILSON. Are there any other agencies, local road districts, or municipalities, or any agency of that kind along the line of that road that can take up this work on the civil side, if it should be transferred by the War Department?

1. RICHARDSON. No, sir.

TILSON. I suppose the character of construction is such that it would rapidly deteriorate if it were not made safe from year to year by some agency of the Government.

1. RICHARDSON. Yes, sir; that is true. It requires constant attention and care to protect that road against the flood waters, especially in the summer, due to the melting snow in the mountains.

TILSON. Then it is your opinion that it would be wise, on the part of the Government, through the War Department, which you consider the best agency to keep up this road, to continue to provide for it?

1. RICHARDSON. Yes, sir, I do. I have recommended in my last report that in case the work should be transferred in the near future, that the local roads, of which there are many all over the Territory—that the local roads be turned over to the Territorial organi-

zation. They have an organization which was established recently, and as soon as it is in working order they might take charge of the local roads.

Mr. TILSON. But it is the main arteries that you refer to particularly that have no local municipalities or road districts to take care of them?

Gen. RICHARDSON. Yes; they have no such agencies to take care of them. This road passes through an absolute wilderness country; there is nothing along the road except the roadhouses here and there.

The CHAIRMAN. As I recall the point of order made against this item, it was that the law authorizing the construction of these roads requires that the expense should be borne out of certain revenues received in the Territory of Alaska. How much revenue do you get?

Gen. RICHARDSON. Our revenues from the Territorial fund, which is a tax fund collected outside of the incorporated towns, has averaged nearly \$150,000 a year, and while these two funds, the fund received from the Territory and the amount appropriated by Congress, have been used interchangeably, Congress has made our appropriation in a lump sum. We have adhered as closely as we could to the principle of using this tax fund for local road construction, and the special appropriation made by Congress for these main lines of travel, of which the one I have referred to is the chief. That is the route of mail communications clear through this Territory, from the coast of Valdez up to the town of Nome, on Bering Sea. It is a wagon road to Fairbanks, and it goes clear through that country. It is used not only for the transportation of the mails, but for the support and maintenance of the telegraph line. This is the main line of communication, and that telegraph line is the lifeblood of the Territory, and has been for 10 years, and this road is its main support.

Mr. KAHN. It is a military road?

Gen. RICHARDSON. It was with that purpose in view that the estimate was originally approved. It has gone on from year to year. I have endeavored to get the law amended so that it would not be subject to a point of order, but it has remained in its first form.

Mr. GREENE. Is the expense of the maintenance of this particular piece of highway more than the normal expense of roads to be found elsewhere, because of the melting snow in the spring?

Gen. RICHARDSON. Yes, sir; we have never been able to complete the road entirely. We have improved it from a trail to a passable route, and people are traveling over it all the time. We could not keep them off, because there are no other places to go to, and so the maintenance has been intermingled with the construction, and the maintenance will be rather high, for a time at least.

Mr. GREENE. Is it not rather incident to the climate that all road construction is susceptible to a higher rate of maintenance there because of the fact that in the spring conditions become unfavorable on account of the going out of the frost, and that happens to a far greater degree than people in more genial climates appreciate?

Gen. RICHARDSON. Yes, sir; that is true.

Mr. GREENE. That would account for the unusual burden on the public to maintain such a highway.

Gen. RICHARDSON. Yes, sir; the Territorial Government is not able to do it. They have done very well, as far as they could. The

ory is aiding by means of special appropriations in addition to tax fund which I mentioned, and I think the Territory is doing well in the work.

KAHN. Has the cost of labor and materials increased during last year?

1. RICHARDSON. We had to increase our wages about 18 per cent.

KAHN. Is labor plentiful up there?

1. RICHARDSON. It has been up to this year.

KAHN. You have had a scarcity recently?

1. RICHARDSON. Yes, sir.

KAHN. Is there any likelihood of any still further increase in the cost of labor this year?

1. RICHARDSON. No; I think not.

KAHN. How much do you pay for laborers on the road up here?

1. RICHARDSON. It varies in different sections, all the way from a day and board—we furnishing the board—up to \$4.50 a day and board.

KAHN. What character of labor do you get?

1. RICHARDSON. It is white labor, and very good.

KAHN. You can get those laborers for \$2.50 a day and board?

1. RICHARDSON. That is the lowest. I do not believe we have it as low as that now; I think the lowest is \$3 now.

OLNEY. How does the cost of living there compare with the cost of living here?

1. RICHARDSON. The cost of living is not so very high; I mean that belt running up from Seattle. That is open all the year round and the towns are supplied, and the cost of living is not much greater than it is along Puget Sound. As soon as you get into the interior it mounts up. The further away you get from transportation the greater the cost of living becomes.

OLNEY. When you go across this country you have to pay \$2 for a meal, for every day you get; it does not make any difference what you get to eat. In the interior that is about the average cost. Of course, when we have the men in those sections of the country it costs us a good deal.

OLNEY. A laborer getting \$2.50 or \$3 a day can not afford to eat many meals at \$2 a piece.

1. RICHARDSON. No, sir; \$3 is the lowest we are paying now, and that is the cost of labor and board in that country.

ARMY APPROPRIATION BILL, 1919.

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Monday, January 21, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent (chairman) presiding.

TESTIMONY OF MAJ. GEN. GEORGE O. SQUIER, CHIEF SIGNAL OFFICER, ACCOMPANIED BY COL. E. A. DEEDS AND COL. H. ARNOLD, SIGNAL CORPS.

THE CHAIRMAN. General, the first item for your department, on page 7 of this bill, under the heading, "Office of the Chief Signal Officer," is "Signal Service of the Army: For expenses of the Signal Service of the Army, \$1,138,240,314.57." At the last session you were given under this item practically \$740,000,000. You were given \$640,000,000 in one bill for air craft, and then in other appropriations you were given practically \$100,000,000 more. I think, perhaps, it will be the most orderly way to proceed for you to first make a general statement of the expenditure of that amount of money, what you have accomplished so far by the use of that money, then explain why you need this extra billion dollars.

MAJ. GEN. SQUIER. As the chairman has stated, we received at the last session of Congress, roughly, \$740,000,000, of which \$694,000,000 was expended. The special bill signed on July 24 gave us an appropriation of \$640,000,000, and other bills made the total what the chairman stated.

Along with that first bill this committee very wisely gave us authority to administer and to develop, gave us a personnel, without which I am sure, gentlemen, it would have been perfectly impossible to have accomplished what we have.

You cannot take a quantity of money of that amount, involving that that involves, without carrying with it a wide authority, together with personnel to administer it.

I think the best way to put it would be to say that we have expended all of that money and more, and we will submit a deficiency estimate for a considerable amount, probably very soon—surely by March 1, when the amount estimated for in this bill will become available. The exact amount of deficiency the Secretary of the War is now informed about, and, of course, also the President. An exact official statement of such a large amount as that, including such expenditures as we have to meet, would require a special session of the committee for explanation, and I suggest that perhaps later, if the committee desire, I will have the head of the finance division state exactly how this amount has been spent.

THE CHAIRMAN. For the record.

MAJ. GEN. SQUIER. I could not possibly do that in the way it should be done. We have spent or obligated that amount of money, and

more than that, and we are now disbursing probably something like \$50,000,000 a month on the deliveries that have already been contracted for under the provisions of that bill. That is a vast amount of money. It has involved, in the first place, an organization to carry out the provisions of the bill, which I might very well describe to you.

I may say in behalf of the committee that their broad-gauge action in securing the passage of that bill has been primarily responsible for enabling the War Department to accomplish what it has. If the bill had not been passed, it would have been a total impossibility to have done what has been done, particularly if it had not carried the unusual terms which were included in it.

The first thing we had to do was to organize the personnel to carry out this program. You will remember that we had some money before this big bill was signed on the 24th of July. We hypothecated on that action in a way, however, because war had been declared in April. We looked over the field immediately, determined what the military necessity was, and laid our plans in a large way, predicated on what we thought this committee and Congress would do.

So, long before we had a large amount of money, or anything that would enable us to go ahead just as if we had the money in hand, we laid our plans in a rather broad way.

Before the 1st of June we had carefully surveyed the technical problem of creating our industry in this country, and had come to the conclusion that we had to rely upon ourselves to produce a new kind of engine, since the engine is the main part of a flying machine.

By the 1st of June we had pretty thoroughly investigated the European situation. We found 30 or 40 different kinds of engines in England, and many more in France, with almost impossible methods of construction, with spare parts by the thousand that nobody could hope to get in quantity, and we had to make a big decision. I doubt if we will ever make as big a decision again.

We made the decision, and I think we made a right decision, as I can prove to you. We could have brought over their engines from Europe, but we would not have had as many real engines by this time. It would have been absolutely the wrong thing to have done.

As soon as war was declared, as Chief Signal Officer, I asked that the best aviation officers of our allies be sent immediately for duty in my office, for the purpose of advising us. So, within two or three weeks after war was declared, I had in my own office a number of the most expert flying officers of England, France, and later of Italy. At this moment I have something like 30 officers, picked officers of all nations allied with us, and they are helping us very materially in our aviation work.

Manifestly, that was the only thing to do, because the war was being fought in Europe, and that is where you get the experience, and we had to have and to know the best. So we have those officers here in our office, and they advise us constantly what to do.

We also sent officers to Europe, commissions of our own people to advise us from that end. We established strong missions of Army and Navy officers in Paris and London, so that we are in daily communication with them, both ways.

In addition to that, we have experts on every boat that sails, both to keep us informed. That gives us an organization so that we can continue to know from day to day and from week to week, what to do. We are thus in daily consultation with the different countries. Cablegrams are received every day from our own people at home, and by the officers of other countries who are here working for us.

Our machinery enables us to follow as nearly as possible the development of aircraft on the different fronts. I think you will be surprised when I say that the development of aircraft in this war has been so kaleidoscopic since I was last before you, that the planes of the joint Army and Navy technical board had planned to put on the Western front as fighting planes, and those we have finally decided are entirely different.

For example, last July, had jumped in and made the planes in the way planned, they would have been out of date by this time.

I merely mention that to show you how this situation has developed, and I want you to understand the machinery we have organized to keep in touch with the actual fronts, in order not to do the wrong thing.

and we do that both ways, through the experts of the various European countries, and through our own people in Europe. As a matter of fact, Mr. Chairman, I have an International General Staff in the office of trained expert designers of planes. We have the best designer from France. In addition to that, we have our missions in London and in Paris, besides that we have our agents carrying information to us. So much for our system for following what has been and is being done.

I have made a decision about the engine. You have probably read the history of the Liberty engine, and despite what you may hear by the underground method, the motor is a great success. I think it will go down into history as one of the great achievements of our history either of this time or any other time.

You know pretty well the story of the Liberty motor. It has already given out by the Secretary of War. We are going to

I may say, in Europe, with perhaps the only high-powered engines that our allies will have in quantity this season.

TILSON. Will you tell us something of the trial performances of the engine in this country, as far as that information has been given?

We are often asked what is the Liberty engine doing. Can you give us the information that will enable us to answer that question?

MR. SQUIER. My attitude, gentlemen, toward this committee in regard to my appearance here, is this: I do not think there is anything I should not tell the Military Committee of the House in absolute frankness, realizing that we are here in a war, and absolutely in honor. I am prepared to show you everything we have done, and to what we have done in France, with the distinct understanding which I wish to impress on everyone who may hear it, that the least hint outside may be a danger.

THE CHAIRMAN. The method we have adopted in regard to this is to try to get the facts in executive session, leaving it to the officials of the War Department, when they blue pencil the hearings, to strike out whatever ought not to be printed.

Gen. SQUIER. The Liberty motor has been tested since it was started in every conceivable kind of way—probably more than any other piece of machinery ever has been. The last plan adopted in the way of testing the motor was to have some entire outsiders, who had never had anything to do with it, give it the most severe tests that they could think of. We are having them make those tests for fear that the people interested might possibly be prejudiced in their judgments.

The real story of the Liberty motor, and every step that has been taken in connection with it, can be better told by Col. Deeds than by me, if you wish to know every detail in regard to it, but I will furnish you all the test performance curves, if you wish.

It has been tested already in planes, on top of Pikes Peak, and by means of special arrangements that have been made to simulate higher altitudes. It has been flown in every conceivable position, both in planes made in this country and those made abroad, and it has been given every conceivable sort of test to which the best ingenuity and brains could put it, and has not only come up to them all, but is better than anybody expected. We have had some changes made in it; indeed, there have been quite a number of changes since the first one was made.

Gen. SQUIER. Of course, Mr. Chairman, in a program of this magnitude the great point is to synchronize the different elements of your entire program, so that you may be sure that each of the elements will fit in its proper place, that you have not all engines and no planes or that you have not both planes and engines and no men to run them, or that you have all three of those and no radio to put on the machine. A vast program of this sort must be synchronized in each of its activities, month by month, with every detail matched up.

All of the things that go with this machine, and that are a part of it, are equally important. All of these things had to be thought of; so months ago we started in to get the materials and do the work which would be required to match them up.

Early in the program we had to have what we called a planning section, a section composed of people who had nothing to do but to plan, to look ahead 30 days or 60 days or 90 days, all the time, with a staff of statisticians. We had to do that because everyone with a special job is so busy with his own particular job that he has not the time to see the whole. So we have these people whose business it is to do nothing else but look ahead and plan.

I will not say more about the Liberty engine, other than to say that we will be glad to give you all the data we can get on it, whenever it is necessary.

The Liberty engine is the backbone of our program, and it is the backbone of the Navy program. It has been put on one or two naval boats, and our fighting machines which are to go to Europe, to be added to the machines that are already there. I may also say that from the word that we get our allies will take all the Liberty engines we can spare.

I consider that engine one of the greatest successes we have ever had, and I believe it to be so, despite what you will hear to the contrary. There is a paid propaganda, we believe, that is throwing

mud at the Liberty engine. You will hear all sorts of underground stories about its being a failure, saying that it will not work. Very likely it is German propaganda.

We proceeded with the Liberty engine, to standardize it as never an engine has been standardized before, which means that we can produce it in quantity. We are accused at times of having standardized so far that we have killed initiative, and I wish to clear that up.

I think I can safely say that every engineer of standing in this country, or every engine designer of standing who has passed the scrutiny of our staff, is now engaged in making some sort of a new engine or plane, because we realize that in the air, perhaps more than anywhere else, we have got to do new things. We are on the threshold of tremendous developments in the air, and there is more experimenting going on than ever before in this country, and probably more than there ever was in any other country. We turn away nobody who has any new ideas, although we are frequently accused of doing so.

The fighting planes that were recommended by our joint technical committee of the Army and Navy last July, when I was before you, have been superseded, and the estimates I made then do not apply now. If we had made those planes on the basis of the estimates that I presented to you at that time, the planes would have been out of date.

Fortunately, we did not start in to make fighting planes the first thing, because we did not know how to make planes. There was only one factory that was making them, and that was subsidized by the British.

When we finally decided upon the plane that we should make, it was after a most careful study of all the European planes, bringing them over here bodily, with the engines of the planes both of our allies and the Germans, and we claim that our standard fighting plane, which will come into production this month and increased production from then on, will be the finest fighting plane. So, instead of going to Europe with something that was out of date we will be in the van. As I have shown we have the only high power engine available in quantity.

In regard to the other things that go on the plane, we must have machine guns, we must have radio, and we must have cameras in large quantities, and all these things must be matched up, and their production synchronized with the production of the planes. That has meant the starting of vast industries.

In regard to the cameras, you all know that the maps of the front are all made by photographs pieced together very carefully, day by day. It is marvelous what the camera has accomplished for it is only by its use that you can tell what has been done by the enemy. The planes are sent up with cameras, photographs taken of the enemy lines to show what the enemy has done during the night, and the commander can map out his plans with that picture before him. That requires a tremendous development both of personnel and materials. It was a most important subject for us to work out and we secured the very best men we could get in the country. That branch of the work has been synchronized with the rest of it. So

far as the radio is concerned also, there have been very many important developments.

The personnel side of the situation had to be taken into consideration very seriously, of course, and had to be synchronized with the equipment. If we have planes and did not have American boys trained to fly them, the program would be a failure. So plans had to be laid, months ago. They were made under the provisions of the wise law you gave us, without which it would have been impossible to have taken a step toward the training of the youth of this country for the air service.

The type of youth we wanted was the finest that the country could produce.

To save time, the young man should be trained first in certain essentials, without any flying machine at all and for the purpose of saving the expense of going to a school where flying is going on. So we summoned to Washington last May the presidents of universities and certain engineering schools, and asked their cooperation in establishing the ground schools where the student is first sent. They cooperated loyally, and eight schools were selected. They are located at the Massachusetts Institute of Technology, Princeton University, Cornell University, the University of Texas, the University of California, the Ohio State University, the University of Illinois (Champaign, Ill.), and the Georgia State University, at Atlanta, Ga., and are distributed geographically in order to save mileage. We established in those schools an intensive training course of eight weeks in the essentials which it is necessary for the student to know in regard to the machinery and the mechanical side of the work. I had them take hold of that right away. Incidentally, we saved the Government hundreds of thousands of dollars by eliminating the weak and undesirable material at the outset. Those schools have been and are a great success.

You have heard a great deal of them, and probably a great many young men have come to you and tried to get into those schools.

Instead of sending the young man out to one of the flying fields first, we thought it was a good idea to start him on the university campus, and he could get a good start there in his engine training and in his radio training, and then we could utilize the staff of the university to give us whatever professors we needed in that instruction work. We had no time to train men to do that work, but we had to have an organization, which was already at hand. We sent along a West Point man to command the cadets. The work all over the country in those schools was standardized, and the course was made an eight weeks intensive course. Every boy has the same examination, goes through the same thing each week, and passes on through until he graduates.

We call them cadets during that period. Though enlisted as privates, we gave them that name, so that we can have control over them. They receive pay of \$100 a month, just as the men in the officers' training camps. The schools are running full speed, and every Monday morning the personnel officer gives me a statement in regard to them. Here is one which has just been handed to me. I will read it to you. [Reading:]

In carrying out our policy for the further training of these young men, we had no schools at the outset, and so it was considered a wise thing to do to fill up the allies' schools with American cadets.

re is a bit of psychology in that matter. If we had asked to send a small detachment of cavalry to Italy, for instance, it would have been difficult, for we would have had to go through the Secretary of State. But in the case of the flying men it is a universal proposition. No one became excited about sending cadets abroad. One of the peculiarities of the flying service is that it represents, broadly, all the hopes of the American Army, and you can send men abroad without much trouble. It would be difficult to send cavalry, but we are sending our flying people to help. They are all organized under American officers, of course. They will always wear the uniform of the United States, and it seemed to us that that was a wise policy. The very beginning Canada had one of the finest flying schools in the world. We could not wait; time was the essence of the matter, so we arranged to utilize their experience, and we sent a mission up there to get everything they had to teach us in relation to the building of flying schools in this country, and those reports, with the aid of the other officers here, enabled us to get plans for our flying schools without delay.

We started to build them on the 1st of June, and in five weeks the first group of schools were built. At one school they cleared three square miles of houses and buildings and erected 103 buildings. Those buildings were built under the direction of Col. Edgar, a very capable man. If you would like to have the details as to those schools, I will be very glad to have Col. Edgar come before you to give them to you.

The question of shipments of men and materials overseas was a very vitally important question, and we had to send abroad a very strong industrial staff, with some 20 men, to help solve those troubles over there.

One of the first things we had to do was to build a small town and send it to France for our men. We could not ask them to build a building over there. We had the building and the nails to put it together, and then we sent a short railroad to connect it to the French system. All this came out of the money you gave us.

We have done the things which have been necessary to do to get them into the air, and the result is that we are going to have ready this spring good machines as there are in the world.

Mr. KAHN. We have read the papers that the Germans have made about three changes in their machines. They began with the Albatross, and then they replaced that with the Fokker, and now they have the Albatross.

Mr. SQUIER. Before you came in, Mr. Kahn, I think, I made a statement to the committee in which I said that last spring we gave an estimate for certain machines, but we have not made one of them yet. If we had made the machines for which we then estimated, we would have had a lot of equipment which would have been out of the way.

Mr. KAHN. I saw some of the press dispatches from the other side, stating that Germany is making terrific plans to beat our flying men when we get over there. Have you any information on that point?

Mr. SQUIER. All the information we have is that it is true. It would be strange if it were not true, would it not? There has been a great deal of talk about it.

Mr. KAHN. That is what I was afraid of, that Germany would get the information and be prepared to beat us.

Mr. SQUIER. As the general situation appears now, speed is the essence of the matter. Germany is going to make a great effort on the western front before we can get there, and therefore speed is the most essential factor.

Mr. KAHN. Will you have sufficient bombs for this great number of planes you speak of to keep the bombing machines supplied?

Mr. SQUIER. I think we will have.

Mr. KAHN. It is essential that you have the bombing machines.

Mr. SQUIER. Of course it is. Your bill authorized us to get the things necessary for this program, and we went out and selected the

very best men we could get. We went out and selected the machine guns we needed.

Mr. KAHN. They are in production now?

Gen. SQUIER. Yes, sir. We wanted something that will shoot. It does not make so very much difference what gun you have, provided it is a reasonably good gun. We had to be progressive in that business. We were going ahead, picking up those guns, and then it seemed desirable to transfer the fund to the Ordnance Department and let them do the buying. But we have people living in the factories where those guns are being made, and we get a report from them every day. We are the pacemaker. If there is any lack in the production of guns we know it; as a matter of fact, they are coming in as they ought to come in.

Mr. GARRETT. As fast as you expected them?

Gen. SQUIER. As fast as we need them. All of the elements have to match up, and some time each week there is something behind. You can not tell what it is going to be. We may be behind in some one thing this week, and next week we may be behind in something else, but all those elements have to be matched up.

Mr. KAHN. In your experience, how long does it take to make a serviceable flier?

Gen. SQUIER. That is a moot question. Englishmen will tell you that they can make them in a little over three weeks. Our intensive training course is planning for two months in the ground school, and three months in the flying school. We have an international training committee right here. We have with us Col. Lee, who is the best man on that subject in England, who was sent here to advise us what to do. The theory of teaching flying is different when you go across the English Channel. Col. Lee says that in teaching flying you do not want to use the training plane, but you should use the battle plane. The French theory however is more like our own. We have to umpire those things all the time.

Mr. KAHN. I presume the student smashes a plane every once in a while?

Gen. SQUIER. Yes, sir; he does.

Mr. KAHN. And the teaching plane is not quite as expensive as the flying plane?

Gen. SQUIER. No.

Mr. KAHN. So that, as a matter of economy, it would be better to teach the student in a training plane?

Gen. SQUIER. Yes. That matter of the training planes was our great problem in the beginning, but we have caught up on that now, and we are storing training planes. When we started on this proposition, we had no training planes at all.

Col. DEEDS. We have reduced the cost of the training plane about 25 per cent.

Gen. SQUIER. When I was before the committee the last time, we were paying \$8,000 for the training plane and now we are paying less than \$6,000 for it.

The thought that we have in this whole matter and the thought that underlies it all is this: Wars, if you look at them in the last analysis, are usually won by some new thing. You remember that it was a new thing, the invention of gunpowder, which changed the history of Europe; and you remember that the invention of the

needle gun turned the tide of victory for Prussia against the Austrians; and some time before that Frederick the Great was successful because he learned how to march his men around the enemy. It is always something that is unbalanced and is not known up to the time it is used that turns the tide. You may remember that the main thing Napoleon discovered was how to utilize the rise and fall of the ground so that he could place his troops in an advantageous position and move the guns around so that the enemy would not know where he had moved them.

In this war, first it was the 17-inch gun and then it was the U-boat. On the whole, we have been more or less deficient in the newer things that are now controlling this war. We have remaining the air, and America is not satisfied with trailing behind in new agencies of war. We are looking for the new thing and adopting it in that spirit. We have been very sympathetic to any plan that would aid in that direction, because we believe that underground warfare has reached a sort of impasse. You can not go much farther with it. The undersea warfare is controlling the North Sea, and the surface of the sea is not safe; and there is nothing left but the other element, the air.

(Thereupon, the committee adjourned to meet to-morrow, Tuesday, January 22, 1918, at 10 o'clock a. m.)

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Tuesday, January 22, 1918.

The committee met at 10 o'clock, a. m., Hon. S. Hubert Dent (chairman) presiding.

STATEMENT OF MAJ. GEN. GEORGE O. SQUIER, CHIEF SIGNAL OFFICER, ACCOMPANIED BY COL. E. A. DEEDS AND COL. H. H. ARNOLD, SIGNAL CORPS—Continued.

The CHAIRMAN. General, I want to ask you some questions in reference to figures before we go further into the program. You are asking for \$1,032,240,314.77 for the aviation section, and the difference between that and \$1,138,240,314.77 is for the Signal Corps proper?

Gen. SQUIER. Yes, sir. About \$105,000,000.

The CHAIRMAN. For the Signal Corps proper?

Gen. SQUIER. Yes, sir. I have divided it into two parts, so that we could take up first the larger item, and then if you have no objection, we can take up the \$105,000,000.

The CHAIRMAN. You prefer to take up the aviation appropriation first?

Gen. SQUIER. Yes, sir.

The CHAIRMAN. The provisos under this item are just the same as those that were in the bill last year, are they?

Gen. SQUIER. Absolutely. There are one or two little points that might come up in a separate bill, or they may be put in this bill if the committee so desires.

The CHAIRMAN. Have you got the items for the aviation section, the expense items, divided according to each paragraph of the provisos? For instance, the first paragraph provides for the "Purchase, manufacture, maintenance, repair, and operation of airships and other aerial machines."

Gen. SQUIER. Not exactly. In a large sum like this, we have tried to place ourselves in your position, to see how it is possible in such a large amount as this appropriation involves, to get a thorough understanding of what the money is asked for and how it is going to be used. I think that can best be done by starting with some small part of it, and if we can analyze that in some simple way, you can see that we have a plan, and that we are working toward that plan, which is directly from Gen. Pershing.

The CHAIRMAN. That will be all right; you can give it to us in that way.

Gen. SQUIER. We have given a great deal of thought of how to present to a committee of this kind a large proposition like this so that it will be so simple that you can grasp it easily and see what our plan is. Therefore the first division of this appropriation is that of aeronautics. It was our purpose to treat that as a separate subject, and then to speak of the Signal Corps proper.

The first thing I would suggest taking up is the larger item, and then I will deal with the item of \$105,000,000.

In order to help understand that we have had a great many conferences.

The CHAIRMAN. I notice on page 15 the bill provides for the paying of 153,945 enlisted men of the Signal Corps.

Gen. SQUIER. Yes, sir. We have figured, for instance, on having 1,000 men for the meteorological service, and then we can not tell what new industries and agencies we may have to have.

We have not only this big plan, but in our own office we have a planning department and a ways and means committee composed of the heads of all the departments, who are all the time studying the estimates for all the different things and correlating them. These estimates represent the results of the studies of our experts, and they are all finally umpired by myself for each of the different elements, such as cameras and machine guns, and all the various elements. The chairman of that committee has been Col. Embick, who is a most experienced man.

Mr. McKENZIE. You say you have this plan, and you have great hopes that it will be carried out. Can you say to this committee that you have an abiding conviction that that is what is going to happen, and that this committee can rest assured that this is going to be done?

Gen. SQUIER. My central thought from the very first—and I have had the advantage of having been in this war practically two years on the front and back in London watching the terrible blunders that were made over there, and the conflict between the Army and the Navy which has not been repeated here—my central thought has been to so organize this service that we can get this thing done. The Liberty engine, for instance, is the backbone of the whole air program, both for the Army and for the Navy. There has never been any lost motion there. I am a member of the Aircraft Board representing the Army, and Admiral Taylor represents the Navy.

Admiral Taylor has acted on every contract of the Army, and I have passed on every naval contract. So there is absolute harmony between the Army and the Navy.

Now, in reference to the kind of contracts we have, I will say this. In a war like this, as we have learned, there is no time to teach people the special things that have to be done. In the Spanish American War I was in command of a battalion, and it fell to me to pick out some boys and teach them telegraphy in the evening to get ready. This is a war of entire nations, and with the small Regular Army we had, it is hopeless to imagine that we can do the vast things that have to be done in that old small way.

From the very start of this matter, the central thought in creating this organization, as far as the Chief Signal Officer is concerned, has been to find those men who can do the job, without regard to anything, politics, personal ambition, or anything else. I may say that I believe that the men behind this building program, when we give you the list of them, are the only people in the country who could put it through. If there are any other people either in this country, or in any other who can do that, they are the men who we want. We have steadfastly refused to give contracts to some of the people who have come here, who thought they could make aeroplanes or engines. In those cases we have made an inspection of their plants, and their engineering ability, and in our judgment we did not think they could make aeroplanes. It is not merely a question of giving out contracts, because we can do that easily. Nothing counts but the delivery of the thing. You can give out a contract very easily, but if the man you give the contract to can not deliver the goods, he is of no use to us in completing this program. Anybody will take a contract, apparently.

The men behind this program are men who can do things. Henry Ford is making all the engine cylinders for everybody. I have been to his plant several times. He has devised machinery, and can turn them out now at the rate of ——— a day. If any member of this committee wants to see how they are being made, it would be worth your while to make a visit to that plant.

Mr. Ford has devised machinery and has proved himself to be a big man. He took charge of that work and went ahead without any contract at all. All he wanted to know was whether we wanted them made. We went up there to see him, and he said that if we wanted his help he would do anything he could. He went ahead and got the contracts later. That is the type of man we have got to deal with in this proposition.

In building the other parts Henry Leland, the man who made the Cadillac automobile, came down here long before the bill passed, in early days, before we had any large amount of money. We asked certain men to come down here, men like those at the head of the Packard Motor Co., the Cadillac Motor Co., and the Fisher Body Co., who make a lot of the woodwork that goes into automobiles. All those people came here and met in my office, and although we had no money, they were willing to go ahead. I wrote each of them a letter then saying that we intended to give them the work and get the money later, and on that sort of a proposition they started in, built factories, etc., ordered machine tools, which is the main thing, and laid the foundation for the present development.

When it came to the engine for the training planes, we summoned Mr. John Willys, of the Willys-Overland Motor Co., who went after that proposition in like manner. This engine is a different kind of engine from the Liberty engine. We were not getting enough of them, and so we joined up with Canada, and since then we have been getting better results. We have worked absolutely in harmony with Gen. Hoar, and have allocated a number of things to Canada which we needed ourselves.

The Dayton-Wright Co., the National Cash Register Co., and people of that sort have been on this work, and if they can not build planes, I do not know who can. That is the only way I know how to get those things, by getting the people to make them who can do the job. When we go after a man, we simply measure him by what he has done, and I am willing to take him on, if he has done things. I can say this, Mr. Chairman and gentlemen, that if we have not the best people behind this proposition we do not know who they are.

We have refused to give contracts to people whom we did not believe could do the job in the way we wanted it done. But we have given out contracts in quite a large number in the hope that we might uncover new sources and encourage all sorts of people to start working on these things.]

Now, in direct answer to your question, Mr. McKenzie, as to whether we will actually get these things at the time we expect to get them, I believe we will come fairly close to it, and we may surprise you. But I know of no agency we could get to do this work in the time we expect to do it if the people we have put on it can not do it.

All the people I have mentioned are men of standing and patriotism and they have come down here merely on a letter from me, and without money appropriated have gone ahead.

The CHAIRMAN. I will be glad if you will proceed with the synopsis of your plan, so that we may know what these things are for.

Mr. OLNEY. What type of machine guns do you use?

Gen. SQUIER. We use the Marlin, the Lewis, and the Vickers. We have all the Marlin and the Lewis guns that we can get, but the Vickers are not coming along yet.

Mr. ANTHONY. How many guns will that buy?

Gen. SQUIER. There are two kinds of guns, known as the fixed and the flexible. The fixed gun is a part of the machine shooting through the propeller, and has to be synchronized so that the shots will not hit the propeller blades. The flexible gun is arranged so that you can get an all around fire from it. The general designation, therefore, is what we call the flexible guns and the synchronizing guns.

Mr. TILSON. I want to ask you some questions in regard to the item for the acquisition of land, or any interest in lands, with any buildings and improvements thereon by purchase, lease, donation, condemnation, or otherwise. The amount you allow for that is \$7,000,000. In general what is that for, and where is the land located?

Gen. SQUIER. The program of fields which your committee authorized in July included an estimate for 24. You remember that those were provided for in that bill, and we have stuck to that program, although we will probably have to add a few more fields.

According to that program, the following fields have been built:

Name.	Town.	Acreage.	Price per acre.	Purchase price.
Wright Field	Dayton	2,245.20	\$156.00	\$350,000.00
Bellevue Field	Belleville	640.00	192.00	122,895.00
Rantoul Field	Rantoul	640.00	325.00	209,000.00
Mount Clemens Field	Mount Clemens	640.00	297.00	190,000.00
Minneapolis Field, No. 1	Minneapolis	672.67	1,858.25	1,250,000.00
Minneapolis Field, No. 2	do.	393.20	764.00	300,000.00
Kelly, No. 2	San Antonio	1,721.54	220.00	378,117.50
Kelly, No. 5	do.	800.00	162.50	130,000.00
Newport News Field	Newport News	247.56	229.00	56,675.00
Richmond Field	Richmond	15.50	2,200.00	34,000.00
Harrisburg Field	Harrisburg	22.44	1,000.00	22,440.00
Memphis Field	Memphis	907.61	97.00	88,010.50
Dallas Field	Dallas	650.00	350.00	227,500.00
Fort Worth Field	Fort Worth	688.83	100.00	68,880.00
San Antonio Field, No. 1	do.	633.00	133.00	84,189.00
San Antonio Field, No. 2	do.	640.00	100.00	64,000.00
San Antonio Field, No. 3	do.	251.80	100.00	25,180.00
Wichita Falls Field	Wichita Falls	640.00	100.00	64,000.00
Waco Field	Waco	690.00	200.00	138,000.00
Houston Field	Houston	1,280.00	80.00	102,400.00
Lake Charles Field	Lake Charles	1,304.20	22.50	29,344.50
Indianapolis Field	Indianapolis	20.66	2,000.00	41,320.00
London Field	London	990.00	71.00	69,000.00
Arcadia Field	Arcadia	640.00	8.00	5,120.00
do.	do.	640.00	8.00	5,120.00
Montgomery Field	Montgomery	800.00	40.00	32,000.00
Additional fields				1,500,000.00
Total				5,545,191.50

We have bought no land yet, except the Langley Field, which you specially authorized. We have the authority to buy land, and could have bought land at any time, but just because we have authority to do things is a good reason why we should go about it very carefully.

Mr. TILSON. That is the proposition I was coming to, whether here is any necessity to purchase a large amount of land.

Gen. SQUIER. We now have authority to buy land. We have bought no land, except that for which specific authority was provided, namely, the Langley Field, which was a definite piece of land, and which it was thought was going to be the Sandy Hook of the Aviation Corps, the aviation experimental station.

The CHAIRMAN. Most of these fields where you have training camps, as I understand it, have been donated to the Government?

Gen. SQUIER. Some of them have; yes.

The CHAIRMAN. I know they have been in my State.

Gen. SQUIER. We had authority to buy land, but we have not exercised it, although we have had pressure to do so, gentlemen. We have rented each of these fields for a period of three years, and obtained an option for the purchase of the land at any time during the three years or at the end of the three-year period. We obtained those options at the time of rental.

That was due to the fact that unless we got a price on those lands then, if the war went on for any length of time, the price might be doubled or trebled. It seemed to be the wise thing to do to be certain of what we were doing. I for one, felt that instead of going ahead and buying the land we had better get a three years' lease on it. There was no particular hurry about rushing off and buying the land, at least before we started to build.

On the other hand, if you improve land and put Government money on the improved land, and make it worth several times the price of the land, we might without an option of purchase be placed in an

equally serious position. We are going ahead exactly as we figured to do when we got the authority in the bill; that is, we have gone on with the plan of 24 fields.

The CHAIRMAN. What you have given as the purchase price is the option price?

Gen. SQUIER. Yes, sir; we can buy them at those prices at any time we please within three years.

Mr. ANTHONY. Will you need all these fields after the war?

Gen. SQUIER. I am coming to that. We have estimated the total amount with the price of each, and figured that during the year we would buy half of them and let it go at that for the present. The ones we buy and the strategical location of the other fields will have the careful thought and consideration not only of the Army authorities, such as the General Staff, but also of certain civilian bodies which we have asked to cooperate with us with a view to the future development of aviation.

The Government has improved certain of these lands to a far greater extent than the value of the ground while certain others remain to be built. I think the flying movement is so huge that it will be unquestionably to the advantage of the Government to buy many of these fields, and my belief is that when all of these thousands of flying men come home after the war, the flying movement will have come to stay. The nearest we could come, after careful consideration of the matter, to the number of fields we think ought to be bought, is an estimate of 50 per cent. We have recommendations as to which ones should be bought immediately. We are planning so that in the future we can fly from field to field without a greater distance than a given number of miles, so that in the training of the Army, so far as the fliers are concerned, we can fly all the way from the Atlantic to the Pacific, and we want to locate the fields in such strategical positions that we could start a squadron from New England and let them fly to Texas.

The CHAIRMAN. As I understand it, most of the fields were turned over to the Government for the purpose of the erection of buildings on the fields by the Government, and the Government was not required to pay any rental.

Gen. SQUIER. That is true to a considerable extent.

The CHAIRMAN. Then if you want to establish a permanent institution at any of those fields, you will have the option of purchase?

Gen. SQUIER. Yes, sir. As time goes on, people almost offer to build the buildings for you. For the last big group we are building in Arcadia, Fla., we did not pay anything for land.

Mr. KAHN. Do you contemplate the purchase of any additional land, or erecting buildings in any additional places?

Gen. SQUIER. Yes, sir; I think so. We built the schools in groups, so that we can digest them, and we built five at a time.

Mr. TILSON. Do you feel that the coastal stations are needed, along the coast?

Gen. SQUIER. Between now and a year from next July, a great many things may happen, with the chances either way about equal. That should be done, and the only question is whether we will get time to do it. Probably we will; in any case we should have the authority.

Mr. KAHN. When you send the aviators to France, will you leave a sufficient number here for protection?

Gen. SQUIER. Yes, sir.

Mr. KAHN. You will retain a certain number of commissioned fliers in this country?

Gen. SQUIER. Yes, sir; as far as we can, as far as the progress of the war develops. It is my judgment that these things should be authorized so that we may do them if it is possible. Just because we have authority to do things, we do not necessarily do them unless it is the right thing to do.

Mr. TILSON. The same statement applies to the border conditions?

Gen. SQUIER. Yes; they undoubtedly should be built. We should have the authority. You can safely give us that authority. They will not be built until the General Staff wants them built.

Mr. TILSON. That would also apply to the construction of permanent stations in Panama, and in Hawaii; that is, what you have been saying?

Gen. SQUIER. It depends upon the development of the war. We want the authority to do it. We have not done it, but I believe you can safely trust us on the record we have made.

Mr. GORDON. Do you not think that is undertaking to delegate all of our legislative functions to the General Staff, and leaving it to their judgment as to whether or not they will spend the money? Is not that an abdication by Congress of this function?

Gen. SQUIER. I do not look at it in that way. This committee can call the Chief Signal Officer before it as often as it pleases.

Mr. GORDON. After we have appropriated the money it does not make any difference whether we call anybody or not. What was done with the \$740,000,000 we appropriated last year?

Gen. SQUIER. I told you yesterday about the progress we have made.

Mr. GORDON. Have you anything like a detailed summary?

Gen. SQUIER. Yes, sir. Col. Robert Montgomery will bring you the most complete statement of all the contracts and all the obligations we have made. I hope you will call him before you.

Mr. ANTHONY. Can you not have a rough statement of that prepared to go into the record?

Gen. SQUIER. Yes, sir.

Mr. GORDON. I notice by your memorandum that the number of fliers is one-fourth of the total number of the commissioned officers. What function would the officers who are not fliers perform? Are all the people in the Aviation Section commissioned?

Gen. SQUIER. No; they are not. The officers who are not fliers perform administrative functions.

Mr. GORDON. Are your mechanics on the ground commissioned officers?

Gen. SQUIER. No, sir; they are not commissioned officers. They are privates, corporals, and sergeants.

Mr. TILSON. But you have commissioned mechanical engineers?

Gen. SQUIER. Yes, sir; we have the greatest collection of specialized brains of various kinds that I think I ever heard of. My own corps is drifting so much into science that you would be astounded at the new things this war has developed, that no one ever dreamed

of at all; and since they are not Infantry, if they are scientific, we seem to get them—that is, the newer things that have to be handled. Gen. Pershing has to have the type of service rendered by the meteorological people, so that he can have predictions as to the kind of weather they are going to have. That is a matter of serious consideration, requiring the use of all sorts of instruments. It is not infantry, or cavalry, or artillery, but it has got to be done.

Mr. ANTHONY. They are used to prognosticate the weather conditions, and that has an effect on the plan of campaign?

Gen. SQUIER. Yes, sir. War is becoming so scientific that it is only the country that has the civilization to do some of these things that can defeat people who can not do them. For instance, consider what I told you about as to the aeroplanes. There is nobody in Turkey who could do that sort of work. They could not make them in Turkey.

The civilization that can do these things is going to prevail, and it may have a political meaning. The control of war will be in the hands of that civilization that can do these specialized things. We must defeat our enemies by mobilizing our specialized brains to the limit of possible usefulness.

The principal illustration of that, it strikes me, is the type of people we have in the Signal Corps. I have in the Signal Corps the head man in physics of the University of Chicago, Prof. Millikan, now Maj. Millikan, one of the best men in that subject anywhere in the world. What is he doing just now? He is helping the Navy on the U boat problem, in connection with all the refinements of working on that delicate business, and there is no man in the world who knows more about that than he does.

Mr. SHALLENBERGER. Is it not true that Artillery officers now in the Army can do that very thing, operating these batteries, without the aid of these trained scientists?

Gen. SQUIER. No, sir; nobody can develop those instruments except trained physicists.

Mr. SHALLENBERGER. The Artillery officers can operate them; it is a comparatively simple thing now, is it not?

Gen. SQUIER. Yes. But I want to make this point perfectly clear, that Army officers, as a rule, can not do those things, nor make the instruments that have to be developed to measure these things.

I have a dozen or more professors from Harvard, Yale, and other universities engaged in that sort of work. There is no use in trying to do it in any other way.

Mr. GORDON. Is that the reason why it is necessary to commission three-quarters of the officers who are not flying?

Gen. SQUIER. Yes, sir; that is one of the reasons.

Mr. GORDON. There is no limitation upon the authority to commission men in your department?

Gen. SQUIER. Except the approval of the General Staff and the President, which has to be had in each case. We have to submit the number of majors and captains we want, and sometimes it is difficult to get them to see these things as we see them.

Mr. GORDON. Then, as a matter of fact, in time of war Congress has nothing to say about the number of men. All it has to do is to appropriate the money for them. The President, in other words, can commission men without limit.

Mr. TILSON. He can not commission officers, in number, beyond the number that Congress has appropriated to pay for.

Mr. GORDON. We do not appropriate the money to pay them until after they are commissioned.

Mr. GREEN. I think that is not true in the Regular Establishment, and under the Reserve Officers' Corps law there is no definite limitation.

Mr. GORDON. Under the draft law the President can organize technical units without number.

Mr. GREEN. They are put into the reserve.

Mr. KAHN. Would you want to curtail his power, if he found it necessary to commission certain men skilled in science, and in that way we could win the war?

Mr. GORDON. It is not a question of whether or not I want to curtail his power. I was inquiring as to the extent of the power and the exercise of it. Congress, aside from its power to appropriate the money, has no voice in the matter.

Mr. McKENZIE. There has been a great deal of pressure brought to bear, has there not, by certain people on the outside, to get men commissioned in your branch of the service for ground work?

Gen. SQUIER. Yes, sir. I do not know that I would say a great deal of pressure. There has always been some pressure. In general, it has been very fair.

Mr. McKENZIE. You do not have an opportunity of investigating the application of every man who applies for a commission?

Gen. SQUIER. No, sir.

Mr. McKENZIE. Do you have any board that looks into that?

Gen. SQUIER. I do. On the first of the year I directed all commanding officers to carefully survey all the personnel in their departments, on the supposition that here and there somebody was in the service who should not be there, and each commanding officer is in the process of combing the whole field. No longer ago than yesterday I discharged one man.

Mr. NICHOLLS. The question was asked you about the men on the ground who are mechanics. What are the qualifications for going into that work? Let me give you an example. I have in mind the case of a man who wants to apply for that kind of work, and he has been a mechanic for 17 years. He has been, I think, the chief mechanic for a railroad company and the chief mechanic for several big automobile concerns. He is 36 years old, and, as I understand it, under your rules, he would have to enlist and be sent to some training school. What would be the chance of a man like that to get a commission with your working force?

Gen. SQUIER. Splendid; we will promote anybody who shows that he has the necessary ability.

Mr. NICHOLLS. How would he get in?

Gen. SQUIER. Enlist and go to the school.

Mr. NICHOLLS. That is the only way?

Gen. SQUIER. Yes, sir.

Mr. NICHOLLS. If a man has a record that shows that he is a competent mechanic, would there be any chance for him to be commissioned, upon his record, without going to one of your schools?

Gen. SQUIER. Not as a mechanic.

Mr. NICHOLLS. Regardless of his ability as a mechanic, he would have to go to school?

Gen. SQUIER. At present candidates for commissions in the non-flying part of the Aviation Section intended for duty as engineer or mechanical officers, supply officers, or adjutants are sent to schools for training.

Mr. NICHOLLS. I am not complaining about that; I was only asking for information.

Mr. SHALLENBERGER. General, will you put in the record a statement as to how many men you have put into your corps who did not go to your school?

Gen. SQUIER. Yes, sir. We have put men in like Col. Deeds here, who has never gone to a Government school.

Mr. FIELDS. Are you having any trouble in getting suitable mechanics at this time?

Gen. SQUIER. No, sir; I think the mechanics are coming along splendidly.

Col. ARNOLD. Now, we have over several thousand mechanics under training, and are utilizing the northern schools where we have to stop flying at this time of the year.

Mr. FIELDS. Are you inducting mechanics of the draft age into the service at this time?

Gen. SQUIER. I do not know how that is. You mean some citizen? I think the law does not permit us to do that.

Mr. FIELDS. There is an order issued by the Secretary of War, permitting men to go into certain branches by induction by the local boards, and there are a great many young men in the country within the draft age who are splendid mechanics, and some who have been asking me whether they could get in or not, and I wanted to know whether you can do that.

Gen. SQUIER. I think we can do that.

Mr. KAHN. You are inducting men now. A man has to go to school, and he can enlist in your corps, he is inducted.

Mr. TILSON. If you could not do that, you would bar yourself from the services of some of the very best mechanics in the country.

Mr. FIELDS. The very best mechanics are within the draft age, and if you could not get them by the process of induction, you would lose their services.

Gen. SQUIER. What is more to the point, we will go to the camps and take them away.

The CHAIRMAN. Do you ask for their transfer?

Gen. SQUIER. Yes, sir; I am doing that right along, every day.

Mr. SHALLENBERGER. Will you include in the statement I asked you for awhile ago the rank given the officers who did not go to the schools; not only the number of officers, but also their rank?

Gen. SQUIER. Yes, sir.

Officers of the Aviation Section, Signal Corps, not sent to training schools or camps: Colonels, 4; lieutenant colonels, 11; majors, 71; captains, 251; first lieutenants, 791; second lieutenants, 475; total, 1,603.

Mr. SHALLENBERGER. The reason I ask that is that I have had this experience: You were asked by Mr. Nicholls in regard to a specific case. I have been to the Ordnance Department and to another department with applications of such men, and they were specifically

wanted to be taken in, and they have always been told that they had to serve in these particular places, which they thought they ought not to do. I informed them that that was the rule. I learned that there were some men that were not required to do that, and these men told me they had heard of some men who had not had to do that.

Gen. SQUIER. There are men who have been put in without going to the school.

Mr. NICHOLLS. Why were they taken in?

Gen. SQUIER. When we went into this thing at the beginning, for instance, we found that we wanted, for instance, acetate of lime to use in making acetone. The question was, where is the man who knows about that? We did not care whether he had gone to school or not. We simply got him and put him to work without a moment's delay.

Mr. SHALLENBERGER. If you want a man to work with acetate of lime to make acetone, is it necessary for you to give him a commission?

Gen. SQUIER. I would much rather have him in the uniform of the United States Army so the Government can control him at all times.

Mr. SHALLENBERGER. We were told by the Quartermaster General that in the foreign armies they give the men in the Quartermaster Department a different rank from the men in the line.

Gen. SQUIER. You mean as sergeants or corporals?

Mr. SHALLENBERGER. No; I mean the men who serve as commissioned officers in the foreign armies. For instance, he told us that in the German and the French Armies they do not have the same relative ranks as the men in the Quartermaster Department in our Army.

Gen. SQUIER. We give them a somewhat higher rank?

Mr. SHALLENBERGER. No; they have a different rank; they do not have the same rank as the men in the line, they are not in the Army as men in the line.

Gen. SQUIER. Not in France.

Mr. SHALLENBERGER. They have a different status. I refer to the whole force of the army.

Mr. KAHN. I think Gen. Sharpe referred especially to the German system.

Mr. SHALLENBERGER. He said that was true in the French Army, that the officer in the quartermaster's department had a different title from the man in the line, but that he was saluted the same as the man in the line, although he had a different title.

Gen. SQUIER. We may come to that.

Mr. SHALLENBERGER. We have been told here that it has been necessary all the time to grant commissions to these men, under which they have the same rank and status and allowances as the men in the fighting line, and there has been a great deal of criticism of that.

Gen. SQUIER. Yes, sir; I served eight years as a second lieutenant, as I remember.

Mr. GREENE. Is it not true that as a part of the original policy of our Army and Navy they made that distinction between the status of technical auxiliary people connected with the Army and the men in the fighting line? We have always given a military grade and status to every man in the Army, and it has, has it not, been the general opinion that it can not be effectively done in any other way?

Gen. SQUIER. I think it is sound. You go to England and you will find that all the people connected with the army have been put into the uniform of their country, just for convenience and simplicity and for control. You try to go down town in Paris as a civilian and some one stops you at every corner and wants to know who you are and where your pass is. So it is a matter of absolute convenience to put all those men into uniform. Then you are working under the rules of other people in the service and you can carry out your duties without explaining who you are all the time.

Mr. KAHN. We have been drifting toward commissioning more men than the other countries have commissioned, and so we have commissioned veterinarians and pay clerks and quartermaster clerks and dentists, and all those kinds of people, and we have made them a part of our Army, so that if you go back to the systems that are in vogue in other countries we would have to reverse our policy even as it was in peace times.

Mr. ANTHONY. I would like to get a little information in regard to the balloon service. Are the balloons you use observation balloons?

Gen. SQUIER. Yes, sir.

Mr. ANTHONY. We understood that the aeroplane was to be used to get control of the air. After you have control of the air, are the balloons of any service?

Gen. SQUIER. Yes, sir.

Mr. TILSON. It is a good thing to have a station in the air, a permanent station?

Gen. SQUIER. These are captive balloons. The Germans have the most wonderful balloon service, and they are meeting the allies completely in the air. When I was on the lines in the second battle of the Ypres, it was an inspiring sight to see these balloons behind their own lines watching the movements of the allied troops. As they could be pulled down, the great object was to hit them or drive them away; but there they were, day after day, because the allies were caught and did not have anything with which to combat them.

Mr. ANTHONY. You want the balloon service to supplement your aeroplane service?

Gen. SQUIER. Yes, sir.

Mr. ANTHONY. Have you continued the development of the Zeppelin type?

Gen. SQUIER. When it comes to the Zeppelin, I think I can safely say that the nations themselves have not agreed at all. Germany is the only country that started on the Zeppelins years ago. England did not take any stock in it, and America did not have either Zeppelins or aeroplanes.

Mr. ANTHONY. What became of the Zeppelin we started to build about a year ago? Was it ever completed?

Gen. SQUIER. No, sir.

Mr. ANTHONY. Has any money ever been spent on it?

Gen. SQUIER. I can give you that information. I am a member of the Zeppelin Board.

Mr. ANTHONY. I would like to have a statement in the record showing how much money was used in that work and what the status of it is now.

Gen. SQUIER. Admiral Taylor is also a member of that board. I will be glad to furnish the statement you ask for.

Col. DEEDS. The main thing we are getting at now is the development of a kind of gas that will not explode.

Statement.—The joint Army and Navy Zeppelin Board, of which Admiral Taylor is chairman, has had several meetings during the past months, and up to the present has been investigating certain metallurgical problems involved, types of gas to be employed, and, in general, the obtaining of suitable designs and specifications. A joint Army and Navy mission is being sent abroad to obtain accurate information on the Zeppelin which is not available here.

(Thereupon the committee adjourned to meet to-morrow, Wednesday, January 23, 1918, at 10.30 o'clock a. m.)

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Wednesday, January 23, 1918.

The committee met at 10 o'clock a. m., Hon. S. Hubert Dent (chairman) presiding.

STATEMENT OF MAJ. GEN. GEORGE O. SQUIER, CHIEF SIGNAL OFFICER, ACCOMPANIED BY COL. E. A. DEEDS, COL. H. H. ARNOLD, AND MAJ. R. M. JONES, SIGNAL CORPS—Concluded.

The CHAIRMAN. General, I am going to ask you to put in the record a detailed statement in reference to the items you ask for. There are two subdivisions of your items, first, the Signal Corps proper, and then the Aviation Section, which is the big item. I am going to ask you to put in the record a detailed statement first of the Signal Corps proper, because that comes first.

Gen. SQUIER. The method of analyzing the estimates of the Signal Corps proper is exactly similar to the method used in analyzing the estimates for the Aviation Section, and I have here a similar analysis of that estimate. I see no objection to putting that list in the record.

The CHAIRMAN. We would like to have it in the record.
(The list referred to is as follows:)

Summary of Signal Corps estimates, 1918-19.

Page 1. Salaries of civilian employees.....	\$750,000.00
2. Service and installation of telephone and telegraph apparatus at camps and cantonments (home).....	1,500,000.00
3. Installation, maintenance, and operating expenses of supply depots and routine departmental administration expense (home).....	864,334.38
4. Maintenance, operating, and administration expenses of administration, supply depots, etc., of insular possessions....	34,000.00
5. Equipment of new organizations not at present officially included in the military program.....	3,500,000.00
6. Wastage of signal equipment in field of active operations....	50,000,000.00
7. Wastage of signal equipment in organizations adjacent to fields of active operations.....	3,000,000.00
8. Reserve equipment in France.....	12,500,000.00
9. Reserve equipment in United States.....	12,500,000.00
10. For development and purchase of new and special apparatus..	5,000,000.00
11. For radio equipment in addition to organization equipment..	4,500,000.00
12. Motor vehicles in addition to organization equipment.....	2,000,000.00
13. Photographic equipment and supplies.....	1,888,678.98
14. Pigeons, maintenance, equipment, and supplies.....	795,000.00

Page 15. Maintenance and extension of railway, signal telephone, te'ograph, and cable service in France.....	\$2, 250, 000. 00
16. Installation of telephone and telegraph apparatus at camps and cantonments in France.....	496, 530. 95
17. For research work and inspection in France.....	250, 000. 00
18. Maintenance and operating expenses of supply depots to store material in France.....	617, 510. 46
19. Over-seas emergency purchase fund for application as required.	3, 500, 000. 00
	<hr/> 105, 946, 054. 77

Gen. SQUIER. I would like to say, Mr. Chairman, for the benefit of the members of the subcommittee in charge of this particular section of the bill, who may have to defend the items of this appropriation on the floor of the House, that we hear certain questions asked every day which may give a good index of what people want to know. We have a statistical department whose business it is to keep data of that kind all the time, and I have here classified data of all sorts, in reference to the subjects appropriated for under these items. For instance, some one might want to know about the cost-plus contracts. We have the data in reference to that which we can furnish you. We have data in reference to almost any sort of thing that might come up on the floor of the House, and we will be glad to give it to you in order to enable the members of the committee to prepare themselves to answer. In order to do it in what we believe to be the most efficient way, I propose, in the first place, to leave this book which I have been using in the hands of the chairman. It was made for the use of the chairman. It contains a voucher to back up each one of these statements in a very condensed form.

In addition to that, under each of these heads we have all sorts of data made up by the statistical department in my office. There is only one copy of that in existence. I propose to detail an officer who will be especially at the service of the members of the committee, one of our experts, who will bring that book down here at any time and explain in detail any part or thing in connection with these estimates that you may want to know. We have that data here. It would probably take us weeks to go into it in detail, if we started a discussion of each one of them, because it is a very large proposition. We have anticipated giving you information to cover questions that might come up on the floor of the House, based on the questions that have come up in our office.

The CHAIRMAN. You have put the detailed statement in reference to the estimates of the Signal Corps proper in the record. Now, let us take item No. 5, "Equipment of new organizations not at present officially included in the military program, \$3,500,000." How do you explain that?

Gen. SQUIER. The estimated amount of that item is \$3,500,000. It merely means, judging by past experience, that we must be prepared to establish any sort of units called for. It is not an infrequent occurrence for an entirely new unit to be required at almost any time.

I will give you an example of that. We received a message a couple of months ago to send immediately railroad telegraph battalions to operate the French railroads, which are now being used by the United States in moving our troops. We had to go out and organize promptly four telegraph battalions, and go to the railroads

and get the people for the block signaling and all that sort of work. That is something new, and something nobody would have thought of, probably. We have had to go further and help the French in operating their railroads. What has happened in France is what is happening in Germany.

The CHAIRMAN. How do you arrive at the amount, \$3,500,000?

Gen. SQUIER. Ten telegraph battalions at \$130,000 apiece, a telegraph battalion meaning any kind of battalion that is to help the French run their railroads, or the intelligence system of the country, or new organizations of any sort that may appear. That \$130,000 is the unit cost.

Signal equipment of new organizations not at present officially included in the military program..... \$3,500,000.00

This item is necessary by the creation from time to time of new organizations not at present officially included in the military program requiring signal equipment and includes items of the following nature which were necessary during the past year and which we believe will be necessary for this year.

10 telegraph battalions, at \$130,000..... 1,300,000.00

The cost of signal equipment for one telegraph battalion is as follows:

Motor trucks and trailers.....	\$82,563.00
Motorcycles with side cars.....	10,238.00
Inspection cars.....	2,906.00
Wire.....	6,530.00
Lance poles.....	6,150.00
Telephone and telegraph apparatus.....	3,200.00
Tool kits, chests, etc.....	2,230.00
Line tools.....	1,200.00
Field glasses and visual signal equipment.....	750.00
Miscellaneous.....	14,233.00

Total..... 130,000.00

10 field signal battalions, at \$71,324.96..... 713,249.60

The cost of signal equipment for one field signal battalion is as follows:

Motor trucks.....	\$28,570.00
Motor cycles and side cars.....	6,516.13
Inspection.....	735.00
Wagons, instrument.....	750.00
Wire carts (2-horse).....	7,200.00
Field typewriters and Signal Office equipment.....	1,200.00
Wire.....	4,320.00
Telephone and buzzer equipment.....	3,386.00
Radio.....	6,600.00
Tool kits, chests, etc.....	2,040.00
Line tools.....	1,124.00
Field glasses and visual equipment.....	1,810.00
Miscellaneous.....	7,073.83

Total..... 71,324.96

20 regiments of 5 or 6 inch artillery, at \$28,000..... 560,000.00

The cost of signal equipment for one regiment of artillery is as follows:

Telephone and telegraph apparatus.....	\$2,590.00
Radio.....	3,000.00
Cable.....	6,010.00
Field glasses.....	8,400.00
Wire.....	7,500.00
Miscellaneous signal material.....	500.00

Total..... 28,000.00

10 forestry regiments, at \$6,500..... 65,000.00

Miscellaneous equipment of new organizations..... 861,751.40

3,500,000.00

The CHAIRMAN. That is the general plan?

Gen. SQUIER. Yes, sir; that is the general plan. The main thing is regiments of heavy artillery that are being organized to take over the big guns we are going to build. Those have to be carefully connected up with a cable buried 8 or 9 feet deep and armored in order to have the barrage fire sure to clear our own men and not hit them. You have to have the best possible communication between the Infantry and Artillery, so that the barrage fire will stop at the proper moment and the Infantry will not be killed by our own fire.

The CHAIRMAN. Now, will you explain item No. 6, "Wastage of signal equipment in field of active operations, \$50,000,000"?

Gen. SQUIER. We got at this whole question just as we did in the case of aviation. It all finally came from Gen. Pershing's staff. We sent over to France, as soon as the war broke out, a complete staff to study the situation there, and the French sent two professors to bring us all the new things in the war, whom we assigned to the Bureau of Standards.

Gen. Pershing studied the whole situation and sent on the same sort of an estimate for the Signal Corps proper, which we showed you yesterday in reference to the Aviation Section.

That being so, we had to estimate wastage in signaling equipment. What are the prospects of war, and what must we consider? Those were the things that we based our studies on. So that Gen. Russell, with the advice of all our allies in Paris and London, produced a table of general wastage, as far as any human being could figure it out. Some of those things are allowed more wastage than others, and this is the percentage of wastage which came from abroad. There is no reason why that should not go into the record.

Wastage, signal equipment.

Classification.	Value of Signal Corps equipment in hands of organizations.	Percentage of maintenance and replacement.	Money value of maintenance and replacement.
Kits, flag.....	\$332,942.69	200	\$665,885.38
Hellographs.....	175,840.00	100	175,840.00
Other visual signal equipment.....	197,630.40	200	395,260.80
Field glasses.....	3,388,978.00	300	10,166,934.00
Wrist watches.....	231,942.45	100	231,942.45
Buzzers and accessories.....	442,691.08	50	221,345.54
Wire:			
Buzzer.....	49,204.80	1,000	492,048.00
Field.....	1,065,120.00	1,000	10,651,200.00
Outpost.....	53,280.00	1,000	537,800.00
Other.....	103,836.03	1,000	1,038,360.30
Wire carts.....	258,768.00	50	129,384.00
Cable, armored.....	3,244,032.00	500	16,220,160.00
Switchboards:			
Buzzer.....	30,770.00	300	92,160.00
Outpost.....	280,800.00	600	1,684,800.00
Camp.....	26,570.00	50	13,285.00
Other.....	23,287.50	25	5,821.88
Telephones, field.....	271,382.00	300	814,178.00
Miscellaneous.....	1,316,177.52	200	2,632,355.04
	11,492,162.47	46,163,733.39

Percentage of wastage as a whole approximately 400.

You will notice that the average wastage of the total signal equipment in the front zone of operation is 400 per cent per year. The whole outfit disappears every three months, everything considered, on the average.

Gen. Pershing's estimate was that a million dollars' worth of wire was absolutely destroyed every month, so it is not a question of maintenance at all. It is absolutely blown to pieces, so you see what a terrible wastage of wire there is. Then there are eighteen hundred telephones that are absolutely blown to pieces every week. There is no question of wastage there at all.

So that, after studying this proposition carefully, it was determined that 400 per cent would be the average wastage of the whole equipment. The general estimate for the total equipment of the Army at the front zone in France, is \$12,500,000, so that four times that would give you the necessary year's supply. That amounts to \$50,000,000.

Mr. McKENZIE. General, are not the items Nos. 6, 7, 8, and 9, designated, "Wastage of signal equipment in field of active operations," "Reserve equipment in France," and "Reserve equipment in the United States," practically all reserve items? In other words it is for a reserve supply to take the place of the destroyed material?

Gen. SQUIER. Yes, sir.

Mr. McKENZIE. What are the prospects of your being able to purchase all this stuff and get it over to France?

Gen. SQUIER. The next two items are related to this one. The estimated value of the whole equipment at the front zone at any one time is \$12,500,000 and it disappears four times a year in the front zone, and 100 per cent in the adjacent areas. So that that gives you the item of \$50,000,000.

The item for "Wastage of signal equipment in organizations adjacent to fields of active operations," No. 7, is \$3,000,000. That wastage is not as great as the wastage at the front zone, and that is estimated at 100 per cent per year.

Item No. 8, "Reserve equipment in France," merely represents a three months' supply that must be on hand.

Gen. Pershing has insisted that our depots shall have three months' supply over there, and that there must also be three months' supply in reserve here, and not to be caught napping, we need to have enough of the material made. We must go ahead and have it ordered, three months' supply in this country, and a supply for three months more in the storehouses in France, because of the U-boat situation. So the next two items are related to the item of \$50,000,000, and represents three months' store house supply in each place.

Mr. McKENZIE. The point I wanted to get at is, are you having any trouble in procuring a sufficient supply of necessities, to hold them in reserve. Is our country in a position where we can supply these items?

Gen. SQUIER. I think the situation to-day is reasonably satisfactory, as much so as the other elements of the Army. We have mobilized all there is in this country in making this equipment. The Western Electric Co. and the General Electric Co., the two largest concerns on earth in their particular lines, are actively engaged on this proposition, and they have orders and are producing, and in

addition to that we have all the smaller companies manufacturing material.

Mr. McKENZIE. What can you say in reference to the price you have to pay for copper wire now, compared to the price of copper wire a year ago?

Gen. SQUIER. I do not know the exact figures, but we buy that all through the copper committee.

Maj. JONES. It is cheaper than it used to be, due to the fact that it is being handled through the war industries committee. Those gentlemen have fixed the price, and you will find, if you investigate, that the figure is lower than it was at the beginning of the war.

Mr. McKENZIE. It would be very encouraging if you would put those figures in the hearing.

Maj. JONES. We can obtain those figures for you, and put them in the hearing.

Price paid by the Signal Corps for copper.

The first contract placed by the Signal Corps in August for quantity delivery of copper was 16.6739 cents a pound, effective until September 20.

The price advanced September 20 to 23½ cents, subject to revision January 1. Recent advices continue the price at 23½ cents.

In this connection it is pointed out that the market price of copper prior to the entrance of the United States into the war was approximately 33 cents a pound.

Gen. SQUIER. We use all the agencies possible in buying all of our material. We secure clearances from the different committees, and in reference to our fields, we do not let the contracts until we get the advice of the contract committee.

The CHAIRMAN. I do not see any objection to you putting in the record a general analysis of each one of these items, just as you have explained those items which have been specifically inquired about.

Gen. SQUIER. I will be pleased to do that.

Mr. KAHN. I would suggest that the General put into the hearings a little summarization of these various amounts.

Gen. SQUIER. Take the matter of pigeons, for instance, and unless you are familiar with the pigeon industry you would hardly believe what we have to do. It is a serious business.

Mr. KAHN. Are you buying them in this country?

Gen. SQUIER. Yes, sir.

Mr. TILSON. Are you trading them in this country?

Gen. SQUIER. Yes, sir.

Mr. CALDWELL. Are you cooperating in that matter with the Pigeon Fanciers' Association?

Gen. SQUIER. We have everybody in the country at work. I never thought so very much about raising pigeons before, but we have found that it is a very important business.

Mr. GARRETT. How do you use the pigeons?

Gen. SQUIER. We use them in connection with the advanced Infantry, principally. In these days they tear the whole surface of your front line Infantry to pieces, and frequently tear all the wires to pieces. We have had to go to all sorts of extremes to keep the advanced Infantry in contact with the Artillery behind.

Mr. GARRETT. How do you operate the pigeons?

Gen. SQUIER. We release them from their cages in the front line Infantry and they fly back to the Artillery behind.

Mr. TILSON. The people in the front line would have them in captivity there?

Gen. SQUIER. Yes, sir; they are a very valuable aid.

Mr. GARRETT. They are all kept stored at a certain place, except those that you want to move forward?

Gen. SQUIER. Yes, sir; we use them from aeroplanes also.

Mr. KAHN. I saw some pictures in the early part of the year showing how they were using pigeons for taking photographs of the defense lines. Do you attach any photographic apparatus to the pigeons you use?

Maj. JONES. We get photographs from our aeroplanes. We have a large number of pigeons in cages on the first line, and the pigeons come back to the rear line all shot to pieces. They are more or less illtreated on the front line, and as soon as they are liberated they fly as fast as they can back to where they belong.

Mr. KAHN. Do you remember which one of the belligerents was using them for taking photographs?

Maj. JONES. Both the English and French were using them.

Gen. SQUIER. We now take a series of photographs from the aeroplanes, and you can see that the methods of road sketching that used to be in vogue have disappeared. A potograph does not lie, but a man can be mistaken.

Mr. McKENZIE. Has any one approached you to help you organize a dog unit in the Signal Corps?

Gen. SQUIER. No, sir; not yet. We are expecting them any day. I believe we are the owners of Alaskan dogs to a considerable extent.

Mr. ANTHONY. Under what bureau are the dog forces being organized? They are organizing them at several of the western posts?

Gen. SQUIER. That is not in the Signal Corps at present.

Mr. ANTHONY. Are they not to be used for signal purposes in the field, or are they to be used for doing Red Cross work, such as bringing in the wounded from the fields.

Gen. SQUIER. I suppose the Red Cross work is the main thing they will use them for. I see that Gen. Scott gave an interview recently in which he said they are most valuable. We have not made preparation for using them in the Signal Corps work, because we do not know what we are going to come to next.

Mr. McKENZIE. You do not think there will be any danger of losing the war if we were to forget about the pigeons and dogs.

Gen. SQUIER. I do not mean for a moment to indicate that they are not important at the front.

Mr. FIELDS. How many have you now?

Gen. SQUIER. I have the estimates here.

Mr. FIELDS. Do you get these birds mostly from South America?

Maj. JONES. Our birds are obtained in the United States and in France and in England. We have lofts in the United States at the training camps, and we have birds being trained abroad. Some of our birds are on the front-line trenches now and are sent back from day to day.

Mr. FIELDS. At what age are they shipped to go into service?

Maj. JONES. Some of them are taken as squeakers and trained, and others are taken when they are 1 year old and 2 years old. We have men in charge of them who came from the Pigeon Fanciers'

Association, men who are familiar with handling them. Those men were put into the service as soon as the demand for pigeons began, and they are there now operating with those birds.

Mr. FIELDS. They have to be trained before you can use them?

Maj. JONES. Yes, sir. They are put in the training camps, both here and abroad. A good many of them are trained in our camps abroad and they are trained under actual fighting conditions in the front-line trenches.

Mr. McKENZIE. How many men have you engaged in the pigeon work, in training, handling, and housing them?

Maj. JONES. The number is comparatively small, because most of the men come out of the Signal Corps organizations that are already in the camps. We plan to obtain more later, but there are approximately four men under the division signal officer, and one pigeon expert to a division.

Mr. KAHN. Are any of the men commissioned?

Mr. FIELDS. As I understand it, the one thing you do not have to train those birds to do is to get home?

Maj. JONES. Yes, sir; that is true. The pigeon is treated very well in the rear of the line; his coat is kept clean and everything is arranged to make it easy for him, so that he likes to stay there, whereas when he gets out in the front-line trenches it is just the other way. Just as soon as you let him go he makes a bee line for home.

Gen. SQUIER. In regard to the personnel of the pigeon section, there are 10 officers and 732 men altogether. In France there are 4 officers and 110 men. There are being mobilized 6 officers and 500 men. There are 2,600 trained birds now in France, with a supply of six months' feed, at 1 pound per week per bird, and there are 12 trench mobile lofts for the battle front.

Mr. McKENZIE. The men in that particular unit are civilians, I take it; or are they commissioned?

Gen. SQUIER. Of course, we have to get the men who know how to do the thing. We want the man who can do the trick. We do not care whether he has a commission or is a corporal if he can get things done he is the man we want. That is the only way to win this war, gentlemen.

Mr. KAHN. This is another instance of how you have been compelled to issue commissions to this sort of men.

Gen. SQUIER. I would like to clear that up right now. Some member of the committee brought out the point that we are having a considerable number of people who have been commissioned, but who had not been in the schools. Anticipating that question, I had that looked up, and I will put the information in the record, as to how many people were commissioned, and the reason therefor.

The main reason was that we had no schools when the war started, and another reason was that the kind of men, most of them, who were badly needed, had already been to the best kind of school we know of, to the school we wanted them to attend, because they had been doing the thing we wanted them to do for many years in civil life.

Mr. KAHN. They had been to the school of experience?

Gen. SQUIER. Yes, sir. Another further reason was that when we organize a thing in a large way that involves an industry comparable with the steel trust, with an expenditure twice the size of the amount

expended for the Panama Canal, which took us eight years to build, we have to get people who can do it, and do it in the right way.

So, in the early stages of such a proposition as this, you have got to organize from the top down, instead of from the bottom up. If you want to start a bank, gentlemen, you do not first select the office boy, but you get the president and the board of directors, and then you let them go ahead and organize the bank.

What I had to do at the beginning of this vast undertaking was to get at the head of our departments people of unimpeachable character, people in whom the country had confidence and who already knew their job.

Mr. SHALLENBERGER. I wanted to get that information. There have been coming to me constant complaints that we are commissioning a tremendous number of officers, more than we need.

Gen. SQUIER. The best answer to that, perhaps, I gave you yesterday when I was discussing the items in regard to the aviation section, concerning the target at which we are shooting, that is to get a given number of officers and men by July 1. If you recall, that estimate had in it something like 18,000 officers, and over 10,000 of those are actual fliers. I will stand on that record.

There is another point I would like to mention. The kind of personnel that is needed, and the kind of personnel the Government is getting, is saving this country, financially, hundreds of thousands of dollars. Men are in my office by the score who could earn all sorts of salaries, who are coming down here for the salaries of captains and majors. Considering the matter purely as a business proposition, this country is getting more service for less money than any organization I ever knew of.

I have several officers—one of them is present this morning—who ordinarily earns more than we pay the President of the United States. His Army salary as an officer does not pay half the rent of a modest house. I have dozens of men in my office who draw salaries of \$30,000 or \$40,000 a year who are merely majors and captains. There are two sides to the proposition, of course. Some of the younger officers are getting things they should not have here and there. That does not, however, remove the consideration of what the country is getting in the services of the others.

Mr. FIELDS. In connection with Mr. Kahn's suggestion that the men have attended the school of experience, do you not prefer the men with the actual experience to those who have taken a short course in your schools?

Gen. SQUIER. Of course.

Mr. GREENE. As I understand it, by reason of the policy which the Government earlier adopted, and the law as constantly enforced, in order to get any people at this time outside of the regular forces into the activities of war, with some organization and effective discipline, they must go into the military service. They may be commissioned officers, but they must at least be enlisted men, and then it follows that what in ordinary civil life would be the job of a superintendent, or a foreman, or something of that sort, is only indicated in a military organization by some commission, and that the commission practically only determines this man's authority to do the work, and the scale of his pay. It is not a technical military rank in any sort of sense.

Gen. SQUIER. Yes, sir; he is made a colonel because he has a colonel's job in the organization. His title in some industrial or commercial organization in New York, for instance, would be, perhaps, general superintendent, or something like that.

Mr. GARRETT. I hear a great deal of criticism about these men, that some of them have offered their services, or have received commissions in the departments, not especially in yours, but in the Quartermaster's Department and in other bureaus; that when they are on the dollar-a-year plan, while acting, no doubt, from patriotic motives, yet back through it all runs a cord to their original place of employment, to some concern with which they are connected, and when there are recommendations to be made concerning articles to be bought, that these men always make a recommendation for their people. Have you run across anything of that kind?

Gen. SQUIER. No; not in my department.

Mr. GARRETT. There is quite a lot of it, I have heard, and I was wondering if you are watching out for that kind of people.

Gen. SQUIER. We are.

Mr. GARRETT. I do not think because a man gets \$75,000 salary, if he tenders his services in this work, he is an unpatriotic man. I think he is fairly patriotic, but still, at the same time, I am convinced that we are all more or less selfish, in a degree, and I have always looked with some degree of allowance upon those who are in these departments, who intended at the beginning to make money out of the war. Whether they will make it or not, is another question. There is no doubt in my mind that they intended to make money, and I was wondering if you were keeping the thumb screws on that thing.

Gen. SQUIER. We are. The slightest indication of anything of that sort would immediately be the cause of such a man separating himself from the service or selling out what he had.

If Col. Deeds will allow me, he had to sell out everything he had at Dayton. He had some little interest in an aeroplane factory before the war, helping the Wright Brothers, but he sold everything when he came with us. There is not a member of the Aircraft Board who has anything to do with any activities of that sort.

Mr. GARRETT. I imagine it might have been a good thing for the Government to have taken over these plants.

Gen. SQUIER. When he got through with them, he could contract with them. We are constantly on the watch for that. There may be some slips, but whenever any man is discovered doing anything of that sort, he goes out.

Mr. CALDWELL. In your department, General, have you a special corps or organization that looks after the packing of your material?

Gen. SQUIER. Yes, sir; we have a large corps of packers.

Mr. CALDWELL. Do they work in conjunction with the Quartermaster Department, or do they work separately?

Maj. JONES. We have depots scattered all over the country, as you know, and in these depots we employ packers. There are bureaus of the Government which have attempted, and are getting along very well in the standardization of packing boxes. No later than this morning I dictated a memorandum and sent out to each depot copies of the Ordnance Bureau's scheme of packing, and also

copies of a bulletin of the Bureau of Forestry on the uses of the different kinds of woods in the making of packing boxes, with the idea of developing a standard box.

It is going to be a very hard proposition for the Signal Corps to do that, because we handle such a mass of odds and ends.

In the Ordnance Department it is comparatively easy, but with us, we handle everything from telephones to aeroplanes. It is quite a proposition to make a standard packing box, but we are cooperating with the Bureau of Forestry and the men in the Quartermaster's Department and the Ordnance Department in an endeavor to develop one. We have them for our aeroplanes.

Mr. CALDWELL. The object of my inquiry was to see what the Signal Corps was doing toward trying to eliminate the loss of space as much as possible, because, of course, the shipping question is a big question.

Gen. SQUIER. The whole thing is coming back to ships, and we are always working with other departments in the packing proposition.

Mr. CALDWELL. The English, as I understand it, deliver their machines by the air route?

Gen. SQUIER. They do.

Mr. CALDWELL. We can not deliver ours by the air route, from America, yet?

Gen. SQUIER. Not yet.

Mr. CALDWELL. You are establishing a central depot at some place on the coast line, at which you will have a sort of reservoir?

Gen. SQUIER. We have several of them. That is all in the Army.

Mr. CALDWELL. From there, I presume, you will deliver by the air route, from that point?

Gen. SQUIER. We will deliver most of our planes by flying. We already occupy the flying field at Issondin, and we have some of our people already over there. In Texas now we fly from one end of the State to the other when necessary.

Mr. CALDWELL. We have had a pretty good description of what we are doing on the front, and then we have this statement as to how we are getting stuff up to the front and back to the original source. Have you had any difficulty in accumulating your supplies here?

Gen. SQUIER. You mean raw materials?

Mr. CALDWELL. Raw materials, manufactured stuff, and everything of that kind. Have you had any difficulty in accumulating those supplies by reason of any interference of the other departments? In other words, there has been some discussion in the other body of this Congress concerning the methods that have been adopted in the matter of getting our supplies. Has the Signal Corps been interfered with in any considerable degree, so that you would recommend a change in regard to that work.

Gen. SQUIER. The Signal Corps believes in the cardinal principle of cooperation, working with all agencies, in general. We have therefore constantly utilized all of the agencies I described, such as the lumber committee and the steel committee, and we have done it direct. We have not written many letters about it. We have got clearances by having a man who sits with those committees. You

can not win a war by the use of pieces of paper and a pencil. You have got to get the stuff you want and get it quickly.

Mr. ANTHONY. In other words, you have chopped out a considerable amount of red tape?

Gen. SQUIER. Yes, sir; I think we have. We have nearly 20 Ford cars in Washington, which add appreciably to our efficiency. When it is necessary to get something done we put an officer in one of these cars and have him go and get it done and stay with it until it is done. If he comes back that night, all right; if he does not get back until the next morning, that is all right, too.

Mr. CALDWELL. The conditions are improving, and you are only getting that by experience?

Gen. SQUIER. Yes, sir.

Mr. OLNEY. I notice that the Council of National Defense purchases supplies; do you depend, to any considerable extent, upon the Council of National Defense for the purchase of supplies?

Gen. SQUIER. No, sir. The Aircraft Board is, as I said, one of the most efficient organizations and one of the simplest organizations I have seen in Washington, and the wisdom of this committee in enacting a bill providing for the organization of that board made it so. You will remember you passed a bill creating the Aircraft Board, which did not create a large staff of civilians, with a number of rooms, duplicating what was already being done. You will see in that bill that what it amounted to was requiring cooperation between the Army and the Navy, requiring us to get together and throw everything that we have on the table, so that there is nothing duplicated. The wisdom of that bill provided for the organization of that board, which I regard as simple and very efficient, indeed.

The CHAIRMAN. Have all of the civilian members of that board been appointed?

Gen. SQUIER. No, sir; there is one vacancy, but he will be appointed soon. I think that board as it stands—there is no authority there to actually spend money—just makes us get together and throw the whole thing on the table. Suppose an expert arrives from France with a new device. Instead of going around a week trying to find somebody from whom he can get action, he is summoned before the Aircraft Board. Everybody is there, and if there is anything to say it is said at once. Whenever there is anything concerning the Navy in connection with aeronautics I have a vote on that, and Admiral Taylor, who represents the Navy on that board, has a vote on everything in relation to aeronautics that concerns the Army.

It is my experience that anybody who can get away with anything from that board which is camouflage has to be a wonder, because somebody will see through it. We have three naval officers and three Army officers and two civilians on the board, and I consider it a very efficient board. It practically gives you a workable department of aeronautics. You really have all of the aeronautics work thrown together right there, with the simplest kind of machinery to do the work, without duplicating anything at all.

Mr. ANTHONY. Then who makes your contracts?

Gen. SQUIER. We make our own contracts. We pass a resolution recommending that the Chief Signal Officer let the contract. If I choose not to do so, I suppose Secretary Baker would be the chief

umpire in the matter. I get the official advice of the board. I have not all the wisdom in the world, and I want all the advice I can get from everybody.

Mr. SHALLENBERGER. Are you asking for an appropriation for a deficiency this year?

Gen. SQUIER. Yes, sir.

Mr. SHALLENBERGER. How much are you asking for?

Gen. SQUIER. We can not give you the exact amount yet.

Mr. SHALLENBERGER. You are asking for an appropriation of \$1,138,240,314.77, and we gave you at the last session \$739,067,766, and you are asking for practically \$550,000,000 for bombs for your fighting planes, making a total of \$2,427,167,000 which you are asking for this year and the year to come.

Gen. SQUIER. Two years.

Mr. SHALLENBERGER. What amount of deficiency will you add to that?

Gen. SQUIER. I do not know just what it will be.

Mr. SHALLENBERGER. You have spent more than a billion and a half?

Gen. SQUIER. If your figures are correct, and that is in two years of war. That is a long while, in war.

Mr. SHALLENBERGER. You ask for maintenance of these different squadrons, and for the equipment of them in addition to that. That does not have anything to do with the purchase of machines, but to keep them in shape for use while they are fighting. Is there anything that has come to your knowledge, during the experience of three years of war in Europe, which has shown that any military position has been influenced by the battle plane? Is there anything to show that any battles have been won by the planes that have been fighting? Of course, we know about the tremendous efficiency of the observation machines, the scout machines. We know what they have done; but what I want to find out is whether there is anything to show whether any military positions have been gained by the use of those machines?

Gen. SQUIER. Here is the answer to that. It is very simple. Practically, we will say, 90 per cent of all of the artillery firing that is done on all the fronts is accomplished by the aid of the aeroplane spotter.

Mr. SHALLENBERGER. I am referring now to the money you are going to spend to get the machines with which you are going to do the fighting. That is where the big money is being spent.

Gen. SQUIER. That has never been done on the scale on which it is being done to-day and will be done in the future.

Mr. SHALLENBERGER. There has been a great deal of criticism of the Germans because they used this form of attack against other nations in attacking civilians and noncombatant towns and cities. Is there anything to warrant us in directly attacking military organizations, while not attacking cities?

Gen. SQUIER. Yes, sir; it is done all the time.

Mr. SHALLENBERGER. I have had it stated to me by foreign officers that in these big flying machines, carrying bombs, you can not drop them with accuracy so that you can tell whether you are able to gain or affect any military position, and that there is nothing to show that

the armies on the ground will not ordinarily defeat your operations in the air, and therefore that there will not be any particular military position gained by this form of attack. The question in my mind is whether we had not better spend this money for the men on the ground, and for reconnoitering machines, and whether or not this method of attack in the air is really achieving any military success, or gaining any military positions. I have been told that there has not been any particular advantage gained by that method of attack so far.

If there is anything to be gained by this method, why is it that it has not been done so far?

I will say further that I have been informed that there are already as many machines as you say you are going to have by the 1st of July on the battle line on both sides now. I believe there are about 2,500 machines in use by the allies now, and what I want to know is whether they have done anything that has had any material effect whatever on the result? Is it not a fact that these attacks which have been made on munition dumps, railroad stations, and places of that sort have not been the success that it was thought they would be?

Gen. SQUIER. It has been a decided success. My opinion is just the reverse of what you have heard.

Mr. SHALLENBERGER. That is what I wanted to know.

Gen. SQUIER. It is very important in a debatable subject like this to get the facts correct and to do some simple thinking and straight thinking.

Mr. SHALLENBERGER. That is what I am trying to get.

Gen. SQUIER. Suppose we look at it in this way.

We find at present an underground warfare, a grand burrowing match, the like of which has never been heard of. There are millions of men under ground. We also find an undersea war, developing as no one ever dreamed of, making whole sections of the North Sea dangerous. We also find that the surface of the ground, where we used to fight and move the Cavalry, is so torn up that you can hardly use foot troops at all on the ground. The surface of the sea is also out of the question.

Let us take an account of stock and see where we are. We can almost say that the underground warfare can not go very much further.

Mr. SHALLENBERGER. The point I am getting at is this. I realize what the general theory is, and that we can not go under the sea, and we can not go under the ground, and now we are trying the air; but has it not been found from military experience that this thing of attacking men on the ground who are armed and ready to fight has been a failure?

Gen. SQUIER. No, sir; I think it has been just the reverse.

Mr. GARRETT. I would like to have you give us some information as to what has been done.

Col. DEEDS. I have the confidential communiqués of the Royal Flying Corps, that have never been outside of our office. I will be glad to let each member of the committee look at the copy we have, and see exactly what the Royal Flying Corps has done. They had — squadrons on the front daily. This shows what they have done.

Mr. ANTHONY. Granting that all that the colonel says is true, that these machines have been driven down, and that these depots have been attacked, what depot has been destroyed that you know of, actually, by aeroplane attack?

Col. DEEDS. You will find actually what has been done if you go through the communiques. We could easily get them together.

Col. ARNOLD. I could give you one good example of that. The town of Dunkirk has been largely destroyed by the Germans about 10 times.

Mr. ANTHONY. By what kind of fire?

Col. ARNOLD. By bombs dropped from Gotha planes.

Mr. ANTHONY. I thought the English have the mastery of the air. How did the German planes ever get to the town of Dunkirk?

Col. ARNOLD. The Germans at the present time have gotten supremacy of the air, so far as bombing machines are concerned. They have concentrated on that type of machine. If you will get Col. Bloomfield before the committee you will find what places have been destroyed and are being destroyed every morning. He can give you the amount of motor transports and everything else that has been destroyed in those depots.

Mr. ANTHONY. I think there is in the Washington Post of this morning a claim made by the English that they have the mastery of the air over there.

Mr. SHALLENBERGER. I have read about the town of Dunkirk and about the dropping of bombs. But those bombs do not necessarily strike the military defenses. They destroy houses, and they blow up the town, and they kill all kinds of noncombatant people, and that has been the general result of the air raids, so far as we know. I have been told by men in the business over there that it is practically impossible for a man flying in a machine at the rate of 125 miles an hour to avoid hitting anybody.

Col. DEEDS. Here is the record of one bombing squadron, beginning on the 31st of August. This was No. 100. It was a bombing squadron, and that is its record from the 31st of August to the 1st of September.

Mr. QUIN. Did they fire on any of the German troops and kill any German soldiers?

Gen. SQUIER. We have the best men of that type in the world right here in Washington. We have the men who have done these things, who have been sent here for duty in my office, and they are on duty in my office now. Summon Col. Lee and summon the French and Italian officers to tell you their experience as to what they have hit.

The CHAIRMAN. Have you the same English officers here now that you had when they appeared before this committee last year?

Gen. SQUIER. They are changing all the time. But those are men who have actually done these things.

Mr. KAHN. Only yesterday, or the day before yesterday, an announcement was printed in the newspapers that the cruisers *Breslau* and *Goeben*, former German raiders, now flying the Turkish flag, were absolutely destroyed by aeroplanes.

Mr. SHALLENBERGER. I want to know whether experience has shown that we are warranted in spending this amount of money for this purpose.

Mr. TILSON. Is not the best evidence of the destruction they do, what has been done on the English and the French sides? In those cases we know what has been done.

Mr. GARRETT. Have our men gone over the lines into the enemy country and done any bombing; and if so, what reports do they bring back?

Gen. SQUIER. Our airmen——

Mr. HULL. Here is No. 115. There are a half dozen instances of the dispersing of troops.

Mr. GARRETT. I was referring to our allies.

Gen. SQUIER. We have the daily bulletins——

Mr. SHALLENBERGER. You are asking for a tremendous sum of money from this committee. There has been, I think, a well-defined demonstration over there that this war, so far, has been fought on the ground, that the men fighting on the ground, and the Artillery, have been the two deciding factors so far. You bring a new factor into the situation that has not been tried, and you are asking for almost as much money for that proposition as is used for the Infantry and the Artillery together. I want to know whether or not there is any result, in the experience of war so far, to justify us in going so deeply into this untried field of battle fighting, when all of these other things have been demonstrated?

Gen. SQUIER. The best answer I can make to that is that we are doing what Gen. Pershing has asked us to do. This is not our program at all. My answer is that this is simply what has been asked for by Gen. Pershing.

Mr. SHALLENBERGER. In this matter of Signal Corps estimates, you have an item in there for wastage amounting to \$50,000,000. That is for a year's operations?

Gen. SQUIER. Yes, sir; it is 400 per cent.

Mr. SHALLENBERGER. You start in with the appropriation of last year, and you start with the necessary signal equipment, and that is to buy what? Why did you ask for \$25,000,000 more, with your equipment on hand, and then, starting in next July you are asking for \$50,000,000, which is enough to take care of all the year's wastage?

Why is not the amount of \$50,000,000, to take in all possible wastage, sufficient without the additional \$25,000,000? I can see why you need reserve, but why is that not included in the \$50,000,000 for wastage?

Gen. SQUIER. Let us take any particular date.

Mr. SHALLENBERGER. You have asked for an appropriation to supply your equipment, beginning with the first of the fiscal year, on the 1st of July. You have asked \$50,000,000 to make good the wastage during the year.

Gen. SQUIER. Yes; that material is destroyed four times during the year.

Mr. SHALLENBERGER. It takes \$12,500,000 for your supplies, and then you ask, in addition to that, for \$25,000,000, practically for reserve. Why is that not included in the wastage?

Gen. SQUIER. Simply because in war you must have at any one moment——

Mr. SHALLENBERGER. That would give you a fund of \$75,000,000.

Gen. SQUIER. Yes, sir.

Mr. SHALLENBERGER. Then, your wastage does not fairly cover your losses?

Gen. SQUIER. It is a question of the definition of wastage. I have shown you what it is, three months' supply in this country, and three months on the other side.

Mr. SHALLENBERGER. So far as defending that item is concerned, it looks to me as if you had better put that together.

Gen. SQUIER. Every word of that proposition came from Gen. Pershing's staff. These plans did not originate here at all. This offensive air program is Gen. Pershing's program, not mine.

Mr. SHALLENBERGER. I think that is a very important thing. I do not mean any reflection upon you at all. The men over there, who have been there for six or eight months, certainly have better chances to know what is needed than even you do, and if that came from the other side, I think it is an important thing that we have that in the record, that in submitting this program you are not relying on your own judgment, but taking the recommendations from the general staff of Gen. Pershing's forces.

Gen. SQUIER. The whole of this program came from Gen. Pershing's staff.

Mr. SHALLENBERGER. I think, after consideration, I will rather modify my opinion. I will say in reference to the matter of the officers that I was talking about a while ago, that I am satisfied that Col. Deeds is worth whatever he has had, and the reason I brought that matter up was because so many of us have had the cases of men who want to go into the schools and they see the cases of all these other men who have been commissioned without going to the schools, and they object to it.

Gen. SQUIER. That is inherent.

Mr. SHALLENBERGER. You will remember that Mr. Coffin, the chairman of the Aircraft Board, came before our committee and gave us a very glowing picture of the number of machines you were going to have on the front lines next summer. As I recall, the number he gave was 18,000 machines, and his statement was that you were ahead of your program, and that everything was going to be exactly as your program required.

Gen. SQUIER. I do not recall that testimony at all.

Mr. SHALLENBERGER. I know I made the statement that your department was the first one that had come to us and said that you knew what you were going to do. He told us about this battle-plane program, that they could not go much further with the campaign of underground warfare or of undersea warfare, and that you were going to fly over these enemy lines and blow up the tracks and smash the communication lines, and thus force the Germans to retreat. That sounded very good to me, but after I had talked with men who have had experience over there, I have been told that that can not be done when the enemy knows you are coming.

Gen. SQUIER. All our experience——

Mr. SHALLENBERGER (interposing). I am very much in favor of the plan.

Gen. SQUIER. In night bombing, in particular, where you do not have to fight, you are practically immune from being attacked.

Mr. SHALLENBERGER. But you can not tell what you are hitting.

Gen. SQUIER. The great city of Metz, for illustration, is very close to the line. If we had even 50 bombing machines every day, or even 10 every night, we could simply go after them, and we could move no man's land back 150 miles, where the dumps are kept now, outside of the artillery range. We have never yet, however, had enough machines.

Mr. SHALLENBERGER. Can you tell the committee that there is anything to warrant you in believing that you are going to do it?

Gen. SQUIER. When we have the quantity—

Mr. OLNEY. At any time would you be in danger of destroying hospitals and killing civilian noncombatants?

Gen. SQUIER. We would attack military things only.

Mr. CALDWELL. I want to ask you something in reference to the Ordnance Corps. The representatives of the Ordnance Department made an estimate, based on a statement made by you. We have here a confidential schedule of it. They asked us for drop bombs, marked "1," 3,750 per squadron per month, making a total of 309,375, and on the second page there is an estimate of 247,500, and so in the details of each page there is a difference.

This schedule was given to us at the beginning of our hearings, and I wondered if your corps had prepared a supplemental estimate to cover that ground; and if so, have you that supplemental estimate handy?

Gen. SQUIER. Mr. Sherley has asked me to appear before the Committee on Appropriations this afternoon to clear up the question of bombs.

Col. DEEDS. Data is being prepared taking into consideration Gen. Pershing's request, approved by the general staff on the other side, giving a statement of the number of bombs per plane. We are making a modified schedule of our own that we will have before this afternoon, which is based on our very latest information on the subject, and we will get that and let you have it.

Gen. SQUIER. On the 3d of January Gen. Pershing sent us the number of bombs he wanted. Every bit of this comes from him. This is not our plan.

Mr. CALDWELL. Could you put that into the record?

Gen. SQUIER. The number of bombs?

Mr. CALDWELL. The number of bombs, and the estimated cost. The matter I referred to just now is what we have in the record at this time. I was under the impression that the large program we have been talking about is so much larger than that, that that would be misleading.

Gen. SQUIER. We will correct it, by all means.

The CHAIRMAN. I am going to ask you, General, to put into the record the detailed statement in regard to the items for the Aviation Section, as you told us yesterday, with an explanation of each item, similar to the explanation you have given with reference to the Signal Corps proper, which you have given this morning.

Gen. SQUIER. I will be glad to do so.

Mr. GREENE. This is to prepare the way to answer some question that will probably be asked on the floor.

There seems to be an impression that each type or aeroplane requires a distinct type of engine, but I had the impression that the Liberty engine was adaptable to any type of plane.

Gen. SQUIER. That is perfectly true; the Liberty engine is adaptable to the various types of planes. It flies the De Haviland, the Bristol, and the Handley Page machine. It also flies every boat of the Navy, and will probably go into some of the planes we are buying from France, or rather some of those that Gen. Pershing has bought for us.

We go to Europe with one engine, and we can get the spares from any of our shops or ships.

We are going to reduce the number of 30 men required for each machine, because we have a simple engine. We can multiply the engine three times and thus we can get 1,200 horsepower to a machine. That is what Germany has done. She started out with the Mercedes engine, and she has it yet. All of the allies have 30 or 40 different kinds, and that does not make for the efficiency of the air campaign.

Mr. GREENE. Another question suggested was that if we standardized to a certain plane that is, perhaps, below 100 per cent of the greatest efficiency of some distinctive plane we might make, whether we would be losers because of the possible advantage in the employment of some one of those superior machines. I tried to express this idea about it. I tried to argue in general terms that if we had a plane and an engine that could be depended upon to be up in the air 20 hours out of every day, and always there, we would accomplish at the end of a month more actual destruction than we would if we had various kinds of special machines which might or might not go up now and then, and that an average of this effective offensive, maintained consistently and persistently, day by day, would be greatly effective. That is a question which relates to strategy, and it was asked me.

Gen. SQUIER. There are various kinds of planes for various purposes. The plane with the last mile to it, the very last mile, is sure to win, but there are few planes in France with the last mile. The standard quantity plane, however, is good for night bombing, where you are not attacked at all, and enables you to accomplish enormous results, commensurate with the number of planes you have, even though you have not got the last mile, because you do not need it. You are protected by the few very speedy machines, and you now travel in groups, in regular formation.

Col. DEEDS. I have here, dated December 31, a confidential table of the performances of all the British aeroplanes. There is given the types of planes they have in service, and with all that variety they are trying to do the work.

Mr. GREENE. Then it comes down, for the purpose of the lay mind, to the fact that as a practical military offensive, a machine that is humanly certain to go up and will go up day by day will be furnished in sufficient quantities, so that there will be enough to go up and enable you to accomplish more destruction than you would with some superior machine, not so great in number, whose certainty is not to be depended upon at all?

Gen. SQUIER. Exactly. We always have a few high-speed machines.

Mr. TILSON. What sized bombs do you calculate dropping; as heavy as 500 pounds?

Col. ARNOLD. The English are dropping 500-pound and 250-pound bombs.

Mr. TILSON. I see that there is a bomb here that the Ordnance Department is preparing, the weight of which is 500 pounds.

Col. ARNOLD. They carry the larger ones only in exceptional cases, the average is 25 or 50 pounds, and they carry some 125 and 250 pound bombs.

The larger number of bombs are those weighing from 100 to 250 pounds. They use the observation planes for bombing, to a certain extent.

Mr. TILSON. How about the incendiary bombs? Those are standard size bombs, the same weight, but simply containing ignition material instead of explosives—is that correct?

Col. ARNOLD. Yes, sir.

Mr. TILSON. Are you preparing to use a great number of those in your work of destruction?

Col. ARNOLD. Our bombing program is outlined by Gen. Pershing's requirements in the field, and we are giving him the number of bombs he has asked for. It includes all kinds.

Gen. SQUIER. We have a cablegram from Gen. Pershing telling us what he wants.

Mr. GARRETT. In your night attacks, do certain of the aeroplanes carry searchlights, or any kind of light, giving the other people a chance to see them?

Gen. SQUIER. In London they have special planes, which are painted in black.

Mr. SHALLENBERGER. You are laying out a larger program in the use of bombs than has been proposed up to date. Is there a possibility that in building up that program, you have reduced the program for maintaining the aeroplanes, and that there is a possibility that you will not be able to do that, and that the Germans will be able to fight or destroy your observation planes?

Gen. SQUIER. Every angle and phase of this proposition has been considered by the allies for a number of months. It was only in September, after conferences held in Paris, that this program was agreed upon. We have the strongest kind of mission in Paris, who meet with these men all the time.

Mr. SHALLENBERGER. Mr. Taylor, of Colorado, talked to us about the situation on the other side. He stated specifically that he had been told that if we sent over large machines with a speed of less than 150 miles per hour, we will be wasting our time, and that the Germans already are building battle planes and fighting planes that will drive our machines out of the way.

Col. DEEDS. The answer to that is the report of December 31.

Gen. SQUIER. It is just the difference between conversation and facts.

Mr. MCKENZIE. When you were before our committee on a former occasion, and I think also when Mr. Coffin and his associates were before us, asking for some authority to organize the Aeronautical Board, the question of royalties was inquired into, and I think it was stated at that time that matter was in process of adjudication, and I think you stated you expected to have it settled by the payment of a lump sum for all the patents. Have you succeeded in getting a settlement of that matter, or is it still in abeyance?

Gen. SQUIER. The whole patent situation is at the disposal of the committee, including everything that has been done in reference to

it. At the present time it is closed. To go into it thoroughly would take us an hour or so. We have not paid a cent out yet on that agreement. It is considered as an item of cost.

Col. DEEDS. There has not been anything paid out as an item of cost.

Mr. SHALLENBERGER. Have you agreed on the contracts?

Col. DEEDS. The whole thing revolves about the cross-license agreement.

Mr. QUIN. Mr. Coffin made a definite statement to this committee in regard to it; has that been complied with?

Mr. McKENZIE. He thought the whole matter could be settled for about a million dollars, for all the European patents, and a payment to the Wright Bros. It is possible that some of the Members of the House, not very friendly to this program, might ask how much royalty is being paid the Wright Bros.; how much are we paying on the patents.

Gen. SQUIER. We have the whole thing right here, stated in full. It might save your time if I were to read it.

Mr. McKENZIE. I think it ought to go into the record.

(The matter referred to is as follows:)

MANUFACTURERS AIRCRAFT ASSOCIATION (INC.).—CROSS-LICENSE AGREEMENT AND LICENSE.

[July 24, 1917.]

CROSS-LICENSE AGREEMENT.

This agreement, made this 24th day of July, 1917, between the Manufacturers Aircraft Association (Inc.), a New York corporation (hereinafter called the "Company"), party of the first part, and each person, firm or corporation (hereinafter called the "Subscriber" or "Subscribers") as shall become stockholders of the said "Company" in the manner and under the conditions provided in the by-laws thereof (which for the purpose of this agreement are made a part hereof), and become parties to this agreement, parties of the second part;

Whereas, the parties hereto are interested in the manufacture, sale, and use of airplanes, as hereinafter defined, and desire to promote and develop the industry in which they are engaged, and to encourage and advance the art applicable thereto; and

Whereas, the said development and advancement in the past have not been capable of as complete accomplishment as is desirable, because of the existence of certain United States patents claimed to be basic in their nature, upon which suits have been brought, or threatened, for alleged infringement and for the collection of royalties and damages in connection therewith; and

Whereas, it is desired to prevent and avoid such litigations or threatened litigations in the future and to give to all of the "Subscribers" the right to manufacture, sell, and use airplanes embodying the inventions of each of the "Subscribers" and to that end it is desired that licenses be granted as herein expressed:

Now, this agreement witnesseth:

That for and in consideration of the premises, the covenants, and conditions herein contained, and of other good and valuable considerations moving between the "Company" and each of the "Subscribers" hereto, and between the "Subscribers" themselves, it is covenanted and agreed as follows:

I. DEFINITIONS.

The word "airplane," as used in this agreement, shall be understood to mean any form of heavier-than-air craft using wing surfaces for sustaining it, and to include propelling means, propellers, propeller hubs, radiators, and all parts and accessories used or useful in the airplane except the engine and its accessories.

The words "airplane patent," as used in this agreement, shall be understood to mean any patent covering inventions for or capable of use in or in connection with airplanes, including propellers, propeller hubs, radiators, and all parts of airplanes and accessories used or useful in the airplane, except the engine and its accessories.

II. LICENSES AND POWERS GRANTED.

The "Subscribers" grant, agree to grant, and cause to be granted to each other. licenses to make, use, and sell airplanes—under all airplane patents of the United States now or hereafter owned or controlled by them or any of them, or by any firm, corporation, or association owned or controlled by them, or under which they, or any of them, or any such firm, corporation or association, have or shall have the right to grant licenses—in and throughout the United States, its territories, and dependencies, for use therein or abroad, except that no rights, express or implied, are hereby granted under any foreign patents, nor shall said rights or the licenses, herein provided for, apply to or include the use of said patents in their application to other than airplanes, and except further that no licenses are hereby granted under the Dunne patents No. 975403, issued November 15th, 1910, and No. 1003721 issued September 19th, 1911, rights under which are held by the Burgess Company.

All licenses provided for herein shall run to the full end of the term of the letters patent under which the license is or is to be granted and shall be personal, indivisible, nonassignable and irrevocable, except for the causes and in the manner hereinafter stated.

The "Subscribers" hereby designate, constitute, and appoint the "Company" (and the "Company" hereby accepts the appointment) as their true, sufficient, and lawful agent and attorney in fact, for them and in their respective names, to make and execute licenses in writing in the form hereto annexed, and to deliver the same to those of the "Subscribers" who, at the time, are stockholders of the "Company" not in default hereunder, and who shall have executed an agreement in writing of like tenor to this; and to enforce said licenses and any and all other obligations (including the obligation to make payments) of the "Subscribers" under this agreement; and the "Subscribers" hereby give and grant unto said "Company" as full, complete and ample power and authority in the premises as the "Subscribers" themselves now have and possess.

All licenses provided for herein, when made, executed, and delivered in accordance with the provisions hereof, shall have the same force and effect as if they had been executed and delivered by the "Subscribers" themselves.

III. COVENANTS OF FURTHER ASSURANCE.

(a) Each "Subscriber", now or hereafter, having rights under any United States airplane patent or invention, of such character that it has legal right and power to procure the grant of rights thereunder to others, but is not itself empowered to grant such rights, covenants to procure the execution of such further instrument as may be necessary to empower the "Company" to grant rights under such patent, or with reference to such invention, to the extent and in the manner herein provided.

(b) Each "Subscriber" covenants that it will not contract for or obtain any rights under any such patent or invention in such manner that its owner would be prevented from granting to other "Subscribers" hereto similar rights on the same terms, unless the "Subscriber" obtains, at the same time, the further privilege to grant rights under said patent or said invention whereby the same may and will be brought under the operation of this instrument.

IV. COVENANTS AGAINST OTHER LICENSES.

Each "Subscriber" covenants that it has not heretofore entered and will not hereafter enter into any contract or arrangement, whereby its privileges under United States airplane patents, issued or to be issued, inventions, and rights, owned or controlled by it, have been or shall be diminished or surrendered so as to exclude or restrict the operation of this instrument in respect thereto. Each "Subscriber" further covenants that it will not grant licenses under any such patents for use in airplanes, with reference to which it is receiving royalties hereunder, to any other person, firm, or corporation on more favorable or lower terms of royalty than those herein provided or which may become more favorable or lower during the term of such license.

V. AFTER ACQUIRED PATENTS.

When a "Subscriber" shall hereafter acquire a United States airplane patent, or any right thereunder, he shall be entitled to compensation for the use thereof if the patent or patent right covers an invention which secures the performance of a function not before known to the art, or constitutes an adaptation for the first time to commercial use of an invention known to the industry to be desirable of use but not used because

of lack of adaptation, or is otherwise of striking character or constitutes a radical departure from previous practice, or if either the price paid therefor or the amount expended in developing the same is such as to justify such compensation, provided that at the time said patent or patent right is reported to the "Company," as required in subdivision (b) of Paragraph VII, the "Subscriber" claims such compensation, and states the grounds on which such claim is based. Such report and claim shall be submitted to a Board of Arbitration to be selected in the manner provided for in Paragraph XIII hereof, which Board shall determine whether such compensation shall be paid, and, if so, the total amount thereof and the rate of royalty, or other payments, which shall be paid (towards such compensation) by any "Subscriber" desiring and taking a license under said patent and shall also fix the time or times when said royalties or other amounts shall be paid.

VI. SPECIAL MODELS.

If any "Subscriber" shall have developed the design and manufacture of any special model of airplane, or airplane engine or other device used in an airplane (except the airplanes manufactured by the Burgess Company under the Dunne Patents hereinbefore mentioned, and the Hispano-Suiza aeronautical engine manufactured by the Wright-Martin Aircraft Corporation or its subsidiaries), which the United States Government may at any time desire to have manufactured in the factory of any other "Subscriber" or in the factory of any manufacturer not a "Subscriber" hereto, the said "Subscriber" agrees that it will furnish to the other "Subscriber" or said other manufacturer such complete specifications, drawings and other production data, as may be required, for use in the manufacture of such special model, provided that and upon condition that the "Subscriber" or other manufacturer in whose factory the work is placed by the United States Government shall agree with said Government and with the "Subscriber" owning said specifications, etc., to pay and shall pay into the treasury of the "Company" one per cent upon the contract price paid by the Government for each airplane or airplane engine or other device manufactured for it in accordance with said specifications, etc.

If the manufacture of such special model is conducted by one not a "Subscriber," such manufacturer shall also agree to pay into the treasury of the "Company" such such royalty as a "Subscriber" would have been obliged to pay had it made and sold the airplane, engine or other device, including the amount specified in subdivisions (a) and (b) of Paragraph VIII hereof, if an airplane with or without engine, is the thing manufactured for and sold to the Government.

VII. REPORTS TO THE "COMPANY."

The following reports in writing shall be rendered to the "Company" by each "Subscriber" at the time or times hereinafter set forth:

(a) At the time of the execution of this agreement each "Subscriber" shall report all United States airplane patents and inventions together with serial numbers and filing dates of all pending applications for such patents, and all rights under such patents and inventions then owned or controlled by it, but no omission from such report shall exclude the patent, application or right so omitted from the operation of this agreement.

(b) Within 30 days after the acquisition by any "Subscriber" of any United States patent (other than patents to be issued upon inventions now owned by it) or right within the scope of this agreement, each such "Subscriber" shall report such acquisition together with all the facts known to it as to such patent or right and its manner of acquisition. If such "Subscriber" claims that additional compensation should be paid to it for licenses under such patent or right, it shall so claim in its report.

(c) On the 10th days of January, April, July and October in each year, each "Subscriber" shall report the number of airplanes (with or without engine), sold and, delivered by it, together with the names of the purchasers, and the dates of delivery or put into use for other than experimental or development purposes, or shipped out of the United States, during the three preceding calendar months.

(d) On the 10th days of January, April, July, and October in each year, each "Subscriber" shall report the number of airplanes, airplane engines, or other devices for use in airplanes, which it has sold and delivered during the preceding three calendar months, made from specifications, drawings, and other production data obtained from any other "Subscriber," as provided in Paragraph VI hereof, together with the sales price and the dates of delivery; and there shall be included in the same report a copy of any agreement which the "Subscriber" shall have made with another manufacturer as provided in said paragraph.

(e) Each license to other than "Subscriber" as provided in Paragraph IV hereof, shall be reported within 30 days after its delivery.

The first of each of the reports specified in subdivisions (c) and (d) hereof shall be made by each "Subscriber" on the tenth day of January, April, July, or October first occurring after it has become a "Subscriber" hereto, and shall cover the period from July 1, 1917, to the first day of the month in which the report is due.

Each of the "Subscribers" hereto shall keep separate books of account showing all business done under or subject to the operation of this agreement. The "Company" may at any time have a New York Certified Public Accountant, to be designated by it, audit such books of account of the "Subscribers," together with such other accounts as the accountant may deem necessary, in order to verify or correct the reports herein provided for, and the "Company" shall have such audit made when any "Subscriber" so demands. Such audit, however, shall be limited to ascertaining whether the reports herein provided for are properly made and to correcting the same, if necessity for correction shall appear. No information obtained from any such audit shall be reported by the accountant or given to any of the parties hereto, except as it directly applies to the reports required by this agreement.

VIII. PAYMENTS TO THE "COMPANY."

Each "Subscriber" agrees to pay into the treasury of the "Company" on the 10th days of January, April, July, and October in each year the following sums of money, to wit:

(a) On each airplane, with or without engine, required to be reported as provided in subdivision (c) of Paragraph VII hereof, the sum of two hundred dollars until such time as the Wright-Martin Aircraft Corporation and the Curtiss Aeroplane and Motor Corporation shall have been paid the aggregate sums provided for in subdivisions (a) and (b) of Paragraph IX hereof.

(b) On each airplane, with or without engine required to be reported as provided for in subdivision (c) of Paragraph VII hereof, such sum not to exceed twenty-five dollars, as the Board of Directors of the "Company" may, from time to time, fix and determine as payable after the above-mentioned aggregate sums shall have been paid to the Wright-Martin Aircraft Corporation and the Curtiss Aeroplane and Motor Corporation.

(c) Such amount or amounts as the Board of Arbitration may specify as special compensation for after acquired patents as provided in Paragraph V hereof, and required to be reported in subdivision (c) of Paragraph VII.

(d) Such amount or amounts as may be payable with reference to the use of specifications, drawings, and data as provided in Paragraph VI hereof, including the royalty payments therein provided for, but all one (1%) per cent payments on account of the use of such specifications, drawings, and data covering any one model shall cease when the total paid by all users shall aggregate Fifty thousand (\$50,000) dollars.

(e) All royalties received under licenses referred to in subdivision (c) of Paragraph VII.

Each "Subscriber" who shall become a party hereto after the first day of July, 1917, shall on the 10th day of January, April, July or October next occurring pay to the "Company" those amounts which it would have been obliged to pay in accordance with the foregoing if it had been a "Subscriber" on July 1, 1917.

Moneys paid into the treasury of the "Company" pursuant to any provisions hereof shall not be or constitute or be deemed to be or constitute the assets, property or profits of said "Company," but shall be received and disbursed by it as the agent and attorney in fact of the "Subscribers" in the manner and for the purposes herein mentioned.

IX. PAYMENTS BY THE "COMPANY."

Out of the moneys paid into the treasury of the "Company" pursuant to the provisions hereof, the following payments shall be made by the Company on the 20th days of January, April, July, and October in each year, to wit:

(a) To the Wright-Martin Aircraft Corporation One hundred and thirty-five dollars (\$135) on each airplane with or without engine, with reference to which payments shall have been made in accordance with subdivisions (a) and (e) of Paragraph VIII hereof, during the preceding three calendar months, until U. S. Patent No. 821393 issued May 22, 1906, shall have expired, or until the aggregate sum of ——— dollars shall have been paid to the said Wright-Martin Aircraft Corporation when all payments to it hereunder shall cease, except as hereinafter provided.

(b) To the Curtiss Aeroplane and Motor Corporation Forty dollars (\$40) on each airplane, with or without engine, with reference to which payments shall have been made in accordance with subdivisions (a) and (e) of Paragraph VIII hereof, during the preceding three calendar months, until such time as the Wright-Martin Aircraft Corporation shall have been paid in full as provided for in subdivision (a) of this paragraph, after which there shall be paid to the Curtiss Aeroplane and Motor Corporation at the times herein mentioned the sum of One hundred and seventy-five dollars (\$175) on each of said airplanes until the aggregate sum of ——— dollars shall have been paid to it or until U. S. Patent No. 1203550, issued October 31st, 1916, shall have expired, when all payments to it hereunder shall cease, except as herein-after provided.

(c) To each of the "Subscribers" entitled thereto such amounts as may have been paid to the "Company" with relation to the use of after acquired patents in accordance with subdivisions (c) and (e) of Paragraph VIII hereof.

(d) To each of the "Subscribers" entitled thereto such amounts as may have been paid to the "Company" on account of the use of specifications, drawings, and data as provided in Paragraph VI and in subdivision (d) of Paragraph VIII hereof, but any royalty payment received from outside manufacturers shall be distributed as though received from "Subscribers."

(e) To any "Subscriber" who shall have granted licenses to others than "Subscribers," as provided in Paragraph IV, the royalties received under such licenses which are not required for payments provided for in subdivisions (a), (b), and (c) of this paragraph.

Out of the balance of said moneys paid into the treasury of the "Company" under this agreement, the "Company" may retain and use sufficient to cover its operating expenses and to create such fund as, in the judgment of the Board of Directors of said "Company," shall be necessary and proper for the further development of the airplane art and industry, and the purchase of patents and rights for the benefit of the "Subscribers" hereto.

If after making the payments and reservation herein provided for, any surplus or balance remains out of the funds so paid into the treasury of the "Company," the same shall be distributed by the "Company" from time to time, among those "Subscribers" who have contributed to said moneys, in proportion to their respective contributions under subdivisions (a) and (b) of Paragraph VIII other than those required for payments under subdivisions (a) and (b) of this Paragraph IX.

X. BREACH OF AGREEMENT.

In the event that any "Subscriber" is claimed by the "Company," or any other "Subscriber," to be in default in the performance of any of its obligations hereunder, and such claimed default continues after thirty days' notice in writing, by the "Company" or any "Subscriber" hereto, to the "Subscriber" claimed to be in default, then the Board of Arbitration, hereinafter provided for, shall determine whether there has been such specified default and if such default is found to exist, shall fix the time within which it must be repaired, and shall assess such damages and impose upon the "Subscriber" in default such other requirements (including the forfeiture of its stock and license) as may seem to the said Board of Arbitration to be proper under the circumstances. Each "Subscriber" covenants and agrees that it will pay such damages and comply with such requirements as may be specified by the said Board of Arbitration.

Nothing contained in this paragraph shall deprive the "Company" of the power to make, execute and deliver licenses under the patents or patent rights owned and controlled by any defaulting "Subscriber," or to which the "Subscriber" may be entitled, at the time he ceases to be a stockholder or "Subscriber," nor deprive other than defaulting "Subscribers" of any right which they may have received to the use of the said patents or patent rights.

XI. WITHDRAWAL FROM AGREEMENT.

Any "Subscriber" may withdraw from this agreement at any time after ten years from the date hereof, on giving to the "Company" written notice of its election so to do and on fulfilling all of its obligations up to the date of such withdrawal. But no withdrawals shall relieve the other parties and other "Subscribers" from their obligations to each other hereunder, nor deprive them of their rights acquired under the patents and patent rights owned or controlled by the withdrawing "Subscriber" at the time of withdrawal, all of said patents and patent rights remaining under this

agreement, but such withdrawing "Subscriber" shall cease to have any rights under the patents of the other "Subscribers" hereto, or any other right under this agreement, from and after such withdrawal.

XII. REPURCHASE OF STOCK.

In the event of the death of any person who is a stockholder in the "Company," or in the event of the dissolution of any corporation or firm which is a stockholder therein, or in the event of the bankruptcy or insolvency of any such stockholders, or in the event of withdrawal under Paragraph XI hereof, the "Company" shall have the right to purchase for the benefit of the other "Subscribers" the stock held by such person, firm or corporation at a sum not to exceed the distributive share or shares of such stockholder in the funds held by the "Company," and the license or licenses issued to such stockholder shall be surrendered to the "Company" and cancelled.

XIII. ARBITRATION OF CLAIMS AND DISPUTES.

In case of any dispute or controversy between the "Subscribers" hereto, or between the "Subscribers" and the "Company," or in case of a claim by a "Subscriber" for special compensation for licenses under patents or rights hereafter acquired by it, or in case of breach of this agreement, the said dispute, controversy, claim or breach shall, within thirty days after a "Subscriber" or "Subscribers" shall have given notice to the "Company" or the "Company" shall have given notice to the "Subscribers" thereof, be referred to a board of disinterested Arbitrators consisting of three persons, for determination.

In the case of a claim for special compensation, one member of such Board of Arbitration shall be appointed by the Board of Directors of the "Company," another by the "Subscriber" making the claim and the third by the other two arbitrators.

In the case of any dispute between the "Company" and a "Subscriber" or "Subscribers," one member of the Board of Arbitration shall be appointed by the Board of Directors of the "Company," another by the "Subscriber" (or if more than one "Subscriber" is involved in the same dispute, then by a majority of those so involved) and the third by the other two arbitrators.

In case of a breach of this agreement asserted by the "Company" or a "Subscriber" against another "Subscriber," one member of the Board of Arbitration shall be appointed by the Board of Directors of the "Company," another by the "Subscriber" against whom the assertion of breach is made and the third by the other two arbitrators.

If either the Board of Directors or the "Subscribers" fail to appoint a member of the Board of Arbitration within the time specified the other party or parties may appoint such member or fill such vacancy.

The decision of a majority of the members of said Board upon all matters submitted to them for adjudication shall be final and binding upon all the parties hereto.

XIV. RELEASES TO "SUBSCRIBERS."

The "Subscribers" hereby waive and release any and all claims which they or any of them may have had against each other for damages and profits on account of any infringement or alleged infringement, prior to July 1, 1917, of any patent included within this instrument in the manufacture, sale, or use of airplanes.

XV. BINDING UPON PARTIES, CONTROLLED COMPANIES, LEGAL REPRESENTATIVES, ETC.

This agreement is binding upon the parties hereto and their several successors, legal representatives, and assigns, but shall enure to the benefit of only their several successors in business. Each "Subscriber" agrees that all persons, firms, and corporations now or hereafter controlled by it, and engaged in the manufacture of airplanes, or owning or controlling United States airplane patents, shall be caused to execute this agreement.

XVI. EXECUTION OF AGREEMENT.

This agreement may be executed by the "Subscribers" in any number of counterparts, but when so executed shall constitute but one and the same agreement, and shall be as binding, and of the same force and effect, as if all the "Subscribers" had executed but one and the same instrument, and as if all executions had been at the same time.

In witness whereof, the parties hereto have executed this instrument as of the day and year first above written.

LICENSE.

License, granted this day of , 1917, by the (hereinafter called the Licenser), to (hereinafter called the Licensee).

Whereas, the Licenser and certain other stockholders of the Manufacturers Aircraft Association (Inc.), (hereinafter called "Subscribers") heretofore, entered into a certain agreement dated July 24, 1917, entitled "Cross License Agreement" (a copy of which is hereto annexed), wherein and whereby the Licenser agreed to grant certain licenses to the other "Subscribers;" and

Whereas, the said agreement also authorized and empowered the Manufacturers Aircraft Association (Inc.), as the agent and attorney in fact of the Licenser, to make, execute, and deliver such licenses in the name of the Licenser; and it is desired to execute the powers therein granted;

Now, this license witnesseth:

That for and in consideration of the premises and other good and valuable considerations moving between the parties hereto, it is covenanted and agreed as follows:

1. The Licenser does hereby give and grant unto the said Licensee the unrestricted but nonexclusive license to make, use and sell airplanes—under all airplane patents of the United States now or hereafter owned or controlled by it, or by any firm, corporation or association owned or controlled by it, or under which it or any such firm, corporation, or association have or shall have the right to grant licenses—in and throughout the United States, its territories, and dependencies for use therein or abroad, except that no rights, express or implied, are hereby granted under any foreign patents, nor shall the licenses herein provided for, apply to or include the use of said patents in their application to other than airplanes, and except further that no licenses are hereby granted under the Dunne patents, No. 975403, issued November 15, 1910, and No. 1003721 issued September 19, 1911, the rights under which are held by the Burgess Company.

The patents; the patents to issue on inventions; and the agreements with reference to which the Licenser has a right to grant licenses at the present time, and which are intended to be included in this license are set forth in Schedule "A," hereto annexed.

2. This license shall run to the full end of the term of the Letters Patent under which the license is or is to be granted, and shall be personal, indivisible, nonassignable and irrevocable, except for the causes and in the manner set forth in the "Cross License Agreement" hereinbefore referred to.

3. This license is made subject to all the terms, conditions, covenants and agreements contained in said "Cross License Agreement," which is made a part hereof with the same force and effect as if herein set forth at large.

In witness whereof, the parties hereto have caused this instrument to be executed as of the day and year first above written.

SCHEDULE A.

I. PATENTS AND INVENTIONS.

Patents No.	Issue date.	Title of invention.

II. PATENT APPLICATIONS.

Serial No.	Filing date.	Other data.

III. PATENT RIGHTS, LICENSES, ETC.

Nature of right.	Inventions.	Date of agreement.

Mr. ANTHONY. Have you agreed on the lump sum?

Col. DEEDS. No, there has been no agreement on the lump sum. The cross licensing agreement, you gentlemen will recall, stipulates that a total of \$200 per plane is to be paid, a portion to the Wright-Martin Co., and a portion to the Curtiss Company, up until a total of \$4,000,000 is paid—\$2,000,000 to the Curtiss Corporation, and \$2,000,000 to the Wright-Martin Corporation. All the facilities are thus pooled, and all patent litigation closed.

This proposition was referred to the Attorney General, who sent back a report saying that the cross licensing agreement was a valid agreement. Then the air craft board asked a committee of patent attorneys to investigate this entire matter and submit their report to the board. That committee returned its report last week. I have not read it, and I do not think Gen. Squier has read it yet, but as I understand it, it is to the effect that there were valid patents, and that in addition to the settlement of the patent litigations, it was a good business proposition for the Government to go into, in that it settles for all time all of this controversy over patents. That is the gist of the report of the committee of patent attorneys, which, I am sure, we will be glad to get before this committee.

Mr. HULL. What is it about the aeroplane that the patent is on?

Col. DEEDS. There are several hundred patents on aeroplanes.

Mr. HULL. Is there a valid patent?

Col. DEEDS. The valid patent, as I recall, is that on the ailerons and the lateral control, the entire control of the aeroplane, which is the fundamental patent of the Wrights.

Mr. HULL. What do the Curtiss people have?

Col. DEEDS. They have a lot of flying-boat patents, used by the Navy, and a great many structural patents, without which we could not build the modern plane. The Wrights did the original work, but it was the Curtiss people who did the development work.

Mr. HULL. If I remember Mr. Coffin's testimony before the committee, it was to the effect that the Curtiss people did not have a fundamental patent, but that it was good business policy to give them something, because they had developed something, or had been in the game, and been good fellows.

Col. DEEDS. I think probably there is something to that side of it. The Wright patents undoubtedly are more fundamental than the Curtiss patents. Those were the things put up to the committee of attorneys who investigated the matter and made a report.

Mr. HULL. Do you think we could defend on the floor of the House the payment of money to somebody simply because they had been good fellows and had developed something?

Col. DEEDS. I do not know what your position would be on that. I see the other side of it, from the practical business standpoint. In that case, everybody was in litigation, and this was found to be a way to close the thing out. I do not know what the results would be if there was no cross-licensing agreement. I think we would have a lot of difficulty in getting aeroplanes at the present time. The fact is that so far, in connection with our cost plus contracts, no money has yet been paid by the Government on this.

Mr. HULL. Is there any agreement to pay?

Col. DEEDS. The Government has agreed to save the contractors harmless from any expense that may arise out of this cross-licensing agreement, because we could not get the contractor to go ahead if he was liable to litigation.

Mr. HULL. As I understand it, then, the Government is responsible for the payment of about \$4,000,000 for patents?

Col. DEEDS. No, it is not responsible. The Government will stand behind the contractor and what he might have to pay as a result of this cross-licensing agreement. If the agreement was knocked out, the Government would have nothing to pay. If it stands and the contractor has to pay, the Government will stand him harmless, because no contractor would go ahead on the possibility of having this agreement hanging over him.

Mr. SHALLENBERGER. How is that being adjudicated, by a court of law or by the Air Craft Board?

Col. DEEDS. That has been in the hands of a committee of patent lawyers, who have made a report. It is being handled by the National Advisory Committee on Aeronautics, who instituted the proceedings. When it came before the Aircraft Board, they asked the same question that was asked here, Are the patents valid? For their own guidance, the members of the board asked these patent attorneys to make this investigation. The report of the committee of patent attorneys has been returned.

Mr. GREENE. The effect of that is also that the people who hold the various patents will not be fighting each other.

Col. DEEDS. That is the result. It closes out the entire patent matter.

Mr. GREENE. It settles all individual relations as well as relations to the Government?

Col. DEEDS. \$200 is a small item, in comparison with \$1,200 paid on the other side. If the patents are fundamental, it is not exorbitant, and it closes out what would be a very nasty situation.

Mr. HULL. The question that comes to my mind is what is the fundamental patent they claim on an aeroplane?

Gen. SQUIER. A copy of the full discussion of the whole thing can be furnished to the committee, and that will give you a complete explanation of the matter. The attorneys on the two sides were Judge Crisp and Mr. Fish, who is one of the highest authorities in the country on patent law. Those two men were the attorneys of the two contestants, and so, in order to see what patents there were, and whether they were valid, we invited a committee entirely outside to investigate. We have now gotten that opinion and the advice of that committee of patent attorneys, and we will give it to you if you desire it.

Mr. TILSON. Is it not a matter of law that we can not determine?

Col. DEEDS. When this question first came up in our finance division, we notified every contractor that we could allow them to have the limit of cost until the matter is adjudicated, and we have not made any payments yet. This is a matter entirely outside of our work. We have no department or division handling matters in connection with patents.

Mr. HULL. I am trying to get the information that some people want.

Gen. SQUIER. You can get that information from Dr. Walcott, of the Advisory Committee on Aeronautics.

Mr. HULL. In the matter of buying the equipment necessary for your department, as I understand it, you are willing to buy of anybody. Who is the gentleman that such people should apply to, if they think they have anything to sell in the line of equipment, or the parts of an aeroplane?

Gen. SQUIER. They can go to the equipment division, or appear before the Aircraft Board.

Mr. HULL. You started to make a point a little while ago, which I think you did not complete, and I think it will be of some interest to the committee to have you complete your statement in regard to it. That was in reference to the repairs on the railroads in France, I think. You started to say that something had happened in France that was also happening in Germany. What is it that is happening in Germany to the railroads and to the railroad equipment?

Gen. SQUIER. When war comes on the public utilities are neglected, and if they are neglected for as long a time as three years, they will all be falling to pieces. The railroads and the telegraph systems are in that state, after three years of neglect. We have a great job to do to help the French run their railroads, because women have been doing it, and old people.

Mr. HULL. I think I asked you this question yesterday, but I want to ask you again, to be sure it is made a matter of record. You were talking about machine guns, and you mentioned three types, but among those you mentioned you did not refer to the Browning gun. You said you wanted to say something on that.

Gen. SQUIER. We intend to use that also.

Mr. ANTHONY. You said you were going to use the Vickers gun. Is that the Vickers gun ordered by the Ordnance Department?

Gen. SQUIER. It is the same gun.

Mr. ANTHONY. That is the water-cooled type; is that too heavy?

Gen. SQUIER. I think it is the same gun.

Col. DEEDS. There are a certain number of Vickers guns which have been ordered by the Ordnance Department that are being turned out at Colts, and we are going to use the air-cooled Vickers up to a certain number.

Mr. ANTHONY. That is something new that has been brought out?

Col. DEEDS. It is the duplicate of the air-cooled Vickers on the other side.

Mr. ANTHONY. Is that a new development of the Vickers?

Col. DEEDS. No; it has been an aircraft gun for sometime.

Mr. ANTHONY. It is a light-weight machine gun.

Col. DEEDS. It is not going into quantity production here. It is a difficult gun to make, and we will use what we can get, under the present order, and follow that with the Marlin gun for the fixed gun, until we can get the Browning gun, which looks like a very good gun, but we will not use it until it has been demonstrated.

Gen. SQUIER. Our policy has been to get a gun and then get a better one when it comes along.

Mr. HULL. I would like to ask you about your cost plus contracts. You use cost plus 12½ per cent in your contracts?

Gen. SQUIER. Not all of them. Some of them are 12½ and some of them are 15.

Mr. HULL. There has been considerable criticism about the 10 per cent profit allowed in the place of cost plus contracts. Where did you get the idea of allowing 12½ and 15?

Gen. SQUIER. That is an evolution. I believe I could say that in cases where we have had to advance a certain amount of money to the contractor, we have taken advantage of that fact to lower the price, and have gotten a lower price than in the case where we did not have to advance the money. We have had to deal with all sorts of conditions.

Mr. HULL. Do you not think the 10 per cent plus contract is a pretty good thing for a manufacturing concern?

Gen. SQUIER. No, sir. I think that ordinary manufacturers in peace times make more than 10 per cent.

Col. DEEDS. Out of the 12½ per cent you must realize that the contractor must supply his buildings, and his fixed equipment. That is not furnished to him. He has to furnish it himself.

Mr. QUIN. Is not that percentage rate allowed on a part of the overhead charges?

Col. DEEDS. No. That does not go into the cost. He has to furnish the buildings and the tools. The jiggs and fixtures are included but the other material is not. The contractor must provide his own buildings, and his own machinery, and his own fixed investment.

Mr. FIELDS. Those things that are a part of the investment?

Col. DEEDS. Those things that are a part of the investment, and it seemed better for the Government to pay a little higher rate there and let the contractor be responsible for the buildings and machinery than for the Government to get into the building game. That was the viewpoint then, and it is not a regular cost plus 10 per cent contract, such as the contracts where the contractor gets 10 cents out of every additional dollar. There is a fixed profit per machine, in dollars, which is what the contractor gets, fixed at 12½ per cent.

Mr. HULL. Does that include the patent cost, or is that on top of the fixed cost?

Col. DEEDS. The patent has not been admitted as an element of cost.

Mr. HULL. Suppose you admit it, that is added to what you call your bogey profit, is it?

Col. DEEDS. Not to the profit; no. The bogey price there is supposed to include the patents. If the bogey price of an aeroplane is \$5,000, the \$200 is supposed to be included, if the \$200 is admitted as an element of cost.

Mr. HULL. It is not additional?

Col. DEEDS. It is not additional; no, sir.

Mr. SHALLENBERGER. I infer that you have a fixed profit that the manufacturer makes. Is it possible that something might occur, as it did in the case of the building of the cantonments, which were let on a basis of cost plus 10 per cent profit? We were told by the Quartermaster General that the actual average profit made was 2.84 per cent. In other words, the real profit to these men was not 10 per cent upon the entire expenditure. Is there a possibility in the case of the aeroplanes of something like that developing, that while, in fact, the amount allowed seems to be a large profit, under your management, it is possible that the actual average per centage of profit would be less than 12½?

Col. DEEDS. The bogey price is \$5,000, which would allow a fixed profit of \$625. If the plane should cost \$10,000 the profit still is \$625, except that if the price exceeds \$7,000, he has to stand 50 per cent of the extra cost taken out of his profit.

I think by the time the contractor gets his buildings paid for and this machinery—this is really becoming a rapidly changing thing—and meets the income tax he has to pay, I think most of them are satisfied if they come out even on the proposition. Their chief disturbance seems to be whether they are going to come out even.

Mr. SHALLENBERGER. I know that the first statement of the cost of the cantonments did not show the real cost of the cantonments to the Government, because there were additions and changes made.

Col. DEEDS. In the building of the cantonments, that was a straight contractor's job, but when you are going into industry and building buildings that are still on your hands as your property when the contract is completed, that is a different proposition.

Mr. ANTHONY. Are all of the available factories in this country now to be employed in the manufacture of the so-called Liberty motor, or will they go ahead developing motors of their own?

Col. DEEDS. The Liberty engine is being built now by the Packard Co., the Lincoln, the Ford, Nordyke & Mormon of Indianapolis, the Buick Co., of Flint, Mich., and the Dreco Motors Corporation, at New Haven. They have orders now for 22,000, but they will have an ultimate capacity when they come up to production of 200 more motors per day.

Mr. ANTHONY. Will these original aeroplane factories like the Wright-Martin and the Curtiss people be employed upon the aeroplane work, or what work will they do?

Col. DEEDS. The Wright-Martin people build the Hispano-Ring engine.

Mr. ANTHONY. Will they be allowed to develop that engine, or will they also produce your engine?

Col. DEEDS. We will let them work on a 300-horsepower Hispano, that if there is any development in that line they will follow that p. The Curtiss Co. are building planes and a new training engine.

Mr. ANTHONY. So that the two best engines that are being developed in the country to-day, or that are being built, are the Hispano engine and the American or Liberty engine?

Mr. ANTHONY. So there is every opportunity for further development by these individual corporations?

Col. DEEDS. One of the inevitable things always when you start to bring in standardization is that you are apt to kill individual initiative. That was one of the faults of the royal aircraft factory in England. We did not want to make that mistake, and anybody who has a really good proposition—there are more of the other kind coming in than in almost anything else—if anybody has a real good proposition, he can have it tried out.

Mr. ANTHONY. I want to get some information about the Zeppelin enterprise in this country. I think the Secretary of War and the Secretary of the Navy cooperated to an extent along that line, and that they each took a million dollars of the appropriation for air purposes and put those amounts together for the purpose of building a Zeppelin. Is that correct?

Col. DEEDS. I can not answer that question. We are not working on that.

Mr. ANTHONY. How much money was expended, and what is the status of that airship?

Gen. SQUIER. I will get that information for you. I am a member of the Zeppelin Board.

The board was appointed, I think, nearly a year ago. Admiral Taylor is on it, representing the Navy, and I am on it, representing the Army. We have not been particularly active, other than developing certain materials and alloys, investigating certain gases, and making plans and designs for certain sized ships. We have not built any ships. I do not know whether we will at all. Opinions seem to change in regard to that.

Mr. ANTHONY. As far as we are concerned, it is true, is it not, that we have abandoned the idea of making any of those battleships of the air?

Gen. SQUIER. No, sir.

Mr. ANTHONY. Under this appropriation?

Gen. SQUIER. No, sir; we have not.

Mr. ANTHONY. You are not building any now?

Gen. SQUIER. We are investigating it.

Mr. ANTHONY. Can you tell us how much money has been spent?

Gen. SQUIER. I can get that information for you.

Col. ARNOLD. I was present at the last session of that board. They there gave a résumé of what had taken place, and were preparing to have experiments to determine whether the envelope would hold the gas, and for what period. That is as far as the investigation of the matter has gone. They designed two ships, one for the use of hydrogen, and one for the use of argon.

The question came up as to whether they should go ahead and build, and it was decided that in view of the fact that nobody knows the exact limitations and value of the Zeppelin, an engineer with

capable assistants shall go abroad to make a study of Zeppelins in London and Paris, and upon his return he is to report, and upon that report would depend the decision as to whether or not that ship should be constructed.

Mr. ANTHONY. I want to make a statement right here to the effect that of all the cantonment construction I have seen, that which has been built by the Signal Corps has apparently been done in the most efficiently and economically of any. Has that been done largely on the plan of letting the contract to the lowest bidder, or has it been done by the other method?

Gen. SQUIER. It has been done by the cost plus method principally.

Mr. ANTHONY. Those that I have seen were being done by the method of letting the contract to the lowest bidder, in your department.

Col. DEEDS. It has been done both ways.

Gen. SQUIER. On the question of building those fields, Col. Edgar has had complete charge of the construction, and he has used all the agencies and erected them without much letter writing at all. He has done it direct.

I, myself, consider that Col. Edgar has made a great success of it. I think one of the best successes in a job of that kind that I know of. He is a very able man, a man who has done things, and I promoted him for specific success, as I have done recently also for the designer of the Liberty motor, and made him a lieutenant-colonel. I have also done the same for the men who developed the radio.

Mr. MCKENZIE. What is your private opinion about those extremely heavy flying machines, designated by Mr. Anthony as battleships? Do you have any great expectations of their being of any practical use?

Col. DEEDS. I think the tendency is in that direction. Admiral Taylor feels that way, that the tendency is toward the larger ships, with larger sized guns, so that we can get a longer range, and get the other fellow before he reaches us.

Gen. SQUIER. Admiral Taylor predicts a similar kind of development for the aeroplane as took place in the Navy, in the matter of ships.

Col. DEEDS. Production at present is well in hand. We are, I imagine, from the time we started last July, up to where we thought we would be, although we are between 45 and 60 days behind the schedule. We have had all the difficulties incident to the creation of a new industry. We had to completely change the program in September, about which we do not complain at all. We have taken our medicine and gone ahead, and to-day our first shipment of Liberty engines has gone abroad.

There are a lot of things that may interfere with our plans, such as transportation, labor difficulties, and a lot of other things incident to war, but the situation is under control.

The engine itself is meeting all requirements. Here is a telegram which has just been received: "Engine No. 12 has now completed 61 hours, wide open throttle," a thing which has never been done in the history of machinery, "engine has run total of 90 hours without trouble."

Mr. McKENZIE. You say you may be hindered in some way in completing this program, but you have no fear but what you will be able to take care of any army we may be able to have in France by the 1st of July and later?

Col. DEEDS. We do not expect any difficulty on that. Between what they are doing over there and what we are doing here, we will be able to meet the situation.

Mr. McKENZIE. On that point in reference to the orders you have given, you have had ample planes for training purposes?

Col. DEEDS. Yes; we have shipped altogether 1,700 training planes, and we have a surplus now.

Mr. McKENZIE. That is to the schools in this country?

Col. DEEDS. Every school is equipped, and we are storing planes. We have met that situation, and in meeting it we have learned something, and we have been filled with a lot of courage and confidence. We have made mistakes and are going to make some more mistakes, but we are not trying to hide them.

Mr. McKENZIE. I have read some criticism along that line.

Col. DEEDS. There has been a lot of it, but we felt that our job was not to talk, unless we talked to you, and we have not struck back at any of it, because we have a lot of contractors who tried to get business, and some of them did not get it, perhaps, who should have had the business, and it is possible that they were not fairly treated. But that is apt to be so in a great rush job of this kind.

You can not take up a thing as big as this proposition and push it through without being subject to criticism.

You gentlemen probably appreciate what that means. Any time you hear of any criticism, you will know that we are not perfect, and do not pretend to be, and we will say we are probably about 60 days behind where we thought we might be last July, but we ought to be congratulated that we are not six months behind.

There is built up behind this proposition such an organization as there never was behind anything, and I say that out of long years of industrial experience. There never was such a strong combination of contractors behind anything as is behind our engine production and our program.

We have a total of 16 contractors on engines, 14 on planes, 25 on instruments, 25 on spare parts, 19 on propellers, 16 on the Handley-Paige parts alone, and there are over 400 subcontractors, all behind this program.

The Liberty engine is in as safe hands as we know how to put it. In reaching this point, we have had to ride sometimes rather rough shod, but we felt that we should make selections above everything else for the purpose of getting the goods, rather than to hand out contracts as a sop to the men who wanted them.

The answer is that the engine is an engine, and we are getting it, and we are going to get planes, and we will meet Col. Arnold's program with the equipment end. Along with that have had to come the machine guns and the sights.

We have met the most difficult proposition that has been put up to any group of people I know of, because we have a most highly technical industry. We have had, for instance, to get out and get acetate of lime, and we have had to get our castor oil and our linen. We ourselves bought over \$12,000,000 worth of long staple cotton.

so that we could have the right kind, and we have to-day a cotton cloth which I think is superior to the linen. It has passed better tests than the linen, so far as the strength of it is concerned.

We have made our mistakes, and we are going to make some more.

Mr. McKENZIE. From your statement you now have your organization complete, as I understand it, and are in the process of turning out the finished product?

Col. DEEDS. Yes, sir.

Mr. McKENZIE. And your greatest trouble is now over, and all you need to do now is to put in your orders and the stuff will be coming along?

Col. DEEDS. We have done the organization work, and the foundation is in good shape. As a whole, I do not want to be over optimistic. We have had our troubles, and I should say frankly we are behind now, but we are not going to stay behind, because we have enough machinery to keep up with it now.

Mr. McKENZIE. Suppose you had no difficulty about anything else and that we were all fixed, but we did not know where we were going to get a satisfactory engine.

Now, as I understand from your statement, you have your organization all complete, and you know where you are going to get all of your articles, and contracts have been made, and shipments will be coming on from time to time, and you can complete this program.

Col. DEEDS. Yes, sir. We are in this position: When you start, you can not have too much help. We had to make these planes; there were no drawings in existence. We got a sample made up of a 200-horsepower engine, and we had a plane, and that had to be fixed in an engineering department. If we can get samples of these things, we can take one of these planes within the next 30 days, have complete drawings made of it, and duplicate it. We can pyramid them just as fast as we feel sure we can meet the equipment situation, unless something happens; and if it does, we believe we have enough punch behind it to do the thing.

Dr. Ames has written a long letter here and has made quite a considerable statement in reference to the Liberty engine. The doctor does not mean to mislead, but the good scientific man did not get at the facts when he was on the trip he made.

Mr. ANTHONY. Who is Dr. Ames.

Col. DEEDS. He is a member of the faculty of Johns Hopkins University.

Mr. ANTHONY. Was he appointed as an inspector?

Gen. SQUIER. He wrote an article or a letter to the editor of the Atlantic Monthly, and by interviewing a man here and there he pieced together a story instead of getting the facts. He said there would not be any mechanics trained to run the engine. He simply did not have the facts.

Col. DEEDS. In his statement he said there would not be any mechanics for a year. He said if you want to get the type of man you have to have to take care of the Liberty engine, you have to get a highly technical man, and he said we could not get the men to take care of this engine within a year. We have over 4,000 of them in training on this side, as Col. Arnold just told you, and we have 6,000 training on the other side. Dr. Ames said they would not be in

production at all in July, but in reply to that, we expect to hit the maximum production in July. But not understanding production problems, he did not get it straight at all. I do not think he means anything, but that criticism is being quoted considerably; it has gone broadcast, and you are going to meet it.

Mr. HULL. There was an inventor here who had a marvelous flying machine that he wanted to manufacture for the Government. I think his name was Eisenhoff. He offered to build this plane and everything about it complete, and if it did not perform as he said it would, it would cost the Government nothing, but if it did what he said it would do, the Government was to pay the cost of the production.

Mr. KAHN. The amount was \$250,000.

Col. DEEDS. I have never heard of it since that time. Nothing has happened in regard to it since. There was a request for two or three Liberty engines, which we could not fill.

Mr. HULL. This man stayed in town for some time, but he could not get a hearing with your department, as I understand it.

Gen. SQUIER. He got a hearing. We have an inventions board, which hears any and all people who have anything to propose. Dr. Durand is the chairman of that board, and its office is in Room 518 in the Munsey Building. The advice of Dr. Durand to the Signal Corps is considered most carefully.

Mr. HULL. I have never seen any reason why the Government could not make that kind of contract.

Col. DEEDS. The difficulty is when you make a contract of that kind they go out and commence to talk about it to everyone. We are working on seven different things which the Government is paying for right now.

Mr. HULL. This man did not ask for the payment of anything. It seems to me we ought to have people who could protect the public from stock-floating operations, and this man was willing that should be done.

Mr. FIELDS. He said he had good financial backing, and he said his people were willing to put up the money for the building of the machine, and if the machine does not do all that he claims for it, the Government would not have to pay a cent. If it does what he claims for it, they said they wanted the Government to pay the cost of building it.

Col. DEEDS. We have a number of people working on things of that sort. Dr. Borghum is one of them. He is the well-known sculptor.

Mr. HULL. There never was an invention perfected but what every scientific man has stood out against it. When a man comes along with a practical proposition, which is a business proposition, I do not think he ought to be sent to the scientific men, but that he ought to be sent to the practical business men. As far as the stock-floating feature of it is concerned, it seems to me that the Department of Justice ought to be able to draw a contract which would prevent that sort of thing.

Col. DEEDS. Why does he not make it and pay for it?

Mr. FIELDS. This man has a good reputation as general inventor.

Col. DEEDS. The Aircraft Board will receive anything anybody has to offer.

Mr. SHALLENBERGER. Is that Gen. Pershing's program?

Col. DEEDS. Yes, sir; that is Gen. Pershing's program.

Gen. SQUIER. There is nothing about any of this proposition that is not Gen. Pershing's.

Mr. SHALLENBERGER. I have been around the country, and have talked to a good many people about this proposition, and I thought the amount you asked for at the beginning was a tremendous amount. But upon your assurance that you were going to deliver the goods, everybody threw up their hats. Of course, if the committee can go on assuring the country that you are coming through with your program, that will be a tremendous achievement.

Col. DEEDS. We will come through with the program. We have slipped behind a little bit, but we are going to be there next spring. The worst thing we have been up against is the advertising of our aircraft program. There has been a great deal of talk about having 100,000 airplanes at the front, but that number of planes would require a tremendous army of men, and that is a perfectly impracticable proposition.

The CHAIRMAN. I am going to ask you to put into the hearings an itemized statement showing the different items for the Washington-Alaska military cable and telegraph system, giving the amount of money appropriated last year, and a detailed statement of how that money was spent, and also a statement as to how the money you ask for this year is to be expended.

Gen. SQUIER. I have an explanation of that.

1. Salaries and wages..... \$43, 945

This is the amount now expended under this head, as shown in detail on the analysis, and provides for the increased expenditure of approximately \$27,000, now being charged for this purpose against the appropriation for the support of the Army.

2. For all radio telegraph installation..... \$50, 000

The Signal Corps now has in operation in Alaska nine high-power radio stations. In addition to the amount required in the upkeep of these stations, it is contemplated to establish a high-power station at Valdez and replace the present low-power station at Fairbanks with a high-power station with a view to intercommunication with Fairbanks and the coast, and thereby making possible the continuity of communication between Valdez and Fairbanks, when the land lines between these points are interrupted. This is the only stretch of line between Seattle and Nulato not having a duplicate means of communication, and its need has been demonstrated on more than one occasion.

There is also considerable pressure from the Alaska Territorial authorities and legislative body, commercial bodies, and mining interests for an extension of the existing system through the erection of several small power stations in outlying and isolated districts, viz, Candle district, near Nome, and the southwestern peninsular, now being developed, but handicapped by the lack of communication to the outside world. The two proposed stations, at Valdez and Fairbanks, will cost approximately \$30,000 and the balance will provide for three additional low-power stations.

3. Rebuilding and betterments, first section..... \$20, 000

This is to cover ordinary expenditures in the maintenance of this section and to provide for necessary rebuilding of the lines, where they have become weakened and difficult to maintain, in a proper working condition, due to glaciers, winter storms, and other climatic disturbances peculiar to Alaska.

4. Rebuilding and betterments, second section..... \$5, 000

See remarks under No. 3.

5. Extension and betterment and maintenance of the Alaska cable system and the operation and maintenance of the transport *Burnside*..... \$20, 000

For cableship machinery, additional cable to replace deteriorated equipment, and replacement of obsolete cable instruments with a more modern equipment.

For the rental of offices and incidental expenses in connection therewith. \$8, 500

This is practically the amount of the current expenditures for the purpose, and was formerly charged against the appropriation for the support of the Army.

Total..... \$147, 445

The CHAIRMAN. I will ask you also to put in a table showing the number of enlisted men that you have in your corps. There seems to be some difference between the estimates given by the Quartermaster General and the number you are asking for now. The Quartermaster General estimated for 153,925, while you are asking for 79,000. I wanted you to put in a complete table in reference to that, and also a table as to the strength of your officers in the Signal Corps, together with their rank and pay.

Gen. SQUIER. The number in each rank at the present time and their pay?

The CHAIRMAN. Yes, sir.

There is also an item in here, on page 15, for "Aviation increase, \$4,916,800," and I wish you would give a brief explanation of that in connection with the tables. I understand that is included under the provisions of the act of June 3, 1916, giving additional pay to the men who fly.

Mr. SHALLENBERGER. I saw recently a statement that there was some dissatisfaction in connection with that point, that you have abandoned giving the officers increased pay.

Gen. SQUIER. That will be before this committee. Gen. Pershing has recommended a change in the law. It will come in due course from the War College.

Mr. ANTHONY. In connection with the items for the Washington-Alaska military cable and telegraph system, there is an increase of nearly \$100,000. Is that increase necessary?

Gen. SQUIER. I think so.

Mr. ANTHONY. What would make it necessary?

Gen. SQUIER. In explanation of that I would like to read this statement:

Washington-Alaska military cable and telegraph system..... \$147, 445

The amount of the appropriation for the current fiscal year is \$50,000, and an increase is asked for the ensuing fiscal year of \$97,445, in order to cover the cost of installation of radio service and of rebuilding and betterments of telegraph lines.

Prior to 1912 the average annual appropriation for the maintenance of this cable and telegraph system was considerably in excess of \$100,000, but since that date the annual appropriation has only been \$50,000. The average value of the business handled annually for the past 12 years has amounted to about \$350,000, of which amount the commercial business amounted to about \$190,000 annually, the tolls for which were collected and turned in to the Treasury. The remainder was the value of official business handled on which no tolls were collected.

The following are the proposed items of expenditure which make up the estimate of appropriations for 1918-19:

Salaries and wages.....	\$43, 945
Radio installation.....	50, 000
Betterments, telegraph system.....	25, 000
Maintenance and betterments, cable system.....	20, 000
Incidentals.....	8, 500
Total.....	147, 445

The item for radio installation is intended to cover the cost of establishing a high-powered station at Valdez and replacing the present low-powered station at Fairbanks by a high-powered station, thereby providing for continuity of service between Fairbanks and the coast, when the land lines are interrupted. These two stations will cost \$30,000, and the remaining \$20,000 is intended to provide smaller stations for several outlying mining districts which are now without means of communication.

That is the country of all others where the radio is a necessary thing. It is the salvation of the people up there. It is a serious thing not to keep up your line of communication in that country.

Mr. MORIN. In the last appropriation bill we authorized you to establish vocational schools. Has that been done?

Col. ARNOLD. At the present time we have in operation eight ground schools for training flying officers, three ground schools for training nonflying officers, one for training engineer officers, one for adjutants, and one for supply officers. We have five schools in operation training mechanics for the different aero squadrons.

Mr. MORIN. Those are privates?

Col. ARNOLD. They are enlisted men.

Gen. SQUIER. We are utilizing the northern flying schools for mechanic schools at this season of the year.

Col. ARNOLD. The five northern schools will accommodate about 4,500 men now under training. We have in operation in the South eight flying schools. They are actually training about 2,000 flying cadets. We have five new flying schools which will open about February 15.

Mr. FIELDS. How do you get men for those cadet flying schools?

Col. ARNOLD. For the schools for the cadet flying officers we have a publicity service operating throughout the country in order to get those men. There is not a newspaper in the United States that at some time or another has not had in it an article telling any man who wants to get into one of those schools how to go about it. We have examining boards in every large city in the United States and at every camp. We use civilian sources and military sources.

Mr. FIELDS. Is not the Aviation Corps about the only branch of the service now open to men of the draft age who may be eligible for a commission?

Col. ARNOLD. Without question.

Mr. MORIN. That is not the case with the nonflying men?

Mr. FIELDS. Is that true in the flying branch only?

Col. ARNOLD. In the nonflying branch a man has to take the regular course and demonstrate his usefulness, going in as an enlisted man. In the flying branch of the service we accept them as they are, because the Secretary of War made that ruling on account of the hazard and risk.

Mr. FIELDS. A man can enlist for this training?

Col. ARNOLD. In the nonflying branch?

Mr. FIELDS. Yes.

Mr. MORIN. He enlists as a private, does he not?

Col. ARNOLD. Yes.

Mr. FIELDS. Does he have to go through the process of induction?

Col. ARNOLD. Yes, he has to go through the induction process.

The CHAIRMAN. He is drafted and then inducted?

Col. ARNOLD. If his number has not been called he can enlist.

Mr. McKENZIE. You are taking in a number of men by transfer from other branches of the Army?

Col. ARNOLD. We are utilizing every source from which we can get the men we need.

(Thereupon, the committee adjourned to meet to-morrow, Thursday, January 24, 1918, at 10.30 o'clock a. m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Thursday, January 24, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent (chairman), presiding.

STATEMENTS OF COL. E. A. DEEDS, COL. H. H. ARNOLD, COL. CLINTON G. EDGAR, MAJ. E. M. JONES, AND MAJ. R. H. COLES, SIGNAL CORPS.

The CHAIRMAN. Col. Deeds, I believe you desire to make a further statement to the committee.

Col. DEEDS. I would like to say just a word or two, Mr. Chairman, before Col. Edgar proceeds.

We did not get into the organization of our divisions in our discussion before, and Gen. Squier thought it might be well to come over this morning and take a moment or two to tell you what the organization is.

The Equipment Division—I suppose everyone realizes that is a large division with big responsibilities, expending a lot of money, and that our real success in our program will depend upon getting the output. So we have lined up as many of the best contractors as could be gotten together. But the great difficulty is in getting a decision. When a difficulty comes up in the factory of the manufacturer. If we can keep the contractor enthusiastic and settle his troubles as they come up we are going to do more to increase production than almost anything that can be done.

I think that we also realize that the real pressure has not come yet upon our divisions. We are not really at war yet, in action over there, and I think we have looked ahead in our organization to the time when the greatest pressure will come.

What the Equipment Division has done is to organize the country into districts and to locate central offices in them. We have one in New York, one in Chicago, one in Buffalo, one in Dayton, and one in Detroit at present. In those offices is to be found a production man, an engineer, an inspector, and a finance man, because the little finance troubles begin cropping out, and those matters can be cared for only in that way. These men in each of these localities are given full authority to settle anything that comes up, being men of broad experience and knowing that if there is some question too large for them to settle they can send it back to Washington.

That arrangement means that any question in a manufacturing plant can be settled that day, whether it is a matter of inspection, production, finance, or engineering. It would be an impossible task if every question had to be referred to Washington to get tangled up

in red tape, every department here being busy and not having time enough to do it.

We have gone further than that. We have taken our chief production man, Maj. Shepler, who was the production man for the Willys-Overland Co. with 25,000 men under him, and Maj. Nextor, who was the chief inspector with the Deere people, and Maj. Smith, the finance man, and Maj. Grow, president of the ———, who had been abroad. That group of men formed a little production board. We have them in Cleveland, with offices there, so that they are within five and a half hours of our principal contractors. That has been done because to get in and out of Washington these days means that you lose three days a week.

On the board we have Lieut. Emmons, who is the Washington representative of the production board, so that we are kept in constant touch with the board through its resident member, and are able to keep in close touch with all its developments. If trouble comes up at any particular factory, it is taken up by that little group of men, who are right there on the ground. They will settle it on the spot, so that production will not be held up. If it is something that can not be settled, they apply to Cleveland, and within five hours and a half the men can be there, and that question can be settled the next morning.

So that we are not permitting a single thing to rest beyond a single day, and I think in that way we are going to speed production more than anything else we can do. Having been through production, I know that indecision means nonproduction.

In our finance we have so organized that division also that for the last four weeks the average length of time that an invoice stays in the department, from the time it arrives at the department until the check goes out, has been less than 24 hours, so that we can give prompt business administration in our affairs.

The same placing of authority out where the job is is also being arranged now in the air division, so that every little question will not have to be referred here to Washington, with the consequent delay. Eventually we will have the same general type of organization for the whole air division, the schools where the training is going on, and all the other branches of the division. We will have the organization scattered out over the country so that those things will be settled very promptly.

Mr. GORDON. You just observed a few minutes ago that this stuff was paid for within 24 hours of delivery. What system of inspection have you?

Col. DEEDS. No; I said that from the time invoices arrive at the department until the check goes out, it averages less than 24 hours; but the invoice is not made until the inspection is all approved and everything else is up to date.

Mr. GARRETT. Give an illustration of what you mean by indecision in the operation of one of your plants.

Col. DEEDS. Suppose a question comes up in reference to the use of this particular piece of tubing that goes in the axle of an aeroplane. It may be that we can not get the exact thickness of that tubing but we can get tubing which is two or three thousandths thicker. Suppose that should come up in the ordinary way. The inspector would report it to Washington, and it would have that delay. It

would then go to some other department here, but they would have it only on paper and they would take their time to decide it, and so it goes around the circle, and I can see that question lying here for three weeks without any difficulty at all. That is not unusual and is very natural under the circumstances and does not reflect on any department.

Suppose that question came up, and that there gathered around that piece of tubing the inspector, the production man, the engineering man, and the finance man. They would sit down with the chief engineer of the factory and say, "Sure, we can use a tubing two-thousandths thicker. It would only add about 8 pounds to the weight of the aeroplane, and we can get the aeroplane out." So they could make their decision on a proposition like that without any lost time. It will finally come on here and become a matter of record in Washington.

We would get the machine in the meantime, and more than that, you would have the enthusiasm of your contractor. When the contractor suspends operations on his work, and loses two or three weeks settling a question, he goes up in an explosion about Washington red tape. That is the way those things work out.

MR. GARRETT. You mean when your factory gets the plans and specifications, if the plans and specifications can not be met in every detail, you have a board created for the purpose of revising them, so that they may be met?

COL. DEEDS. We have a board created for the purpose of revising the plans and specifications, so that they may be met, and still not drop in quality.

You have a great deal more difficulty putting something past a board which is right on the ground than you would in getting it past some paper work, somewhere. It is an improvement and is working out in the way I have indicated. All the lost motion is taken out of the operation, because the members of that board are on the job. We have an enthusiastic group of contractors, and I think you will find them so if you discuss these subjects with them. It is just plain horse sense, but it is a little bit contrary to past policy. But this thing is so big, if you ever try to focus it all here, you are going to be swamped. We have got to trust somebody to be responsible for that job and settle the thing, so that we can proceed.

The same general principle is to be applied to the Air Division by locating competent officers in certain localities, who will decide things quickly, without having all the paper work that it has been customary to have, going back and forth to Washington, because that is going to become more difficult as time goes on.

Further than that, trips have been made very regularly. I know as head of the Equipment Division I average about three nights a week on the sleeping car. Gen. Squier has made two or three trips personally to our contractors, and has inspected every field under his direction.

The Aircraft Board has gone through the contractors' plants, so that the local authorities here have been out and gotten fairly familiar with the troubles of the other fellow. We are getting production, and that is the final and most important thing. It is the best we can do.

Gen. Squier wanted me to say another thing. So far as publicity is concerned in the Signal Corps, there is a positive order that no officer of the Signal Corps shall say one thing for publication, and that is being strictly adhered to. It would be a very serious matter if any officer of the Signal Corps should permit himself to be quoted. He would be brought up and an explanation demanded.

Mr. ANTHONY. Along that line of publicity, if there is a ban on publicity, how did it happen that in one of the magazines last week there was a most elaborate article, practically detailing all of the developments of the Signal Corps work which we have heard about in these hearings?

Col. DEEDS. Which magazine was that?

Mr. ANTHONY. That was The Saturday Evening Post.

Col. DEEDS. That was an article written by Sam Blythe.

Mr. ANTHONY. But that article contained practically all the developments that have been unfolded here to this committee.

Col. DEEDS. There were a lot of those things there.

Mr. ANTHONY. Who did that come from?

Col. DEEDS. That came from Sam Blythe. He went out and made a trip.

Mr. ANTHONY. Where does the information come from? Where does he get his information?

Col. DEEDS. He made a trip around the country.

Mr. ANTHONY. He can not dig up that information at these can-
tonments?

Col. DEEDS. He went to the factories.

Mr. ANTHONY. Did he not get the information at the War Department here?

Col. DEEDS. No; I do not think he got all of it there. I talked with him; I talked with him myself.

Mr. GORDON. Then did you violate those regulations?

Col. DEEDS. No, sir.

Mr. GORDON. Then what does the regulation mean that prohibits officers from discussing these matters?

Col. DEEDS. I mean to say that the regulation prohibits officers from signing their names to any articles that are published, or permitting themselves to be quoted.

Mr. GORDON. If they stuff a newspaper man full of that information, is that not violating the regulations?

Col. DEEDS. It depends upon whether it is done with the understanding and consent of the Aircraft Board.

Mr. GORDON. Were you so authorized?

Col. DEEDS. I was authorized to talk with Sam Blythe on this matter.

Mr. SHALLENBERGER. It was practically authorized by the Aircraft Board?

Col. DEEDS. It was.

Mr. ANTHONY. What I marvel at is that Mr. Blythe should get information that the chairman of this committee does not get.

Col. DEEDS. I do not think there is anything in the article that is harmful.

Mr. QUIN. When we passed the bill appropriating \$640,000,000 for the aviation work, we were requested by the Secretary of War and other authorities in the War Department not to give detailed

information in regard to it, and on the floor of the House, when asked for information by members, we said that we were not giving detailed information, and then they showed from what appeared in the newspapers that somebody had given out everything, all of the details, when we went on the floor of the House.

Col. DEEDS. There is only one article that was authorized by the Aircraft Board and that is the article written by Sam Blythe.

The CHAIRMAN. Have you read that article?

Col. DEEDS. I have not read it clear through.

The CHAIRMAN. Several people have called my attention to it. I have not read it through. It seems to speak by the card, as to the development of the Liberty motor.

Mr. NICHOLLS. I want to ask you a question along this line. I am not referring now to the article in the Saturday Evening Post written by Sam Blythe, but I would like to ask you about an article in the Outlook of last week.

Col. DEEDS. Dr. Ames wrote that.

Mr. NICHOLLS. I want to ask you about the statement he makes there. He says we can manufacture the Liberty motor very fast, but that after we manufacture it it is so technical that in case we have trouble with it it is going to be hard to get mechanics to fix it. What about that statement?

Col. DEEDS. It is less technical than any aeroplane engine.

Mr. NICHOLLS. Did you read that article?

Col. DEEDS. Yes.

Mr. NICHOLLS. You remember that statement?

Col. DEEDS. I remember the statement of Dr. Ames. I have a letter from Dr. Ames. He quotes Maj. Vincent on that subject. It may be that the major told him that to get a man who would be really valuable to run a 50-hour test on an aeroplane motor would require a year of preparation, that it would take a year to prepare a man to do that work.

Mr. NICHOLLS. In other words, if we can not get the people to repair these motors, that would be a great defect?

Col. DEEDS. It would, but this is a simpler engine than any aeroplane engine at the front. As Col. Arnold has told you, there are 4,000 mechanics in training in this country, and 6,000 on the other side who are being prepared to take care of that engine.

Mr. NICHOLLS. Where did Dr. Ames get his information?

Col. DEEDS. I do not know. The doctor imagined that.

Mr. FIELDS. In other words, a man does not necessarily have to be as efficient as Dr. Ames to repair that engine?

Col. DEEDS. No. Dr. Ames being an ultra scientific man, probably could not repair that engine himself. It is a great thing to be able to let this engine alone after you get it running. This is a perfectly safe engine.

Mr. GARRETT. As I understand from Gen. Squier's testimony, the one great feature about the Liberty motor is that it is standardized, and instead of requiring somebody with detailed and scientific knowledge about mechanics to fix it, it only requires somebody to take the defective part off and put on another part like it.

Mr. NICHOLLS. I understand that, but I was wondering why Dr. Ames should make that statement. It discourages the public.

Col. DEEDS. I think it was an unfortunate article, and I do not know why the doctor wrote it, although I had a letter from him saying that what we needed was Northcliff. He is a very fine gentleman.

He suggested why he should not do this, but on the other hand I can see how an ultra technical and scientific man could get off alone, not knowing production in regard to this or other things, and could bring about that very form of reasoning and be sincere in just what he said. But that is not the situation at all as the doctor has depicted it.

Mr. GORDON. After all, it was a mere expression of opinion?

Col. Deeds. That is all.

Mr. QUIN. Do you not think it would have a bad psychological effect upon the public?

Col. DEEDS. Yes. There is one thing always to be considered, and that is that it does not make much difference what anybody says, the Liberty motor goes right ahead and does the trick just the same, because it does not understand those things.

Mr. TILSON. Do you not think that the trouble in regard to this publicity proposition would not be with the articles that an officer would give out in his own name, but after all the worst trouble comes when somebody goes up to the Army and Navy Club and gets talking to the officers, and the officers in their natural enthusiasm naturally bubble over a little bit and give these fellows who talk with them a pretty clear outline of the proposition, about the same, perhaps, they give to us later when they come before this committee formally? Is not that largely the trouble?

Col. DEEDS. I think so. But you can get any kind of information if you pick out the right fellow.

Mr. GREEN. If you wanted to get at the remedy for this matter, having standardized the Liberty motor, you would have to standardize all human nature.

Col. DEEDS. Yes, we have had some experience in attempting that.

Mr. HULL. I want to ask you one question in regard to the matter of publicity. Suppose a member of this committee, having these details, should give them out, how would you look upon that member of the committee?

Col. DEEDS. I do not know. I believe that the members of this committee feel their responsibility as much as the rest of us, and I believe their good judgment would be as good as anybody else's.

Mr. HULL. That is the very point I want to make. I am afraid to talk to anybody for fear that some publicity might come out of what I might say, and the fellow who used that would say he got it from a member of the committee. If we are going to have secrecy about this proposition, it seems to me that everybody ought to be secret. That is my own opinion about the matter.

Col. DEEDS. There has been too much talk about this producing 100,000 aeroplanes, and too much talk about the aeroplanes being the only way to end the war. There has been a little bit too much of that.

Those of us who are in this thing know that the aeroplane is an important part of our war program, and we also realize that the Artillery and the Infantry and other things are just as vital as our part of it. We are trying to follow the program as outlined by the

people on the other side, who know, and that does not call for 100,000 aeroplanes.

The CHAIRMAN. Yesterday I asked Gen. Squier to put in the record a statement in regard to the personnel.

Col. ARNOLD. I have that.

Col. DEEDS. I have been brought here to handle the business administration, and questions of that kind, right along side of Gen. Sultzman, who handles the other things. The general has had an insight into the industrial side of war which I think is one reason why we are able to make as good a show as we have.

Col. ARNOLD. The type of men he has asked for in that increased number are not in the service on the first line. They are for the service in the rear.

Mr. ANTHONY. Can you give us tables to show how many are in the field organizations, and how many in the mechanical organizations?

Col. ARNOLD. I have divided the men in this way, giving those who at home and in the Insular service, then those who are at general headquarters and the service of the front, and then those in the service of the rear, from the first line back.

Mr. ANTHONY. What I meant was whether you can show the proportion of men that are in the military organization for field work and the others who are purely mechanics.

Col. ARNOLD. The service of the rear practically covers all those used for mechanical construction purposes.

Mr. ANTHONY. Those are in the field battalions?

Col. ARNOLD. Yes.

Mr. CALDWELL. Has Gen. Pershing asked for any considerable increase in the field battalions?

Col. ARNOLD. Maj. Cole will answer that question for you.

Mr. GREENE. The field mechanics take a machine as it comes down?

Col. ARNOLD. Our squadron organization is fixed so that when an aeroplane comes back, if it can be repaired inside of 24 hours, it is repaired in the squadron; if not it is sent back to our repair park.

Mr. GREENE. That immediate overhauling must necessitate some mechanics being at the front.

Col. ARNOLD. Yes, sir; it does.

The CHAIRMAN. When was this request for an increase received from Gen. Pershing?

Col. ARNOLD. We are receiving them practically all the time, by cable.

The CHAIRMAN. How are we going to know how many men to legislate for?

Col. ARNOLD. The last bill, as I remember it, authorized the President to organize such regiments, divisions, and squadrons, as he might find to be necessary.

The CHAIRMAN. We gave him unlimited power, but when we come to appropriate we have got to have some idea of the number of men we are going to appropriate for.

Col. ARNOLD. I believe these figures I am giving you now are the final figures, because Gen. Pershing is sending over an officer now with his complete organization for the aero program on the other side. We have put these cable advices together and gotten the total, and

we have every reason to believe the totals will agree with the organization he is sending over. If it does not, we will have to ask for more.

Mr. GORDON. Officers and men?

Col. ARNOLD. That is the total number of officers and men.

Mr. GORDON. How many officers and how many men?

Col. ARNOLD. About 15,000 men and 660 officers. Those figures are approximate. We can not get them accurately because more officers are going over all the time.

Col. DEEDS. The 15,000 men who have been asked for to assemble planes is liable to lead you into confusion. There are 25,000 mechanics going across. They are to be used for assembling planes over there and in the different factories. A part of them will be used to take care of the planes, and part of them will continually go to the front as mechanics. As far as the night bombing planes are concerned, the parts will be made here and assembled on the other side, we to furnish the buildings. The arrangement for that has been worked out. It may be, as the shipping situation gets worse we will have to go over there and get into the assembling on the other side. But for the present we are taking the planes as you see here and are going to assemble them and ship them complete. The large planes we are going to assemble over there, and these men will help do it.

Then, if things get in bad shape, we have got 24 concerns making the spare parts and we can send the parts over, and go into the business of assembling on the other side.

But the making of the parts is about one-eighth of the job of building an aeroplane, and to build a big program, we will have to decide whether it will be better to ship abroad the men, the food, and the raw material, or to ship the finished machines from here.

Mr. FIELDS. It has seemed to me that it would expedite deliveries on the other side to ship the machine knocked down.

Col. DEEDS. They will be shipped knocked down, but when you go to separate them into the various little pieces, then you get into the regular plane building job, which would take thousands of people.

Mr. FIELDS. You can do that to a better advantage on this side?

Col. DEEDS. Yes. But I want the committee to realize that we are ready to do that both ways, because we will have our assembling plants to assemble the large machines, and if it becomes necessary to extend the assembly plants further, we can do that within 30 days' notice. We are watching very carefully both sides of that proposition.

Mr. FIELDS. You generally ship the planes from this side entirely ready for use?

Col. DEEDS. Oh, no. We box the wings in one box, the tail control in another, the engine in another, and so on.

Mr. FIELDS. I think the impression was created that in some instances some of them were put up on this side, ready to fly.

Col. DEEDS. No; they are not, but they are put up in such a way that they can be taken to a park and put together in a short while and made ready to fly.

Mr. GARRETT. Just as you ship a binder—ready to put up for use?

Col. DEEDS. Yes.

Mr. QUINN. What is the time limit within which Gen. Pershing wants these men he has asked for?

Col. ARNOLD. We are going to do the best we can to get them for him by the 1st of July. That is when he would like to have them. We are taking advantage of every boat we can to get our men across.

Mr. GREENE. How large is the balloon squadron?

Col. ARNOLD. A balloon squadron in the past consisted of four companies of 100 men each.

Mr. GREENE. It is a larger unit than the plane squadron?

Col. ARNOLD. Yes. Gen. Pershing has reorganized that so that the balloon organization in the future will consist of companies of 200 men each, instead of squadrons.

Mr. ANTHONY. Will each company have charge of a balloon outfit?

Col. ARNOLD. Each company will have charge of two kite balloons one of which will be actually up in the air.

Mr. CALDWELL. Is that the so-called sausage balloon?

Col. ARNOLD. Yes, sir.

Mr. CALDWELL. What is the size of the dirigible organization?

Col. ARNOLD. We have not any dirigible organizations.

Mr. CALDWELL. Have we not any of those under construction?

Col. ARNOLD. We have some under consideration, but they have never been quite successful.

The CHAIRMAN. Maj. Cole, we will be glad to have a statement from you in reference to the personnel.

Maj. COLE. This follows up Col. Arnold's statement, Mr. Chairman.

The Signal Corps proper is the subdivision of the Signal Corps, which deals with the field telegraph battalions, the battalions which have for their duties the keeping up of communications between all the subdivisions of the Army.

The chief signal officer has assigned to that work what is known as the land division. That name probably gives the best distinction between the air division which Col. Arnold has explained and our division. Our program proceeds a little differently from that of the air program. They have been able to go right ahead, independent of the fighting troops, whereas our progress is blocked out along with that of the troops of the line, the Infantry and Artillery, and the divisions as they are organized.

The CHAIRMAN. Have you a detailed statement in regard to the personnel?

Maj. COLE. I have several items here. I can tell you how the enlisted men will be divided in grades.

The CHAIRMAN. I wish you would tell us that.

Maj. COLE. The total number of 50,054 men will be divided in this way: 1,001 master signal electricians at a salary of \$81 a month; 3,504 sergeants, first class, at \$51 a month; 5,005 sergeants, at \$44 a month; 500 chauffeurs, first class, at \$51 a month; 10,010 corporals, at \$36 a month; 1,001 horseshoers, at \$38 a month; 1,001 chauffeurs, at \$44 a month; 1,001 cooks, at \$38 a month; 22,524 privates, first class, at \$33 a month; and 4,507 privates, at \$30 a month. That makes a total of 50,054 men for which we now requesting authority.

I might add one thing more that will make our side of it pretty clear. We now have authority for 38,000 men. Of those, 25,000 belong to the field battalions. Each one of the field battalions is assigned to each tactical division, forms an integral part of it, and takes care of the interior communications of that division. That

accounts for 25,000 of the 38,000 men; 6,000 more are used with telegraph battalions. One telegraph battalion is with each Army corps, and an Army corps is made up of six divisions, so that the ratio of the telegraph battalions to the field battalions runs about one to six. That accounts for 31,000 of the men.

Then about 5,000 more are used to form the replacement battalions, which are called depot battalions, and to care for the highly specialized technical units. One is engaged in France on research and inspection work, trying to develop something else that will be better than what they have already found; and then there are a great many highly specialized telegraph operators, experts in handling duplex and quadruplex circuits. These depot battalions include about 5,000 men. Then there are the miscellaneous detachments, such as the radio and meteorological and pigeon detachments, which make up the remainder of the 38,000 men we are now authorized to have.

The CHAIRMAN. Will you give the number of officers and men in those special technical organizations?

Maj. COLE. Yes, sir. The officers and enlisted men now on duty with the photographic, radio, pigeon, and meteorological divisions of the Signal Corps are made up in the following way: Photographic divisions, 1 major, 8 captains, 26 first lieutenants, 15 second lieutenants, and 256 enlisted men; pigeon division, 1 major, 1 captain, 2 first lieutenants, 5 second lieutenants, and 727 enlisted men; radio division, 1 major, 7 captains, 13 first lieutenants, 34 second lieutenants, and 101 enlisted men; meteorological division, 2 majors, 1 captain, and 23 enlisted men. The last named unit is simply getting a start now. The meteorological people have had considerable trouble in getting the class of men. Their duties are to do the prognosticating of weather conditions in the field of operations, and they have a difficult time in finding the type of men they need for that. That makes a total in the divisions I mentioned of 5 majors, 17 captains, 41 first lieutenants, 54 second lieutenants, and 1,107 enlisted men.

Mr. TILSON. As compared with the Infantry organizations, it would seem that your enlisted personnel is quite top heavy with non-commissioned officers. Do I understand correctly that these non-commissioned officers' places are used largely as a sort of special compensation for highly skilled men, and the increased pay chevrons are a part of the compensation for men who are above the average common laborer, who could be used as a private, but who could not be used very largely in your outfit.

Maj. COLE. That is exactly correct. I am not as old in the Signal Corps work as a great many other officers, but my understanding of the policy in the past is that it has been that these men have devoted many years of their lives to perfecting themselves in their work, which you might call the art of telegraph operating and the repair of electrical instruments. That is something we all feel is a little above the work of a common laborer, as it takes a man a certain length of time to perfect himself in it. There is very little rough labor that they are called on to do.

Mr. GREENE. Is it not true that their work is largely done individually, or in small groups, and to each one there is attached more

the usual responsibility, and that these men work sometimes on their own initiative?

COLE. I would say practically all the time.

GREENE. That is in contradistinction to the familiar sight of organization with a few officers and a great many men, who do as they are told.

COLE. Yes, sir; there is no mass effect about it. It is detached

CALDWELL. You stated that we could get a rough estimate of the many men we needed in the Signal Corps proper by figuring per cent of the line, and the 50,000 men you have asked for be about that percentage of an army of a million and a half

COLE. Yes, sir; if they were all in the field.

CALDWELL. If we had an army in the field of a million and a half men on the other side, and then had a million and a half men on this side, you would have to have 100,000 men in your corps?

COLE. Yes, sir. Let me modify that statement. This 50,000 includes the overhead. We have to make a start by putting the top fellow first.

CALDWELL. As a matter of fact, if we had 3,000,000 men, 3 per cent of them would be 90,000 men, for your corps?

COLE. Roughly; yes, sir.

CALDWELL. So if we decide to appropriate for an army of 3,000,000 men we would have to double your present request for personnel in the Signal Corps?

COLE. Yes, sir. There is one point about that; that these officers and men in the Signal Corps will be sufficient to take care of the job for the number of men you have authorized in the

if the President calls for another draft, we can figure that out in this way: For every 500,000 men there will be, roughly, 16 divisions, three corps, and one army, which will call for 20 field divisions of our kind of troops, 6 telegraph battalions, and 2 depot divisions, or that would be not quite 90,000 men, which would be 30,000 and 35,000 added to the present number of 50,000.

ANTHONY. Do you think that it is necessary to maintain a separate organization of the Signal Corps proper? If you have 100,000 Signal Corps troops on the other side with an army of 3,000,000 men in the field, do you think it is necessary to have 100,000 more on this side, if we have a million and a half men in training?

In other words, is it not only necessary to have sufficient personnel of your men to supply the needs of the fighting army?

COLE. We have to be training at the same time that the line Army is training.

ANTHONY. Well, you can be training your men, but is it necessary with all these units of Infantry to train along with them the increased number of Signal Corps organizations?

COLE. Yes, sir. We try to get a start wherever we can, so we have to do more than the others have to do.

CALDWELL. The request for personnel being a flexible request, you put into the record the number of men and the cost, so that

we will be able to know how much we will have to appropriate if we are going to have an army of a certain size?

Maj. COLE. How much it will cost for the pay of the men in each grade?

Mr. CALDWELL. Yes.

Maj. COLE. Yes, sir; I will do that.

Mr. CALDWELL. For each increase of 500,000 in the Army.

Maj. COLE. Yes, sir.

(The matter referred to is as follows:)

Enlisted men in grades required by the land division of the Signal Corps, as follows:

Master signal electricians, 1,001 at \$81 per month.....	\$81, 081
Sergeants, first-class, 3,504 at \$51 per month.....	178, 704
Sergeants, 5,005 at \$44 per month.....	220, 220
Chauffeurs, first-class, 500 at \$51 per month.....	25, 500
Corporals, 10,010 at \$36 per month.....	360, 360
Horseshoers, 1,001 at \$38 per month.....	38, 038
Chauffeurs, 1,001 at \$44 per month.....	44, 044
Cooks, 1,001 at \$38 per month.....	38, 038
Privates, first-class, 22,524 at \$33 per month.....	743, 292
Privates, 4,507 at \$30 per month.....	135, 210

Total..... 1, 864, 487

Cost per annum (pay) of 50,054 men in Signal Corps, \$22, 373, 844.

Officers and enlisted men on duty with photographic, radio, pigeon, and meteorological divisions.

Division.	Majors.	Captains.	First lieutenants.	Second lieutenants.	Enlisted men.

Total.....	5	17	41	54	1, 107

Mr. ANTHONY. How are your land Signal forces distributed in this country now?

Maj. COLE. Wherever there is a division; we have about forty-two divisions, and with each division you will find a field battalion.

Mr. ANTHONY. That is, wherever there is a division of National Guard at one of the National Guard camps you will find an appropriate number of Signal troops?

Maj. COLE. Yes, sir.

Mr. ANTHONY. How about the drafted men in the cantonments? Have you Signal organizations for them, too?

Maj. COLE. Yes, sir.

Mr. ANTHONY. In proportion to their numbers?

Maj. COLE. Yes, sir.

Mr. ANTHONY. Where are your depot battalions?

Maj. COLE. They are both at Fort Leavenworth, sir. We have not been able to get any other places to organize all we want, but we are organizing them as fast as Gen. Pershing calls for them.

Mr. SHALLENBERGER. Is the depot battalion a sort of gathering place for officers who have not been assigned to any regular duties?

Maj. COLE. No; it is not exactly that. If there are, for instance, telegraphers wanted out at the front, they will go back to the depot battalion to get them; they take the raw men and try to make them finished products before they are sent to the front.

Mr. SHALLENBERGER. Have you more officers than privates in the depot battalions at Fort Leavenworth?

Maj. COLE. No, sir.

Mr. ANTHONY. The proportion is just the other way, is it not?

Maj. COLE. Yes, sir.

Mr. ANTHONY. They are primarily for the enlisted men?

Maj. COLE. Yes. The authorized strength for a depot battalion is 15 officers and 400 men.

Mr. SHALLENBERGER. Do you think that is what it is now?

Maj. COLE. Our figures vary from day to day at Fort Leavenworth, because that is the place where the men go to be inducted for our division. According to our last reports there were about 800 inducted men. What the situation is just now I do not know, but I do know that there are about 12 officers there.

Mr. SHALLENBERGER. I am glad to hear you say that. The reason I asked that question is because I have been told several times that the depot battalions have been used as places where idle officers are being kept, and that there are practically no privates there at all.

Maj. COLE. It is not that way in our case.

Mr. NICHOLLS. Is Fort Leavenworth a pretty good place to have that depot battalion?

Maj. COLE. It is fine, except for this time of the year. There is one thing about Fort Leavenworth, and that is that they have some shelter out there.

Mr. ANTHONY. While we are on that subject, I want to ask Maj. Cole if he has seen the Signal Corps cantonment out there.

Maj. COLE. No, sir. I have not been out there since I graduated from the Signal Corps school.

Mr. ANTHONY. I want to say that that is one of the most complete and comfortable small cantonments I have seen.

The CHAIRMAN. We will now be glad to hear Col. Edgar. Colonel, you are at the head of the construction branch of the Aviation Section of the Signal Corps?

Col. EDGAR. Yes, sir.

The CHAIRMAN. Will you tell us something of your previous business experience?

Col. EDGAR. I am a colonel in the Signal Corps. I entered the service in May, 1917, and have been in charge of the construction division of the Aviation Corps since May 21, 1917. I am president of the Continental Sugar Co., of Toledo, Ohio, managing partner of W. H. Edgar & Son, warehousemen and distributors of sugar at Detroit, and I have been building in my own behalf various types of buildings since 1903.

The CHAIRMAN. How long did you say you have been connected with the Signal Corps?

Col. EDGAR. The construction division of the Signal Corps was created on May 21, 1917. I had been in Washington about two weeks prior to that time at the request of Gen. Squier and Mr. Coffin.

The CHAIRMAN. Will you state to the committee the number of camps that have been constructed, and where they have been constructed?

Col. EDGAR. The number of camps constructed under the construction division of the Signal Corps at the present time is 23. There are 5 camps that are being built, 2 at Arcadia, Fla., 1 at Montgomery, 1 at Lonoke, Ark., and 1 at San Antonio, Tex. That leaves 18 fields at which there are troops flying.

Of these 18 there are 2 at Fort Worth, Tex., being used by the Royal Flying Corps with which you are probably familiar.

There is a field at Dayton, Ohio, called McCook Field, which is used entirely for experimental purposes in connection with the Liberty motor and United States war planes.

There is a field called Langley Field, near Newport News, Va., which is the original field for experimental work. There has been concentrated the work of the foreign Liaison officers who have been sent here with planes.

The program was originally to construct 24 new fields. We had when we started a little field at Essington, Pa., a field at Mineola, and a field at San Antonio in operation. The Essington field was used for hydroplanes, and has since been turned over to the Navy. We have built along the lines I have outlined to you.

The CHAIRMAN. They were built under your direction?

Col. EDGAR. They have all been built under my direction.

The CHAIRMAN. And not under the direction of the Quartermaster General's Department?

Col. EDGAR. No, sir. The advisory committee on aeronautics had knowledge of two fields at the start, that could be operated on, one near Mt. Clemens, Mich., and one near Dayton, Ohio. Those two fields were all we knew of on the 21st day of May, and two officers (Gen. Saulois and myself) went out and passed on those two fields, and located another field at Rantoul, Ill.

The field at Belleville, Ill., Scott Field, cost \$1,534,474.27, up to yesterday. At the Belleville Field we ran down a well and struck salt water, after making some local inquiries and being guaranteed that there was good water there. So we had to put in a seven-mile pipe line into Belleville to get the water from the Mississippi River, increasing the cost of that field a good deal over what it should have been.

We think it is one of the prettiest locations we have.

The Love Field at Dallas, Tex., cost \$716,301.09.

The McCook Field, at Dayton, Ohio, is an experimental field. It has not capacity for personnel nor for maneuvers, but is used in connection with the work on the Liberty motor. It cost \$450,362.70.

The Wilber Wright Field at Dayton, Ohio, has cost \$2,564,510.74. I have some other building operations. The balloon school at Fort Omaha, Nebr., cost \$475,303.08. Then there is at Fort Sill, Okla., an aerial observers' school. That was built in connection with the artillery school of fire, to teach the spotting of artillery, and has cost \$1,099,414.91. We have a balloon battalion there, with housing to the amount of \$172,291.23.

We have three fields at Fort Worth, Tex. The Taliaferro No. 1 field cost \$910,806.62, Taliaferro Field No. 2 cost \$384,502.94, Taliaferro Field No. 3 cost \$663,354.84. Those fields were all laid out under an agreement with England, for a certain capacity for the

of the Royal Flying Corps. They shipped down nearly double personnel expected, and as we had to take care of them in some we provided them with a few additional buildings.

. ANTHONY. Can you designate the cost of the buildings and cost of the ground; can you separate those?

l. EDGAR. I have that only on one field. On Selfridge Field, it is the most expensive proposition we have gotten into.

. ANTHONY. Can you put into the record a statement or a table giving the cost of the buildings, and the cost of the grounds, separately?

l. EDGAR. Yes, sir.

	Cost of field.	Roads, sewers, grad- ing, and drainage.	Buildings.

l. EDGAR. The Langley Field job is not complete yet. It consists of temporary buildings and some permanent structures. We spent there \$1,209,597.97.

e Ellington Field at Houston, Tex., has cost \$1,866,959.72. Aero Repair Depot at Indianapolis, for repairs to engines and parts, has had spent on it so far \$144,000. When the bill appropriating \$640,000,000 was passed we did not know that that repair was necessary at all. We have since found that in the case of engines wrecked which can not be repaired within 48 hours it is more economical to put them into a machine repair shop than to attempt to repair them at the field. The estimate for that repair shop at Indianapolis was \$527,000, of which we have spent, as I said, \$144,000. The Gerstner Field, at Lake Charles, La., has cost \$1,996,651.99. The field at Lonoke, Ark., the Eberts Field, is under construction, there has been only \$27,000 spent on it up to this time. The estimate for that field was \$800,000.

The Park Field, at Memphis, Tenn., has cost \$1,803,821.58.

The Hazelhurst field and concentration camp, at Garden City, N. Y., is in addition to a flying field a recruit camp, where all the aviation troops are sent before they are sent overseas. This consists altogether of housing. It has 27 sets of barracks, so that we can accommodate 27 squadrons at a time, and the cost of that field has been \$3,117,610.50 altogether.

At Montgomery, Ala., on the Taylor Field, we have only spent so far \$110,000.

The Selfridge Field, at Mount Clemens, Mich., has cost up to date \$1,691,764, and there has been one overseas camp built at a cost of \$642,491.90. That will give you a clue as to what the materials and the fields cost. That is the actual building material, f. o. b. dock in New York, in June. We got an order in May to get that material and ship it across, and we had it on dock in New York on June 15 and everything ready to go overseas.

The CHAIRMAN. That is not the cost set up in France?

Col. EDGAR. No, sir.

The CHAIRMAN. What is it going to cost when you get it over there; that is, the work of setting it up?

Col. EDGAR. I can not give you those figures now.

The CHAIRMAN. Will it be three or four times as much as that?

Col. EDGAR. No; that field will cost probably, about twice that amount.

The CHAIRMAN. Did you buy a field over there?

Col. EDGAR. The field was furnished by France, and was in shape to put these buildings up on, and the material and labor are about fifty-fifty. If you spend \$100,000 for materials, you can figure almost certainly that it will cost \$100,000 more for labor to put up the buildings.

At San Antonio, Tex., Camp Kelly, we built a double unit and extended the single unit. The figures for that are \$3,486,355.70. The estimate for Brooks Field at San Antonio, Tex., was \$800,000, but only \$50,000 has been spent. On the Rich Field, at Waco, Tex., there has been spent \$821,672.60.

The CHAIRMAN. How did you let the contracts for the construction of the buildings?

Col. EDGAR. These contracts are let to contractors designated by the Emergency Construction Committee of the Council of National Defense. The original three fields were let on a letter which I gave the contractors, telling them that the emergency existed and that we had to build the fields. I took the responsibility myself of starting them, and later on the Emergency Construction Committee authorized a letter, and then the contract was drawn by Mr. Whaley, who was an attorney for the Council of National Defense. That contract was approved by the Secretary of War, and the form used by the Quartermaster General was used by us. All the contracts for these fields are let on a percentage basis, and on jobs the size of these compensation is 7 per cent.

The CHAIRMAN. You mean that percentage varies?

Col. EDGAR. It varies according to the size of the job. When the amount of the job runs to \$4,000,000 or \$5,000,000, the percentage is reduced. That percentage table is fixed in the contract; it is printed in the contract.

Mr. ANTHONY. It starts at 10 per cent?

Col. EDGAR. Yes, sir; and as the size of the job increases, the percentage decreases.

The CHAIRMAN. Ten per cent is the highest?

Col. EDGAR. Ten per cent is the highest. In the allotment of these funds that were turned over to our division, there was \$54,128,047 turned over for the building of buildings and the purchase of land in the United States and abroad. We have spent and contracted for work amounting to \$40,577,235, and we have the balance or surplus of \$13,506,812.

Mr. GORDON. How much of that amount was spent on land?

Col. EDGAR. The amount of money spent for land has been very small, about \$8,000 for the site for a warehouse at Dayton, Ohio. We found there a peculiar case, that we were on a gravel bed, and that we could build a fireproof reinforced warehouse as cheap as a frame one. We could not build a permanent building except on land owned by the Government, so we purchased that piece of land.

The CHAIRMAN. That is the only site you have purchased?

Col. EDGAR. That is the only land my division has purchased. Langley Field and Keely Field No. 1 were purchased before the division was created.

The CHAIRMAN. These places you have mentioned are the only places where land was purchased?

Col. EDGAR. Yes, sir.

The CHAIRMAN. The other sites are all rented?

Col. EDGAR. They are all rented on a basis of three years, with a fixed rental, and a fixed option to purchase, in every case. We did not know where these funds would come out, and how the expenses might pile up, and so we were obliged to get an option, not increasing from year to year, but a fixed option, at the same price that we could get two years from now, and we thought that was the proper thing to do under the circumstances.

Mr. ANTHONY. Are any of the fields donated to the Government—that is, the use of the fields—by communities?

Col. EDGAR. We have only one field which we are renting for a dollar a year.

Mr. ANTHONY. Where is that?

Col. EDGAR. That is Eberts Field at Lonoke, Ark.

Mr. HULL. How do you decide as between the contractors for the buildings?

Col. EDGAR. We have no option in the matter at all. The contractor is furnished us by the Council of National Defense. When I first came here I made a very strong protest against the system, because I felt, with some building experience, I might know something about a contractor, and I did not want to accept him if I did not feel he was able to do a good job.

Mr. HULL. Do you know how they decide on the contractor?

Col. EDGAR. No, sir; I have no information on that. I went to see Gen. Squier about it, and he assured me that if I ran into a contractor who was recommended by the Council of National Defense, and I knew he was not what I wanted, he would fix it.

Mr. HULL. You do not know whether, all things being equal, they prefer the local man to the outsider?

Col. EDGAR. I believe, from my experience, that the local man has been taken as against the outsider; but all things being equal—and you must remember if you have a building job of a million dollars or a million and a half dollars with any contractor you may name, such as Jones & Co., for instance, and you put him to doing exactly the same thing over again on a second job, with exactly the same supervision, and the same force, you are going to pick up anywhere from \$25,000 to \$50,000 for the Government in that way.

Mr. HULL. All things being equal, your judgment would be that the local man is the best?

Col. EDGAR. Yes; because he does not disturb labor conditions in the locality.

Mr. HULL. He would save more than an outsider, would he not?

Col. EDGAR. Yes, sir; with this one exception, that if the outsider had already built one of these jobs——

Mr. HULL (interposing). I know, but I said all things being equal.

Col. EDGAR. Yes; all things being equal.

The CHAIRMAN. If you will put into the record a complete statement showing the cost of each one of these fields, the total cost and the cost of the land where purchased, the rental cost, the cost of the construction of the buildings, and the option on which you can purchase, we will be much obliged to you.

Col. EDGAR. Yes, sir; I will do that.

(The statement referred to is as follows:)

1 Part of Love Field.

2 Government land.

3 Purchase of Langley Field completed prior to May 21, 1917.

* Represents purchase price Kelly Field No. 1; transaction prior to May 21, 1917; payment disbursed.

Mr. ANTHONY. Did you designate the contractors for these camps, or were the contractors designated by the Council of National Defense?

Col. EDGAR. The contractors were all approved by the Council of National Defense. So far as the first three fields are concerned, when I came down here I found such a condition of delay that, coming directly from civil life, it was very irritating to me, and I started out three of those fields by choosing the contractors and giving them a letter starting them off, and the Council of National Defense approved those contractors.

Mr. ANTHONY. I understand that in the Quartermaster General's Department of the Army they have never let a contract for cantonment construction unless the contractor was first given them by the Council of National Defense.

Col. EDGAR. On the first three fields that were started in May, that was done, before we got the organization. After that the contracts in every case were let to the contractors who were named and recommended to us by the committee of the Council of National Defense.

Mr. ANTHONY. How many of these contracts for the construction of the aviation camps have been let to the lowest bidder?

Col. EDGAR. There have been no bids on any of these jobs. The contracts were all let on the percentage basis.

Mr. ANTHONY. I have in mind some small jobs that were let to the lowest bidder.

Col. EDGAR. If any such contracts have been let, they have been let outside of my department, because the instructions of the Secretary of War were that we would use this one form of contract and no other, and we have no option in the matter.

Mr. ANTHONY. How were the cantonments for the signal troops let, outside of your department?

Col. EDGAR. I built for the Aviation Section.

Mr. ANTHONY. You only built for the Aviation Section?

Col. EDGAR. I only built for the Aviation Section, except that I have helped out at Camp Alfred Vail, and Little Silver, N. J., where they had some difficulty.

Mr. ANTHONY. Who had charge of the construction for the land troops of the Signal Corps?

Col. EDGAR. The Quartermaster Corps.

Mr. ANTHONY. Of the Army?

Col. EDGAR. Yes, sir. At Little Silver they had some troops, and there was some delay in the building, and Gen. Squier asked us to help them out, which we did.

Mr. ANTHONY. What is the largest amount of profit that any one contractor has earned under your contracts?

Col. EDGAR. It is a very difficult thing to say what is profit. The biggest fee that has been earned on this list was earned on the Mincola Field. That contracting firm was a New York concern, and the amount of work done there was \$3,182,000, which would give them a fee of \$210,000. But that fee is figured on money actually expended for labor and materials. The bills are audited by our auditors on the job, and then they go to the finance division to be paid. We do not permit any of the employees to be under salaries.

Mr. ANTHONY. Did you have an arbitrary limitation on the profit of \$250,000?

Col. EDGAR. That was put in our contracts; some of them got less than that.

Mr. ANTHONY. Do you know of the case of any contractor who had reached the limit of his original contract, and was given a profit on that, and then was given additional work and additional profit?

Col. EDGAR. Yes, sir.

Mr. ANTHONY. How much would the additional profit amount to for the additional work on the same job?

Col. EDGAR. That I could not answer offhand.

Mr. ANTHONY. If all of that work had been included in one contract, the contractor's profit would have been limited to the original amount, but by giving him that work in two contracts, he is entitled to an increased profit?

Col. EDGAR. That, in some cases, was a matter of adjustment, and in some cases a matter of conditions.

At Fort Sill, Okla., we built a training camp. The estimated cost was \$800,000, and we limited the contractor to a profit on \$900,000. He has done a million dollars' worth of work, and he is very little ahead. When that camp was completed, we drew the line when we gave him the new work, and in order not to delay getting the contractor, we let the contract to him for the new work.

The CHAIRMAN. Do you expect to have this work completed during the present fiscal year, the work of constructing the camps?

Col. EDGAR. Mr. Chairman, the work we have under way the Quartermaster General is going to let us continue and finish. He has permitted us to go ahead with some other work. I think we will have our entire program, so far as the fields are concerned, completed by the end of the fiscal year.

Now, there has come into this a new feature, and that is the universities. We have built the grammar schools and in some cases we have built the high schools. But I have had within the last two or three days suggestions that we had better get out and locate gunnery schools and bombing schools, and a lot of schools that could be used in France. That, of course, will mean an additional program, but I understand there are six schools in the program of double units. Whether that work can be finished within the fiscal year, I doubt.

The CHAIRMAN. I mean the training camps and fields; that work will be completed within the fiscal year?

Col. EDGAR. These jobs will all be done and the next group of five will be done also before the first of the next fiscal year.

The CHAIRMAN. So that you will be asking for no additional appropriation next year for this particular work?

Col. EDGAR. Not for this particular work, but for the new high schools, that Gen. Squier has in his estimates.

Mr. GORDON. Has he submitted estimates for those?

Col. EDGAR. He has gotten up estimates.

Mr. GREENE. Those are for signal service schools?

Col. EDGAR. Those are for aviation advanced training schools.

Mr. GORDON. Will the funds in your hands be sufficient to pay the cost of completing this work?

Col. EDGAR. Yes, sir; we are within our appropriation. I think we will have a little bit left over.

Mr. GORDON. You have now \$13,000,000?

Col. EDGAR. I have \$13,500,000 to finish this work and complete five more schools.

Mr. QUIN. You said there are more schools contemplated?

Col. EDGAR. We have asked for authority to establish one in Georgia and one at Riverside, Cal., and a board of officers is now in the West looking at other locations for the last group of five.

Mr. MCKENZIE. You spoke of building high schools and grammar schools. What did you mean by that?

Col. EDGAR. By the term "grammar school," I mean the place where the pilots are taught to fly. That is what we started to turn out.

Mr. ANTHONY. That is just the beginning?

Col. EDGAR. It is the primary training. Now comes the secondary training, and, of course, they have to be instructed in making photographs in the air and fighting in the air, how to use machine guns and how to use bombs, and to be wing shots under most difficult conditions; that is, while you yourself are moving and while the target is moving, possibly in the same direction or in different directions. The only school we have for that work is at Mount Clemens.

Mr. ANTHONY. I was thinking that it would be impossible to have a shooting range out in the country.

Col. EDGAR. We learned that these targets must be over water, so that a man can see where his bullets hit, and on the surface of a lake or surface of the ocean he can see what he is doing. They learn much more quickly over water than in any other way. In France and in Germany their schools are over water.

Mr. ANTHONY. Have you been commissioned in the Regular service?

Col. EDGAR. I have a temporary commission in the Regular service.

Mr. ANTHONY. Were you appointed from the Reserve?

Col. EDGAR. Yes.

Mr. ANTHONY. That only applies to the Signal Corps?

Col. EDGAR. That only applies on the \$640,000,000 bill. There is a clause in that bill that permits the President to issue to officers temporary commissions in the Regular Army.

Mr. ANTHONY. At the pleasure of the Secretary of War?

Col. EDGAR. Yes; upon the recommendation of the Chief Signal officer.

Somebody asked a question in regard to the cost of the buildings and the cost of materials. In the case of Selfridge Field, at Mt. Clemens, Mich., the cost of the buildings was \$900,000, and the cost of grading and preparing the field was about as much more. That ran the total cost up to \$1,946,000. We struck extraordinary conditions there.

(Thereupon the committee adjourned to meet Monday, January 28, 1918, at 10.30 o'clock a. m.)

ARMY APPROPRIATION BILL, 1919.

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Monday, January 28, 1918.

The committee this day met, Hon. S. Hubert Dent (chairman) presiding.

STATEMENT OF MAJ. GEN. WILLIAM C. GORGAS, SURGEON GENERAL, ACCOMPANIED BY COL. C. E. DARNALL, MEDICAL CORPS, AND MAJ. BRADLEY DEWEY, SANITARY CORPS.

The CHAIRMAN. Gen. Gorgas, you are the Surgeon General of the Army?

Gen. GORGAS. Yes, sir.

The CHAIRMAN. The first item for the Medical Department is on page 54, "Medical and hospital department: For the purchase of medical and hospital supplies, including gas masks, motor ambulances, and motorcycles, for medical service, their maintenance, repair and operation, and disinfectants, and the purchase and exchange of typewriting machines for military posts, camps, hospitals, hospital ships, and transports, and supplies required for mosquito destruction in and about the military posts in the Canal Zone," and so forth, for which you are asking an appropriation of \$151,111,894. There was appropriated for this item at the last session of Congress, \$130,780,000. Will you please explain that item?

Gen. GORGAS. The amount of \$157,000,000 is our general appropriation for the Medical Department, and that includes all the items which are mentioned in the section, for medical supplies and similar things.

The CHAIRMAN. Can you put a detailed statement in the record in reference to these various items?

Gen. GORGAS. Yes, sir; but the caption of the item covers in general terms what the appropriation is intended for.

(For detailed statement see page 1158.)

The CHAIRMAN. What sized army is that estimated for?

Col. DARNALL. That is based on a million and a half men.

The CHAIRMAN. On 1,600,000 men?

Gen. GORGAS. On a million and a half men. It came about in this way. We were originally directed to make out an estimate for 3,000,000 men, and then it was afterwards changed, and we were directed to make out the estimate for 1,500,000 men.

The CHAIRMAN. Most of the other departments have been giving us figures for 1,612,245 men.

Gen. GORGAS. We were directed to make out this estimate on a basis of a million and a half men. I think that direction was in general terms, 3,000,000 men at first, and then it was concluded to

cut that number in half. I have the letter of direction as to the basis of the estimate here. It is from the Chief of Staff, dated October 19, and it says:

The Secretary of War desires that you submit a modified estimate based on an estimate of 1,500,000 men to be maintained in the Military Establishment during the fiscal year 1918-19.

The CHAIRMAN. How many men did you estimate for last year when you got \$130,780,000?

Gen. GORGAS. The first estimate was based on 2 000,000 men.

The CHAIRMAN. Then you only got \$130,000,000 for 2,000,000 men, but you are asking for \$157,000,000 for , 1,500,000 men?

Gen. GORGAS. That is in general terms, because we know more now than we did.

The CHAIRMAN. Does that mean you are going to have a deficit from last year's appropriation?

Col. DARNALL. Yes, sir. This is what that estimate was based on, 1,000,000 men for the entire year, 500,000 men for nine months, and 500,000 men for six months, making an average of 1,625,000 men for one year. That estimate of \$130,000,000 was based on that. But we find that is not enough.

The CHAIRMAN. How much will your deficit be?

Col. DARNALL. So far as we can tell at the present time, it will be in the neighborhood of \$20,000,000. New things are coming along every day. The other day we received a cablegram from Gen. Pershing, increasing the number of gas masks, and those gas masks are very expensive.

The CHAIRMAN. That accounts for the difference between the amount of the appropriation you got last year, and what you are asking for this year?

Col. DARNALL. Yes, sir.

The CHAIRMAN. This appropriation seems to authorize the construction, maintenance, repair, and operation of hospital ships. Do you contemplate having any hospital ships?

Gen. GORGAS. That question is up for decision in the department now. Either we ourselves or the Navy will have to transport the sick and wounded, and those that will be brought over from France to the United States.

The CHAIRMAN. That is an undetermined matter at the present time?

Gen. GORGAS. As to who is to look after it; yes, sir.

The CHAIRMAN. Have you reached any idea as to how much it would take?

Gen. GORGAS. We are basing our estimates on the Canadians, and what they have had to do. We can tell pretty accurately the number of men we will have to bring across. The Canadians, in general terms, have returned 10 per cent of their men as entirely disabled.

They do not bring back all of the sick and wounded. All of those who are likely to recover, and possibly be of future service, are treated in France and England, and are not brought back to Canada to be treated, and we expect to do the same with our men. We will just bring back the men who are permanently disabled, and that number will be about 10 per cent of the forces in the field.

Mr. KAHN. Your department furnishes gas masks for the Army?

Gen. GORGAS. Yes, sir.

Mr. KAHN. I saw in the papers the other day that quite a large number of gas masks were sent back here because they were found to be of practically no value on the other side. We are going to be asked about that on the floor of the House when this bill comes up. Could you explain how that happened?

Gen. GORGAS. Maj. Dewey is directly in charge of that work, and he can explain it to you in detail.

Maj. DEWEY. Early in July, the Army, in collaboration with the Bureau of Mines, which had already done considerable work for gas protection for mine rescue work, made up 20,000 masks. The bureau had had some information from abroad, and it had done some preliminary experimental work.

When those masks were on their way to France further experimental work showed that they were not suitable for the high concentrations and new gases then being used on the front. They were equal or superior to some of the gas masks then in use, but were not as good as the best British masks. At the same time it developed that the British could sell outright to our expeditionary forces a sufficient number of gas masks to last us for some time, and as their mask was then superior to any of the other masks which were then being used, this Government cabled to Gen. Pershing not to issue the 20,000 which had been sent over, and later cabled him to return them for training purposes in this country.

We then passed through a period of experiment, development, and manufacture, in which masks were made for use in the training camps. Many of those masks were a very superior product, but they were used for training purposes, both because Gen. Pershing had British masks and because it was very essential to start at the earliest possible moment to give our troops preliminary training in gas protection.

We have, since the 1st of January, been shipping comparatively large numbers of our own gas masks to Gen. Pershing. Those masks have not arrived as yet. We have had no time to receive a cable from him telling us what his opinion is of those gas masks.

We have, however, written expressions of opinion from British experts, men very high in the British antigas service, and those men have said that as far as protection is concerned, our mask is superior to anything now used by any army.

These masks are, as a matter of fact, a few ounces heavier, than the British masks, and this question with regard to the weight is one that is now under discussion.

There were never, as the newspaper articles stated, 200,000 gas masks sent over. There were never such a large number sent to France. The number sent over was 20,088, and they were never issued to our troops. I understand, from those who saw the boxes in which they came back, that it is probable that not more than three boxes were opened in France.

Mr. KAHN. Then as I understand it, the request for their return to this country, came from your department, and did not come from Gen. Pershing?

Maj. DEWEY. There was a large group of cablegrams on that subject, which fit into and knit into each other. The gas service,

as a service, was not organized at that time and our cables had to go through several hands, finally getting to the War College, before coming to us, and I am not able to say, as a matter of record, whether Gen. Pershing's comments with reference to those things arrived first, or whether our orders first were received abroad. The fact is that we knew we wanted the masks back before they arrived.

Mr. KAHN. Have you a sufficient number of gas masks now to supply all the forces who are over there?

Maj. DEWEY. No; we have not.

Mr. KAHN. Are you getting enough from England to supply them?

Mr. DEWEY. Yes, sir; the forces in the field are well supplied.

Mr. KAHN. How soon do you think it will be when we will be able to supply our troops over there with the gas masks made by us?

Maj. DEWEY. We are not fully informed of the exact number of troops over there, but my estimate is that it will be about the 1st of April.

Mr. KAHN. We were told that there are * * * troops over there now, and of course, a great many of them are engineering troops and are not in the line. I imagine that we have about * * * fighting troops over there. Have you anywhere near that number ready?

Maj. DEWEY. There will be over 150,000 gas masks on the way to Europe before the end of February, unless there are some more Fuel Administration orders, or things of that kind. Everything we say to-day is dependent upon industrial uncertainty, so far as the production of that type of gas mask is concerned.

Mr. GARRETT. How does the Fuel Administration by its orders affect the making of war material?

Mr. KAHN. Will the fuel orders interfere with your manufacturing of those gas masks?

Maj. DEWEY. Even if we can obtain an exemption for a rubber company, it may seriously interfere in this way. The rubber company makes molded parts in heavy steam presses in a room containing several hundred presses, and they may be only operating four presses on our material. Under such circumstances you can not expect any company to charge their entire steam line of a power plant with thousands of horsepower, and suffer condensation losses all through the plant, in order to operate four presses on our work. So, even though we get an exemption for a shop doing our work, it does us no good. Secondly, our program to-day is largely dependent upon the rate at which the rubber companies can obtain the complicated molds and machine-made parts of that type. Those are made for the rubber companies by subsidiary outside contractors, such as small machine shops, and it is not possible to obtain, and, in fact, we have been refused an exemption for all of those small machine shops, so that in that way we are very seriously affected by the orders of the Fuel Administration.

Mr. KAHN. Do you think you could get relief by presenting this matter in detail to Dr. Garfield? Have you tried to get relief?

Maj. DEWEY. We have tried to get relief, and we have been refused.

Mr. KAHN. You have failed in that?

Maj. DEWEY. We have failed in that.

Mr. KAHN. What is the approximate cost of one of these gas masks?

Maj. DEWEY. Approximately \$7.50.

Mr. KAHN. Do you know how much the English masks cost?

Maj. DEWEY. I do not. The only costs I have had are not what we call the true costs in this country. The question of overhead and matters of that kind are left out, and we have no idea as to what an accountant would say the cost is, and we have been unable to determine it.

Mr. SHALLENBERGER. What did Gen. Pershing have to pay for those masks he got?

Maj. DEWEY. I do not know.

Mr. KAHN. From whom did he get the authority to purchase the English gas masks?

Gen. GORGAS. I think he has full authority for all those things.

Mr. KAHN. From the Secretary of War?

Gen. GORGAS. Yes, sir.

Mr. KAHN. Can you put into the hearings a statement showing what Gen. Pershing paid for those masks over there?

Col. DARNALL. We would have to cable to him for that. They do not advise us every time they buy things as to what the cost is.

Gen. GORGAS. I think we can get that.

Maj. DEWEY. In that connection, we have taken up, unofficially, with the British, the advisability of their supplying us permanently and have been told, unofficially, that their labor shortage precludes any permanent arrangement for that sort of thing.

Mr. KAHN. So that you will have to depend in a large measure on the masks manufactured in this country?

Maj. DEWEY. From this time on; yes.

Gen. GORGAS. You understand, Mr. Kahn, that all the troops on the other side who need the masks are supplied with them at the present time.

Maj. DEWEY. With an abundant quantity in reserve.

Mr. KAHN. I saw a statement in the newspapers not long ago that the Germans are now using an odorless gas, and that you can not smell it, as you have been able to smell the gas heretofore. Have you any reports about that?

Maj. DEWEY. The latest reports we have are that that statement is not entirely true. There is, however, some foundation for it in that the odor of the latest German gas is comparatively slight, instead of being pungent, and taking hold immediately. It resembles garlic. It is no more than the ordinary garlic smell.

Well-trained troops are now trained to recognize this garlic odor, as they recognize the odor of the stronger gases, and they have no more casualties from that gas than from the other gases.

Mr. KAHN. What are we doing in the manufacture of gases, and in the use of gases by our troops in that kind of warfare?

Maj. DEWEY. That is a matter that the Ordnance Department can inform you about.

Mr. KAHN. They are manufacturing the gas bombs?

Maj. DEWEY. Yes, sir.

Mr. KAHN. I would like to ask you, General, about the difficulty you have had, which was reported in the papers a day or two ago, with some of the young lieutenants in your corps who refused to take in sick men who were sent to the hospital, who were left standing in the rain, died in consequence of neglect. Can you tell this committee just what that situation was?

Gen. GORGAS. The report on that has not come in as yet. I saw that in the newspapers, but I know nothing more about it than what the papers state. I can get the information for you.

Mr. KAHN. I wish you would do that, because that is another matter that will be discussed on the floor of the House when this bill comes up, and I know the chairman feels that we should have all that detailed information in order that we may be able to inform the House about it.

NOTE.—The case referred to by Mr. Kahn was not sufficiently clear to enable this office to locate the names of the lieutenants and make investigation.

Mr. TILSON. General, have you any way by which you can get real information, and get it quickly, without having to be involved in a lot of formal red-tape methods, and consequent delay? Have you any real way of getting information about things of the kind that have been mentioned, as a business concern would get information in reference to any matter it heard about, such as ugly rumors?

Gen. GORGAS. What we do in a case like that is this: If we can get enough information so that we can locate the man, we send a man right down there from my office.

Mr. TILSON. To make a personal investigation?

Gen. GORGAS. To make a personal investigation; yes, sir. We have a great deal of information coming from the various camps through official channels.

Mr. TILSON. Where there is an ugly rumor of some sort which is, perhaps, without foundation of any kind, you have a way of trying to nail it without having to depend on roundabout red-tape methods?

Gen. GORGAS. Yes; sometimes I go myself.

Col. DARNALL. We are investigating a report now that has come from one of the camps, to the effect that there are no stimulants in the hospital there for pneumonia cases.

Mr. TILSON. That is not an investigation at all, because you may send your wire or your letter to the very person who was responsible for the thing. I do not believe in following out every single rumor that comes to your ears, but there are ways of getting information, not necessarily through the regular channels, which are sometimes actually blocked for some reason or other.

Col. DARNALL. The Surgeon General has his regular inspectors, and he sends those men around.

Gen. GORGAS. We have one special force of outside men for that sort of investigation, and where the matter is particularly important we send a special inspector from my own office.

Mr. KAHN. You have discharged from the medical service quite a number of men whom you found were not equal to the work?

Gen. GORGAS. Yes, sir.

Mr. KAHN. Do you know how many men you have discharged?

Gen. GORGAS. I can get you those exact figures—854 men up to February 7.

Mr. KAHN. When you accept a man into your department for a commission, you do not go behind his college diploma, do you?

Gen. GORGAS. The general method is that they are required to have a certain amount of education, which can be determined on the face of the diploma. Then examination blanks are sent to the local boards in the various States or localities, who have the man

come before them, and they examine him. Then those examination papers come back to us, and we refer them to a board of men we have here for the purpose of passing upon those papers, grading them, etc. Those are men who are prominent in the medical profession. Dr. Mayo is a member of that board. The idea in having such a board is that the members of that board are men who would have a general knowledge of the medical profession. Then we have always referred to such organizations as the American Medical Association and asked them whether there is anything against any particular man's character in their files. That is the general method. Of course, the men are physically examined also.

Mr. KAHN. You take every step you can that is possible to determine the qualifications of a man before you commission him?

Gen. GORGAS. I think they are very well selected.

Mr. KAHN. How many officers have you in the medical department at this time?

Gen. GORGAS. This morning there were on duty 17,000.

Mr. KAHN. How many officers do you expect to have when your corps is fully filled up, for the number of men that will be in the service in the near future, namely 1,612,245?

Gen. GORGAS. I think we have almost enough to meet the demand now.

Mr. KAHN. You mean that 17,000 will be enough for an army of that size?

Gen. GORGAS. Yes, almost. That includes the whole medical department, the veterinarian corps, and the dental corps, too. Of the doctors, proper, we have about 15,000 on duty now.

Mr. KAHN. That would be——

Col. DARNALL. That is about 10,000 per million men.

Gen. GORGAS. It would be approximately that. The law would give us, for the Regular Army, seven doctors for a thousand men. For a million and a half men, it would be about that number.

Mr. KAHN. How many men have you in the hospital reserve corps?

Gen. GORGAS. You mean enlisted men?

Mr. KAHN. Yes.

Gen. GORGAS. There are about 20,000 in all.

Mr. KAHN. Is that corps pretty well filled up?

Gen. GORGAS. We are not using our Reserve Corps. The enlisted personnel we have——

Mr. KAHN (interposing). That is what I referred to.

Gen. GORGAS. We have about 80,000. The enlisted Reserve Corps is a fine thing. We get the men for that corps as they are called.

Mr. KAHN. Are those men not with the troops at the present time, and ready to be called?

Gen. GORGAS. The 80,000?

Mr. KAHN. Yes.

Gen. GORGAS. They are principally with the troops now. We are allowed more than these, and we are not quite filled up, and we are getting more.

Mr. KAHN. I see that pneumonia has been playing havoc with the boys in the various camps. Has that been due to the conditions at the cantonments, largely?

Gen. GORGAS. Principally due, I think, to an epidemic of measles. I do not think it bears much relation to the conditions at the cantonments.

Mr. KAHN. No overheating of the quarters at the cantonments and then allowing the men to go out into the cold, that you are aware of?

Gen. GORGAS. No; I think not. It was principally in the National Guard camps, and they were poorly heated.

Mr. KAHN. I understand that pneumonia often results from measles, that it is an aftermath of measles, and there is no way of preventing measles breaking out when so many young men come to those camps from all sections of the country, and in all wars we have had epidemics of measles and mumps; so that it is nothing unusual at this time.

Gen. GORGAS. I think that is generally the case, in bringing a large body of troops together. It depends upon the character of the troops.

Take, for instance, Camp Wheeler, at Macon, Ga. We had that there more than anywhere else, and the troops located at Camp Wheeler are southern troops, from sparsely settled States like Georgia, Alabama, and Florida. We have about 30,000 men at Camp Wheeler, and we have to-day at that camp about 3,000 cases of measles. That practically means that there were 3,000 out of 30,000 men who had not had measles before.

Mr. KAHN. How many troops did you say there are at Camp Wheeler?

Gen. GORGAS. There are a little over 30,000 at the present time.

Mr. KAHN. So that 10 per cent of the men there became ill with measles?

Gen. GORGAS. About that. That probably meant that, when they went, there were about 10 per cent of those men who had not had measles in childhood.

But if you go to Spartansburg, S. C., where there are New York troops, you will find that we have practically no measles, probably not more than two or three hundred cases in the whole camp. That means that out of practically the same number of men as there are in Camp Wheeler, of those men who went down there from New York, a great many of them, probably a majority of them from the big cities, there were only about 300 men in that total number of about 30,000 who had not had measles in childhood.

Mr. KAHN. That is only about 1 per cent?

Gen. GORGAS. Approximately that.

Mr. KAHN. Have you had the usual success with your typhoid serum?

Gen. GORGAS. We have had very great success with that.

Mr. KAHN. The cases of typhoid have been remarkably few?

Gen. GORGAS. Very few.

Mr. KAHN. Do you treat everybody who goes into the service?

Gen. GORGAS. Everybody is required to be vaccinated.

Mr. KAHN. What about the venereal diseases?

Gen. GORGAS. The situation in regard to venereal diseases is in excellent shape, and we are now having a fewer number of cases than we had in time of peace. There was a very big rise in the number of

cases when the men first came in, but that number has been decreasing until now we have less than we have in time of peace.

Mr. KAHN. Are you getting salvarsan?

Gen. GORGAS. Yes.

Col. DARNALL. We are getting what we can in this country. We have three firms who make the American salvarsan, and we are getting their entire output.

Mr. KAHN. Do you find that the American salvarsan compares favorably with the imported article?

Col. DARNALL. It is very good indeed. We are now making arrangements to have more of it made in England.

Mr. KAHN. We have seen something in the newspapers about the venereal diseases affecting our boys on the other side. Have you any report in regard to that?

Gen. GORGAS. Yes; our reports show that it is a little higher on the other side than at home, but not much.

Mr. KAHN. How do they compare with the French and English forces?

Gen. GORGAS. I could not say. I got in some reference this morning in regard to the English forces during the first year, to a very limited extent, and our reports compare very well with those.

Mr. KAHN. The percentage is no higher among our troops than among the English?

Gen. GORGAS. No.

Mr. KAHN. If the number of troops that we have by the first of July should be 1,612,245 men, as contemplated by the War Department now, as I understand, would this estimate of yours amounting to \$157,000,000 be enough for such a force?

Col. DARNALL. No, sir.

Mr. KAHN. And you would begin the fiscal year with a deficit; is that right?

Col. DARNALL. We would have a deficit before the year was over.

Mr. KAHN. Practically, you would begin without enough money to carry you through the year?

Col. DARNALL. Yes, sir.

Mr. KAHN. Will you kindly put into the hearing a statement showing what additional amount you need for, say, that additional number of men; that is, 112,000, and then also what additional amount you would need for each additional 500,000 men?

Col. DARNALL. We will do that.

Mr. KAHN. Up to 3,000,000 men.

Col. DARNALL. We have it for 3,000,000 men right here.

Mr. KAHN. I would like to have the amount for each additional 500,000 men up to 3,000,000 men, and also for the 112,245 above the 1,500,000.

(The statement referred to is as follows:)

Estimates of amount required under Medical and Hospital Department for a military establishment of from 1,500,000 to 3,000,000 men—Approximations.

Items.	1,500,000	1,612,000	2,000,000	2,800,000	3,000,000
Motor vehicles:					
New equipment.....	\$6,000,000	\$6,400,000	\$7,500,000	\$8,750,000	\$10,500,000
Replacement and repairs.....	11,000,000	11,733,000	14,160,000	17,075,000	20,400,000
Printing and binding.....	700,000	747,000	880,000	1,100,000	1,320,000
Veterinary supplies:					
Medicines and antiseptics.....	11,000,000	11,815,980	14,660,000	18,325,000	21,990,000
Dressings.....	12,500,000	13,427,940	16,660,000	20,825,000	24,990,000
Instruments.....	825,000	880,000	1,040,000	1,300,000	1,550,000
Other medical and hospital supplies:					
Medicines, antiseptics, and disinfectants.....	19,000,000	20,407,920	25,320,000	31,650,000	37,980,000
Surgical dressings.....	15,250,000	16,377,920	20,320,000	25,490,000	30,480,000
Hospital equipments.....	18,000,000	19,200,000	23,100,000	28,500,000	33,900,000
Textiles.....	12,000,000	12,806,000	16,000,000	20,000,000	24,000,000
Instruments.....	2,500,000	2,667,000	3,240,000	4,000,000	4,740,000
Dental supplies.....	3,487,500	3,719,000	4,540,000	5,625,000	6,720,000
X-ray equipment and supplies.....	753,000	806,000	1,000,000	1,250,000	1,500,000
Office equipment and stationery.....	500,000	534,000	600,000	675,000	720,000
Gas masks.....	40,000,000	42,975,940	53,320,000	66,650,000	79,980,000
Total supplies and equipment..	153,512,500	164,587,680	202,340,000	251,125,000	303,780,000
Employees, civilian, salary and wages.....	1,539,394	1,684,334	2,052,524	2,595,655	3,073,788
Civilian Medical Service.....	753,000	806,000	1,000,000	1,250,000	1,500,000
Laundering hospital linen.....	1,000,000	1,074,667	1,333,333	1,666,667	2,000,000
Expressage on medical property.....	250,000	263,667	333,333	416,667	500,000
Gas and electricity for gas and laboratory apparatus.....	30,000	32,240	40,000	50,000	60,000
Miscellaneous items.....	30,000	32,240	40,000	50,000	60,000
Grand total.....	157,111,894	168,455,828	207,139,190	257,123,999	307,973,788

Gen. GORGAS. Anything that we may put in as a definite estimate is a rather wild guess. Within two weeks two projects have come up that we never contemplated at all. One of them was the phase of the reconstruction work in which we are expected to do a considerable part of the work for the Insurance Board. That is going to involve, if we undertake it, a considerable increase in all our expenses.

Another very large increase that we had not thought of two weeks ago was in relation to the draft men. A great many men come up for the draft with hernia, for instance. We have a project of operating upon those men who have hernia and making them fit for service. That one item in reference to hernia will mean operations on about 50,000 men, including those who have already come in.

Those are some very large expenses which we could not have looked forward to six months ago.

Mr. KAHN. I saw in the paper this morning that it is the purpose of the department to take the men who have slight ailments and allow them to be operated upon and treated in the Army hospitals, so that they will become fit for military duty, and I can readily understand that you will need more money for that. I think this committee feels—I know I feel—that we want to know how much money you are going to need for the things you have in sight.

They are trying to make somebody the goat, and it has been said that Congress has been derelict in furnishing the funds. So far as my vote is concerned, I want to furnish sufficient funds to conduct this war properly, and I would like to have those figures for that reason.

Gen. GORGAS. We can give you that fairly accurately.

The CHAIRMAN. I want to ask you some questions in reference to the gas masks you think you will get from the British. Have they an ample supply for their own army and for ours, and can they freely afford to let our army have them?

Gen. GORGAS. Maj. Dewey just answered that while we have gotten our present supply from the British, they told us they could not supply us in the future.

Maj. DEWEY. They have been able to let us have masks up to the present time, and I presume they did it quite willingly. For the future we are expected to supply our own.

The CHAIRMAN. How many have you gotten from the British?

Maj. DEWEY. I think we have obtained between 300,000 and 500,000.

Gen. GORGAS. They are purchased over there. I could get the expense and the numbers.

The CHAIRMAN. Then you are amply supplied for the present?

Gen. GORGAS. I can not say definitely about that.

Mr. TILSON. Last summer I gave some attention to this particular subject, and I was told then by an officer in your department that at that time we had made arrangements, and actually had 25,000 masks, and they were for the division we were sending over at that time, Gen. Pershing's first division, and I was furnished with a sample mask, and brought it to the House and exhibited it on the floor of the House. One of the Members of the House put it on, and it was exhibited to the membership of the House. It was a box respirator type. Is that the mask which has been furnished to our troops in France?

Maj. DEWEY. The 25,000 you speak of?

Mr. TILSON. We were told there were 25,000 masks in sight.

Maj. DEWEY. Twenty thousand masks went over and came back. Another 7,000 were never shipped. They are being used for training purposes, and the mask made to-day looks, to all intents and purposes, like the mask you had. I have one here.

Mr. TILSON. What I would like to know is whether that mask which I presented at that time as the mask we were going to use, as an improvement on anything that had been gotten up before, was actually used.

Maj. DEWEY. No; it was not used.

Mr. TILSON. What kind of mask are we using instead of that?

Maj. DEWEY. We are using the British box respirator type.

Mr. TILSON. It is the box respirator type?

Maj. DEWEY. Yes.

Mr. TILSON. Is the one you have the British type, or our type?

Maj. DEWEY. It is our type of mask.

Mr. TILSON. That is exactly the type, or at least it looks like the same type of mask I presented to the House last year.

Maj. DEWEY. This mask is not essentially different from the mask you had, but there is a difference in the chemical filling which is used and there has been an immense amount of technical development, particularly with reference to the rubberizing film right there [indicating].

Mr. TILSON. That had a rubber piece on there, and a rubberized film around there [indicating]. Is this one particularly different from the one I had?

Maj. DEWEY. The chemical composition of that rubber film is absolutely different from that of the one you had.

Mr. TILSON. In other words, while that mask would stop the ordinary chlorine gas, this mask will stop any gas that is known.

Maj. DEWEY. Yes, sir; this is a brand-new compound.

Mr. TILSON. This gas mask which you have there will stop any known gas?

Maj. DEWEY. Yes, sir.

Mr. NICHOLLS. You have to keep changing your masks, just as they do?

Maj. DEWEY. We have to keep two jumps ahead of the game.

Mr. TILSON. When I went into the subject last June I was told that a man could live in that gas mask, in any kind of gas for 10 hours, but Capt. Hines disputed it. But, at any rate, we were told that a man could stand 10 hours in gas with that mask on.

Maj. DEWEY. The British are repeatedly wearing their masks in actual gas attacks for from 8 to 12 hours.

Mr. TILSON. That is about what we were told they would stand, last year. Are there any other gas masks used along with these? Do you have a different type to use in the rear and a reserve mask of the same sort?

Maj. DEWEY. That practice has been abolished by the British, and we are following them in that, and do not have masks in reserve.

Mr. TILSON. Is it not a fact that the gas you most fear is that which is dropped upon you from shells, rather than the cloud gas, now?

Maj. DEWEY. Yes; the British have not had to withstand a cloud gas attack for a year.

Mr. TILSON. The gases you most fear now are those directed by means of shells, especially aimed at your artillery, some distance back of your front-line trenches?

Maj. DEWEY. They are used against the front-line troops, they are used for raiding parties, to combat artillery, and for many other purposes.

Mr. TILSON. But if you can drop them in the vicinity of a battery, that is a very effective use of them.

Maj. DEWEY. If you surprise the battery you put them out of business. If you do not surprise them, you make them slow down.

Mr. TILSON. If you can make the gunner work with a gas mask on, it slows him up considerably?

Maj. DEWEY. He can not work as fast with it on as he can with it off, of course.

Mr. TILSON. If you drop a few of them around a battery and the men have not their masks on, you can put them out of business, and so you can cripple the battery?

Maj. DEWEY. They are used a good deal in that way.

Mr. TILSON. You use the same mask at the front and in the rear?

Maj. DEWEY. Yes, sir.

Mr. TILSON. Does one man have more than one mask?

Maj. DEWEY. No, sir; he has only one. That is enough for him to carry.

Mr. NICHOLLS. What does that one weigh?

Maj. DEWEY. Three pounds and eleven ounces.

Mr. TILSON. We were told last year that the best guess they could make as to the price was that the gas mask would probably cost about \$14 or \$15. Is that a fair guess at the cost of that mask?

Maj. DEWEY. The cost of that mask is \$7.50.

Mr. TILSON. You have gotten it down about \$7.50?

Maj. DEWEY. I think the man who told you that was guessing at it. We were guessing that the cost would be about \$5 when we started out, and it has gone up to \$7.50.

The CHAIRMAN. How many masks do you figure on per man?

Maj. DEWEY. The average used by the British is three or four a year.

The CHAIRMAN. And each man has one for training?

Maj. DEWEY. He must be constantly trained, and the training becomes more elaborate every day. Each man must be able to put on his mask in six seconds, regardless of what type of work he is doing, and then he must be able to carry on all forms of activity with the mask on. He must be trained in wire cutting, and in trench digging, and in following the communication trench, and he must be able to do everything with his mask on, and he must be able to do it at night. The British are now laying great emphasis upon that night work.

The CHAIRMAN. He must be trained to put the mask on in six seconds?

Maj. DEWEY. The latest development in the matter of training is the use of a small paper bomb, with a firecracker in it, and pepper dissolved in a harmless gas. The British make tests with these bombs to see how long it takes a man to get the mask on, and whether the pepper makes him sneeze.

Mr. GARRETT. Suppose one of these bombs would explode near a man with a mask off, containing the most deadly gases, and they should get the smell of that gas for the six seconds between the dropping of the bomb and the placing of the mask on their faces. What would be the result of that?

Maj. DEWEY. You would have to ask the surgeon in the hospital that question. A man in that situation would go to the hospital. Whether or not he would die would depend on his luck.

The CHAIRMAN. What about the supply of chemicals you use? Have you got a good supply of those?

Maj. DEWEY. We have an adequate supply now for our present needs. We have ample capacity in sight for one of our chemicals. For the other one we are having to survey the sources of supply carefully, and may have to go to Trinidad and even to the Philippines for the materials.

The CHAIRMAN. Do you anticipate any difficulty in getting it there?

Maj. DEWEY. No. It may cost a great deal of money to bring it in.

The CHAIRMAN. The transportation question is serious?

Maj. DEWEY. Yes.

Mr. HARRISON. I notice that Gen. Gorgas said that there was a deficit on the appropriation of \$130,000,000 made last year, and I think you said that deficit would amount to about \$20,000,000 and that estimate was based on 1,625,000 men.

Gen. GORGAS. Yes.

Mr. HARRISON. How many men were there, actually? That was a deficit on an estimate for 1,625,000 men. But about how many men were there, actually?

Col. DARNALL. We have not reached the last of that period, and will not have reached that until June 30. We do not know how many men they will have at that time. If they have 1,000,000, it will be approximately as stated here. They have, as I understand it, about one million and a half men now. That is what we have to provide for.

Mr. HARRISON. I understand that, but my point was that in the appropriation of \$130,780,000 you estimated for 1,625,000 men, and there is a \$20,000,000 deficit, although there were not that number of men in the service.

Col. DARNALL. There are now about a million men in the service. It depends upon whether they have 625,000 above that number. If they have another draft, that will add 500,000 men to it.

Mr. HARRISON. It is evident, therefore, that the \$157,000,000 you are asking for would show a very large deficit, if we have the 1,625,000 men we expect to have.

You will have a very large deficit on that appropriation, if you have the deficit you have named on the appropriation of \$130,780,000.

Col. DARNALL. There is a good deal of original equipment that we have that we will not have to buy again. Furthermore, there are extra things coming in.

The other day we got a cablegram for something we had never issued. Gen. Pershing wanted a convalescent suit made of wool. He wanted that instead of our pajama suit, which costs \$1.75. I think those convalescent suits are going to cost us about \$12 apiece. If we get million of them, there will be an expenditure of \$12,000,000 which we had not considered at all.

Mr. HARRISON. I am not criticizing you, but I want to get a definite idea in reference to it.

Col. DARNALL. That is the way the shortage has occurred, and then we have all these extra things that have been thrown in, in addition to that.

Mr. HARRISON. I simply wanted to bring out the fact that with an appropriation of \$157,000,000 there will undoubtedly be a deficit, because you have a deficit with the appropriation of \$130,000,000 which was estimated for 1,625,000 men, when, as a matter of fact, you did not have anything like that number of men to provide for.

Col. DARNALL. In that estimate of \$157,000,000 is \$40,000,000 for gas masks. Gen. Pershing has asked actually for new masks for 3,000,000 men. That would be approximately \$80,000,000 instead of \$40,000,000 for gas masks. But the basis of my estimate on those gas masks was on a cost of \$9.50 instead of \$7.50 apiece, which Maj. Dewey states they will cost now.

Mr. HARRISON. Do you get any supplies through the Quartermaster's Department?

Col. DARNALL. For the construction and repair of hospitals. We have also certain quartermaster's supplies that we draw from the Quartermaster's Department, such as tentage and cooking ranges.

Gen. GORGAS. This estimate does not cover that.

Mr. HARRISON. I would like to have the same information that Mr. Kahn was asking about, in reference to these cantonments

The health departments in those cantonments are under your administration?

Gen. GORGAS. Yes.

Mr. HARRISON. You are responsible for the health conditions there?

Gen. GORGAS. Yes.

Mr. HARRISON. If there has been any lack of health conditions there, and any blame is to be attached to anyone, it would be chargeable to you, would it not?

Gen. GORGAS. Yes.

Mr. HARRISON. How has the death rate been in the cantonments, and how has the general health been?

Gen. GORGAS. The general health has been very good, with the exception of this epidemic of measles. Leaving out that epidemic of measles, our death rate would be as it was the first two months, less than three per thousand, which would be very low.

Mr. HARRISON. You think the health conditions at the cantonments are very favorable, considering the difficulties that have been confronting the men?

Gen. GORGAS. I do not think the difficulties have ever affected the death rate. That death rate of three per thousand would be about the best possible.

Mr. HARRISON. How do you provide for the nursing of the men at the cantonments?

Gen. GORGAS. We have at present with the Army in the United States as nurses 80,000 men who are brought out from the same class of men as come in with the draft. These men are in the hospitals and they do the waiting on the sick, and they known as orderlies and do all the ordinary work around the hospital. We have in these cantonments now 5,000 trained female nurses.

Our method would be this: There would be a trained female nurse on the ward, with a man as her assistant. These men are just country boys, the class of men you would get generally for that class of work; they have no special knowledge about nursing. They are gradually being whipped into shape by the medical officers and the female nurses.

Mr. HARRISON. You have had considerable difficulty, just as all the other branches of the service have, because of the large number of new men?

Gen. GORGAS. They are all new. Take, if you please, any one of the National Guard camps; such as Camp Bowie, where I was recently. The officer in charge of the hospital at that camp has 2,000 people to care for, and he has himself and his adjutant as the only trained men in that aggregation of 2,000 people. Not that the other people are below par, at all. The doctors are the best doctors in the country. They are the right men.

The men in charge of surgery and medicine there are probably better equipped men than any of us could get, if we had pneumonia, for treatment.

It is difficult in any big organization, where they have not worked together, and where they are not all thoroughly disciplined, to get things done. Those are the difficulties we are concerned with now. The situation is much better than it was four months ago, and it is

going to be very much better four months from now than it is at the present time.

But it is like the rest of the Army, they have not been trained to work together, and there would be the same difficulty in any other big project.

Mr. HARRISON. You have in these cantonments now a sufficient nursing force to take care of the sick men, and a sufficient medical force, generally?

Gen. GORGAS. We have, in general. We are increasing the female nurses, but we need more and more.

Mr. HARRISON. I have had a great many letters from pharmacists. Does your department have charge of the commissioning of pharmacists, and have you decided to commission the pharmacists?

Gen. GORGAS. Yes; and in general we have taken the ground that it was not necessary. We have very little pharmaceutical work, as compared with the English and French and Italian armies with which they compare us, because they manufacture a good many of their own drugs, and in that special knowledge is required. We buy ours, generally, through our supply department, and furnish them to the camps, and there is comparatively little dispensing. All of these dispensers in these drug stores are trained men, but they are generally noncommissioned officers.

Mr. HARRISON. Do they put up prescriptions?

Gen. GORGAS. To a limited extent; they are sufficiently trained for that.

Mr. HARRISON. How about the osteopaths?

Gen. GORGAS. I would like to use them, and perhaps can use them in the reconstruction work, for massage and things of that sort. They are pressing for commissions, too. We feel that the conditions are such that an osteopath would not be able to perform all the functions of a medical officer on the ward.

Mr. HARRISON. This appropriation takes care of the Ambulance Corps, does it not?

Gen. GORGAS. In the same way it takes care of the rest of the Medical Corps. This appropriation would buy motor ambulances for the Medical Corps. This appropriation, outside of the motor trucks, would just supply what it does for the rest of the troops—that is, such things as medicine.

Mr. HARRISON. Will this appropriation take care of the ambulances drawn by horses?

Gen. GORGAS. No; that comes under the Quartermaster's Department, both the ambulances and the animals. This appropriation would not cover that.

Mr. HARRISON. Would it not be advantageous to have all of the appropriations for that purpose under one head?

Gen. GORGAS. I am inclined to think it would be advantageous.

Col. DARNALL. I think it would be, too; but they are gradually eliminating the horse-drawn ambulance. We have three of the companies to a division now, which are motor companies, and the chances are that the other—horse-drawn ambulances—will be used very little.

Mr. NICHOLLS. They are not fast enough?

Col. DARNALL. No; and also because of the forage, and one thing and another.

Mr. TILSON. Would you not be practically obliged to have horse-drawn vehicles to accompany your foot troops? Is it not wearing on a motor vehicle to slow it down and make it travel all day at the rate of foot troops, and therefore will you not be obliged to have some horse-drawn vehicles for the troops?

Col. DARNALL. I do not know that that difficulty will be there to any great extent. The foot troops are being transported a great deal by motor trucks now.

Mr. TILSON. But where they have to be moved by marching and have to be accompanied by some kind of medical vehicle, is it not very difficult to use motor transportation for that purpose?

Col. DARNALL. Yes; that is true, but they might wait.

Mr. TILSON. They block the column if you stop them?

Col. DARNALL. Yes; but it is understood that very little horse-drawn transportation is used except where the vehicle has to go out to the actual front. That is where we intend to use ours.

Gen. GORGAS. Maj. Dewey has one other point he would like to bring out in connection with the gas masks, Mr. Chairman.

Maj. DEWEY. I think there is one point in connection with gas masks that may interest you. As long as gas is used in modern warfare on the scale it is now used there will always be some death casualties, and this country will gradually have to come to a realization that we are going to have gas casualties right along. They come as a result of surprise attacks as much as from anything else. Surprise attacks have been launched on such a scale that Stokes mortars and things of that kind have been fired in such perfect unison that 15 tons of gas have been in the air at one time over a few hundred yards of front. When that falls into the trenches there are going to be a lot of men who get excited and who do not get their gas masks on in time. It is interesting to note that the Germans figure that in a gas attack such as I speak of they must have at least 10 per cent of casualties. The British have nothing like that number. They are better protected than the Germans, but even then they have a few, and we must realize that we will have some. The country must realize that every gas casualty does not mean that a gas mask has failed to function.

Mr. HARRISON. Do you find any difficulty in getting all the medical assistance you need?

Gen. GORGAS. The doctors, do you mean?

Mr. HARRISON. Yes.

Gen. GORGAS. It has been a tremendous job to get what we have—16,000 men. We have all we need at present, and I think we will be able to meet the demands made upon us with the assistance of the various medical associations, who have helped us in every way possible.

Mr. HARRISON. And the same thing applies to nurses?

Gen. GORGAS. Yes.

Mr. HARRISON. Does the Red Cross operate with you in any way?

Gen. GORGAS. Yes; the Red Cross has helped us a great deal.

The CHAIRMAN. In connection with the question of commissioning pharmacists and osteopaths, it has been urged upon me that commissions ought to be issued to members of the Nurse Corps. What do you think about that?

Gen. GORGAS. We have a clause inserted in our regulations, corresponding with the British regulations, that gives the nursing corps a position just after the cadets. I believe that answers all present purposes.

The CHAIRMAN. Just after the cadets?

Gen. GORGAS. Yes; in their relative rank and standing.

The CHAIRMAN. I do not understand that.

Gen. GORGAS. I mean the cadets at the Military Academy, who are not commissioned officers.

The CHAIRMAN. You mean the cadets at West Point?

Gen. GORGAS. Yes.

Mr. KAHN. We also have cadets in various branches of the service. For instance, in the aviation section of the Signal Corps the men who are at the schools learning to fly are called cadets. Would these nurses come after those cadets, do you think?

Gen. GORGAS. As I understand it, they have the same position as the cadets at the Military Academy.

Mr. KAHN. These cadets are not graduates of the Military Academy, nor are they attendants there. Some of them are at the aviation school at Atlanta, Ga., and some of them are at other fields, and I understand that in the Ordnance Department they have a grade known as cadets, who are learning to adapt themselves to the particular business of that department. Would the nurses come after those cadets?

Gen. GORGAS. My understanding is that those cadets would have the same rating as the cadets at the Military Academy. I am not sure about that.

Mr. KAHN. Will you get that definite information and put it in the hearings?

Gen. GORGAS. Yes; I will do that.

NOTE.—It is understood that the rank of a nurse is above a sergeant major and below a second lieutenant.

The CHAIRMAN. The argument is that they would have more influence and be better able to enforce discipline if they were commissioned.

Gen. GORGAS. I have so far been opposed to that, Mr. Chairman. I think we are getting along well enough. It is only in the Canadian Army that nurses are commissioned; not in the British Army.

The CHAIRMAN. You are perfectly satisfied with the organization as it is now?

Gen. GORGAS. Yes. Mr. Chairman, Col. Darnall has something to add in reference to ambulances.

[Extract from Regulations for the British Army Medical Services.]

DISCIPLINE AND DUTIES.

As regards medical and sanitary matters and work in connection with the sick, the matrons, sisters, and staff nurses are to be regarded as having authority in and about military hospitals next after the officers of the Royal Army Medical Corps, and are at all times to be obeyed accordingly and to receive the respect due to their position. (Paragraph 324.)

Col. DARNALL. The question in regard to horse-drawn ambulances was thrashed out a year or so ago. There is a difficulty in our furnishing the horse-drawn ambulances, because the animals' forage is included with that. As a matter of fact, the Medical Department

does not desire to furnish the horse-drawn ambulances. Everything comes in so nicely as it is now, so far as the Quartermaster's Department is concerned, that we would prefer to remain that way. We are having no difficulty with it arranged in that way.

Mr. LUNN. If there was any difficulty in getting the ambulance to the proper place, you would not be responsible?

Col. DARNALL. No. We think it is working nicely the way it is.

The CHAIRMAN. Have you a standardized ambulance now?

Col. DARNALL. We have a standardized motor ambulance.

Mr. GORDON. You stated that your estimates were based upon the number sent back from France by the Canadians since the beginning of this war, and that it is a fixed percentage of 10 per cent. Is it the judgment of our military authorities that the casualties will be as great in proportion for the remainder of this war as they have been since the beginning of it?

Gen. GORGAS. I could not speak for them. Our estimates were in general terms. We thought the Canadian Army was made up much as ours was made up, and therefore, just for the purpose of making an estimate, we thought it would be a fair guide for us. It was not quite 10 per cent, but a little bit over 9 per cent.

Mr. GORDON. You say you estimated that for the men at the front or for the men in the field. Is there not a distinction between those terms, the men at the front and the men in the field?

Gen. GORGAS. Yes; but that refers to the men in France.

Mr. GORDON. All the men in France?

Gen. GORGAS. In the field army.

Mr. GORDON. General, in reference to this bill, 5407, which provides that osteopathic physicians shall be admitted to examine patients, the members of this committee are receiving a great many letters importuning them to favor the passage of that bill. You gave a formal opinion to the chairman of this committee last July in reference to that subject. Are you still satisfied with that opinion?

Gen. GORGAS. Yes.

Mr. GORDON. Would you have any objection to that being placed in the record for the information of the committee?

Gen. GORGAS. That is still my opinion, and I would not have any objection to that going into the record.

(The opinion referred to is as follows):

(Second indorsement.)

WAR DEPARTMENT, SURGEON GENERAL'S OFFICE,
July 26, 1917.

To: The Adjutant General, United States Army.

1. Returned. The following resolution, unanimously adopted by the general medical board of the Council of National Defense, embodies the principles and methods now adopted for the admission of members to the Medical Corps of the Army, and I am of the opinion that no change should be made in this regard:

"It is the sense of the general medical board of the Council of National Defense that candidates for commission in the Medical Corps or in the Medical Reserve Corps of the Army and the Navy shall be graduates of reputable schools of medicine, and shall be required to pass the examinations—mental, moral, and physical—now required by law and regulation, without exclusive adherence to any particular school of doctrine or practice."

2. It will be observed that the foregoing qualifications include three requirements, each of which I believe to be essential:

(a) Evidence of time spent in securing a good medical education and training. Ability to pass an examination can not take the place of this education and training,

which are now secured by graduation from a reputable school of medicine, legally authorized to confer the degree of doctor of medicine. Impartial investigations of colleges of osteopathy do not indicate that they furnish to their students adequate opportunities for that scientific study of the human body, in health and in disease, which should be the basis for the intelligent treatment of disease and injury and for the preservation of health.

(b) While examinations are not a substitute for actual training, they are an added test of fitness and should remain as now required by law and regulations. No one, however, should be regarded as eligible to enter the examinations who has not spent the time required and pursued the scientific and practical studies required for graduation from a reputable school of medicine authorized to confer the medical degree.

(c) The time has long passed for exclusive adherence to any particular school of medical doctrine or practice, such as is implied by the degree of doctor of osteopathy, or chiropractic, of naturopathy, of mechano-therapy, of eclectic medicine, or any other "pathy." the terms "allopathy," "old school," etc., are equally objectionable. A scientifically educated physician is at liberty, and it is his duty to employ any method of treatment whatever which he believes will benefit his patient. Homeopathic physicians have the degree of doctor of medicine, and some of their schools furnish an adequate medical education. They have for the most part abandoned their exclusive dogmas; as a class they are rapidly declining in numbers and are being merged in the general profession of medicine. They are eligible to qualify for the Medical Corps of the Army.

While practice based upon the peculiar tenets of osteopathy may be beneficial in suitable cases, the same or similar methods are open to the use of any physician. Osteopathic procedures applied to cases unsuited for them, as has often been done, result in serious harm. The only safeguard against such adherence to exclusive systems is a good medical education, such as is now demanded for admission to the Medical Corps.

3. It would be most objectionable to recognize any sect of medical practitioners in the Medical Department of the Army, be it osteopathic, allopathic, eclectic, chiropractic, or any other of the countless sects. Members of the regular profession of medicine, who now enter the Medical Corps, are merely educated physicians and do not constitute a sect in medicine, allopathic or otherwise. They are merely physicians free to follow any method of treatment which they may deem beneficial, in the same sense that a chemist is a chemist and a physician is a physician.

It is argued that osteopathic physicians are trained in the principles of scientific medicine and are as well qualified as any physician to practice all branches of the profession. I have already indicated that in my judgment this is not true, but, if it were conceded, then the epithet "osteopathic" which sets these practitioners apart as a separate class or sect, could have no significance or value other than a commercial one, and this is not a principle which should be sanctioned in the constitution of the Medical Corps of the Army.

4. It is hardly necessary to say that the creation of a Dental Corps and of a Veterinary Corps in the Medical Department of the Army offers no parallel for the creation of a corps of osteopaths or for their admission as such to the Medical Corps. The former are divisions of medical science and practice, properly recognized as such. Whatever argument can be urged for the admission of osteopaths would apply equally to chiropractics and other medical sects. All cure their patients in certain cases; all do more harm than good when the balance between benefit and injury is struck.

5. The Judge Advocate General has advised the Secretary of War to the effect that, while the law does not specifically provide that a physician, in order to enter the Medical Corps, must be a doctor of medicine, unwritten practice does, and the Secretary has decided in accordance with this opinion that he will require that a man coming into the Medical Corps shall have the degree of M. D.

I hope that this decision, which is in accord with all previous practice, will be maintained, and that the degree of D. O. will not be recognized as an equivalent, as is desired by the osteopathic physicians.

6. The admission of osteopathic physicians as such and without the degree of doctor of medicine to the Medical Corps would have the practically unanimous opposition of the medical profession of this country and of all allied countries, would be regarded, and justly so, as lowering the standards, educational and professional, of our Medical Corps, and would have a discouraging and detrimental effect upon efforts to secure physicians for the corps both now and in the future, and upon the general morale of the corps.

7. For the reasons above set forth I recommend to the Secretary of War that he strongly oppose this bill.

W. C. GORGAS,
Surgeon General United States Army.

Mr. McKENZIE. Going back to the matter of gas masks, Maj. Dewey, you have stated that you had manufactured something like 25,000, 20,000 of which were sent to France, and afterwards returned, because they were rejected by Gen. Pershing as not being the right kind of masks to be used, and they were returned to this country, and upon the return of those masks, you began the manufacture of a different character of gas mask, and stated that you are now furnishing those to the Army.

The question I want to ask is whether or not, after Gen. Pershing had vetoed the issuing of the gas masks shipped over to the other side, you submitted to him for his approval the gas mask you are now manufacturing and having sent over there?

Maj. DEWEY. Let me correct one misunderstanding you have. We asked for the return of those masks ourselves. We were fully conversant with the two defects before those masks arrived in France. The type of mask was exactly what Gen. Pershing had asked for, and the two main defects were in the chemicals, which would not take out one gas, and in the face piece, which would not stop the penetration of that same gas through it. The correction of those two main points made that mask the equal of the British mask. It so happened that in correcting those defects we made a better chemical, and we have now better protection than the British.

Mr. McKENZIE. The point I am trying to bring out is this: If Gen. Pershing has arbitrary power to reject any sort of equipment furnished him by you for the use of the soldiers, it seems a matter of good policy, at least, before you order thousands of those gas masks made to submit the matter to him for his approval. It seems to me that would be advisable.

Maj. DEWEY. We did submit samples; we submitted the first samples we made. Unfortunately, transportation conditions are such that we do not know whether they have arrived in France. We have a cablegram asking for the shipping of the masks, but we have no way of knowing whether the samples have arrived. They were turned over to the transportation end of the Army and were then out of our power.

Mr. McKENZIE. We are interested in knowing, first, whether you have a good mask, which you seem to have, and second, before expending the money in having it manufactured, whether it is going to be accepted by the commander in chief of the troops in France or whether it is going to be rejected.

Maj. DEWEY. I can only say that Gen. Pershing has passed upon the type as being what he wants, and that the entire design is satisfactory to him, and we have with us, sitting in our office, the British experts who advised Gen. Pershing at the time he accepted the type, and who are probably as well equipped to tell us whether a gas mask is satisfactory as are any men in Europe.

Mr. McKENZIE. One of the reasons I had for asking these questions is because we have been repeatedly told that Gen. Pershing did not want this or that, or that he called for this or that, and what we would like to know before we appropriate the money is whether the War Department, or the staff officers in the War Department, have anything to say about this, or whether Gen. Pershing is the only man whose opinion we must have before we proceed to manufac-

ture anything. If that is the situation, then this committee ought to be advised as to what he wants before appropriating the money to manufacture the article, in order to protect the Treasury to some extent.

I would like to ask Gen. Gorgas one or two questions. This item in the bill provides for, or at least it mentions, hospital ships, and under this item an appropriation could be made for hospital ships. I understood you to say you had not taken any decided steps along the line of constructing hospital ships.

Gen. GORGAS. It has not yet been determined.

Mr. McKENZIE. I want to ask you whether or not you have any information as to whether any nation in the world carries in its fleet, or keeps in its fleet, specially constructed hospital ships for the Army.

Gen. GORGAS. All the nations who have transportation to-day now have done so. The English are still using their hospital ships, but they are armed and not painted as hospital ships. They have practically given up any idea of protection of hospital ships. They use them as transports.

Mr. McKENZIE. Are they used exclusively as hospital ships, or are they ships that have been converted for the time being, to be used in that way?

Gen. GORGAS. I think they are all converted.

Mr. McKENZIE. But they were not constructed originally for the specific purpose of transporting the sick and wounded soldiers?

Gen. GORGAS. Some were until the enemy disregarded the rules of the Geneva Convention relating to hospital ships. I can look that matter up and put more definite information in regard to it in the record.

Mr. McKENZIE. My reason for asking those questions is that I have heard our Government criticized because we have not constructed some hospital ships. I want to ask you this question, whether one of the great ocean liners, one of the great passenger ships that we have under our flag, would make a suitable ship for that purpose, or could it be made a suitable ship for conveying back to the United States our sick and wounded soldiers?

Gen. GORGAS. I think that would be the best kind of a ship.

Mr. McKENZIE. It struck me that way, that with, perhaps, very little expense, one of those great ocean liners could be made into a very good hospital ship. If there is any real ground for criticism I want to know it, and I think you ought to be the man who would be able to state whether or not we will be in a position to take care of the wounded soldiers and bring them back in the comfort to which they are entitled. What have you to say about that?

Gen. GORGAS. I think it is a matter that could be very well taken care of by ourselves now. I do not believe it is necessary to build special hospital ships, but we ought to prepare now, and the question ought to be determined.

What I am asking for now is to determine whether we ourselves or the Navy are to transport these sick and wounded men. If it is determined that the Army is to do that, I would at once raise the question as to whether we would have special hospital ships, or whether we would do as the English are doing now.

If it should be decided to build special hospital ships and try to get the protection of the Geneva Cross, we should prepare some of those ships. If we are not going to have protection for the hospital ships in that way, I think we could use transports in returning these men. There would not be very many of them to come back. The men who would be sent back on those ships would not be in very serious condition, and I think one of the transports would be as comfortable as anything we could get.

Mr. McKENZIE. I understand you have already commissioned 5,000 men in the Dental Corps, and that is a sufficient number to take care of an army of 5,000,000 men, and that for the time being the door is closed to any man obtaining a commission in the Dental Reserve Corps. If I understand you correctly, that is also practically true in the case of the Medical Reserve Corps, for the time being.

Gen. GORGAS. In the case of the Dental Reserve Corps, what you state is just the condition that exists. We think we have all we want, and we have stopped taking men in. In the Medical Corps, we have a very small margin, and we are still taking into the Medical Reserve Corps all the men we can get. We want a larger margin in the Medical Reserve Corps.

Mr. McKENZIE. You have as many in the active service as you want?

Gen. GORGAS. We have as many as we want.

Mr. McKENZIE. You feel you have a sufficient number, so that the health of the soldiers will be carefully guarded and protected?

Gen. GORGAS. As far as the medical service is concerned, yes.

Mr. McKENZIE. You have complied with the law in the appointment of seven surgeons to a thousand men, as we gave you authority to do?

Gen. GORGAS. I wish you had given us that authority, but you did not do that. If you study the law carefully you will see that it applies to the Regular Army, and if you would arrange it so that it would apply to the National Army, as some bills which have been introduced provide, I think it would be desirable.

Mr. McKENZIE. As a matter of fact, have you not assumed that you had a right to do that, and have commissioned those men according to that?

Gen. GORGAS. The law for the Reserve Corps does not limit me at all. I am just limited by the amount of the appropriation, and so far I have had all I wanted.

Mr. McKENZIE. These incidents which have occurred, and which have been mentioned here this morning, meet with your disapprobation, and are due to the fact that in commissioning those men on their Army record, or on such information as you were able to get at the time, naturally it was inevitable that occasionally you would get, perhaps, what we might designate as an inhuman brute who would get a commission and who would abuse the sick men, and thus reflect upon the whole Army of the United States, as these men who have been referred to did. So far as you are concerned, you are in favor of punishing those men to the full extent of the law?

Gen. GORGAS. You speak of the two men referred to in the newspaper article?

Mr. McKENZIE. Yes, sir.

Gen. GORGAS. They have been convicted by a court martial; I think I would accept it that the facts stated are so.

Mr. SHALLENBERGER. I have here a statement from the New York Times, which you apparently gave out to the public press, giving the average of sick soldiers in our Army for the four months beginning the 21st of September and extending to the 18th of January, and the average as given in that article is 8.2.

Gen. GORGAS. Was not that the death rate?

Mr. SHALLENBERGER. Yes; how does that compare with the death rate you had in the border trouble, among the troops we had on the border at that time?

Gen. GORGAS. In that same table you will find that under the head of the death rate for 1916. I can put that in the record.

Mr. SHALLENBERGER. This death rate is for four months; is that not true?

Gen. GORGAS. That figure of 8.2 means that if twice the number of men should die in the next eight months who have died in the last four months, the death rate would be 8.2.

Mr. SHALLENBERGER. It would be 8.2 for the year?

Gen. GORGAS. Yes.

Mr. SHALLENBERGER. Does that mean if the same death rate were continued, the death rate would be 25 to the thousand instead of 8.2 to the thousand?

Gen. GORGAS. Only 8.2 to the thousand.

Mr. SHALLENBERGER. I ask that question because I have here the report of Maj. Seaman upon the death rate from sickness and disease in the Japanese army, and it was practically 20 per thousand.

Gen. GORGAS. That must include the killed.

Mr. SHALLENBERGER. No, that is the rate from sickness and disease alone.

Gen. GORGAS. What time was that?

Mr. SHALLENBERGER. That was for the entire war.

Gen. GORGAS. That would be an enormous death rate.

Mr. SHALLENBERGER. That was 20 per thousand, or 2 per cent.

Gen. GORGAS: I think that must be a mistake.

Mr. SHALLENBERGER. He says: "Those who died of disease, exclusive of infection and contagious diseases, amounted to 1.24 per cent of the entire army in the field, and those who died of contagious diseases amounted to 0.76. Therefore the entire deaths from all diseases amounted to exactly 2 per cent of the army in the field, a rate of 20 per thousand of strength. On a basis of an army of 600,000 this would mean that only 12,000 men died of disease." He gives a table of percentages, as follows:

	Per cent.
Killed in action.....	7.32
Died of wounds received in action.....	1.51
Wounded in action.....	24.27
Other wounded (accidents, etc.) and sick.....	27.11
Died from disease (not including infectious and contagious diseases).....	1.24
Contagious diseases.....	1.93
Died of infectious and contagious diseases.....	.76
Number never wounded or sick during war.....	35.86

Total.....100

I think that is much better than any other army ever did. He says that no other army was ever able to go through a war with a death rate of 20 per thousand.

Gen. GORGAS. Our death rate in Cuba was only 20 per thousand.

Mr. SHALLENBERGER. I have had officers tell me that the death rate of our soldiers during the Spanish-American War, from some statement given out by the Medical Department of the Army, was only 2 in a thousand. They must have meant 2 to a hundred.

Gen. GORGAS. It was 2 per cent.

Mr. SHALLENBERGER. I wanted to be sure about that. I think that is what must have been meant.

Gen. GORGAS. I recollect the figures.

Mr. SHALLENBERGER. The statement has been made on the floor of the House, and it was said that from the reports of the surgeons, it was only 2 to the thousand. I can not find that any army was ever able to go through war conditions and have as small an average rate as you are showing now. In other words, you are beating the Japanese record by two and one-half to one. Maj. Seaman says that the Japanese record is better than any army ever showed before. It seems to me, with the health condition of our Army as you say it is now, you are making a very creditable showing. Of course, the men have not yet been in the field.

Now, I would like to ask you another thing. I notice that the decrease in the venereal diseases is very marked, the longer you have the men in the camp.

I have a report prepared from data in your office, which shows that the disease was very much heavier in September than it was in October, and that it has decreased until it is now only 80 per cent of what it was in September, showing that you have had a very marked decrease in venereal diseases.

I also see that the Regular Army only shows a rate of 80 to 1,000, whereas in the National Army encampment it was 388 in September. As I say, that report shows that so far as the Regular Army is concerned, the rate was only 80 to 1,000, and the National Army was 162 to 1,000, suffering from venereal diseases. Have you any record which would enable you to give us any reason why the rate of venereal diseases in the National Army, and also the rate of sickness caused by other diseases is so much greater than in the Regular Army and in the National Guard, especially in the case of venereal diseases?

Gen. GORGAS. I do not think of any particular reason. Of course, the period you are referring to would make some difference. Just after the men come into the camp the rate is much higher than it is after they have been there for some time.

Mr. SHALLENBERGER. Do you take a man into the Army who is suffering from venereal disease?

Gen. GORGAS. Yes.

Mr. SHALLENBERGER. Has that always been done?

Gen. GORGAS. I think so.

Mr. SHALLENBERGER. There have been men who have gotten pensions or who have applied for pensions who have been rejected because they were dismissed from the service on account of having had venereal disease and thus became incapacitated for service. Do you not run that risk?

Gen. GORGAS. You are referring to syphilis?

Mr. SHALLENBERGER. You do not take them if they have that, do you?

Gen. GORGAS. Yes; but it would depend upon the condition they were in, upon the stage of the syphilis.

Mr. SHALLENBERGER. Is there not danger of contagion?

Gen. GORGAS. They are not allowed to go among the other men.

Mr. SHALLENBERGER. But you would not take a man into the Army if he had any other contagious disease? You would not take him if he had measles?

Gen. GORGAS. We would put him in an isolation camp. It would be poor policy not to take a man if he is going to get well of the disease he has.

Mr. SHALLENBERGER. Do you put the men suffering from venereal diseases in observation camps?

Gen. GORGAS. They are sent to the hospital and treated.

Mr. SHALLENBERGER. I want to ask if it is not a fair assumption, since you have made such a tremendous improvement in regard to venereal diseases during the last year, and in view of the fact that you will have these men in the camps from now on—if we have the right to assume that the death rate from sickness will not increase, but will probably decrease from now on? Is that not to be expected in the case of the men in the camps?

Gen. GORGAS. I think that will certainly happen. In September and October, before the epidemic of measles broke out, we had a low rate. It was between two and three per thousand. I feel very sure that as soon as we get over the effects of the epidemic, within two or three months from now, our rate will return to that figure. We are suffering now from epidemics.

Mr. SHALLENBERGER. You have not got the record of the number of deaths in the Army during the time the men were on the border, have you?

Gen. GORGAS. That would practically be the record for the year 1916.

Mr. SHALLENBERGER. Will you put that in the record?

Gen. GORGAS. Yes.

(The matter referred to is as follows:)

Number of deaths in 1916 among the Army, either in Mexico or at the border:

Disease.....	189
Injury.....	187
Total.....	376

Mr. SHALLENBERGER. I was interested in what Mr. McKenzie said about the trouble you had with officers who would not treat the men properly.

I have read the Articles of War, and I find that if a private soldier commits violence against an officer, or if he strikes him, the punishment for that offense is such punishment as the court-martial shall direct, even including death. Have you ever tried shooting medical officers for neglecting their men? Have medical officers ever been executed for such things as that?

Gen. GORGAS. I do not know. I could not say yes or no to that question.

Mr. SHALLENBERGER. Do you not think it would be a good thing if a few officers were shot, where it was shown that a man had brutally and intentionally neglected his men? I know if a private soldier were to neglect his duty he would be severely punished. If I am a private soldier on a picket line and neglect my post, and come in because my feet get cold, I may be shot for that, and sometimes men have been shot for that. If a medical officer neglects his men, in my judgment he should have dealt out to him the same penalty as any other soldier, but I wondered if that had ever been tried.

I am a great believer in the theory that punishment effects certain reforms. I have read in the newspapers that there were over 300 killings in Chicago last year. In the city of London, with three times the population of Chicago, there were only 17 killings during the same times, and 15 of the guilty persons were executed within six weeks of the time the murder was committed, whereas in Chicago a good many of the guilty persons escaped.

The point is that apparently the knowledge that punishment is going to be severely inflicted has a meritorious effect, and I wondered if that sort of punishment meted out to officers in the Medical Department who neglected their men would not have a good effect.

Gen. GORGAS. The medical officer is subject to the same articles of war as every other soldier.

Mr. SHALLENBERGER. Yes; but there seems to be an opinion among a good many people that an officer escapes with dismissal, whereas the private is severely punished.

Gen. GORGAS. I think that in a case of that kind the officer would get a more severe punishment.

Mr. SHALLENBERGER. Is there anything in the larger death rate—in your figures you give the death rate among the Regulars as only 4.71, whereas in the National Guard it was 10.4, or two and a half times greater in the National Guard than in the Regular Army. Can you give us any reason for that?

Gen. GORGAS. Pneumonia and measles are almost entirely among the National Guard camps, for the reason I have already given you. There, again, the men had not been exposed to measles. The Regular Army has been filled principally by volunteers, and as a general thing the volunteer is more apt to come from a city or a town than from the country districts. I think that is the principal reason.

Mr. SHALLENBERGER. The Regular Army has practically had as many new men as the National Guard has?

Gen. GORGAS. Yes.

Mr. SHALLENBERGER. So that the proportion of green men coming in does not affect that so much as the place from which they come?

Gen. GORGAS. Yes.

Mr. SHALLENBERGER. You do not think there is any connection between the care given the men in the Regular Army and those in the National Guard? You do not think that is due to the better care given the men in the Regular Army?

Gen. GORGAS. No; I do not think the care given the men has much relation to the men getting measles.

Mr. SHALLENBERGER. But the care a man gets after he has the measles determines whether he will live or die?

Gen. GORGAS. Our case rate for pneumonia has not been large—that is, the number of deaths per 100 cases.

Mr. SHALLENBERGER. But that is so small in the Regular Army that there must be some vital reason for it.

Gen. GORGAS. The great reason is that they have not had to stop an epidemic of measles in the Regular Army.

Mr. SHALLENBERGER. Does pneumonia frequently follow measles?

Gen. GORGAS. Yes.

Mr. SHALLENBERGER. In camps where you had no measles, you had no pneumonia?

Gen. GORGAS. That is practically true.

Mr. SHALLENBERGER. Have you had cases of meningitis in the Regular Army?

Gen. GORGAS. I do not think there is any Regular Army camp that has been largely affected, but all of our camps have had some.

Mr. SHALLENBERGER. Is there anything in the story I have heard that the men who are drafted, believing that they would be dismissed from the Army if they contracted venereal diseases, have therefore deliberately gone out and contracted venereal diseases with the idea of being discharged from the Army?

Gen. GORGAS. I have heard that, but I have no evidence of it.

Mr. SHALLENBERGER. The fact that you take those men would preclude that?

Gen. GORGAS. They did not know that they were going to be taken in.

Mr. SHALLENBERGER. It is believed that there were a great many men drafted who did not want to go to the other side, and who tried in one way or another to avoid service, and I was told the reason for the tremendous number of men suffering from venereal diseases during the first month or two was on account of that fact, and then it materially decreased. I believe almost one-fourth of the men in the National Army had venereal diseases.

Gen. GORGAS. I think not.

Mr. SHALLENBERGER. The report shows 388 in a thousand.

Gen. GORGAS. That means—

Mr. SHALLENBERGER (interposing) That is more than 25 per cent, is it not?

Gen. GORGAS. That means if the same rate were to continue for a year, in the course of a year 388 men in a thousand would be on the sick list.

Mr. SHALLENBERGER. The report shows that on September 28 there were 388 men to the thousand in the National Army who had some sort of venereal disease; in other words, as I understand it, from the number you had there would have been 388 in every thousand if it had been kept up for a year? That is your explanation of it?

Gen. GORGAS. Yes.

Mr. SHALLENBERGER. You did not have that many to start with?

Gen. GORGAS. Those rates are all yearly rates.

Mr. TILSON. What do you multiply that by; by the number of days or months or weeks?

Gen. GORGAS. You would take the average strength of the command as given at the end of the year, and add together all the cases

of venereal diseases that had occurred in that command, and divide the one into the other.

I would like to state, Mr. Chairman, in reference to the nurses, that you have a bill before you which has already been introduced, fixing the number in the Nursing Corps and slightly adding to their present allowances.

Mr. SHALLENBERGER. Do you take officers into the Army who are afflicted with venereal diseases?

Gen. GORGAS. Yes.

Mr. SHALLENBERGER. They come in too?

Gen. GORGAS. Yes.

Mr. LUNN. You have to have letters of recommendation as to their moral character, do you not?

Gen. GORGAS. Every officer has to have those.

Mr. LUNN. He would not need to have an extra letter as to whether or not he had a venereal disease?

Gen. GORGAS. He would have a letter from the surgeon.

Col. Darnall has an additional statement he would like to make, Mr. Chairman, if you have no objection.

The CHAIRMAN. He may make such statement as he desires.

Col. DARNALL. In regard to the ships, we do not want to buy hospital ships; the appropriation is in reference to supplies for the hospital ships. There seems to be a misunderstanding in regard to that. This estimate does not cover the purchase of hospital ships, but the purchase of supplies for outfitting hospital ships.

Mr. GREENE. Are we to understand from what you said, General, that if we decide to have hospital ships it would practically amount to some rearrangement of the interior of the ships along general lines of material difference from the transports, and you may need some interior rearrangement for that purpose?

Gen. GORGAS. These men who would come over in those ships would be men who are walking around, and who would be just brought back home for care and discharge, and I think they could be accommodated as much as the troops would be. We would have to have a little bigger hospital space.

Mr. GREENE. It would not be a matter that would delay the preparation of the ship very long?

Gen. GORGAS. No; but the men are beginning to come back, and it ought to be settled very soon.

Mr. GREENE. I mean as far as the reconstruction is concerned.

Gen. GORGAS. No.

The CHAIRMAN. Did I understand you to say that this item on page 54, "Medical and Hospital Department," does not include the purchase of ships?

Col. DARNALL. No.

The CHAIRMAN. Is there any item in the bill that would expressly include that?

Col. DARNALL. There is nothing here. It says "Hospital ships and transports"; that does not mean the purchase of them, it means the medical equipment and supplies.

The CHAIRMAN. It says "The purchase and exchange of type-writing machines for military posts, camps, hospitals, hospital ships, and transports." That just means the purchase of supplies?

Col. DARNALL. Yes; I think it is very clear on that.

Gen. GORGAS. It includes the purchase of any medical supplies we need.

The CHAIRMAN. There does not seem to be any item in the bill expressly providing for the purchase or reconstruction of hospital ships?

Gen. GORGAS. No.

Mr. SHALLENBERGER. General, there have been a good many statements made about the conditions of the Army. This record shows that the number of cases per thousand on September 28 was 388. It also shows that on December 7 you had reduced that to 80, a reduction of over 400 per cent. In other words you worked a tremendous improvement in the physical condition of the men in a very short time. Therefore, the Army, instead of being in bad shape, and instead of being a bad place for these men, so far as that is concerned, is proven by this record to have been a tremendous reformatory institution since you took those men in. They did not contract those diseases when they came into the camps?

Gen. GORGAS. No.

Mr. SHALLENBERGER. You have tremendously improved the condition of the men in that respect as well as in others?

Gen. GORGAS. I think so.

Mr. SHALLENBERGER. I think that should be in the record, that while there were seemingly a great many men so afflicted, and some people might get the idea that that is a bad showing, as a matter of fact the record shows that you very quickly remedied that condition.

Gen. GORGAS. They came in probably with the disease.

Mr. QUIN. General, how do you get the doctors for the Army? I think there has been a wholesale, unjust criticism of your department because of the brutal action of a few men.

Gen. GORGAS. We get the medical officers—we have in the Regular Army a certain number of medical officers, and we have the necessary machinery for getting them through examinations. Then we got the medical officers who came to us with the National Guard, but the bulk of our medical officers are those we get through our Reserve Corps. They are all subject to examination.

I am inclined to think that as far as the personnel of our medical service is concerned, it is by far better than that with which any other army went into the field.

Mr. QUIN. So far as the National Army is concerned, taking my own district as an example, every doctor who had been called has had my recommendation, and I presume he has also had the recommendation of the United States Senators. Do you require that of all doctors who are taken in from all parts of the United States?

Gen. GORGAS. No, it is not required. The method of getting them—take the Reserve Corps, in which we have now about 16,000 men, which make up the bulk of our Medical Corps.

The doctor makes his application to our office, and we send him blanks which refer him to his State board, generally. When he sends his application in, he also sends along with it a certain number of credentials. Of course, if he has credentials from Senators and Representatives, they have great weight, and probably most of the men have tried to get credentials of that kind.

Then he goes to his State examining board. We have several of them in most of the States, appointed from men who are working

there. They examine him physically and mentally, and they go into his credentials. The State boards are generally made up of well-known practitioners in the State, who have a general knowledge of the profession in the locality where they operate.

Mr. QUIN. Here is the proposition: My observation is that the medical profession, as a rule, are most humane and kind hearted people. But I can conceive of a man being addicted to some drug habit that would cause him to lose that feeling. Have you any way of passing on the moral qualifications of the doctors you take in the Army?

Gen. GORGAS. The credentials he has help to give us some idea in reference to that. The local board generally knows the personnel in the particular district where it is located. We depend mostly upon the records of our big medical associations, such as the American Medical Association, for information of that kind. Ordinarily, they will have the record of any particular doctor for a number of years. They would know his history with regard to drug habits, and whether he had been convicted of anything disreputable, or had been accused of anything disreputable.

Mr. QUIN. In reference to the isolated cases that occur, and concerning which your department and the whole War Department are unmercifully criticized, have you any way of knowing what those charges are?

Gen. GORGAS. You refer to these two men who have been tried?

Mr. QUIN. No; not especially to those two. I am referring to the cases which were referred to in the speech made in the Senate the other day.

Gen. GORGAS. No. I have written to Senator Chamberlain on that subject. The only way we can get the data in reference to those cases is for him to give me the name of the man to whom he was referring, and then I can send an inspector to that particular camp and get the facts in that particular case.

Mr. QUIN. In your own observation and experience, there is not one doctor in a thousand who would be guilty of any such conduct as that, is there?

Gen. GORGAS. We have several hundred cases that have been investigated. We have a great many letters of complaint. I do not recollect anywhere the facts are exactly as they are stated. The picture is different. I would be glad to mention some prominent ones which have occurred recently, where the picture is so radically different from the real facts, even though the case may be reported in perfectly good faith.

Mr. QUIN. I think that would be valuable information for the committee.

Gen. GORGAS. There was a case in one of the camps about which the governor of the State wrote to me. I was a personal friend of the governor and he wrote to me and stated that the health officer of the State had been in this camp and found that the pneumonia cases had no attention and found that those men never had their faces and hands washed and that there was no nurse to look after them. The picture he painted was a good deal like that which was set forth in the letter which Senator Chamberlain read to the Senate. I went down there in person and went to see the health officer, and I got

the detailed facts as they were set forth by the health officer, and the name of the man and the ward in which he was located, and I went right up to the camp and went into the ward where he said that man was. It was a good deal as the health officer had said. The man was in a ward of convalescent measles cases. It was a camp battalion in one of these crowded hospitals. The man was sick of pneumonia, but he was not a seriously sick man. The rest of the ward was filled with convalescent measles cases, and those men looked after themselves.

There were two orderlies on duty in the ward and they waited on anybody who needed waiting on.

This particular man had been looked after in a rough sort of way by these two untrained orderlies.

The whole hospital was inspected by the commanding officer and the doctor in charge of the ward.

I then went to look at the pneumonia cases. There were 300 in the hospital. They had been all concentrated into a dozen wards and they were under the care of a hundred or more female nurses.

I said to the head nurse, "What is your routine with regard to your pneumonia cases?" She said, "Every pneumonia case in this hospital has had his face and hands washed three times every day since he has been here. He has been fully bathed once a day. He has always had a female nurse, there being from two to four on duty in the ward." I said, "Here is a pneumonia case that has had no female nurse over him." They had overlooked that case, in the confusion of a small hospital greatly overcrowded. If he had been seriously sick he would not have gone to the convalescent ward. Out of three hundred cases of pneumonia there one had not been looked after by the female nurses.

Of course, it was wrong that a pneumonia case should have gotten in the convalescent measles ward, and four months from now a thing like that will not occur. It was an isolated case, and did not give a true picture of the pneumonia conditions in that camp. The idea of the governor and the health officer of the State was that all cases of pneumonia were treated in the way in which that one case which the health officer reported about was treated.

Personally, when I can get the names from Senator Chamberlain, I will investigate the case he referred to, but I think it will be found that there was some such condition as that. I know the camp he was referring to, and I was in that camp about the time this case is supposed to have occurred.

The CHAIRMAN. A newspaper clipping just handed to me in reference to that case says that it occurred at Camp Donaiphon, and it says that the name of that man was Albert Hestwood. It says he was a member of a Kansas organization and a son of Rev. C. D. Hestwood, a Methodist minister of Liberty, Kans.

Gen. GORGAS. That will be sufficient for me to act on. We can send to the camp, and we can locate the trouble.

Mr. QUIN. If a doctor is guilty of that kind of conduct, what would be the punishment meted out to him by your department?

Gen. GORGAS. Of course, Senator Chamberlain does not accuse the doctor of doing anything. I can take the other case, where a doctor has been convicted of letting a pneumonia patient go back to the ambulance because he did not salute him. That is what the charge

was, as I read it in the newspapers. The newspaper stated that the doctor had been dismissed, and that the Secretary of War had sent the proceedings back to the court-martial, saying that that was not a severe enough punishment.

Mr. QUIN. I observed in the newspapers that there was a doctor at Camp Beauregard who was guilty of some such conduct and was treated in the same way. Do you think that a severe enough punishment?

Gen. GORGAS. No; I agree with the Secretary of War that it is not a severe enough punishment. Of course, the court-martial will determine that.

Mr. QUIN. What may seem to be a little incident of that kind, is a mighty big thing for the people who are interested, and the people are going to hold responsible not only you, but Congress. I know you do not want your department to have such a reputation as that.

Gen. GORGAS. No; I do not.

(Thereupon, the committee adjourned to meet to-morrow, Tuesday, January 29, 1918, at 10 o'clock, a. m.)

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Tuesday, January 29, 1918.

The committee met at 10 o'clock, a. m., Hon. S. Hubert Dent, jr. (chairman), presiding.

STATEMENT OF MAJ. GEN. WILLIAM G. GORGAS, SURGEON GENERAL, ACCOMPANIED BY COL. C. B. DARNALL, COL. W. O. OWEN, COL. J. D. GLENNON, AND COL. C. C. McCULLOCH, MEDICAL CORPS, AND MAJ. BRADLEY DEWEY, SANITARY CORPS—Concluded.

The CHAIRMAN. Gen. GORGAS, I want to run through the items for the medical department, for the purpose of getting you to put into the record a detailed statement of each one of the items, and then we will ask you general questions.

I believe I asked you yesterday to put into the record a detailed statement of the different items in reference to the medical and hospital departments. I wish you would do the same in reference to the item on page 55, "Hospital care, Canal Zone garrisons."

Gen. GORGAS. I can give you that now.

The CHAIRMAN. All right, you may do that.

Gen. GORGAS. That comes about in this way. They have on the Canal Zone a general hospital for the construction and operating force of the canal, which takes in Army patients. The appropriation this year to reimburse the canal for that service is \$35,000, and that is not nearly enough, and so we have estimated for the next fiscal year for an appropriation of \$60,000.

The CHAIRMAN. You will be short this year?

Gen. GORGAS. We will be short this year on that item. We have estimated a deficiency of \$25,000. It is really just a question of bookkeeping. It is simply one branch of the Government paying another branch of the Government.

Statement "AA" appended.

No adequate Army hospitals having been provided for the care of the seriously sick at the military posts in the Canal Zone, the necessity of sending them for treatment into the hospitals of the Panama Canal will continue during 1919.

The cost of similar service for the fiscal year 1915 was \$29,618.92; for 1916, \$33,709.18; for 1917, \$41,928.60. The increasing cost is due to the successive enlargements of the garrisons. To cover the enlarged garrisons of 1919, it is believed no less than \$60,000 will be required.

Statements are appended showing (1) the items of expenditure under this head for the fiscal year 1917, and for the first four months of the current fiscal year; (2) the increases in the Canal Zone garrison from July, 1916, to the latest date available; and (3) the approved charges payable to the Panama Canal for hospital care furnished Army patients.

Number of hospital days and cost of services, Panama Canal hospitals, July 1, 1916, to Oct. 31, 1917.

Obligated fiscal year 1917:

Civilian employees, 570 days, at 30 cents per day.....	\$171.00
Civilian employees, 75 days, at 60 cents per day.....	45.00
Civilian employees, 4 days, at \$1.10 per day.....	4.40
Officers, 430 days, at 50 cents per day.....	215.00
Enlisted men, 683 days, at 60 cents per day.....	409.80
Enlisted men, 29,564 days, at \$1.10 per day.....	32,520.40
Total.....	33,365.60
Private rooms.....	322.50
Surgery.....	8,240.50
Grand total.....	41,928.60

Total days, 31,326.

Obligated fiscal year 1918 (to Oct. 31, 1917):

Civilian employees, 81 days, at 30 cents per day.....	\$24.30
Officers, 126 days, at 50 cents per day.....	63.00
Enlisted men, 217 days, at 60 cents per day.....	130.20
Enlisted men, 12,078 days, at \$1.10 per day.....	13,285.80
Total.....	13,503.30
Private rooms.....	183.00
Surgery.....	4,181.75
Grand total.....	17,868.05
Total days, 12,502.	

Recapitulation.

Total number of hospital days 43,828, for which was paid the sum of....	\$46,868.90
Total amount for private rooms.....	505.50
Total amount for surgery.....	12,422.25

From July 1, 1916, to Oct. 31, 1917, 43,825 hospital days' services, amount to.....	59,796.65
---	-----------

Strength of Panama Canal Zone garrisons, July, 1916, to November, 1917.

	Officers.	Enlisted men.	Total.
1916.			
July 31.....	218	6,795	7,013
Aug. 31.....	231	6,858	7,089
Sept. 30.....	224	6,721	6,945

Average for 5 months.....	296	10,688	10,985

PANAMA CANAL HOSPITALS.

Rates of charge approved by the Secretary of War September 21, 1915, for the care at public expense of officers and soldiers in the hospitals of the Panama Canal:

Ordinary care and treatment in ward, per day.....	\$1.50
Ordinary treatment in insane ward, per day.....	1.00
Treatment in private room, additional, per day.....	1.50
Special nurses, additional for each, per day.....	4.00
Special maid or attendant, additional for each, per day.....	1.50

Surgical operations, 10 per cent of schedule. (The operative schedule exhibits fees from \$5 to \$500, according to the nature of the operation.)

NOTE.—The first two items above include subsistence, which in the cases of enlisted men are payable out of the subsistence appropriation, and in the case of officers out of their own funds. The net rates chargeable to "Hospital care, Canal Zone garrisons," are therefore as follows:

Item 1. Enlisted men, \$1; officers, 50 cents.

Item 2. Enlisted men, 60 cents.

The other items, when allowable, are paid from "Hospital care, Canal Zone garrisons."

The CHAIRMAN. The next two items are, "Army Medical Museum and library: For Army Medical Museum, preservation of specimens, and the preparation and purchase of new specimens, \$10,000," and "For the library of the Surgeon General's Office, including the purchase of the necessary books of reference and periodicals, \$20,000." For the Army Medical Museum you had an appropriation of \$5,000 last year, and for the library of the Surgeon General's Office you had an appropriation at the last session of Congress of \$15,000. So that you are asking for double the appropriation for the Army Medical Museum and for an increase of \$5,000 in the appropriation for the library of the Surgeon General's Office.

Gen. GORGAS. We ask for the Army Medical Museum an appropriation of double the amount of the appropriation for the present fiscal year. We are expanding the museum very rapidly. There is an immense deal of material coming from the war in Europe, specimens of all kinds from the hospitals for the museum. That is one of the large museums of its kind in the world just now, and this

material will be exceedingly valuable. We ask for \$5,000 more than we had last year in order to meet the emergency.

The CHAIRMAN. Have you spent the \$5,000 appropriation you got last year?

Col. OWEN. We have spent \$4,700.

The CHAIRMAN. Is this for the purchase of books mainly?

Col. OWEN. No; it is for the preparation of specimens. The second appropriation, for the library, refers to the purchase of books.

The CHAIRMAN. You are asking for an increase in both appropriations.

Gen. GORGAS. Col. McCulloch can tell you what the other general items are to be included.

Col. McCULLOCH. The appropriation we get from this committee for the library is for the purchase of books and medical journals. The other expenses of the library come from some other appropriation.

The CHAIRMAN. Will you please put in the record a detailed statement of these two items under the general head, "Army Medical Museum and Library," with a general statement as to the reasons for the increase you are asking?

Mr. TILSON. Will you state, in a general way, the nature of the specimens you preserve?

Gen. GORGAS. Those will include all that we will get from our base hospitals in Europe. There will be, for instance, crushed joints and broken bones, and anything of surgical and medical interest, with the large number of casualties that will occur over there. Col. Owen could go into that in more detail.

Mr. TILSON. In a general way, not in great detail, I would like to know what they are going to do with that money.

Col. OWEN. The material over there is not being collected as it ought to be, because it ought to be sent over here for the guidance of our own men in caring for our future injured.

The studies that have taken place are all very important, and they are not being put in this museum, where they should be collected, where the studies could be made by a group of men rather than by individual men. Those things are now being studied by individual men rather than by groups of men, and in that way much of the study is being duplicated, and much time and effort is being wasted, which ought to be put on the whole thing. Then the studies would go ahead much more rapidly, and the results would be produced much more rapidly.

Mr. TILSON. Then your idea is that from these specimens a study could be made by groups of trained men in this country that might be immediately, or at least very soon helpful, and then by the preservation of these specimens they might carry lessons which would be useful in the future?

Gen. GORGAS. Unquestionably.

Mr. McKENZIE. Will these specimens you speak of be the actual bones, or photographs?

Col. OWEN. We will have the actual bones, and then we will also have photographs of them.

Mr. McKENZIE. The bones will be deposited in the museum, and they would not be of very much use to the groups of doctors, it seems to me, because they would not be there, and therefore they would have to make the studies from the photographs.

Col. OWEN. No, sir; they would make the studies themselves, from the bones themselves.

Mr. McKENZIE. You would collect a sufficient number for that purpose?

Col. OWEN. Yes, sir.

Gen. GORGAS. We have a museum there with a large number of specimens from the Civil War, and also specimens from all over the country since that time.

Col. OWEN. At the present time the space has to be devoted to other purposes, and consequently the specimens are not on public exhibition at all. The public exhibit is intended largely for people who can teach themselves, and I do not believe the museum ought to be used for the purpose of a collection of curios, but rather for material that could be studied for the benefit of the Army itself.

The intention was to get a group of selected men who have an international reputation, like Louis Wilson, of the Mayo Foundation, and give to each three or four other men whom he personally knows to be quick and accurate observers, to examine and select this material for study, to go around to the various hospitals and collect this material as it is produced.

For instance, the study of the trench foot has not been made to any great degree. Many of the injuries going on are comparatively new, and there are new methods of treatment, and that work ought to be done by a collective agency, rather than by individual men.

Many of the men who are doing that work now have gone to the personal expense of taking with them artists and paying the expense of these men to produce these things in color. Many of these men are making studies of these things and placing them in the museums of their own institutions. They ought to be collected together in one group, so that a group study can be made of them; otherwise the studies and the work are inevitably duplicated, time and time again.

Gen. GORGAS. I think I ought to say, Mr. Chairman, that this appropriation does not pertain to the pay of the men who do this work, but pertains principally to the expense of packing and shipping the stuff.

Col. OWEN. And for the alcohol and the instruments used in making the preparations.

Gen. GORGAS. The men engaged in the work will be officers in the Army.

Col. McCULLOCH. I would like to make a short statement, Mr. Chairman, in reference to the library.

The CHAIRMAN. We will be glad to have you make a statement about that.

Col. McCULLOCH. I do not desire to go particularly into any explanation with reference to the figures, but I simply want to make a short statement in reference to this particular item because I do not believe the committee understands what the Surgeon General's library is. I am sure a great many of our most intelligent friends do not know about it.

They think it is a sort of revolving bookstand in the Surgeon General's office.

As a matter of fact, this library has rapidly grown from that stand. It was in that shape about the time of the Civil War, when

Dr. Billings took hold of it, and he has developed it until it has grown to be what we now claim to be the largest and best medical library in the world. The Surgeon General's library is now the library of the whole medical profession of the country, and, to a large extent, of the medical profession abroad. We have about half a million volumes, and we really occupy the same position with reference to the medical profession that the Library of Congress occupies with respect to general literature.

The CHAIRMAN. In other words, it is a complete medical library?

Col. McCULLOCH. That is true. The fact is that we try to get everything published of a medical sort, and the appropriation of \$10,000 that we have been getting has not enabled us to do that work as it should have been done.

The CHAIRMAN. You got \$15,000 last year?

Col. McCULLOCH. The other \$5,000 was for the museum, \$10,000 was for the library.

Mr. LUNN. When I was reading over this bill, I thought to myself, Gen. Gorgas will not have time to read the books he wants in that library. I thought this referred to reference books which he needed in his particular office.

Col. McCULLOCH. We furnish those books to other doctors all over the country.

Mr. LUNN. Your statement in regard to the library is new to me.

Col. McCULLOCH. We loan books to doctors all over the country, and the doctors in the far-away mining camps, or in the country districts can borrow these books from us. We practically furnish the whole medical profession in the country with the books they want to borrow from us.

Mr. TILSON. I see that the amount of the appropriation you are asking for this year is double the amount of last year.. Is it intended that so many more books are going to be bought?

Col. McCULLOCH. I was going to say the appropriation has been insufficient for several years, and the war coming on has made a big difference. There are a good many more books published, medical books, and the cost of books has gone up with the price of paper.

Mr. TILSON. So far as getting books in reference to the things that have been learned in this war is concerned, in general, it seems to me that books written right now are probably as of little public value as any books we can buy, because they are written in the midst of a state of flux. You do not know whether your books you are getting now are going to be of value next year.

Col. McCULLOCH. I think there is a medical literature of tremendous value being published right now.

Mr. LUNN. You want to trace the evolution of the science of medicine anyway?

Col. McCULLOCH. Yes.

Mr. TILSON. By doing that you will be able to make one stage in the progress of the science?

Col. McCULLOCH. Yes. Now, in addition to that, I think we subscribe for 1,800 medical journals, besides the books we buy. If it were not for the fact that we get the copyrighted books for nothing from the Library of Congress, we would not come out at all. The Library of Congress gets two copies of each book copyrighted, and

gives us one of those copies. That, of course, applies only to the books on medical subjects.

Mr. McKENZIE. In what building is that library located?

Col. McCULLOCH. It is located in the building on the Mall, just east of the old National Museum Building, at the corner of Seventh and B Streets SW. It is one of the large buildings in the group of buildings on the southern edge of the Smithsonian Grounds.

Mr. McKENZIE. You have ample room there?

Col. McCULLOCH. We are trying to get another building, although we are getting along fairly well at the present time. I have to keep a certain amount of money ahead on this proposition of buying German books, because we are not getting those now, and in order to get them at all we have to keep ordering them.

Mr. SHALLENBERGER. Do you intend to collect German books?

Col. McCULLOCH. Yes; we must get those after the war.

The CHAIRMAN. How much of this appropriation of \$10,000 have you spent up to date?

Col. McCULLOCH. We spend it by half years. For the half year just gone we have spent about \$4,500 out of the \$5,000 we allot ourselves for each half year. The fact that we have not spent the entire \$5,000 allotted for the first half year does not indicate that we could not have spent it.

The CHAIRMAN. If you had had more you could easily have spent it?

Col. McCULLOCH. We could spend any amount of money for getting old historical books we would like to get in the library, such as the Library of Congress gets in other branches of science and art.

The CHAIRMAN. If we did not give you an increased appropriation would you be able to keep up your subscriptions for the 1,800 medical journals for which you subscribe?

Col. McCULLOCH. No, sir.

Mr. LUNN. Are these historical books you refer to in the Congressional Library now?

Col. McCULLOCH. The Library of Congress selects that class of books in other branches of science and art, but not medical books of that character.

Mr. LUNN. So that if you do not collect them the Government will not have them?

Col. McCULLOCH. They are lost to the country. I am speaking of the incunabula that were published in the fifteenth century. They are like any other objects of art or literature; they are very valuable.

Mr. LUNN. If you do not get the money to buy them, the Government will not have them?

Col. McCULLOCH. They will not have them. They rely on us entirely in this country for medical literature. I have here a volume containing the titles of the books we have. That simply contains the bare titles of the books.

The CHAIRMAN. It is an index catalogue.

Col. McCULLOCH. It is an index catalogue. We send copies of this catalogue to the doctors out on the frontier and in various out-of-the-way places, and they can borrow such books from us as they want.

The CHAIRMAN. I understand any doctor can send to you and borrow such books as he wants.

Col. McCULLOCH. He can borrow anything he wants.

The CHAIRMAN. Do you lose many of them in that way?

Col. McCULLOCH. We have not lost any in four years.

Mr. LUNN. It seems to me that is a very excellent arrangement.

Col. McCULLOCH. Very few of the doctors seem to understand about the loaning of those books, but that loaning business is growing every day, and we are loaning a tremendous lot of books now.

MEMORANDUM RE ESTIMATES 1919 FOR ARMY MEDICAL MUSEUM AND LIBRARY.

If the museum and library are to fulfill the object for which they were established and maintain their present status among similar institutions of this and other countries, it will be necessary to provide larger appropriations to meet the increased cost of operation.

It is therefore urged in submitting estimates for the 1919 appropriation that the sum of \$10,000 be provided for the museum in lieu of the \$5,000 ordinarily carried and \$20,000 for the library in lieu of \$10,000 as heretofore.

The present library appropriation (\$10,000) was established years ago when the demands on the library were, as compared with the present, very light. Since that time medical literature as a whole has more than trebled, rendering it more and more difficult for the library to keep abreast with it. The increase in appropriation asked for is believed to be absolutely necessary for the following reasons:

1. The cost of all publications, but especially the limited editions of scientific publications, has advanced enormously in the past two years.

2. Foreign booksellers through whom publications are of necessity secured have advanced their commission charges or reduced the amount of discount allowed.

3. The object of the library is to secure all worth-while medical literature. The amount of this literature has constantly increased, and recently the amount of literature on the purely medico-military features of the war has been greatly augmented. If the index catalogue of the library is to continue to be practically a bibliography of the world's medical literature, the funds for the purchase of the publications must be increased.

The increase in appropriation for the museum is asked in order that the present plans of making this in every sense of the word a national medical museum may be carried out. It is proposed to establish here a permanent exhibit of medical and medico-military specimens which will rank with exhibits of similar institutions on the continent of Europe.

The amounts asked for, if allowed, will be distributed approximately as follows:

Army Medical Museum.

For purchase of specimens.....	\$5,000
For supplies and equipments for preparation and preservation of specimens..	4,900
For transportation on museum account.....	100
Total.....	10,000

Library, Surgeon General's Office.

For books, periodicals, photographs, engravings, etc., for deposit.....	\$18,000
For equipments and utensils for library use.....	1,500
For transportation on library account.....	500
Total.....	20,000

MEMORANDUM.

JANUARY 29, 1918.

It should be borne in mind that this appropriation, being for the library of the Surgeon General's office and the museum of the Surgeon General's office, just what these two organizations represent. The library of the Surgeon General's office is the great clearing house for medical literature in the world. It is not alone the library of the Surgeon General's office. That is an entirely incidental function. Nearly all of the books of the American medical world are written largely through the facilities afforded to the profession by this library.

The museum, if it is to fulfill its function at all should have a very much larger pathological collection than it at present possesses, and it should become the greatest

clearing house of medical specimens in the world, where advanced students could come and have every facility and every pathological specimen necessary made immediately available to them, so that as they study the books in the library they should have the pathological material available, so that they may go over other men's studies, examining this material and slides left here from other's studies previously made, making fresh studies from the material itself, and in this way verify and reinforce other men's work.

This war should not be allowed to pass without benefit to the race as a whole. It should be borne in mind that the medical schools, together with all other professional schools of Europe, are now destroyed and we will be compelled, whether we will or whether we won't, to take the leadership in medicine, and if we have this pathological material where the men of the present day may have it, right alongside of the pathological material of the last great war, where they can study this and the literature side by side, it will be of infinite value to the profession as a whole, and thereby to the people of the United States, as well, because everything that benefits or interests the profession of medicine is necessarily, either directly or indirectly, of benefit to the people of the United States.

For the above reasons, I have persuaded the Surgeon General that the least possible amount with which the work of the museum can be done is \$10,000. This amount it will be necessary to have in order that I may be able to purchase alcohol and other necessary fluids for the preservation of this material, for the purchase of instruments with which to make proper preparation, and for the examination of the material, for the purchase of containers in which to preserve it, and in order to pay for transportation charges and other necessary detail for the obtaining, preservation, and study of this material.

As for the library, the \$10,000 which has been annually allowed in the past is not, in my judgment, sufficient to enable the librarian to make the necessary purchases to secure annual publications, and he can use to a very great advantage the \$20,000 asked for.

Regarding this appropriation of \$20,000 for the library of the Surgeon General's office, this increase of \$10,000 is based upon the conviction that at this particular time everything available relating to the profession should be obtained, so far as possible.

In detail, I would invite your attention to the following:

1. The rise in the prices of books, due to the large increases in the cost of paper, ink, type metal, and all other materials which enter into the process of bookmaking.
2. The immense production of literature, both foreign and domestic, relating to the medical and surgical activities of the present world war, which it is necessary for the library to add to its collection.
3. The large amount of foreign literature necessary to complete the library's files which is being contracted for, for delivery at the close of the war. If the latter should continue longer than the end of the present fiscal year, such sums of money as have been set aside for this purpose out of the annual appropriations for the past two years will, under the law, revert to the Treasury as an unexpended balance.
4. The unusually favorable opportunities now arising from the unsettled condition of the European market, for the purchase at comparatively low figures, of rare old medical works, of which the library already possesses the largest and most valuable single collection in the world, and which it is desired to add to while it is possible to do so at a minimum expenditure.

W. O. OWEN,
Colonel, Medical Corps, United States Army,
Curator, Army Medical Museum.

The CHAIRMAN. I would like to return to the item on page 48, General, for the—

Construction and repair of hospitals: For construction and repair of hospitals at military posts already established and occupied, including the extra-duty pay of enlisted men employed on the same, and including also all expenditures for construction and repairs required at the Army and Navy Hospital at Hot Springs, Arkansas, and for the construction and repair of general hospitals and expenses incident thereto, and for additions needed to meet the requirements of increased garrisons, and for temporary hospitals in standing camps and cantonments. For the alteration of permanent buildings at posts for use as hospitals, construction and repairs of temporary hospital buildings at permanent posts, construction and repair of temporary general hospitals, rental of grounds and rental and alteration of buildings for use for hospital purposes in the District of Columbia and elsewhere, including necessary temporary quarters for hospital personnel, outbuildings, heating and laundry apparatus, plumbing, water and sewers, and roads and walks for the same.

You are asking this year for \$25,000,000 for that item, and at the last session of Congress you got \$37,865,267. I suppose that decrease is almost entirely due to the fact that the hospitals have been constructed?

Gen. GORGAS. We have done a great amount of construction. That is the reason for the decrease.

The CHAIRMAN. Will you put into the record a statement showing the different items included under this heading?

Gen. GORGAS. I will be glad to do that.

(The statement referred to is as follows:)

For construction of hospitals at military posts already established and occupied.....	\$3,646,000
For repair of hospitals at military posts.....	3,860,000
For repairs Army and Navy, General Hospital.....	10,000
For construction of general hospitals.....	12,970,000
For repairs, general hospitals.....	330,000
For additions to meet increased garrisons.....	907,000
For temporary hospitals.....	3,277,000
Total.....	25,000,000

The foregoing is calculated upon the needs of a total force of approximately 1,500,000 men. If the force raised for 1919 is materially greater, say 2,000,000 or 2,500,000, additional amounts hereunder will turn out to be necessary about in proportion to the increase of the forces.

The CHAIRMAN. These hospitals were constructed, I believe, partly under your jurisdiction and partly under the jurisdiction of the Quartermaster General's Department, were they not?

Gen. GORGAS. They were constructed altogether under the direction of the Quartermaster General. We had nothing to do with the work done by the Quartermaster General's Department.

The CHAIRMAN. Were they not constructed after consultation with you as to the plans?

Gen. GORGAS. We supplied the plans.

The CHAIRMAN. Your plans were not fully carried out in every particular as to the space, for instance?

Gen. GORGAS. The question of space applied to the barracks.

The CHAIRMAN. Your plans were carried out as far as the hospitals were concerned?

Gen. GORGAS. Yes, sir.

The CHAIRMAN. I have heard some criticism, General, of the base hospitals in some of the camps in the South, to the effect that they were not heated. What have you to say about that?

Gen. GORGAS. That applies to the hospitals of the National Guard.

When the war broke out the question was raised about the various cantonments, and it was decided that the National Guard would go overseas very rapidly; that they would be in divisions; and that they would have the equipment they would need when they were in the field in France. For instance, the hospitals would be, while the men are in this country, just as the men, under canvas. A little later when we made requisition for the canvas for the hospitals, the Quartermaster General's Department did not have it, and told us they would not be able to furnish it, and so it was decided to build the wooden structures, very much cheaper and less elaborate than the ordinary hospitals we planned for the National Army, which were to be of a permanent character.

Then when it was found later, in August, that the commands would not be gotten over before winter, it was decided to put heat and water in these wooden hospitals. The heat and water in most of them has not been gotten in yet. It has all been allowed and ordered, and the funds have been provided, but the actual work has not been done.

The CHAIRMAN. Can you tell us how many have not been heated yet?

Gen. GORGAS. The National Army hospitals have heat and water in them. None of the National Guard hospitals, as far as we know, have gotten those things in them yet. We have steam heat and water in the hospitals.

All of the hospitals, as the cold weather came on, were supplied with stoves. I am speaking now of the National Guard camps, which are on a different basis and plan than that of the National Army cantonments, and most of the difficulty that has been met refers entirely to the National Guard camps.

The CHAIRMAN. We have noticed that there has been a discrimination between the National Army and the National Guard all the way through, unfortunately.

Gen. GORGAS. The reason for that was the difference in the plans for the National Guard and the National Army. The National Army cantonments were known to be permanent for the war. The National Guardsmen were supposed to be in camp, and were supposed to go abroad in a few months, and it was supposed that they would be in camp here just as they would be when they got to France.

The CHAIRMAN. Then the excuse for the discrimination is that you expected to send the National Guard over to France first, and you expected to have them over there before the winter season started?

Gen. GORGAS. Yes.

Mr. TILSON. I can corroborate that, because I went through a number of National Guard camps, and I said to the commanding officers, "You are going to suffer a great deal here this winter, with these accommodations." In every camp I found the idea prevailing that they were going to France before the winter set in.

Mr. GORDON. What time did you visit those National Guard camps?

Mr. TILSON. I visited those camps in September, and that was the feeling there, and that feeling seems to have permeated headquarters in Washington.

Gen. GORGAS. I would like to go into a little further explanation of that matter. Take, for instance, the division which is at Camp Meade now, and the division which is at Camp Wheeler, at Macon, Ga. When they get to France they will all have the same camp equipment. The reason why the men at Camp Meade are housed differently is because it was known that that cantonment was built for the duration of the war. The division at Camp Wheeler originally started out with the idea that they would be there only a few months. When they get to France they will have the same equipment.

The CHAIRMAN. They will all have tents in France?

Gen. GORGAS. They will be like a moving command, as the English and French troops will be, if they ever get to fighting again in the field. All of those commands have to be equipped with the expectation of pitching camp at night and breaking camp the next morning.

The CHAIRMAN. After it was determined by the War Department that we were not going to send the National Guard troops over as early as the department originally intended, why could not those hospitals have been heated then?

Gen. GORGAS. As soon as it was determined upon, about the middle of August, the heating apparatus and water supply were authorized.

The CHAIRMAN. But you say those things have not been put in the National Guard hospitals yet?

Gen. GORGAS. Stoves were put in. The water is being put in much more rapidly. Col. Glennan says that his reports show that some of them have water in the hospitals now.

Mr. TILSON. What about the sewage disposal plants?

Gen. GORGAS. In none of the National Guard camps is there a permanent system of sewerage actually connected up.

Col. GLENNAN. The water and sewerage systems are being put in the hospitals at the same time.

Mr. MCKENZIE. Have you visited any of these National Guard camps since the weather has been cold?

Gen. GORGAS. Yes, I visited some of them as late as the early part of December.

Mr. MCKENZIE. How did you find the condition in those hospitals with the stoves in them? Were they able to heat the hospitals comfortably, or were the men suffering from the cold.

Gen. GORGAS. No, I think they were comfortable. The wards there had great big furnaces in them, such as you heat houses with, with the tops taken off, and they had two or three smaller stoves in every one I went in. The camps which I visited were the National Guard camps from which we were getting the worst reports. I visited none of the very good camps, but in the last two or three months I visited all the camps where we are having trouble.

Mr. MCKENZIE. Would there be any connection between the use of stoves and the character of heat furnished by stoves and the prevalence of pneumonia? That is, do you think there would be more cases of pneumonia where they had steam heat or furnace heat than where they have just the stove heat? In other words, would there be any connection between the cooling down of the stoves and the fact that there was a greater amount of pneumonia in those camps?

Gen. GORGAS. I am inclined to think there is no very close connection between those things. In one or two of the National Army cantonments, which have steam heat and where that has been going on for some time, we have about as much trouble as we have in our most troublesome National Guard camps. Camp Pike, for instance, at Little Rock, is giving us as much trouble as far as pneumonia cases are concerned as anything else we have had, and that is a permanently constructed steam-heated cantonment.

Mr. GREENE. I understand Secretary Baker has stated that they did not contemplate in the beginning sending any considerable number of troops to France until probably this spring, or something like that, and that that was in large measure accountable for some of the apparent discrepancies, and it was a matter of preparation that would take that much time. Yet, as I understand your statement, preparations were deliberately made at the outset for the construction of relatively temporary structures and accommodations for the National

Guard because it was thought they were likely to go right overseas.

Gen. GORGAS. Before the cold weather.

Mr. GREENE. How does your statement compare with the statement of Secretary Baker, that there was no general movement of troops contemplated?

Gen. GORGAS. I do not know about that in detail. I recollect that I heard that the General Staff were urging and were in favor of not sending the Army over until it was fully trained. My information is all a matter of hearsay. I have no definite, personal knowledge on that subject.

Mr. GREENE. And yet, if they went ahead on the policy then under contemplation, that they would stay here until spring, it appears that the National Guard were to be furnished with temporary quarters, without adequate preparation for the winter, and the National Army had every possible convenience provided for them.

Gen. GORGAS. You mean when it was contemplated——

Mr. GREENE (interposing). As I gather from the statement of the Secretary of War, no general movement of troops other than such preliminary movement of the pioneering people as might be necessary was contemplated until toward spring, and that he explained as the reason for certain lack of preparedness, and because the policy was to be followed of not preparing to send fully equipped and organized troops to France in the larger bodies. And yet at the very time when this policy of not sending troops overseas appears to have been determined upon, the plan, as you outline it, indicates that preparations were made for temporary quarters of National Guard troops on the supposition that they would go over and would need only temporary quarters in the meantime.

Gen. GORGAS. We were always told that the National Guard, up to August, were to be tented camps.

Mr. McKENZIE. Is it not true that the Quartermaster General took the position, or the General Staff took the position, that they would put them all in tents, but owing to the lack of tentage they found it would be impossible to do that, and therefore it was necessary to construct wooden cantonments for the National Army, and the element of cost entered into it also. Is there not something to that?

Gen. GORGAS. The information we had was always that the permanent cantonments were to be wooden structures. We never had any plan presented to us for the use of tents for the National Army.

Mr. McKENZIE. Is it not a fact that the Quartermaster General stated to this committee that that was due to the fact that they could not obtain the tentage?

The CHAIRMAN. There was some testimony by the officers from the Quartermaster's Department that there was a shortage in tentage.

Mr. GREENE. It comes back to this proposition, whatever may be the incidental details, that the Secretary of War announced that the first plan of the War Department, and apparently the plan upon which the general preparations were founded, contemplated holding the troops in this country until they could be organized and equipped and trained and gotten in condition to be sent overseas in considerable numbers, toward the springtime, and that this plan, it appears, was afterwards disarranged because France began to call for troops,

so that they had to hurry some troops to France. And as the Secretary said, this disarranged the general plan.

Notwithstanding that explanation, however, it is apparent, from your testimony, and apparent from the facts that from the beginning the quarters of the National Guardsmen were made of a temporary character, evidently with the expectation that they would be sent to France before winter set in. How do those two statements gibe?

Gen. GORGAS. The information we had with regard to tentage for the winter came about the 1st of August, or somewhere about that time, when we made a requisition for heat and water.

Before that time we had applied for the tentage for the hospitals, under the general plan, and then we were notified by the Quartermaster General that he did not have tentage, and then it was decided to make the hospitals wooden structures, but that was merely because we did not have tentage. If we had had the tentage, the hospitals would have been put in tents, just as the rest of the camps.

Mr. GREENE. I can see how the Medical Department follows its custom, so far as the policy of the War Department is concerned, but your testimony brings out the fact that one explanation runs in one direction, and the other explanation runs in another way.

Gen. GORGAS. This is just my supposition of what occurred, that the plan of the Army remaining here until it was trained was settled very early before any information came to us, and when we got the information that plan was pushed aside, and they had determined upon sending the Army abroad as soon as they could. My information was just hearsay.

Mr. MORIN. They decided on the change before they put the men in the camps.

Mr. GREENE. Whatever may have been the various steps and the uncertainty of the policy, when the policy was finally decided upon, and it was concluded that they would remain here, it is a fact that one part of the Army was given permanent quarters and the other part was given temporary quarters.

Mr. MORIN. Secretary Baker said yesterday that, so far as the American medical association was concerned, they concerned themselves about the cantonments, and as far as the men in the tents were concerned, there was not so much concern about them because it was said they would be more healthful in the tents.

Mr. McKENZIE. Eliminating the question of the suffering of the soldiers, what do you say as to the effect on the health of the men, whether it would be better if they were housed in wooden cantonments or in tented camps?

Gen. GORGAS. As a general proposition, I would prefer tents to the regular wooden buildings.

Mr. McKENZIE. You think that the health of the soldiers would be better conserved in tents than in the wooden cantonments?

Gen. GORGAS. As a general proposition, I think so, other conditions being equal.

May I go back again to the question brought out yesterday by Mr. Shallenberger in reference to the death rate?

The CHAIRMAN. The death rate in the Army?

Gen. GORGAS. Yes, we were discussing the death rate, and I took the position—

The CHAIRMAN. I wanted to bring that out a little later.

Gen. GORGAS. Very well.

Mr. GORDON. General, you have just stated that the first plan of the General Staff, or the military authorities, was not to send any men to Europe until they were fully trained. Will you be kind enough to elaborate a little upon that term "fully trained," telling us what you understand by men being fully trained, and how much time would be involved in subjecting them to that training.

Gen. GORGAS. I was merely giving what I understand to be a general report.

Mr. GORDON. I understand that, but what I wanted to know was what you understood to be comprehended as to the time required, and other things in the term "fully trained."

Gen. GORGAS. I am merely giving my opinion. I have my opinion in regard to it, just as you would have yours. I know nothing of what they did about it at the time.

Mr. GORDON. But, having used the term "fully trained"—

Gen. GORGAS (interposing). You mean what I mean now?

Mr. Gordon. Yes.

Gen. GORGAS. I meant what I understood the newspapers to mean, that the men would be trained for a year, and that they would be soldiers when they went to France.

Mr. GORDON. You understood that it involves training the men for a year before they were sent over seas?

Gen. GORGAS. I know nothing more about it than what I saw in the newspapers.

Mr. CALDWELL. General, I have a telegram which I just received a few minutes ago inquiring concerning the condition of one of our very widely known young men, who is a member of Company I of the Seventh Infantry at Spartanburg, who is suffering, they understand, from pneumonia, and they are very much distressed because of the recent newspaper stories. What I would like to know is, can we get a report back from this particular case some time to-day; and would it be possible to supply any extra assistance, such as a specially trained nurse? These people telegraph me that they have already sent by telegraph some money to pay for any extra help that might be needed, and I would like to know if it would be possible to have an extra trained nurse for that man.

Gen. GORGAS. If they can get a trained nurse there. If he is a seriously sick man he is probably in a room by himself, with a special trained nurse there.

Mr. CALDWELL. There is one other question I would like to ask you. Have you any general order by which the members of the Medical Department are governed concerning the isolation of soldiers suffering from syphilis?

Gen. GORGAS. We have a general order that is being changed and sent around from time to time that covers all cases of infection.

Mr. CALDWELL. Just before the present session of Congress convened I was called to Allentown, Pa., in the matter of the trial of a man who was afterwards released. I found there a man under charges in a cell which was practically a dungeon, and on a protest he was removed from there and put in a room about one-half the size of this room.

In that room with him were 22 other men, making 23 men all told, one of them having syphilis in an active stage, with an open sore on his mouth. The cots were so close together that some of them had to be folded up and stood up on edge so that the men could move around in the daytime. I protested against that and asked for an investigation.

The Inspector General's office sent an inspector to Allentown, and I was personally present when they brought the testimony and the records in which it was proven that this man had a long history of syphilis; that he had been treated under the old syphilitic method of treatment until his stomach had gone bad, and then it was continued again. The fact that this man suffering from syphilis was allowed in there with those other men was complained of by a civilian who was there attending the trial with me.

The prisoner with syphilis was permitted to stay in the little guard-house for, I think, five days, or perhaps longer than that before he was removed, and he was then removed to a hospital across the street, where he could have been kept at any time. I have protested and written letters about it, and have asked that something be done to punish the man who was responsible for that kind of treatment, and I have not yet heard of anything that has been done, not even the sending of a letter of censure for that sort of handling of that syphilitic man, and keeping him with those other men. I wanted to know if the prevalence of such a condition was in accordance with the rules and regulations of your department, and if not, why something has not been done to show up that condition, and punish the man responsible for it.

HEADQUARTERS EASTERN DEPARTMENT,
Governors Island, New York City, October 27, 1917.

From: Adjutant.

To: Col. E. E. Persons, Medical Department, United States Army, commanding Army Ambulance Service, Concentration Camp, Allentown, Pa.

Subject: Treatment accorded Sergt. (First Class) George E. Louis, acting first sergeant, section 14, Ambulance Corps.

1. Referring to recent investigation concerning the treatment accorded Sergt. (First Class) George E. Louis, section 14, Ambulance Corps, then acting first sergeant, in your command between August 31 and October 11, 1917, the department commander directs that you be advised as follows:

First. Sergt. Louis, a noncommissioned officer of excellent standing, of previous service and a strict disciplinarian, was accused by certain men of his company of improper conduct. Without giving him a hearing you ordered him to be confined. The custom of the service and simple justice demanded that he should be given a hearing, before taking such severe action with a noncommissioned officer.

Second. The only justification for confining a noncommissioned officer is belief that he will desert or that restraint is necessary. In this case the accusation against Sergt. Louis was suspicious, and, in the opinion of the department commander, there was no danger of his desertion, and no necessity for his confinement.

Third. In this case the provisions of the seventieth article of war were not complied with.

Fourth. While it is believed and is shown by testimony that you are humane and considerate of those under your command, and that you have great responsibilities in your large command, and that you are hampered by the ignorance and inexperience of your officers, it is felt that Sergt. Louis has suffered unjust treatment and that your attention must be called to it.

W. A. SIMPSON,
Adjutant General.

HOUSE OF REPRESENTATIVES,
Washington, D. C., January 17, 1918.

Col. E. E. PERSONS,
Army Ambulance Service, Allentown, Pa.

MY DEAR COL. PERSONS: I am endeavoring to secure a commission for Sergt. George E. Louis, in whose behalf you remember I made several trips to Allentown.

I have never felt that Sergt. Louis was guilty of any breach of duty, and it is my desire to have him commissioned as was contemplated when charges were preferred against him. I would like to know if there has been anything in his conduct since the date of his trial which would lead you to believe that he is not worthy of a commission, and, if so, what it is, and whether or not there is anything in his military record which would stand against him in this very laudable ambition?

I would not expect you to stand in the sergeant's way any more than you would expect me to oppose a confirmation of a promotion which you may earn.

Yours, sincerely,

CHARLES POPE CALDWELL, M. C.

JANUARY 23, 1918.

HON. C. P. CALDWELL,
House of Representatives, Washington, D. C.

DEAR MR. CALDWELL: In reference to your letter of January 17, in which you state that you are endeavoring to secure a commission for Sergt. (First Class) George E. Louis, Medical Department, in which you say, "I would not expect you to stand in the sergeant's way, any more than you would expect me to oppose a confirmation of a promotion which you may earn," you are advised as follows:

1. Sergt. (First Class) George E. Louis was, as you know, sent abroad with his section sometime since. From the time he sailed he is absolutely divorced from any control of mine, directly or indirectly. I have nothing to do with the sections of this organization which are in service in France, and in fact it is very difficult to get any information concerning them. We even have no records of who the officers are who are commanding them, or where the sections are serving, or of the men who now belong to them.

2. After the proceedings of the court-martial which convicted Sergt. Louis and sentenced him to dishonorable discharge from the service had been disapproved by the reviewing authority, and Sergt. Louis had been restored to duty, no dereliction of duty on his part was ever reported to me, and so far as I know he has done nothing which should stand in the way of his consideration for promotion by the officers under whom he is serving.

3. Your inquiry as to whether there is anything in his military record which would stand against him in his ambition to be a commissioned officer should be made to The Adjutant General of the Army, where his record is on file.

4. You may rest assured that I have no desire to stand in the way of the promotion of Sergt. (First Class) Louis. As I told you in the last interview I had with you, in the presence of Maj. Reed, Inspector General's Department, I thought it best that Sergt. Louis be sent abroad at the earliest opportunity, in order that he might be removed from the supervision of the officers who had preferred charges against him and sat on his court-martial and voted for his conviction and placed under the control of entirely new officers, and I pointed out at this time that it was particularly fortunate for him that in going abroad he would probably come under the immediate supervision of Lieut. Col. Percy L. Jones, under whom Sergt. Louis had previously served, and on whose recommendation he had been enlisted in this service as a sergeant. This proposition met with your approval, and with the approval of Maj. Reed at that time. Nothing has occurred to cause me to change my opinion that such an assignment, especially since it placed Sergt. Louis under conditions of active service, where a man has a chance to distinguish himself and earn honorable mention, was not the best course to pursue. I therefore see no reason why Sergt. (First Class) Louis should not merit and obtain consideration of his superiors for recognition for good service, including recommendation for promotion. However, as stated above, matters of this kind are handled abroad entirely.

5. I desire to state that the wording of the last paragraph of your letter, which I have placed in quotation marks in the first paragraph of this letter, is such an unusual one that I have forwarded a copy of your letter, with a copy of this reply, asking that it be placed on file, to The Adjutant General of the Army. I desire to say in this relation, however, that I have received the last promotion which I ever expect to receive in the Army.

Yours, very truly,

E. E. PERSONS,
Colonel, Army Ambulance Service.

STATEMENT OF COL. E. E. PERSONS IN REGARD TO CONDITIONS AT ALLENTOWN CAMP
REFERRED TO BY MR. CALDWELL IN HEARING BEFORE THE MILITARY COMMITTEE,
HOUSE OF REPRESENTATIVES.

1. Mr. Caldwell charges that a man with syphilis and with a sore in his mouth was confined in the guardhouse with other prisoners. This is true and it occurred in this way; orders were given, of course, that all cases of active syphilis should be isolated. When this man was found with a sore in his mouth, his blood was taken and sent to the laboratory at the Army Medical School for a Wasserman test. Report was negative. The doctor, who is a prominent medical man of large practice in Philadelphia, was suspicious concerning the case, however, and took another specimen of blood and sent it in for another test, and because of the man's previous history, began anti-syphilitic treatment. About this time report came to me through the sanitary inspector, Maj. Snee, that it was believed that one of the prisoners in the guardhouse had syphilis. I sent for the surgeon and elicited the above facts, and directed him to isolate the prisoner without waiting to make a positive diagnosis in the case and further advised him that in all doubtful cases, or even in cases in which men were fearful concerning another man in their midst, that man should be removed and kept in isolation until such time as the surgeon was able to positively assure the men that they had no reason to fear anything from the suspect. As stated by Mr. Caldwell, all the facts in connection with this case were brought out by the inspector from headquarters, Eastern Department, who reported his findings in full to the commanding general. The general hygienic conditions under which these prisoners lived were good, and no case of infection of any kind developed among them. As stated by Representative Caldwell, from the time the sore was first noted in the man's mouth until he was removed to the hospital was about five days. I regard the action of the surgeon in this case as an error of judgment due to his lack of familiarity with Army customs, and nothing was developed in the hearings in the case to show that there was any neglect of the patient or lack of carefulness on the part of the surgeon, but simply that he thought it was not necessary to isolate until a positive diagnosis was made. This opinion was apparently shared by the authorities of the Eastern Department, since the commanding general called my attention to certain mistakes in judgment on my part in dealing with this case, in a letter dated October 27, 1917, copy inclosed herewith, but did not mention the matter of the failure to isolate this case at an earlier date.

2. The implication of Mr. Caldwell that there was unnecessary delay in the trial of the prisoners is without foundation. Summary court prisoners were tried promptly from day to day. Regulations do not require that copies of charges be given these prisoners. From June to September we had no general court prisoners at this camp. At this time two cases developed at once. The charges were forwarded to department headquarters as soon as they could be investigated, as required by regulations. It was necessary then for the department commander to get out an order convening a general court, which was done under date of September 13. The cases were then immediately brought to trial. It is true that neither of the two general prisoners were presented with copies of their charges as required by regulations. This was a technical oversight, however, as the prisoners both had counsel, who consulted with them frequently concerning their cases and they knew what they were charged with and could have had copies of the charges had they requested them. The omission was due to the fact that we had had no previous general court-martial cases at the camp, and several minor details in connection with the court procedure were overlooked. The omission, however, was called to the attention of the commanding officer in the letter of the commanding general referred to, copy attached.

3. The impression was current here that Mr. Caldwell, coming here in the capacity of a lawyer to defend a client, unfortunately gave the court the idea that he proposed to have special consideration for his client because of his congressional relations. I inclose a letter herewith, dated January 17, from Mr. Caldwell to me, which unfortunately is open to such a construction. I also append my reply to the same. As stated in my reply, both of these letters have been placed on file by me in the office of The Adjutant General of the Army.

E. E. PERSONS,
Colonel, Army Ambulance Service.

Gen. GORGAS. That is not in accord with instructions. Such a man should have been separated and kept separate from the other men. How long ago was that?

Mr. CALDWELL. That was just prior to the opening of the present session of Congress, some time in November or October. This

syphilitic man was confined with a number of other prisoners in the guardhouse running over a period of weeks.

Gen. GORGAS. It has not come to my attention, and I will be glad to look it up. Did you appeal to the Inspector General's Department?

Mr. CALDWELL. I saw The Adjutant General of the United States Army, and have protested against that treatment, but so far I have heard of no action being taken in the matter of the punishment of the man responsible for that, or even any censure of the medical officers who were responsible.

The CHAIRMAN. Would the medical officer be responsible for that sort of thing?

Mr. CALDWELL. That is a medical cantonment.

Gen. GORGAS. If you will send me the record in the case, I will do what I can with it.

Mr. CALDWELL. I will do that, and I wish you would take the matter up.

Mr. TILSON. I have had some complaints from people who went to Allentown, and I think I have heard all the hard things that could be said about any place spoken about Allentown. I have taken it up with the Surgeon General's office, and the reports seem to be fine, and I did not know, in view of the reports that have been received, whether the people who were complaining were kickers. The reports received from there were fine, but I have received, myself, from no other place where men are stationed, such bad reports as I have heard about Allentown.

Mr. CALDWELL. I was down there myself, and spent two or three days there, and I think the trouble is you have a case of too many Franklins down there.

Mr. ANTHONY. Will you not state what the condition is there?

Mr. TILSON. In the first place, the trouble was about the place where they were kept, and in the next place they were kicking about the food, and the lack of discipline and spirit generally was complained of.

I got one letter from a college graduate whom I knew to be a reliable man, and his picture of the place, covering two full pages of typewritten matter was really very bad, so much so that I went to the Surgeon General's office myself and told the physician in charge in that particular department about it and then he turned to the reports from Allentown and he showed me that, according to the reports, everything was lovely. But he said, "If you will give me the name of the young man, I will have it investigated." I wrote back to the young man and he said, "I would rather take what I get than do that."

Mr. CALDWELL. While I was there attending this trial there were several other men before the court-martial. The articles of war prescribe that each man who is charged with a violation of the regulations shall be given a copy of the charges against him at once, and shall have an opportunity to make reply. No man in the prison while I was there, that I could find out, ever received a copy of any charges preferred against him. No man who was tried while I was there had been in prison less than 20 days, and under the law, if a man is not tried within 10 days, he must be released until he can be tried.

Mr. GORDON. That comes under the control of the Judge Advocate's office, does it not?

Mr. CALDWELL. The members of the court that were there were, without exception, reserve officers.

The attitude of the adjutant was, I thought, open to very severe criticism. He was narrow in his judgment, dictatorial in his manner, and he was harsh, and, in my opinion, cruel.

The CHAIRMAN. General, is it within your jurisdiction to correct those things?

Gen. GORGAS. I can do a great deal at Allentown.

The CHAIRMAN. I would suggest that you have these charges investigated as soon as possible.

Gen. GORGAS. I will be glad to do so.

Mr. LUNN. Were all these men also notified that they had a right to have counsel?

Mr. CALDWELL. Oh, yes; they were notified about that; but in the particular case I went out to try, the man did not get a copy of the charges against him until the day of the trial.

Mr. LUNN. If you had not been there——

Mr. CALDWELL (interposing). He would have been railroaded and put away for three years.

Mr. ANTHONY. Do you mean the prosecuting officer of the Government was cruel and harsh?

Mr. CALDWELL. No.

Mr. ANTHONY. Which officer was cruel and harsh?

Mr. CALDWELL. I think the principal men entitled to censure were Col. Persons and the adjutant, Lieut. Col. Franklin. He was Maj. Franklin at that time, but since then he has been promoted to lieutenant colonel.

Gen. GORGAS. I know a good deal about conditions at Allentown, and there is a good deal of cause for dissatisfaction among the men there. I think that is one of the finest bodies of troops that were ever gotten together.

When the war started, the French Government, through Gen. Joffre, asked us to take over the transportation of all the French wounded. For that purpose we got together 190 ambulance sections, which were all at one time at Allentown. They were principally college boys. There was a section there from nearly every college in the different sections of the country. My own college had a section there, and those men went in with a great deal of enthusiasm. We got them ready, even got their equipment across to France, and got about one-half of the men over. Then we got a cablegram from Gen. Pershing telling us not to send any more, that the French Government said that they did not need any more. Apparently, some friction grew up between the transportation and the ambulance sections in the French Government, and Gen. Pershing was asked not to have any more of those men sent over. These young men went into that work with great enthusiasm, expecting to go to France six or seven months ago. They have been kept at Allentown, and they are disappointed, and I think there is a great deal of dissatisfaction in that camp.

Mr. CALDWELL. I did not find so much dissatisfaction among the men about anything except that there was a general feeling among all the men I talked to, even the commissioned officers of lower rank

who were frank enough to speak about it, that the trouble with the camp was that they had too much Franklin.

It seemed that Maj. Franklin had exercised quite some influence over the commanding officer, Col. Persons, and Col. Persons is a man of the Regular Establishment and ought to have known better. It seemed to me he was following a narrow-minded view that one should not expect to find in the Regular Establishment. I did not find that there was much dissatisfaction among the men, so far as their being sent to France was concerned.

Gen. GORGAS. I was at Allentown not very long ago. There is a general feeling of discontent because they have not gotten to France, and the fear that they are going to be broken up.

Mr. CALDWELL. I think you will find that the question of getting to France is not so much the cause of the dissatisfaction there as the other matter I spoke about.

Gen. GORGAS. I will be glad to look into it.

The CHAIRMAN. General, I would like to go back to the question of disease and deaths at the different camps. I notice you get a weekly statement from each camp, and you send that out every week. I would like to have you explain some things in that.

For instance, take the case of Camp Sheridan, which is at my home town. I want to call your attention to the report made on January 11.

Gen. GORGAS. I hope you will notice that is the best one there.

The CHAIRMAN. Yes. On January 11 there were 8 cases of pneumonia, 5 cases of venereal disease, 2 cases of typhoid fever, 19 cases of measles, and 1 case of scarlet fever, and no deaths, with a percentage of 25.3 noneffective. How do you arrive at that figure of 25.3; 25.3 out of every 1,000 noneffective?

Gen. GORGAS. That is weekly. That means when the report was made if there were 10,000 men in the camp 25 out of every 1,000 were sick; that is, 250 men out of 10,000 were sick.

The CHAIRMAN. Some time during that week?

Gen. GORGAS. At the end of the week, when the report was made.

The CHAIRMAN. You do not go by the number of cases then each week?

Gen. GORGAS. Yes; that indicates the morning sick report when that report was made.

The CHAIRMAN. I want to ask you another thing. On January 16, for instance, the noneffective rate per thousand throughout the entire Army was 46.4 per thousand.

Gen. GORGAS. That is per thousand.

The CHAIRMAN. The admission rate per thousand was 1,547.8. What do you mean by that?

Gen. GORGAS. That means if the number of men admitted to the sick report during that week should continue the same during the year, the rate would be that per thousand men in the Army, that there would be approximately 1,600 men admitted to sick report. That is, every man would get sick about one and a half times during the year.

The CHAIRMAN. What is the death rate in these camps throughout the whole Army?

Gen. GORGAS. It is eight per thousand.

Mr. TILSON. Per year?

Gen. GORGAS. All these figures are yearly figures.

The CHAIRMAN. Eight per thousand per year?

Gen. GORGAS. If those rates continue when we make our yearly report.

The CHAIRMAN. How does that compare with the mortality in the cities?

Gen. GORGAS. Of course, it is much smaller than it would be in the big cities. Take a city like the city of Washington, and the rate would probably be about 20 per thousand.

Mr. CALDWELL. That includes the old men and children, and women?

Gen. GORGAS. Yes; but that would hardly be a fair comparison.

The CHAIRMAN. What would be a fair comparison?

Gen. GORGAS. I think the figures of the Japanese-Russian war, in reference to the Japanese Army, which Mr. Shallenberger gave, would be a fair comparison. That is looked upon as being the best that the army of any nation has ever done.

Mr. SHALLENBERGER. Is it not true that it is the last great war with which we can make a comparison? There has been no great war since the Japanese-Russian war.

Gen. GORGAS. No, no great war.

Mr. ANTHONY. General, have you seen a statement—I think it was given out by a French medical officer in this country—that the percentage of mortality in the French Army is 1.8 per annum of the total number of men, and that includes the deaths in battle and the deaths due to disease.

Gen. GORGAS. I have not seen any such statement, but I should say from my general knowledge, that there is some mistake about it, because that is so much less than anything that has ever occurred before.

Mr. ANYHONY. That may apply only to deaths in battle; probably it does.

Mr. GORDON. It probably applies to deaths from disease.

Mr. ANTHONY. One and eight-tenths per cent.

Gen. GORGAS. That is probably true.

Mr. ANTHONY. And did you say that ours is 8 per cent per thousand?

Gen. GORGAS. Eight per thousand.

Mr. ANTHONY. What percentage of the total number would that be?

Gen. GORGAS. Eight per thousand would be eight-tenths of 1 per cent.

Mr. ANTHONY. Perhaps the statement of this French officer is correct, that their total number of deaths is 1.8 per cent, including all deaths by disease and in battle.

Gen. GORGAS. I think that would probably mean 18 per thousand by disease. That is about equal to the best reports we have ever gotten from any previous war, and the best we have ever gotten was in the Franco-Prussian War, in which the Germans lost from disease 18 per thousand.

Mr. SHALLENBERGER. What did you find out about those figures I suggested yesterday?

Gen. GORGAS. I found you were right, and I was wrong.

The CHAIRMAN. As I understand it, this average death rate of eight per thousand is an annual rate. Do you not expect that rate

even to be reduced, after this winter season breaks? Have you not had an unusual season to contend with?

Gen. GORGAS. We have had this epidemic of measles, which has raised the rate from 3 per thousand to 8 per thousand. Of course, it is difficult to predict what is coming along. Past experience with all great armies shows that when you get a big army together you have a much higher mortality than we have had yet. The best figure, as I say, that has been recorded is that of the German Army in 1871, in the Franco-Prussian War, which was nearly 19 per thousand. I would much rather answer that question two or three years from now. I hope it will be reduced; I think we are going to make the record of the world in this war.

The CHAIRMAN. Would it not be natural to suppose, as far as the camps in this country are concerned, that the men would be in a more healthy condition when this winter season closes? Of course, there are measles and things like that, that come on during the winter season.

Gen. GORGAS. I expect it will be better.

Mr. KAHN. I think the experience of all countries is that in the case of the first soldiers who go to the colors, the standard of health is a very high, and there is apt to be a letting down of the standard as subsequent calls are issued. If there should be any letting down in this country, the chances are that the percentage of mortality would increase correspondingly; is that not true?

Gen. GORGAS. Yes.

Mr. KAHN. And that is the experience of all countries, is it not?

Gen. GORGAS. Yes.

Mr. KAHN. It was so with England, as I understand it. The first troops who came to the colors were exceptionally strong and vigorous, and the health requirements of the English Army officials were very, very rigid. They subsequently let down on some of those requirements, and took men in who would have been rejected in the first call. Did that increase the mortality?

Gen. GORGAS. I can say from my general knowledge that it would, but we have been unable to get any figures so far in regard to the English and French Armies. But that is true in the case of all selected bodies of men. The insurance tables show the same thing.

Mr. KAHN. It is fair to assume if there is any letting down of the rigidity required at the beginning, there would be a corresponding increase in the mortality?

Gen. GORGAS. I have to agree to that, as a general proposition. We expect to do better than that.

Mr. KAHN. You hope to keep up the rigidity?

Gen. GORGAS. I do not see anything else that can come. We are having our let down now. I do not see what is to come after we get rid of the epidemic of measles.

Mr. KAHN. Were the figures correct that we saw quoted originally to the effect that out of 10 men examined for the National Army 6 were rejected because of physical incapacity?

Gen. GORGAS. I am pretty sure that is not the case. I have not gotten the detailed figures from the Provost Marshal General's office, but in general terms we have only called 2,000,000 men to get nearly 700,000 men.

Mr. GORDON. I think it was only 23 per cent in the report itself.

Mr. KAHN. I think the newspapers said 31 per cent.

The CHAIRMAN. I will ask you to put in the record, General, a detailed statement in explanation of the item for quarters for hospital stewards.

Gen. GORGAS. I will be glad to do that.

(The statement referred to is as follows):

United States:

6 single sets of quarters at permanent military posts.....	\$24, 000
4 double sets of quarters at Letterman General Hospital and Fort Sill...	30, 000
Repairs for all posts.....	20, 000

Philippine Department:

New quarters.....	12, 600
Repairs.....	2, 500

Total.....	89, 100
------------	---------

Mr. McKENZIE. I have a statement here, General, which has been given very wide publicity in the newspapers throughout the country, and I would like to ask you in regard to it. The statement reads as follows:

Five hundred men afflicted with tuberculosis have been withdrawn from the ranks at Camp Wheeler, Ga. The tuberculosis board reported that some of the men had the disease before being drafted, while some of them contracted it in camp. Lack of thorough physical examination was responsible for the acceptance of the first, lack of sanitary environment responsible for the second.

What do you know about that, General?

Gen. GORGAS. I would have to look up my records. It would strike me as being a large number. After the troops were taken in we sent special tuberculosis boards to all the camps, and those boards examined the men, and threw out those men who had consumption.

Mr. McKENZIE. It is not the policy of the Medical Department to permit any man to remain in the service who is suffering from tuberculosis, when that is discovered?

Gen. GORGAS. No. I think they are more nearly eliminated in this Army than they ever have been in any Army before, because we have these special tuberculosis men examining them.

Mr. SHALLENBERGER. How do you determine whether a man has tuberculosis?

Gen. GORGAS. We have all the leading tuberculosis men in the country engaged in this work for us. Originally a man would be taken before a draft board, and he would be examined by the local draft board, and they determine his deficiency, as well as they can. If they recognize tuberculosis, they do not take him in. If he is accepted he goes to the camp he is assigned to and there the members of the Medical Corps examine him and his reception into the Army is determined by their examination.

Mr. SHALLENBERGER. Have you got any infallible means by which you can determine whether a man has tuberculosis?

Gen. GORGAS. No.

Mr. SHALLENBERGER. I was told by the superintendent of the hospital at Las Animas, N. Mex., that practically everybody reacted to tuberculosis, and that there is no rule whereby you can determine when a man has tuberculosis, except in a dangerous case.

Gen. GORGAS. That is an absolute fact. Nobody can say, absolutely.

Mr. SHALLENBERGER. Sometimes a man will get by, in spite of anything you can do?

Gen. GORGAS. Yes.

Mr. MCKENZIE. I think it would be well for the general to put in the record the facts in relation to Camp Wheeler.

Gen. GORGAS. I will be glad to do that.

The tuberculosis examining board at Camp Wheeler reported 165 cases of pulmonary tuberculosis. Of these, 107 cases were recommended by the board for discharge and 58 cases were recommended for sanatorium treatment.

Mr. GREENE. General, is it not found by experience that when a large army is assembled, taken from the miscellaneous ranks of civil life, that there is a certain period that might be said—of course, I am using the terms of a layman—a certain period of incubation, in which certain incipient tendencies toward disease, which were not discernible upon a superficial medical examination, have every opportunity to develop, and to develop, perhaps, under the most unfavorable circumstances, because they develop in a mass of men who are trying to readjust themselves to an outdoor military life as a complete change from their comparative comforts and conveniences of civil life, and that your disease and mortality figures at the outset of the preparations for war are not fairly to be taken as standards of what may be the normal health conditions in the camps afterwards?

Gen. GORGAS. I think the history of all large armies like ours, large bodies of men brought together, is somewhat this. Say we have examined 2,000,000 men and out of that 2,000,000 we have taken in 600,000 or 700,000. Those examiners would throw out all the more evident cases of disease, and the same thing happens in the examinations made for insurance companies. Those cases are very similar.

When those men are brought to the camps, for the first few months their rate would be lower than the normal rate, and that would be expected. But very soon, from various causes, from being brought together in large numbers and because of the development of contagious and infectious diseases which begin to spread, the rate will begin to rise. That rate will be higher after that period, but it will be smaller than it was at the beginning.

Mr. GREENE. In other words, you have massed a good many men who develop some disease which may have been undiscovered at the time they were taken in, and they are now in a position to spread the disease, whereas in civil life they would have been taken care of.

The question of the lowering of the physical standard for admission to the Army is another matter I would like to ask you about, and also the statistics that are based upon the present physical standard.

I suppose we can properly assume that the fact that A, B, and C, out of a certain number of men, were rejected because they were physically disqualified by no means is to be taken to indicate that they were not healthy men. They fell off on some of the standards, but a large proportion of them, if not all of them, are likely to be normal, healthy men in civil life, and that does not indicate a dangerous stage of public health; is that true?

Gen. GORGAS. I think that is true.

Mr. GREENE. They probably have some slight deficiency in height, or discrepancy in weight, or perhaps they have some slight defect

in their eyes, but that does not indicate any serious condition of health.

Gen. GORGAS. Yes; I think that is true.

Mr. GREENE. Now, I would like to ask you a question in regard to the comparison of our Army with the Japanese Army in the Russian-Japanese War and with the German Army in the Franco-Prussian War. Are not these things taken into consideration: First, that the Japanese, by reason of their simpler life and long habit of dealing with more primitive conditions in their daily domestic and social life, more likely to be adaptable people in the field than people taken from our more highly developed social institutions, with greater physical conveniences and luxuries?

Gen. GORGAS. There may be some weight in that. When they understand what you are trying to teach them, they will willingly cooperate.

Mr. GREENE. That is appealing to the intelligence of the men after they get used to the work in the field. I am speaking of the transition period, when they start from civil life. Would you expect our people would be more easily adaptable than the Japanese, who are living under more primitive conditions?

Gen. GORGAS. I would agree to that as a general proposition. I think because of the rearing of our men they are harder to discipline than the Japanese. The latter come in as a disciplined people when they start.

Mr. GREENE. And they are used to more frugal fare and they might more easily make that transition, but you think that from the time after that appeal to the higher developed intelligence of the Americans the balance begins to show in our favor?

Gen. GORGAS. I suppose the Japanese when he comes in fares better than he does at home. They are fed better than when they are at home. Our men, as a rule, are fed better than at home.

Mr. GREENE. But the wonderful record of the Japanese is always cited to us.

Gen. GORGAS. But the principal thing in the case of the Japanese is that they were the first people in a great war who had more men killed on the field of battle than the number who died from disease; but they had a heavy death rate from disease.

Mr. GREENE. The thought occurs to me—and I would like to have your opinion about it—whether or not the people of Japan, being a people who have been accustomed to a more frugal and simple fare, and less luxurious modes of living among the masses—whether or not they would be more easily adaptable to the rigors of military camp life than people taken out of conditions under which our people live?

Gen. GORGAS. I think not. I think our people are more or less normally underfed; but I should imagine that the Japanese would be less prepared. I think they are also underfed.

Mr. MORIN. What is the Japanese death rate?

Gen. GORGAS. From 20 to 22 per thousand.

Mr. GREENE. Your health statistics, as far as the camps are concerned, often depend on the character of the campaign. For instance take the Franco-Prussian War, where the Germans made a pretty quick clean-up. There was not an opportunity for what we might call camp stagnation and the other attendant physical pull-downs that come from long periods of inactivity in close quarters. You

take those things into consideration in making estimates as to comparative health conditions?

Gen. GORGAS. Yes.

Mr. GREENE. For the present, our nine months of war ought not to be compared with the quick action of the German troops in France in 1871. We have been laboring under more depressing conditions than they were.

Gen. GORGAS. I think we can say that.

Mr. ANTHONY. When the selection of the sites for the cantonments was made was your department consulted as to the sanitary advantages or disadvantages of these sites?

Gen. GORGAS. That question did not come to my office. The sites were selected by the department commanders. The department commanders appointed boards to select the sites for the cantonments, and on each one of those boards there was a medical officer.

Mr. ANTHONY. Your department has made a subsequent investigation?

Gen. GORGAS. Yes; I have seen most of them.

Mr. ANTHONY. Is it true that some of the sites are not ideally located, from the standpoint of military sanitation?

Gen. GORGAS. All that I have seen are very good. I have made some criticisms of Camp Funston.

Mr. ANTHONY. As you know, that large cantonment is located on the flat of a river bottom, without apparent natural drainage, and I wanted to ask if it was possible for a site of that kind to be selected without the approval of the medical officer.

Gen. GORGAS. No; there was always a medical officer on the boards that selected the sites.

Mr. ANTHONY. Do you know in that particular case what the recommendations of the medical officer were as to that particular camp site?

Gen. GORGAS. No; I do not.

Mr. ANTHONY. What I want to try to do is to fix the responsibility for the location of that camp site in such an apparently disadvantageous location. You have no means of knowing what the recommendations of the medical officer were who was on the board that selected that site?

Gen. GORGAS. I could find that out for you.

Mr. ANTHONY. I wish you would find that out and put in the record the name of the medical officer who approved or disapproved that camp site, with his reasons.

Gen. GORGAS. Yes, sir. Capt. S. J. Turnbull, Medical Corps, was the medical officer on the board which recommended the site of Fort Riley, Kans., at which point Camp Funston is located.

Mr. ANTHONY. Were not some of these camps located, or at least one of them, in a region concerning which it was brought to the attention of the Secretary of War afterwards that it was located in a region of the country peculiarly susceptible to certain diseases, or where certain diseases had been prevalent?

Gen. GORGAS. As a matter of fact, Camp Funston is located in a section of the country that has, so far as spinal meningitis is concerned, a higher rate than the rest of the country. That is what I had in view in my report.

Mr. ANTHONY. Did you bring that to the attention of the Secretary of War?

Gen. GORGAS. I did, when my report came in.

Mr. ANTHONY. Was that before or after the camp was built?

Gen. GORGAS. That was after it was built. It was early in December when I was there.

Mr. ANTHONY. So far as the responsibility for the selection of these camp sites is concerned, if a report had been asked of your department, that would have been brought to the Secretary of War in time to have avoided a location such as that at Camp Funston?

Gen. GORGAS. It would have been brought to the attention of the Secretary of War. I do not think I would personally recommend that a camp be not located on that site for that reason. If there is any military advantage in locating it there, I would favor locating it there, and I would take steps to protect the men in the camp.

Mr. ANTHONY. Does spinal meningitis thrive in such a location, on a flat, where there is imperfect drainage, and which in the rainy season becomes muddy and wet?

Gen. GORGAS. No; spinal meningitis is a contact disease, and would be contracted in a way similar to the way in which measles is contracted. It would be more a question of the general condition of infectious diseases.

Mr. ANTHONY. From the standpoint of medical sanitation, is not one of the first requisites in the selection of a military camp site that there be natural drainage on the site?

Gen. GORGAS. Yes.

Mr. ANTHONY. What would have recommended the camp site where Camp Funston is located, in any way, to a medical officer who was on the board selecting that site?

Gen. GORGAS. Nothing in the camp site itself. I inquired what the probable reasons for the selection were.

Mr. ANTHONY. It is true, is it not, if the camp had been moved a mile back, a proper site could have been found, in the rolling country a mile back from the present site?

Gen. GORGAS. It would have been a very much better site.

Mr. ANTHONY. I want to try to fix the responsibility for the awful error in building that great cantonment on that river bottom, which everybody knows in time of high water completely overflows, and at times of excessive rainfall becomes impassable for any body of men, or for animals, or anything of that kind.

Gen. GORGAS. I will have to look that up. My understanding is that the department commander had charge of the selection. He was advised by this board as to the question of selection.

Mr. ANTHONY. Then he would have had authority to have gone over the recommendation of the board that originally acted in reference to the selection of the sites?

Gen. GORGAS. He had entire authority.

Mr. ANTHONY. You would not be able to tell us whether the action of the board had been followed in that case?

Gen. GORGAS. No; but I could find that out for you.

Extract from a report, dated Chicago, Ill., May 15, 1917, of a board of officers appointed to report upon available camp sites for cantonments in the fourteenth divisional area, Central Department.

"After due deliberation upon the relative advantages and disadvantages of all of the sites inspected, as well as from a consideration of many less desirable sites offered to

the board for its inspection, it is the opinion of the board that the most suitable site within the fourteenth divisional area that can be found, all features being considered, is the United States Military Reservation at Fort Leavenworth, Kans., and the board makes its recommendation accordingly.

"The board considers the site at Colorado Springs and the site at Fort Riley available and adaptable for the purpose. Of these two sites the board considers Colorado Springs preferable."

This report was signed by each member of the board. Capt. S. J. Turnbull, Medical Corps, was the medical officer of the board.

Camp Funston is located at Fort Riley, Kans.

(Old files, A. G. O. Feb. 8, 1918.)

Mr. ANTHONY. It would be interesting to put that in the hearings, because we hear so much about that, and I would like to try to fix the responsibility for the selection of that site.

Now, in reference to Camp Doniphan. Have you ever heard any complaint in regard to the water supply at Camp Doniphan?

Gen. GORGAS. I was at Camp Doniphan recently. We get reports very frequently from our inspectors. My general impression was that we heard those complaints as to the appearance and odor of the water. I saw it myself when I was there, and I heard the complaints.

Mr. ANTHONY. The men complained to me that it was offensive to wash their faces in that water.

Gen. GORGAS. I think probably that is true, at times. It is a common attribute of waters that have algae in them.

Mr. ANTHONY. It is caused by decaying vegetable matter?

Gen. GORGAS. Yes. Our water expert reported the Camp Doniphan water as being good water.

Mr. ANTHONY. So that the full responsibility for the selection of those two camps sites would be on the commanding officer of that department.

Extract from a report of a board of officers, dated Fort Sam Houston, May 24, 1917, appointed for the purpose of selecting and investigating divisional cantonments and training sites in the Southern Department.

"The following places in Oklahoma were considered and were found not suited for camp sites for the following reasons:

"1. Fort Sill.

"2. Camp Lawton.

"In the neighborhood of these places, and particularly of the reservation, are to be found the best of training sites, but the water supply at Fort Sill has failed and the maximum that Lawton can furnish is 300 gallons per day, and this is now being entirely used by Fort Sill. To insure an adequate supply of water would be required the laying of a 7-mile pipe line and other construction, which is now out of the question.

"If a site be selected in Oklahoma, the board believes that the one in the neighborhood of McAlester is the best obtainable in the State, but attention is invited to the fact that training in this locality would be interrupted by winter weather."

This report was signed by each member of the board. Maj. J. R. Shook was the medical officer on the board.

Camp Doniphan is located near Fort Sill.

(Old files, A. G. O. Feb. 8, 1918.)

FORT SAM HOUSTON, June 6, 1917.

The ADJUTANT GENERAL,
Washington.

Number 5373. Referring to Fort Sill as site for division cantonment the board of officers reported that Sill was unsuitable on account of lack of water period. This objection appears to no longer exist and Fort Sill, like Fort Worth, Waco, Dallas, Houston, and San Antonio is available as a camp site saving advantage of being on

Government land period. As compared to San Antonio it has the disadvantage of lack of storehouses, roads, distributing system of water, and sewer connection, making a difference of perhaps \$200,000.

PARKER.

Gen. GORGAS. Yes; that is my impression. I would have to look that up and see if that is correct. I know in a general way that those papers came to Washington, but my impression is that that matter was left entirely to the commanding officer of that department.

Mr. ANTHONY. Are you convinced as to the advisability of concentrating men in these very large military cantonments? Is it more advantageous to put them in that kind of cantonments than to concentrate them in smaller groups?

Gen. GORGAS. I would say, as a general proposition, the greater the segregation the better it would be from a health standpoint.

Mr. ANTHONY. Do you believe that the idea of having steam heat in a military camp is the correct idea, from a medical standpoint?

Gen. GORGAS. Yes, as a general proposition, I think it is.

Mr. ANTHONY. It has been brought to my attention that in the military camps which are not steam heated, and which have very simple conveniences, there has been almost no death rate, and very little illness, whereas, in the large steam-heated camps the death rate has been high, and the sick rate also. Has that been brought to your attention?

Gen. GORGAS. Yes, sir, but the contrary is the case. But I think that has nothing to do with the steam heat. It is a question of epidemics.

Mr. ANTHONY. I do not refer to the tented camps, General. I am referring to the wooden cantonments without the steam heat. It has been brought to my attention that they were healthier than the ones which had the steam heat.

Gen. GORGAS. I can not be positive whether in a cantonment like Camp Meade the men's barracks are heated by steam. All of our hospitals there are heated by steam, and I think the whole cantonment is heated by steam, but I am not sure about that.

Mr. ANTHONY. In reference to the matter of hospital ships, the Army has operated hospital ships in the past, has it not?

Gen. GORGAS. Yes.

Mr. ANTHONY. And a few years ago they turned over the hospital ships they possessed to the Navy, did they not?

Gen. GORGAS. Yes, after the Spanish-American War.

Mr. ANTHONY. The Army owned the *Solace* and the *Relief*?

Gen. GORGAS. The *Relief* and several others.

Mr. ANTHONY. But all the hospital ships have been transferred from the Army to the Navy?

Gen. GORGAS. They have been disposed of; I think they were transferred to the Navy.

Mr. ANTHONY. If our Army in France sees service in the field in a short time the emergency will confront you of looking after the transportation of the permanently disabled men back to this country. Have you formulated a plan yet as to how you will do that?

Gen. GORGAS. We have formulated our plans, but the question as to who is to bring them back has not been decided, whether we will do that or the Navy.

Mr. ANTHONY. It is still a disputed question whether the Army or the Navy shall undertake that?

Gen. GORGAS. Yes.

Mr. ANTHONY. Would it not be advisable to have a matter like that settled now?

Gen. GORGAS. I think it is very necessary to settle it as soon as possible.

Mr. ANTHONY. Where is that matter pending now?

Gen. GORGAS. The matter is pending between the two departments. I saw the paper this morning that came back to me, but I have not had time to read it to see what was the final decision.

Mr. ANTHONY. What was your recommendation, that the hospital ships be operated by the Army under the control of your corps?

Gen. GORGAS. As far as I am concerned, that would be my recommendation.

Mr. ANTHONY. And it has been your recommendation?

Gen. GORGAS. Yes.

The CHAIRMAN. General, I have been asked a good many times just exactly what is the Sanitary Corps. What is the difference between the Sanitary Corps and the Medical Department proper, and how is the Sanitary Corps organized?

Gen. GORGAS. The Sanitary Corps is one of the divisions of the Medical Department. When the question came up of getting these men for these ambulance companies to go to France, we pointed out that the only means we had for commissioning people was to put them in the Medical Corps, and a man to get a commission in the Medical Corps had to be an M. D. Under the draft act passed last year the President had authority to authorize other corps.

THE CHAIRMAN. You mean the Sanitary Corps was organized under that section of the draft act providing for the organization of special and technical troops?

Gen. GORGAS. Yes. The President then issued two orders, one making a separate organization for the Ambulance Service, and then we asked for another organization for the Sanitary Corps, in which we could get anybody who was necessary for our work. What we wanted principally at that time were sanitary engineers for drainage work in connection with the operations against mosquitoes.

But the principal expansion of that corps comes from the use of the men in the gas-mask work. We have more men in the gas section than any other. It was authorized and is used by us to get in men of that sort.

The CHAIRMAN. What is the strength of the corps; how many officers are there in the corps and what is their rank?

Gen. GORGAS. We are allowed about 1,300 officers in that corps, and the grade of major is the highest grade. I do not think we have any higher grade than that in the Sanitary Corps, but I will get you those details and put them in the record. Majors, 25; captains, 134; first lieutenants, 563; total now in service, 722.

The CHAIRMAN. You say there are about 1,300 officers allowed in the Sanitary Corps?

Gen. GORGAS. Yes; one per thousand.

The CHAIRMAN. How many men?

Gen. GORGAS. About 4,000 enlisted men; that is, specified in numbers. We have not enlisted very many men so far—only 600.

The CHAIRMAN. General, have you in your department any other organization of special or technical troops?

Gen. GORGAS. We have the Veterinary Corps.

The CHAIRMAN. As provided for by law?

Gen. GORGAS. Yes; that is provided for by law.

The CHAIRMAN. I mean any organization of such troops, organized under the provisions of the act of May 18, 1917.

Gen. GORGAS. No; I think those are the only two organizations.

The CHAIRMAN. The Sanitary Corps and the Ambulance Corps?

Gen. GORGAS. Yes.

Mr. CALDWELL. General, did you personally inspect the hospital at Camp Mills, on Long Island?

Gen. GORGAS. Yes.

Mr. CALDWELL. Under whose supervision was that hospital erected?

Gen. GORGAS. It was erected on a requisition from our department, as other hospitals are, and was put up by the Quartermaster General's Department, but it was a very temporary affair, and just a few rough board buildings when I was there.

Mr. CALDWELL. Generally described, the buildings are just long sheds, closed in on either side, with windows and a door, without any porch in front, or any means of anyone getting from one room to another without going outside and around?

Gen. GORGAS. That was true.

Mr. CALDWELL. You saw that that whole camp was set in the center of a truck farming district, where they use stable manure for a fertilizer?

Gen. GORGAS. I saw where it was located.

Mr. CALDWELL. And you saw that billions of flies were swarming all over the whole place?

Gen. GORGAS. I would have to look at my report to see about that.

Mr. CALDWELL. Flies are germ carriers, are they not?

Gen. GORGAS. To a considerable extent.

Mr. CALDWELL. How did it happen that all the officers' quarters were fully screened with copper wire screens and that the hospital did not have a screen in it?

Gen. GORGAS. I could not say about that. Did you see it?

Mr. CALDWELL. I was there and talked with the medical officer and asked him how it happened, and he said he had requisitioned screens, but none had come.

Gen. GORGAS. It was under my supervision, but in the case of any hospital, the camp commander is the supreme officer. It would be our business to see that the things were there.

Mr. SHALLENBERGER. That was a National Guard camp?

Gen. GORGAS. Yes.

Mr. CALDWELL. Is it not a fact that practically every National Guard camp has fewer hospital facilities than any of the other camps?

Gen. GORGAS. No; I think not. I think the hospitals are all the same size, irrespective of where they are located.

Mr. CALDWELL. At the time I was complaining of, and when I talked to the medical officers there in relation to the conditions at that hospital, there were two hospitals built within a mile of it at

the flying field, both of which were fully screened and both of which had entrance halls, and places where the nurses could go from one room to another without having to go outside.

Gen. GORGAS. That was the case with all camps looked upon as being permanent camps. They all had permanent hospitals built from the beginning.

Mr. CALDWELL. You know, do you not, that Camp Mills was designed as an embarkation depot, a point to which men were going to be sent, who were going abroad?

Gen. GORGAS. I would have to look that up and see what the intention was.

Mr. CALDWELL. Did you examine the condition of the water supply there?

Gen. GORGAS. Yes.

Mr. CALDWELL. Do you know how deep the water pipes were put under the ground there?

Gen. GORGAS. I do not recollect, but I can furnish you that information, as far as our office is concerned. In some places pipes were only one foot deep, while in other places, two feet. Around the bath house risers were unprotected from frost.

Mr. CALDWELL. Was it ever called to your attention that the water pipes were only two feet underground, and that the frost went down four feet eight inches under ground there?

Gen. GORGAS. That may be so; I would have to look that up to be sure about it.

Mr. CALDWELL. Did you have anything to do with the selection of the site in a case where you knew it was located on a low, level, sloppy section of land?

Gen. GORGAS. When I was there last, it appeared to be fairly dry.

Mr. CALDWELL. Did you see it during the rainy season?

Gen. GORGAS. No; it was dry when I was there.

Mr. CALDWELL. Was your sanitary squad called upon in the matter of draining that sort of ground?

Gen. GORGAS. The way the drainage is done, our sanitary officers recommend it, and the quartermaster does the work.

Mr. CALDWELL. In locating a site, do you think it ought to be on a level stretch of ground, the same distance from the railroad and water, or other transportation facilities, if you can secure a site on rolling ground, or would you put it on the level ground?

Gen. GORGAS. Leaving out the military consideration for the selection of the site, and considering it from the sanitary site, I should say it should be on the rolling ground.

Mr. CALDWELL. Can you think of any particular reason, other than that this site was near to the Garden City Hotel, why this site should be selected, when just a mile away was a beautiful site, on rolling ground?

The CHAIRMAN. Gen. Gorgas says he had nothing to do with the selection of the site.

Mr. LUNN. If your Sanitary Corps recommends certain drainage work to be done, then it is up to the Quartermaster's Department to carry that out?

Gen. GORGAS. Yes.

Mr. LUNN. Suppose they do not do it. The point I am getting at is as to the authority, whether the ultimate authority to get that done rests with you, and whether you can go ahead and do that work, or whether you can be checkmated by the military authority on sanitary matters.

Gen. GORGAS. It is the business of the chief surgeon to let the commanding general know about it. If he does not carry it out, then the monthly sanitary inspection report comes to me, and I deal with it in this way: I have inspectors in my office, and they would make a report to me in regard to that camp, independently. If I think the things recommended ought to be done, then I send this recommendation to the Chief of Staff, that this particular camp is not properly drained, and then the Chief of Staff asks the division commander why it is not done.

Mr. LUNN. Let me put it another way. Suppose your men go through a camp, and there are certain things in the camp which they do not like, have they the authority to say this thing must be changed, or has the military commander authority to decide whether or not they shall be changed? Has he the authority to say they shall not be changed if he does not want them, it does not make any difference what you want?

Gen. GORGAS. There is no authority outside of the military authority in the Army for things of that kind.

Mr. LUNN. If the question did become acute, you would be powerless if the military authority did not agree with you?

Gen. GORGAS. Yes.

Mr. LUNN. Do you think that is wise?

Gen. GORGAS. In just such a thing it would be much better if I had the authority to go into a camp and order certain things done, but from a military point of view you see what bad business that might be. For instance, take it in France, you can see how bad it would be for a medical officer, if he should go into the trenches and find a battalion half dead from all sorts of diseases, if he had the authority to say, "You move that battalion back," and the commander had to do that.

In Army life, at least, at the present time, we are to fight, and we have to whip the Germans, and everything has to be secondary to that. The medical officer ought to have some good reasons for wanting to have anything done.

When I make these reports these things ought to be done by the division commander, if the Chief of Staff believes in me.

I do not believe in any military machine it would be feasible or advisable to give the medical officers such authority as you suggest. Would you suggest that it would be advisable in the case I cited?

Mr. LUNN. I would not go so far as to take into consideration the actual fighting situation. But in these camps, if you were to go into camp, and there are certain conditions there that you do not think are right, my point was whether you have the authority to change them, if there was a division of opinion between the Medical Department and the division commander?

Gen. GORGAS. No; I have not the authority to change them.

Mr. LUNN. It seems to me that in reference to medical matters in permanent or semipermanent camps your word ought to be final so far as questions of health are concerned.

Gen. GORGAS. You see the difficulty that even that would involve. Suppose I should make various recommendations that I think ought to be carried out, on my say so. I did make some recommendations. I would have built the permanent hospitals and put steam heat in all cantonments and I would have kept the troops out; I would have said, do not let the men go in there until the hospitals is finished. I would have advised against it, and if I had had entire power would have probably carried that into effect.

Mr. LUNN. Of course, it might be because of certain things you do not know about in military strategy the men must go there, if they can take care of them. But the question is whether there has arisen any serious diversion of opinion where your opinion might be overruled disadvantageously. I am not particularly interested in the theoretical side of it, but I was interested in knowing whether such a situation as that has arisen.

Gen. GORGAS. I suppose these questions must have been discussed, and I presume my suggestions were turned down for good reasons, such as I spoke of.

You might take, for instance, the question that came up on yesterday in regard to a laundry at Camp Doniphan. When I was out there the building was finished, but the machinery was not in. It would have been a very good scheme in that particular case if I had had the authority to say, go ahead and put in the machinery; it is very much needed. But how you are going to define that authority, I do not know.

Mr. LUNN. Is it not a subject deserving of study, to the end that there might be certain changes brought about by legislation?

Gen. GORGAS. I think so. If I could change it as I want to, I would get up some scheme so that a responsible authority, either the Chief of Staff or the Secretary of War, would act within a reasonable time upon my recommendations, so that I could know what to do, in the case, for instance, of the suggestions I have made about these camps, suggesting that the troops must not go in there until the camps are finished. It seems to me the machinery might be improved if we had some scheme so that within a week such a recommendation could get back to me, so that I could see what the position of the higher authority was without unnecessary delay. If a scheme could be brought about so that we could get prompt action on our recommendations, I think it would be a very good thing.

Mr. TILSON. Do you not think in a big industrial concern outside of the Government, instead of having a report which would take a month to get around and be effective, that they would instantly recall the men in charge of that work by telephone, and say "what about this," and settle that matter immediately, before the thing went any further; and do you not think if we could cut loose from a lot of this report writing, and the writing of indorsements, and the action upon indorsements, and could handle the matter just as they do in a big industrial concern, where one man goes to another and settles the matter at once, we would get better results and get them more quickly?

Gen. GORGAS. If it could be done.

Mr. TILSON. Why can it not be done, even if it is not quite so accurate, and even if there were a few slips made now and then; in the long run, would it not be a much better system?

Gen. GORGAS. That strikes me as being utterly impracticable and out of the question. If you were only dealing with one camp, it would be all right. How is any official like the Chief of Staff to deal with 58 camps in that way? There would probably be coming from these camps some recommendations in regard to which machinery much lower down than the Chief of Staff can be used for getting action. I do not see how such a scheme could be made effective. How would you propose to do it?

Mr. TILSON. I would have a method somewhere between the method I have suggested, and the long roundabout methods that are now in existence, and I think I would cut it down as much as possible, and I would get the information in a more expeditious way.

Mr. GREENE. The bane of the practice is summed up in the words "through military channels." It passes through too many men.

Mr. GORDON. It appears that when the men in the last increment were called into service in November and December, the Chief of Staff was in possession of a notice from the Quartermaster General that he, the Quartermaster General, would be unable to clothe those men until the 31st of December. Was the Medical Department consulted as to the effect upon the men of calling them into these cantonments without sufficient clothing and blankets for them?

Gen. GORGAS. It was not.

Mr. GORDON. What was the effect on the men who were called in and not given clothing, but simply supplied with these blue cotton jumpers in lieu of uniforms and blankets?

Gen. GORGAS. A great deal of discomfort, I think, was caused by that, but I am not prepared to say that it has any marked effect upon the health of the men.

Mr. GORDON. Do you not think it added materially to the cases of disease?

Gen. GORGAS. I am inclined to think not.

Mr. GORDON. The weather was extremely cold in the month of December in most of these camps, was it not?

Gen. GORGAS. Yes.

Mr. GORDON. Would not the fact that the men were not adequately clothed have rendered them more susceptible to pneumonia and other diseases?

Gen. GORGAS. That is a very general belief. I am not prepared to say that I am in accord with that general belief. I have seen the severest epidemics of pneumonia that I have ever had to deal with in the tropics. I may add that pneumonia and measles are spread by contact.

Mr. GORDON. Do your statistics of the diseases in these different camps show a larger proportion of men on the sick list in the camps where inadequate blankets and clothing were furnished than in the other camps?

Gen. GORGAS. They do.

Mr. GORDON. They show a larger proportion?

Gen. GORGAS. Yes; I am speaking in general terms.

Mr. GORDON. If that is true, would not that be rather convincing evidence that the inadequacy of the clothing provided for these men was the direct cause of these diseases?

Gen. GORGAS. I think not; I think that is due to other causes.

Mr. GORDON. You think other causes contributed to that?

Gen. GORGAS. Yes.

Mr. GORDON. What other causes were they. Are you prepared to say that?

Gen. GORGAS. Yes; I think the greatest cause was the fact that in these camps which have been so much affected there were among the troops there a much larger proportion of people who had not had measles, that they came from the southern and more sparsely settled parts of the country, and those men had not had the measles. When they were brought into the camps, the measles spread. If you have a thousand cases of measles, you would have a considerable number of cases of pneumonia.

In the other camps, in which there were not so many cases of measles, the men came mostly from the large cities, and those men had had measles before they went to the camp. Our figures would rather prove that than the other as being the principal cause.

Probably the post which has had the largest number of measles cases is Camp Wheeler, where they had about 3,000 cases, which was one-tenth of the total number of men in the command. That is, there were about 30,000 men in Camp Wheeler, and about 3,000 of those men had measles. They were the southern troops, some of them from my State, and others from Florida and Georgia.

At Spartanburg, where the troops were from New York, there were very few cases of measles, not more than 300 cases altogether. Camp Wheeler is also one of the camps where they had the largest number of pneumonia cases, whereas, there were comparatively few at Spartanburg. That is what our figures would bear out, in general terms.

Mr. GORDON. Is it not also true that men coming from the southern part of the country would be apt to suffer more from exposure as a result of inadequate clothing than men coming from northern latitudes?

Gen. GORGAS. They might, if they had less clothing on. My personal experience does not bear that out. In my 20 years in the tropics, I did not feel any personal discomfort during the first winter after I got back to the more northern climate; I did not suffer from the cold in the United States, and I do not think the men, as a general rule, feel particularly the cold, when they come north from the south, but I could not give you any statistics on that subject. I do not think my opinion on that subject is worth very much. It is worth no more than yours would be on a subject of that kind.

Mr. GORDON. It would seem to me that men coming from the southern part of the country, and especially where they are sent to a latitude north of where they have been accustomed to living, would suffer more from the cold, with the same amount of clothing, than men coming from northern latitudes.

Gen. GORGAS. That may be. Our experience in the Spanish-American war would not bear that out. You may remember that a great many men were sent to Florida in order that they might be acclimated, but when they got to Cuba, they were the worst used up men that you could imagine. And the men who were sent direct from New York to Santiago were in very much better shape than the men who were sent to Santiago from Tampa, Fla. The men who were sent to Tampa became infected with malaria. Personally, I do not believe that climate has much to do with disease.

Mr. TILSON. General, is it customary to perform autopsies on the bodies of soldiers who die in our camps?

Gen. GORGAS. We do that wherever we can. I think that is the general custom.

Mr. TILSON. If an autopsy is performed, is it in accordance with your regulations that the body should be again prepared in as nearly a normal state as possible?

Gen. GORGAS. Yes.

Mr. TILSON. We heard the other day in a speech in the Senate an illustration of a case in which it seemed there had been an autopsy performed, and then the body had been left without any care at all, without even wiping the blood from the man's face. Do you understand that to be just an isolated case?

Gen. GORGAS. Am I expressing just my personal opinion now?

Mr. TILSON. If you have any official facts, we would like to have the information, because this case and others like it are brought to our attention, and if you can give us any information in regard to it, we would like to have it.

Gen. GORGAS. I will get the facts in that particular case.

(The name of man, camp, and other details we found unavailable and it is impossible to secure the facts asked for.)

What is generally done is this: The autopsy, if performed, is done with the permission of the friends of the men or some responsible person. That permission is obtained before the autopsy is performed.

Mr. SHALLENBERGER. Is that the rule; should that always be done?

Gen. GORGAS. Yes, that is the rule.

Mr. TILSON. It happened that within 30 minutes of the time when Senator Chamberlain referred to this particular case, a member of the House, coming from a part of the country different from where this case is supposed to have occurred, told me of an exactly similar case, with the exception that in the case of one man there was a cloth thrown over the corpse, and in the other case not even a cloth was thrown over it. The second case was in an entirely different camp. That is the reason I ask whether it was common for these autopsies to be performed, and if so, what are the requirements of the regulations after the autopsy is performed, in regard to the care and disposition of the body?

Gen. GORGAS. The requirement is that the officer in charge of the hospital is responsible for the man's body, and he should see that the body is decently prepared, clothed in the man's uniform before it is finally shipped, and then he calls upon the quartermaster to have the body embalmed and shipped. But it is the duty of the officer in charge to see that everything is decent and in order.

The CHAIRMAN. You mean the doctor gives the order, and it is actually executed by the Quartermaster's Department?

Gen. GORGAS. The order for the embalming; yes.

The CHAIRMAN. The execution of the order is in the hands of the Quartermaster's Department?

Gen. GORGAS. Yes.

The CHAIRMAN. So that in the case of a failure to obey the orders, the Quartermaster's Department would be responsible?

Gen. GORGAS. It was the duty of the commanding officer in the case Senator Chamberlain referred to, when the body was ready for ship-

ment, to have somebody see that it was decently prepared and properly shipped.

The CHAIRMAN. It was his duty to see that the Quartermaster's Department had executed the order properly?

Gen. GORGAS. Yes.

Mr. LUNN. May I ask whether, in the case of a body being sent back to the parents of the deceased soldier, the expense is borne by the War Department, or is it, as one newspaper has said, sent C. O. D.?

Gen. GORGAS. The expense is borne by the Government. I have investigated many cases where undertakers at the camp notified friends of the death and got an order to take charge of and ship the body. The friends do not know that the Government is going to do it and the undertaker gets authority from friends to take charge of the body and ship it.

Mr. LUNN. Possibly you saw the story of the case of a poor family, where the body of a soldier belonging to that family was shipped, and there were \$45 charges on it, and the resident undertaker paid the charges for those people.

Gen. GORGAS. I saw that.

Mr. TILSON. I would like to ask you a question in reference to the overheating. You have testified that you do not believe the matter of cold or exposure has had much to do with the cases of disease. Can you say with the same regard to overheating of the buildings at the National Army camps?

Gen. GORGAS. I think overheating is objectionable. I do not think, however, that overheating has had much to do with the high percentage of pneumonia cases.

Mr. TILSON. I have been at Camp Devens on two different occasions, and it happened to be fairly warm weather for that time of the year, late in November, and in both cases every building I went into was so roasting hot that you could hardly endure it. I should say the thermometer was not less than 100 degrees in every building I went into, and there was no possibility of shutting the steam off. There were no valves on the radiators, and there was no way of shutting the steam off, and every building there—I was in all of them—had the windows wide open. It would not have been comfortable without any heat, but it was a comparatively warm day and the temperature in those buildings was simply roasting, in every building I went in, and I was there twice.

Mr. LUNN. You mean that there were no valves on the radiators, so that you could regulate the heat at the radiators?

Mr. TILSON. There were no valves, except the main valve at the heating plant. The heat could not be turned off unless it was all turned off.

Mr. OLNEY. In the case of men with measles, they succumb quite easily to pneumonia, do they not?

Gen. GORGAS. Yes.

Mr. OLNEY. I have heard it said that the camp doctors are, in a large measure, responsible for the great number of pneumonia cases because they do not allow the patients to sufficiently convalesce from measles, so that they easily take pneumonia. Should it not be a part of the duties of the camp physicians to see that the men with the measles are properly taken care of, and that they are thoroughly

recovered before they are allowed to go about, so that they will not be so susceptible to pneumonia?

Gen. GORGAS. We have sent around notices that the men with measles should not be returned to duty within less than two weeks, and there is nothing in our figures to show that we have a greater proportion of measles to pneumonia than ordinarily. It has not been a very great factor, so far as the proportion of the cases of pneumonia is concerned.

Mr. OLNEY. I would like to mention an isolated case, and the story about these isolated cases is disseminated quite broadly.

This is a case that came to my attention, where a patient had a severe cold and was given a cot without any mattress. They said the mattresses had all been shipped abroad, and this man slept on a thin blanket thrown over a single spring bed or cot. This man was finally sent to the Walter Reed Hospital and died of scarlet fever about 10 days ago, about 20 minutes of 4, one afternoon. Has the demand for this kind of supplies been met at the camps; that is, for mattresses and other furnishings of the bed?

Gen. GORGAS. Yes. There has been no lack of those supplies, even at Camp Meade. I would like to get hold of that case and see why that man did not have a mattress. As far as we know, there are plenty of those supplies on hand.

Mr. OLNEY. That man's body was shipped to Boston, apparently, by the paying of an extra fare. That was done through the undertaker. Will that man's family be remitted the amount of that fare?

Gen. GORGAS. The Quartermaster's Department, I understand, allows \$75 for the shipment of the body. I can get that information for you. That is a detail which is in the hands of the Quartermaster's Department, which has charge of the shipping of the bodies. I expect, if there was some mistake, the amount would be refunded. They probably gave the undertaker authority to take the body.

Mr. OLNEY. The family will be remitted that amount in due time, I suppose?

Gen. GORGAS. I presume so. I will be glad to look that up.

The bodies of deceased soldiers are returned to their homes at the expense of the Government. Should the body of a deceased soldier be sent home "charges collect," this would be an error and when reported to the Quartermaster General's Department would be promptly and thoroughly investigated and the family reimbursed for the amount of the charges paid.

Mr. OLNEY. The undertaker, as a matter of fact, charged the family \$240. I think particular attention has been called to that case.

Mr. HULL. What is the attitude of your department toward the organization of the Purple Cross, to attend to the bodies of these men after death?

Gen. GORGAS. I should be delighted to turn the bodies over to them. I think it would be a very good thing.

Mr. HULL. You say the Quartermaster General's Department attends to it. Do they have an organization to attend to it?

Gen. GORGAS. They have several organizations of undertakers in their department, but as a general rule, this is done by contract with the local undertaker at the various camps.

Mr. HULL. You really would be in favor of recommending some sort of an organization like the Purple Cross?

Gen. GORGAS. I have passed adversely on that proposition, but that was because it was brought to me in this way:

An apparently very well educated man came into my office one day. I do not think I ever heard a more interesting talker. He outlined a plan of undertakers for the department, and the ground he took was this, that it would probably do more to whip the Germans than anything else the Government could do—that if a man knew that his body was going to be taken care of in this fine fashion, no man would object to being killed. He actually used that argument with me, and he submitted a scheme that provided for a major general who was to be the chief undertaker, and six brigadier generals, with an organization bigger than our Medical Corps. That was the proposition which was put to me.

Mr. HULL. This organization would be sort of independent of the Army, organized and operating along the lines of the Red Cross; is that not true?

Gen. GORGAS. This proposition brought to me provided that the undertakers' organization would be a part of the Medical Department.

Mr. HULL. Which do you think would be the better, to have the organization in the Army, or to have it independent, as the Red Cross is?

Gen. GORGAS. I would think from what I know it would be better to have it in the Army. It would have to be everywhere, so that it would be accessible when needed.

Mr. HULL. It would be possible, would it not, if you were given authority, to organize such a department in your organization?

Gen. GORGAS. Yes.

Mr. HULL. You think that would be desirable?

Gen. GORGAS. I do not think it would be desirable to commission the men in such an organization.

Mr. HULL. I do not care about that. You are opposed to the pharmacists having commissions. What do you pay the pharmacists?

Gen. GORGAS. The pharmacist is usually a master hospital sergeant and gets \$125 a month.

Mr. HULL. That is almost as much as he would get if he were commissioned?

Gen. GORGAS. Yes. He only gets \$75 in money, but his allowances make what he gets from his position equivalent to about \$125 a month.

Mr. HULL. It has come to my notice that in the matter of the selection of the aviators it is very hard to pass the examination. I know of one case in particular in which it seemed to me that they were too technical. That comes under the supervision of your department, does it not?

Gen. GORGAS. You mean the physical examination?

Mr. HULL. The physical examination.

Gen. GORGAS. Yes.

Mr. HULL. What is your opinion in regard to that, General? Do you think it is too technical?

Gen. GORGAS. The examination was established on my recommendation. I got the leading men in the country together on the subject. The Aviation Corps themselves were very particular about the examination, especially in regard to the eyes. The matter of equilibrium depends so much upon the eyes that the examination in that particular was very rigid.

Mr. HULL. Is it not possible that because of the fact that the examination is so rigid you are losing a number of good fliers and are taking in others? It is very hard to get into the Aviation Corps, and where we get hold of an extraordinarily good man, who is only lacking a slight shade of a point in the eye test, is it not possible that that man ought to be accepted, on the basis of his other qualifications?

Gen. GORGAS. Yes; and if such a man should be rejected by us and the Chief Signal Officer will say "That is all right; we do not question your examination, but this man has been a flier in England or France for two years and we know he can fly all right," if that was said to me I would waive the examination on that point. I think it is better to do it that way than to lower the standard.

Mr. HULL. I have heard a great deal of complaint about people being taken into the Army without a proper examination. I have heard of a case where it was claimed that a man was taken into the Army through the draft who had a wooden leg. Was that possible?

Gen. GORGAS. I do not think that is possible. Suppose the Chief Signal Officer should say that this one-legged man was an excellent flier. If he wanted him in the Aviation Corps, and if he came to me and said that, I would waive that part of the examination.

Mr. HULL. Are there any women physicians on the examining boards?

Gen. GORGAS. I do not think there are; none that I know of.

Mr. HULL. It would be impossible for them to get on those boards, would it not?

Gen. GORGAS. Under the present law we can take them into the Army as contract surgeons. We are taking them in now as contract surgeons and assigning them to hospitals.

Mr. HULL. Would they be allowed to examine a soldier?

Gen. GORGAS. No. They come in for special purposes. There is no regulation against it, but it would not come about, as a matter of fact.

May I refer to a matter which was brought up yesterday?

The CHAIRMAN. Yes.

Gen. GORGAS. It was called to my attention that I had testified yesterday that in the Medical Reserve Corps we would accept a man who had a venereal disease. What I had in mind, if I said that, was in regard to the draft, that we do not reject men who have a venereal disease.

Mr. SHALLENBERGER. I asked you if you took commissioned officers in who had a venereal disease, and you said you did.

Gen. GORGAS. Referring to the medical officers?

Mr. SHALLENBERGER. I mean any man who applies for and takes a commission. Do you take him if he has a venereal disease?

Gen. GORGAS. I would have to look that up, but my impression is that we would reject a man in the training camps for that reason.

Reject extraversion of the bladder, distinct hermaphrodites, and registrants whose penis has been totally destroyed by operation or disease.

Accept all cases with no signs of disease of the genito-urinary organs, all acute and chronic cases of gonorrhea and syphilis who have no complications permanently incapacitating.

Mr. SHALLENBERGER. You refer to the men in the training camps. Suppose a man came in directly from civil life, and he was about to be commissioned as an expert, and had a venereal disease. Would you take him?

Gen. GORGAS. I think not.

Mr. MORIN. You fix the physical requirements for men taken into the Army, that is, the enlisted men?

Gen. GORGAS. We really do it. We send the requirements to the Secretary of War, and he approves them.

Mr. MORIN. Is there any difference between the physical requirements in the case of men who volunteer and those who are taken in by the draft boards?

Gen. GORGAS. I think there is a considerable difference in that. I will put that in the record.

General Orders, No. 66, issued April 18, 1910, will show the standards by which volunteers for the Regular Army were physically examined. Selective Service Regulations, Form 999, will show the standards by which men taken in the selective draft were physically examined. Applicants for the Regular Army and men taken in the selective draft will hereafter be physically examined according to the standards laid down in C. S. S. R. No. 3, issued from the Provost Marshal General's Office, Washington, D. C., January 28, 1918.

Mr. MORIN. Then you think they do take men into the National Army through the draft boards who are rejected by the Regular Army recruiting officers?

Gen. GORGAS. No; the draft board has no authority to take them into the Army. They have to be examined by our men.

Mr. MORIN. I have had men come to me who tried to enlist in the Regular Army, and who were turned down because of some physical defect, such as some slight irregularity in connection with their eyes, and then have been taken into the draft Army and gone into the camps. They have protested against that because they did not want to be drafted, but wanted to get into the Army through voluntary enlistment, but I never was able to get them transferred, although I made a number of efforts to do so.

Gen. GORGAS. A good many things of that kind occur. It is very often due to the personal equation of the examiner.

Mr. MORIN. Do you approve the practice? Do you think a draft board should take men into the Army who have been rejected by the Regular Army recruiting officers?

Gen. GORGAS. I should think they should be on the lookout for that. But, of course, in such a very large number of cases individual instances of that kind occur.

Mr. TILSON. Should not a man be given some sort of a certificate when he fails on the physical examination and is thrown out? Should he not be given some sort of a certificate that would protect him from being drawn into the draft immediately afterwards?

Gen. GORGAS. That would not necessarily protect him from the draft. It would call the attention of the examiners to the fact. I suppose he could get that from the man who examined him.

Mr. GORDON. The difficulty is that there are two different jurisdictions. You have a local draft board that passes on the claims for

exemption under the draft rules, and when a man voluntarily enlists in the Army or Navy the recruiting officer determines whether or not he will be accepted or rejected. In one case you have one authority and in the other case you have another authority.

Gen. GORGAS. But eventually he is submitted to our authority. Nobody gets into the National Army without passing an examination given by our men.

Mr. GORDON. You mean as far as his physical condition is concerned?

Gen. GORGAS. Yes.

Mr. MORIN. Why do they reject men who have been operated on for appendicitis, if they are in good health, and who appear to be in better condition following the operation than they were before?

Gen. GORGAS. As a rule, that ought not to be a cause for rejection. But it frequently happens that a man who has been operated on for appendicitis has a little hernia in the scar.

Mr. MORIN. I have had a good many men come to me, and some of them perform hard work in the mills in the city in which I live, and still they say that they have been refused enlistment in the Army, although they are much stronger since they were operated on than they were before.

Gen. GORGAS. A man should not be rejected for that cause.

Mr. MORIN. But do they accept men in the Army who have hernia?

Gen. GORGAS. If, in the opinion of the examining doctor, the man can be operated on, and be relieved of the hernia, and is willing to be operated on, generally we tell him to go and be operated on and come back. Probably in the next draft no man will be excused because he has hernia who the examining surgeon says can be operated upon and thus be made fit.

Mr. MORIN. There is an impression which has gone over the country that in the next draft the War Department is going to accept men and take them into the National Army who do not come up to the physical requirements, and who are defective to some extent, for the purpose of using them in some of the noncombatant positions in the Army? Is that correct?

Gen. GORGAS. We are going to propose that to the Secretary of War, and we are drawing up regulations for that purpose now.

Mr. MORIN. To what extent will that be done?

Gen. GORGAS. I think that will be done in the case of any man who may be useful.

Mr. MORIN. If, in the opinion of the examining physician, he can perform any useful duties?

Gen. GORGAS. Yes.

Mr. MORIN. Can you put into the record the rate of deaths from disease in the armies now in the field in Europe, both of our opponents and our allies?

Gen. GORGAS. I do not think we can get any data on that at all, as yet. We are trying to get that.

Mr. MORIN. I think that would be very valuable.

Gen. GORGAS. I do not believe we can get a better record from them than the Japanese had.

Mr. MORIN. I think that will be a question that will be asked on the floor of the House. What is the death rate of the armies in the field?

Gen. GORGAS. I will do the best I can to get that for you. I have officers in both the French and English armies in my office, asking for that data.

Annual death rate (disease only) all troops in United States, September 21 to February 8, 1918, 8.7 per 1,000. Similar figures are not available to the Surgeon General for the French and English armies.

Mr. MORIN. In the camps, when they find men who are flat-footed, do they discharge them at once, or is it the rule to put them under observation to see if that defect can be corrected?

Gen. GORGAS. They should be kept under observation, and we are now establishing camps, where the men will be kept under the observation of an orthopedist, who will take care of the men troubled with flat feet. Those men will be given proper exercises to correct that, and they will be put in shape so they can perform duty. The orthopedist will bring such a man up to a condition where he can do all of the work of a soldier. We are establishing camps with that in view and the men who are recommended for discharge because of flat feet will be sent to one of those camps.

Mr. MORIN. But when his case is found to be hopeless, he will be discharged?

Gen. GORGAS. Yes.

Mr. MORIN. That same rule applies to men who might have defective hearts, that they will be cared for and kept under observation until it is found whether they can be cured?

Gen. GORGAS. A man with an irritable heart, who is not able to do duty, can be trained so that he will be all right. All those things are accentuated where there are large numbers of men, under tremendous strain, suddenly brought on. If all of that strain is brought on gradually, there are hundreds of men who can be brought around, so that they can perform duty.

Mr. MORIN. Then the men who have been rejected in the previous draft on account of defective eyes may be accepted this time?

Gen. GORGAS. We are going to call them.

Mr. MORIN. I know of some cases of men who have been rejected for bad eyes.

Gen. GORGAS. If we can use them——

Mr. MORIN (interposing). They may be accepted this time, if you think they would be useful in any capacity?

Gen. GORGAS. Yes.

Mr. OLNEY. I brought to the attention of your department some time ago the sawdust filled and cork filled shoes, and I understand the rules and regulations have been changed so that we have now a flat pigskin. Those shoes which were made on the original standard would be injurious to the soldier, would they not? They were fastened on by glue to the sole, and the heat from the man's foot, when he wears the shoe would cause that to go into a lump and hurt his foot.

Gen. GORGAS. Our orthopedic section made recommendations on that subject. I can put in the record just what they did recommend.

Mr. OLNEY. I would be glad to have you do that.

(Following was submitted.)

Original specifications called for a cork filling. Each man is supposed to take in his kit a pair of half soles and the necessary implements and materials are in the regular regimental outfit so that this half sole may be applied when necessary. There

has been no recommendation by the orthopedic department or by any other department, as far as can be determined, for the use of sawdust as filler, nor would it meet the approval of the orthopedic section.

Mr. HULL. I would like to ask Maj. Dewey a question in regard to the gas masks. Do you know whether there are any patents on that gas mask?

Maj. DEWEY. There is no patent at all on the gas mask. The mask follows so closely along the lines of the British mask that there has not been anything patented about it. One of the concerns with whom we are now dealing has devised a very interesting, and what we hope to be a superior mechanism for the insertion of the eyepiece, and I believe they are planning to take out patents on that, but if they do it will be with the distinct understanding that the Government will have absolute freedom to use the patent during the war, even to the extent, if we want to do so, of dealing with other people.

Mr. HULL. That is without cost?

Maj. DEWEY. Without cost.

Mr. HULL. Has your department taken up the matter in such a way that we are protected against somebody getting a patent on the very thing we are using?

Maj. DEWEY. I think we are amply protected. The conditions are such that, as I understand it, we can go ahead and manufacture.

Mr. HULL. I do not think there is a bit of doubt about it, but there are always a lot of fellows watching these things and they will go out and get a patent and persuade some commission that they have a good patent, and then the Government pays for it. That is the way it occurs to me.

Maj. DEWEY. I understand in that connection that a man has no rights until he has made a claim, and we have no people who have made a claim against us for anything of that kind.

Mr. TILSON. Along that very line, are you making preparations to have every man supplied with a gas mask, so that in case the enemy should drop these gas containers from air bombs, having gained a superiority in some particular place by sending over a large number of airplanes, and drop containers of poisonous gases at a considerable distance from the front line—have you made preparations to protect the men in the rear from such an attack?

Maj. DEWEY. We are making plans to have in France not only enough masks for every man, but also a very large reserve, to take care of any emergencies.

Mr. TILSON. No matter how far back from the front line a man may be?

Maj. DEWEY. The question of where a man will wear his mask is a question for the division commander, or for the higher military authority to decide.

Mr. TILSON. Do you know whether there have been any such bombs dropped from aeroplanes yet?

Maj. DEWEY. Up to this time the consensus of military opinion has been that, so far as the airplane bombs are concerned, there would not be enough of them in one place to make it worth while.

Mr. TILSON. The high explosive would be more deadly?

Maj. DEWEY. Where it is a localized shot. If you could get a hundred of those bombs at one spot, you may not want to use gas.

Mr. GREENE. So far as tactical considerations are concerned, the explosive bomb would be used largely against material rather than against personnel, and the gas bomb would be used against personnel?

Maj. DEWEY. Of course, that is true. But, of course, a modern gas bomb often has enough high explosive in it so that it is no toy.

Mr. TILSON. But they have special bombs for personnel?

Mr. GREENE. The choice of the military commander is based on how the greatest effectiveness may be secured?

Mr. SHALLENBERGER. Gen. Gorgas, you spoke a while ago about the prevalence of meningitis in the locality of the Camp Funston site. There are Nebraska troops at Camp Funston. I understood you to say to charge that that particular spot has meningitis germs, but that the whole region was more or less affected, and for that reason there is more meningitis in evidence there. In other words, that while some particular spot in Kansas or Nebraska might have had some epidemic of meningitis, there was no charge made on your part in reference to that particular spot?

Gen. GORGAS. No.

Mr. SHALLENBERGER. In regard to the death rate in the National Guard as compared with the other branches of the Army, I called your attention to the fact that your own report shows that that were two and a half times as many deaths in the National Guard as in the Regular Army, and as I understood it, your idea was that that was because of the fact that the National Guard had more contagious diseases like measles brought into it than the Regular Army, because the men of the National Guard come from sparsely settled sections of the country.

There are parts of Nebraska that are more sparsely settled than any of the sections of the country in the South, and yet in Nebraska we enlisted more than 15,000 men in the Regular Army, which is more than we sent to the National Guard.

If that condition prevailed all over the country, would that not rather upset your idea that the organization composed of men from the more thickly settled parts of the country were more nearly immune than the organizations composed of men from the sparsely settled districts? Do you not think there may be some other reason?

I want to ask you this question, because I think it is a marvelous thing if you could show the same death rate in the whole Army that you have shown in the Regular Army; it would be more wonderful than anything you have ever done. If we had lost out of 10,000 only 400 men in the National Guard, instead of two and a half times that number, it would have been a wonderful showing.

You have testified that so far as the National Guard is concerned, you consider that tents were perhaps more healthful than the inclosed cantonments.

Your reports in regard to your hospitals show that you did not have as complete hospitals for the National Guard as you did for the National Army, and yet you say you do not think that the incompleteness of your hospitals explains it.

Gen. GORGAS. That is right.

Mr. SHALLENBERGER. Is it possible that your Regular Army doctors, because of their long service in the Army and their better understanding of how to care for the men in the Army, are better than the new doctors?

Gen. GORGAS. I think so.

Mr. SHALLENBERGER. And the Regular Army officers are men who have had a good deal of experience in regard to the conduct of men.

Gen. GORGAS. Yes.

Mr. SHALLENBERGER. Is it not true that the officers who have charge of the men have as much to do with the health of the men as the doctors?

Gen. GORGAS. It has a great effect upon the general health of the men.

Mr. SHALLENBERGER. Do you not think a part of this trouble is because of the fact that your doctors in the Regular Army are more experienced in that particular line of work, and your officers are more experienced, and that that has more to do with it than anything else?

Gen. GORGAS. I do not think the Regular Army troops have more regular doctors with them, because we have had so few Regular Army doctors.

Mr. SHALLENBERGER. The reason I asked you that is because an officer who had been in the Spanish-American War told me that there is a certain psychology of experience with men, that when you take doctors suddenly from civil life, who have not had the care of men there, and put them in charge of large hospitals full of soldiers, that a great many of those men under those circumstances become sort of indifferent to the men whom they did not know, and that that did not apply to the doctor in civil life, where he was dealing with people he was paid to take care of; for that reason, when you consider the doctors in the Regular Army, who had had long experience in handling men, that type of men is weeded out.

Therefore, his argument was that we needed more experienced, trained doctors in the Regular Army. What would you say about that? Have you more experienced Army doctors, men who have been in the Army and are used to handling men, and know what conducts to health, than you have in the National Guard? Are the National Guard doctors inexperienced men?

Gen. GORGAS. You mean serving with the regular regiments?

Mr. SHALLENBERGER. Yes.

Gen. GORGAS. Col. Glennan tells me that we have more Regulars with the regular troops than we have with the National Army; but that does not apply to the hospitals.

Mr. SHALLENBERGER. You did not take the doctors who came with the National Guard—

Gen. GORGAS (interposing). We have had to use them, but they are all much the same.

Mr. SHALLENBERGER. I was not referring particularly to the doctors in the hospitals. Take the troops in the field. You have a certain number of medical men with the regiments. Are there not in the National Guard medical officers who are not experienced in handling men in the field, compared to the medical officers in the Regular Army?

Gen. GORGAS. I would have to look that up and see. My impression would be that we would have more of those men in a division like that at Charlotte, N. C., and my general impression is that there would not be a great difference. We only had 550 men to start with.

Mr. SHALLENBERGER. They were nearly all in the Regular Army!

Gen. GORGAS. Yes.

Mr. HARRISON. The men themselves in the Regular Army would know better how to take care of themselves than the new men in the National Army or the National Guard?

Gen. GORGAS. It is like saying that a veteran knows better how to take care of himself than a man who has just been recruited.

Mr. HARRISON. That might explain the difference in the sick rate.

Gen. GORGAS. There is an element in that. A man who has been in the Army a long time has probably had measles. Of course, he gets better food and better blankets, and everything of that kind, if he knows how to take care of himself.

Mr. SHALLENBERGER. I understood you to say that pneumonia comes largely from preexisting cases. Why is it that a man who has had measles, which has no germ, as I understand it, contracts pneumonia easier than anybody else?

Gen. GORGAS. He is more prepared to receive the pneumonia germs. He has had bronchitis.

Mr. SHALLENBERGER. Does it apply more to that particular disease than to any other disease?

Gen. GORGAS. You mean why is pneumonia a complication of measles? It is probably because measles is a respiratory disease. One of the common complications is mastoiditis. The man probably gets mastoiditis very easily from measles, because he is run down, and pneumonia is preeminently so.

Mr. SHALLENBERGER. Did you find that pneumonia is more prevalent in the southern camps than in the northern camps?

Gen. GORGAS. As a matter of fact, it is.

Mr. SHALLENBERGER. Were not the Army camps put in the South because it was supposed that the climate would be better for the men when they had to be in the tents?

Gen. GORGAS. I thought it would be.

Mr. SHALLENBERGER. But it did not turn out to be so?

Gen. GORGAS. I think it has.

Mr. SHALLENBERGER. You think you would have had more pneumonia—

Gen. GORGAS (interposing). No.

Mr. SHALLENBERGER. Did you reduce the death rate by sending the men South? You sent them South, and did not prepare to take care of them as well, although you give them as warm quarters. Did that have something to do with the high death rate in the National Guard?

Gen. GORGAS. I do not think it had.

The CHAIRMAN. You did not anticipate that we would have any such winter as we are having?

Gen. GORGAS. No.

Mr. HARRISON. When a soldier becomes very ill, is his family notified?

Gen. GORGAS. Those are the general directions. In some cases it has been neglected. We are taking the matter up to arrange it so that that will be done promptly. We are arranging to take a Red Cross man in every hospital, and it will be his business to notify the family of every man who goes into the hospital.

Mr. HARRISON. As soon as a man comes into a hospital the family will be notified?

Gen. GORGAS. Yes.

Mr. GREENE. Gov. Shallenberger suggested the possibility that the less experienced officer who comes from civil life to become an officer in the National Guard or the National Army would not be likely to have the same disciplinary control and efficiency of administration as the Regular Army officer, so that he might safeguard the health of his command. Do you not find that that probably does enter into the situation as one of the probable causes of the health conditions?

Gen. GORGAS. It is hard to answer a question like that. It is a fact that the Regular Army officer would know how to do it.

Mr. GREENE. It can not be reduced to statistics, I know, but I simply wanted to get your impression about it.

Gen. GORGAS. My impression is that when it comes to health that it does not play a very great part. If we were going to put quarantine regulations into effect, I would feel much more confident that those regulations would be carried out by a regiment of regular troops, whether I gave orders for that or not. If I gave orders establishing a quarantine in the case of one of our present National Army regiments, I would be pretty certain that they would not be carried out. Whether a man is very well fed and well clothed, and whether you could tell from your figures that he is going to have more pneumonia or less pneumonia might be questioned. If I were going to have pneumonia I would want to be well fed and well clothed. If I had before me a definite scientific proposition as to whether a well-clothed man was more likely to get pneumonia, and whether I could prove it, I would be very shaky on my experience. I have seen the worst epidemics of pneumonia in the Tropics that I have ever seen.

Mr. GREENE. I had more particular reference to the matter of discipline.

In 1898 I was an officer in a volunteer regiment. Fortunately, an officer of the medical staff, who was a very intimate friend of mine, used to drop around and talk with me. He put into my mind some ideas about company discipline, with an idea of their being effective as preventive measures in regard to epidemics starting in the camp. He casually let me know some things which it might be a good thing for me, on my own responsibility, to insist upon with my own men, to demand obedience, and so I had a little coaching, in regard to such things as forbidding the men drinking water except at certain places or points, and various other things of that kind. I found that while at first it seemed to be a little bit of petty despotism, the men soon came to understand it was in their own interest, and that command had less troubles of certain kinds than others, where there was no particular concern shown, and in which they had those troubles simply through ignorance. As we were all volunteer officers, the thought comes directly to my mind that the firmer grasp of administrative details which a regular soldier has must have a marked tendency toward creating a better health standard in the command.

Gen. GORGAS. I think that goes without saying.

Mr. ANTHONY. General, I wanted to ask if you have done anything to improve the hospitals at Camp Doniphan recently?

Gen. GORGAS. Yes.

Mr. ANTHONY. The case that was brought out in the Senate the other day was at Camp Doniphan?

Gen. GORGAS. I think it was.

Mr. ANTHONY. A Member of Congress from Kansas, Mr. Campbell, called to my attention the conditions that prevailed there before this latest development, and he gave me a letter from a banker in his district bearing on conditions in that hospital, which I think ought to be brought to the attention of the committee, and I will read it.

Gen. GORGAS. What is the date of it?

Mr. ANTHONY. It is dated December 4, 1917. He says:

COFFEYVILLE, KANS., December 4, 1917.

HON. PHIL P. CAMPBELL,
Washington.

DEAR SIR: I wish to get your help to improving hospital conditions at Camp Doniphan. Champ Clark saw a little of the wretched management and registered a big kick but it has not improved. Smith, a Salina boy in Company M, One Hundred and Thirty-seventh Infantry took spinal meningitis; the ward maters said that if he lasted more than two days it would be a miracle, but the authorities did not wish his parents to know. He died Sunday; he was in the hospital three weeks and never had even a sponge bath. Ted Richter, also of Company M, was in the hospital for rheumatism; he told one of the boys who went to see him that he had had no water to wash his face for two days. In one of the drills my son Robert Hugh had two bones in his hand broken. He went to the hospital and they told him that they were too busy—did not even bandage his hand; he walked 2 miles to his own tent, where a sergeant bound his hand, but so inefficiently that it had to be released. After waiting three days without treatment, he went to Oklahoma City, where a doctor gave him the much needed attention. Mr. Ball's (president of this bank) son Charles was told that he had diphtheria, and was ordered to the hospital—not in an ambulance, but he walked 2 miles through the camp, although supposed to be suffering with a contagious disease; he was put into the diphtheria ward, given 10,000 units of anti-toxin, kept with true diphtheretic patients for a week and dismissed. The boy said that it was hell and that he would rather die in his tent than to go to the base hospital.

The reports of the wretched mismanagement are almost incredible, but I have given you instances which come direct from Company M. Surely our sick soldiers deserve humane treatment, but they certainly are not getting it at Fort Sill.

If you can start something to improve conditions, I implore you to begin and earn the gratitude of thousands of parents whose sons are in that camp.

Respectfully,

CHAS. T. CARPENTER.

You think those conditions have been remedied at this time?

Gen. GORGAS. I am not prepared to assent to that statement of those conditions. I would like to have the facts in that case. I can look them up. I would like to have everything of that kind, so that if there is any defect we can correct it.

Mr. McKENZIE. I will say for Mr. Anthony's information that while I was at home during the holiday season, one of the boys from my home town had an attack of measles, and afterwards had pneumonia, at this same camp, and while I was there the father of the boy got a telegram from the hospital informing him that his boy was dangerously ill. The boy afterwards died. I cite that to show that they informed the parents that the boy was dangerously ill.

Gen. GORGAS. I was at Camp Doniphan about the time that letter was written. From inspections that have been made since I know that the hospitals are improving, and all the men are being trained everywhere. Individual instances like that convey a wrong picture. I would like to have the facts in instances of that kind in order that I may look into them and see what has occurred, and see what corrections could be made. Things of that kind would be most likely due to lack of discipline.

The CHAIRMAN. Do you not think it is remarkable that they have found so few instances of this kind in the camps of an army of over a million men organized in nine months?

Gen. GORGAS. I think, in general, the men are well taken care of in the hospitals. The same day that Senator Chamberlain read his letter, a Senator sent me a complaint from Camp Doniphan, a bitter complaint.

The mother and father of one of the men went to Camp Doniphan, and when they got there they wrote a letter to me saying they were entirely mistaken in what they had said before they left home, saying that everything that could be done was being done for their son.

The pictures are different. This mother had written a letter based on what her son had written her when the son had left home. I have no doubt that probably a good many of the facts were so, but the whole impression upon the mother had been to give her a different picture than that which really existed. I have no doubt the whole picture will be quite different. The picture, as a general thing, would be different from that which the facts show. I would like to have the facts in cases of that kind. I do not care who wrote the letter, just so we can identify the organization.

Mr. ANTHONY. Here is a newspaper article, taken from the San Antonio Express, which pictures the conditions at Camp Bowie. Where is that?

Gen. GORGAS. At Fort Worth.

Mr. ANTHONY. It tells of a father who buried two boys on the same day, one of them dying in South Carolina and the other at Camp Bowie. The letter says:

To the EDITOR OF THE SAN ANTONIO DAILY EXPRESS:

I am going to appeal to you to help me and mine in a humane way.

I have just returned from Camp Bowie with my dead boy. Had one to die in South Carolina Monday morning, December 3. I sent a telegram to the other one at Camp Bowie, telling him to come at once. I had a return wire that he was dying. I went at once, and found him dead. I had never been notified of his being sick. When I got there one of the lieutenants told me that he had been trying to see him for five days to write his insurance, and they would not let him in, but when he took the telegram he found him past human aid.

My boy, on Sunday, November 25, sent word to one of our neighbor boys (who is at Camp Bowie) to come and bring him some fruit, or something that he could eat. So this friend, who was on duty and could not go, bought the fruit and sent it by a schoolmate of my boy's. The hospital authorities would not let him in. He tried time and again to see my boy, but could not get in.

When I met him in camp, on December 4, at 4.30 p. m., he did not know that his friend and schoolmate was dead. They both enlisted together in the same company.

Now, the point is this: The Red Cross is taking up money for the soldiers, and are getting lots of it; they are going to knit their sweaters, but what they need most is nurses and nourishment, something they haven't at Camp Bowie. I saw two of the sick boys fed. Their supper consisted of camp bread, beans, raw tomatoes, and coffee. One of them could go it and the other one was trying to when I left.

I saw three taken to the hospital from the San Marcos company while I was there; knew one of them. He is the son of Henry Mueller, of San Marcos. He volunteered to fight for his country. They had him on a stretcher with one blanket over him, carrying him head first, with head uncovered. They had to carry him about 500 yards and he had just been taken out of bed with a bad case of pneumonia and was seriously sick. The wind was blowing a gale from the north and nearly freezing.

Now, gentlemen, as public men, can't you help those boys some way? The Red Cross knitting is not worth one penny to a sick soldier. They need nurses and nourishment. Those knitted sweaters are not worth a cent to the boys. I appeal to the Red Cross to send nurses and nourishment.

My boy died with his summer clothes on and was buried in his shirt sleeves. He had no coat nor overcoat. They need a heavy comfort on the cots and a quilt over the blanket.

Those boys must have help and at once. I know that many died. Now this appeal is to the public in general, to the Red Cross and the Y. M. C. A. in particular. The

only thing in particular that I could find that had been done was that the Y. M. C. A. had secured permission from the authorities to run the picture show on Sunday and charge double the regular price, and to send a preacher to preach to them. That is nourishment mentally, but they need bodily comfort. The knitting of clothes is wasting time, if they really want to help the boys.

I am ready to make affidavit to what is written here. I have no more boys up there, for I buried two in one grave the other day. But my neighbors have boys there, and if I can save the life of one I will be well paid. Of course it is nice to save their souls, but neither you nor I, nor the Y. M. C. A., nor the Red Cross can do that when they are actually suffering for bodily attention. It is enough to make an atheist of a preacher to go and look at those poor boys. The country is going wild over all those helps for the boys, but it don't reach the boys. They don't get what they really need.

My poor boy died, but he didn't die for his country; he died for the want of care and nourishment.

GEORGE W. SPARKS,
Blanco, Tex.

Is that rather rough fare for men in a hospital?

Gen. GORGAS: When was that letter dated?

Mr. ANTHONY. This is from the San Antonio Express. It is dated December 3, 1917.

Gen. GORGAS. I was at Camp Bowie about November 25. What was going on there with the feeding of the very sick men——

Mr. ANTHONY (interposing). This father, George W. Sparks, says that the boy was clad in his summer clothes and was buried in his shirtsleeves. That would show that he evidently was not dressed in his uniform when the body was sent from the camp.

Gen. GORGAS. I would like to have the facts in that case. It is possible that a great many of those things might occur. I will find out what the facts are. In those cases, we take it for granted that the situation is as represented. But I think that is unfair.

Mr. HARRISON. I have a son down there, and he has been there four weeks and the letters he has written to me have been very glowing.

Gen. GORGAS. Let me tell you what I know about the facts. In Camp Bowie there were 400 very sick men who were concentrated into six or eight wards. Those men were under the charge of 120 female nurses. Every man has his food cooked in the diet kitchen, and it is a light diet. No such food ever gets into those sick wards. The governor had complained about the very thing complained of there, about a pneumonia patient not having his face and hands washed.

Mr. ANTHONY. All the meningitis patients have female nurses?

Gen. GORGAS. They did at that time.

Mr. ANTHONY. At Camp Bowie?

Gen. GORGAS. Yes.

Mr. ANTHONY. A gentleman who is familiar with the Hestwood case tells me the only nurse the Hestwood boy had was a prisoner detailed from the camp guardhouse. Is it the practice to detail prisoners for that kind of work?

Gen. GORGAS. I happen to know that there were no female nurses at Camp Donipahn at that time.

Mr. ANTHONY. There are some there now?

Gen. GORGAS. There are 80 there now.

Mr. GREENE. There has been a report around town that several score nurses have been at Philadelphia and Baltimore waiting for weeks for assignment, and some of them have become dissatisfied,

and the complaint that seems to come from them is that they are getting tired of doing nothing, and it is said that they have been kept there at great expense. Is it proper to ask whether that matter has come to your notice?

Gen. GORGAS. That is a case where there are about 300 nurses waiting in New York and various places to go to France. They belong to the various base hospitals and have been ordered over there, and they are waiting for the notification of the transport officer to go aboard. Sometimes they are ordered to New York and they do not get a vessel to take them for a month. At the present time there are about 300 waiting there.

Mr. SHALLENBERGER. They are waiting for assignments in Europe?

Gen. GORGAS. They are waiting for transportation.

Mr. LUNN. General, the item of drugs must be a very large item. Are those drugs purchased from various concerns, or do you have any kind of a pharmaceutical corps to mix those drugs from the raw materials?

Gen. GORGAS. No; we purchase our drugs, to a large extent.

Mr. LUNN. Would it not be a tremendous saving of money if you mixed your own drugs?

Col. DARNELL. No it would not. In the case of our field medicines, it requires expensive machinery to make them, and they are put in cans. It would be absolutely impracticable to do that in the field.

In order to get sufficient medicines for this army we had to call all the pharmaceutical manufacturers here and organize them to see what they could do, and we are working them to the limit now.

Mr. LUNN. How about the prices; have they been fixed by you?

Col. DARNELL. No; the prices are gradually going up, as the things get scarce. I have a price list here on a number of our most important drugs which shows the prices before war was declared and after the war began. It is illustrative of the general trend.

(The price list referred to is as follows:)

	Price before the war.	Price in 1917.
Acid, boric, 5-grain tablets.....	per 1,000..	\$0.24
Aether in $\frac{1}{4}$ -lb. tin.....	per tin..	.18
Alcohol.....	per gallon..	.66
Bismuth subnitrate, 5-grain tablets.....	per 1,000..	1.26
Chloral hydrate, 5-grain tablets.....	per 1,000..	.80
Chloroform, $\frac{1}{4}$ -pound tins.....	per tin..	.090
Cocain hydrochloride, $\frac{1}{4}$ -ounce bottles.....	per bottle..	.975
Glycerine.....	per gallon..	2.57
Magnesium sulphate (Epsom salts).....	per pound..	.06
Morphine sulphate, $\frac{1}{4}$ -ounce bottle.....	per bottle..	.88
Oleum ricini (castor oil).....	per gallon..	1.04
Oleum terebinthinae (oil of turpentine).....	per gallon..	.85
Opium (powder) 2-ounce bottle.....	per bottle..	.604
Phenol (carbolic acid) $\frac{1}{4}$ -pound bottles.....	per bottle..	.094
Potassium iodide, 5-grain tablets.....	per 1,000..	.69
Quinine sulphate, 3-grain tablets.....	per 1,000..	1.05
Sodium salicylate, 5-grain tablets.....	per 1,000..	.40
		1.06

Mr. LUNN. May I ask you regarding the antitoxin? What do you have to pay for that? The reason I ask that is that at one time, in the State of New York, in the city of which I was the executive, we had to pay from \$3 to \$5 for 3,000 units. We got it so that we could give it away. It only cost about 10 cents.

Col. DARNALL. We usually make special arrangements about that.

The CHAIRMAN. There is one other item in your estimate that I want to ask you about, General, and that is the pay of 124,188 enlisted men in your department. I believe Gen. Sharpe said you had in November 75,000 men.

Gen. GORGAS. That was the case.

The CHAIRMAN. How many have you now?

Gen. GORGAS. About 80,000, exclusive of Veterinary Corps, Sanitary Corps, and Ambulance Service. If we can get up to 10 per cent of the total forces, we expect to have our full allowance.

The CHAIRMAN. Do you need all of the 124,188?

Gen. GORGAS. Yes; and more than that for a million and a half men.

The CHAIRMAN. How many do you need for a million and a half men?

Gen. GORGAS. I think about 150,000, exclusive of Veterinary Corps, Sanitary Corps, and Ambulance Service.

The CHAIRMAN. Will you put in the record a statement showing just exactly how many you need for a million and a half men, and for two million men, together with the pay and allowances, and also include the same information in a detailed statement in reference to the officers in your department?

Gen. GORGAS. I will be glad to do so.

(The statements referred to are as follows:)

Commissioned and enlisted personnel of the Medical Department, with their approximate pay and allowances, required for the military establishment at the several strengths indicated.

Class of personnel.	Present active.	Strength, 1,500,000.		Strength, 2,000,000.

Mr. TILSON. General, have you a large number of officers who have been selected and commissioned, and who are ready for call in case we should wake up some fine morning and find a great many wounded men to be cared for; more than we had calculated on?

Gen. GORGAS. We have about 6,000, and are increasing that number all the time.

Mr. TILSON. Do you think that any practicing graduate physician should be enlisted and taken away for the draft and should not be enrolled in some sort of reserve corps, where he could be used?

Gen. GORGAS. We are getting up a volunteer corps of that kind now, to take in all physicians.

Mr. TILSON. I know of one instance of a doctor in a country community who was drafted and put in the ranks, and made a private, and the people in that community have no doctor now. There is no doctor within 15 miles, and I have reports that a number of people have died there without any opportunity of having the services of a physician, and yet that doctor was taken out of that community and sent to a National Army camp, and he is still a private.

Gen. GORGAS. We would like to get hold of that man. We will get him.

(Thereupon the committee adjourned, to meet to-morrow, Wednesday, January 30, 1918, at 10.30 o'clock a. m.)

ARMY APPROPRIATION BILL, 1919.

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Wednesday, January 30, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent (chairman) presiding.

STATEMENT OF BRIG. GEN. E. EVELETH WINSLOW, CORPS OF ENGINEERS, ASSISTANT TO THE CHIEF OF ENGINEERS, ACCOMPANIED BY MAJ. EARL NORTH, MAJ. ROSCOE C. CRAWFORD, AND MAJ. RUFUS W. PUTNAM, ENGINEER CORPS.

The CHAIRMAN. General, the first item for the Engineer Corps is on page 19, for the pay of 400 officers, and the amount asked for is \$925,200. We have had some information on that item from Gen. Sharpe. How many officers are there in the Engineer Corps now?

Gen. Winslow. The authorized commissioned strength of the Corps, by law, is 505. We now have about 330 officers in the Regular Service, of whom 5 are detailed on the General Staff. However, we had an examination last week of candidates for commissions in the Engineer Corps, and we expect to have another examination about July 1, the time being chosen so that it will be convenient for next June's graduates of technical schools to take the examination. From those two examinations it is expected that the corps will be practically filled.

According to law, commissions are open to two classes of persons only—first, graduates of the Military Academy, and, second, graduates of approved technical schools—who are unmarried, and between the ages of 21 and 29 years, and who pass the examination successfully. In order to be eligible to take the examination they must hold diplomas showing graduation from engineering courses in an approved technical school. The examination held last week was for those who have already graduated from such schools.

The CHAIRMAN. Is the list of those schools published by the War Department?

Gen. WINSLOW. It is not published, but there is a list which has been prepared, with the assistance of the Bureau of Education of the Interior Department and the Carnegie Foundation for the Advancement of Teaching. By the terms of the act of June 27, 1911, commissions in the Corps of Engineers were opened to civilian candidates.

Mr. GORDON. How many of those approved technical schools are there?

Gen. WINSLOW. There are 117 on the list now.

The passage of the act I just referred to made it necessary to select the schools which were to be put on the approved list. The War Department felt that it did not have the information necessary, and it asked the assistance of the bureau of education of the Interior Department and later of the Carnegie Foundation. With the assistance of those two institutions a list was drawn up and approved by the Secretary of War. Modifications have been made in the list since that time, from time to time, but in every case those modifications were made upon the recommendations of either one or both of the institutions which assisted us in making the list. A general revision of the list is in process now, and it is expected to be completed during the month of February.

The CHAIRMAN. Who conducts the examination?

Gen. WINSLOW. The questions which are to be asked in the examinations are prepared by the engineer school and the office of the Chief of Engineers together—that is, they are prepared by the members of the faculty of the engineer school, and are then reviewed by the assistants to the Chief of Engineers. These questions are then sent out through the Adjutant General to boards which meet in various places all over the country, consisting partly of medical officers and partly of line officers who merely supervise the examinations.

Then the report of the doctor and the answers to the questions are all sealed and returned to the Chief of Engineers, and are there examined by a board appointed for this purpose. The present board consists of three regular officers and three reserve officers, who are about to mark the papers of the candidate who took the examination held last week.

The CHAIRMAN. Does the list of 505 officers include engineers who are on river and harbor work?

Gen. WINSLOW. It includes the entire corps. At the present time there are only 13 officers on what might be called construction work, and all but five of those are engaged, at least partially, on fortification or other military work. So there are only five officers at the present time who are doing civil work exclusively. Most of the officers on construction work are not physically capable of going into the field. Had they been in any other branch of the service than the Engineer Corps they would probably have been retired, but because of their engineering knowledge they have been retained to the Corps of Engineers, and they will probably be left on the active list as long as they can perform satisfactory duty as construction officers.

The CHAIRMAN. Do you not have reserve officers in the Engineer Corps on this work.

Gen. WINSLOW. These officers are in the Engineer Corps of the Regular Army; they are not reserve officers. The river and harbor work is now carried on under the supervision of division Engineers, all of whom are Regular Army officers. The district officers are nearly all assistant engineers who have been called into the active service as district officers, under the same act of February 27, 1911.

In other words, when the war broke out we had about 120 officers on construction work. We have called to active military duty, either in this country or abroad, all except about 13 of these officers and have turned their work over to those who were their civilian assistants before the war.

The CHAIRMAN. The enlisted men in this corps are paid along with the enlisted men of the line; that is, they are carried with the enlisted men of the line?

Gen. WINSLOW. Yes, sir. According to law, the enlisted men of the Corps of Engineers and the officers serving with them are a part of the line of the Army.

Mr. CRAGO. Where do these engineers come in who are in France now constructing the railroads?

Gen. WINSLOW. The railroad organizations were formed last May by order of the Secretary of War. They were organized as regiments of the legal strength of the time; that is, with 33 officers and slightly less than a thousand men. Subsequently their strength was increased to 47 officers and about 1,600 men. Each regiment was given two Regular officers, one Regular officer as a colonel to organize the regiment and command it, and another Regular officer as adjutant to attend to the paper work. All the other officers were actually railroad construction and operating men, and were selected, to a great extent, by Mr. Felton, who was given the title of Director General of Railways. The title has recently been changed to Director General of Military Railways. He was formerly president of one of the big railroads running out of Chicago and was in close touch with the various railroad presidents all over the United States, and selected nearly all of the officers for the first railroad regiments and also for several others formed since.

Mr. CRAGO. Gen. Atterbury is also in the railroad organization, is he not?

Gen. WINSLOW. He was sent abroad to do about the same thing abroad that Mr. Felton does in this country. Just as Mr. Felton is the advisor in railroad matters to the Secretary of War, Gen. Atterbury is the advisor in similar matters to Gen. Pershing, and he has been given the title of Director General of Transportation, and is in charge of all the various matters connected with transportation, such as railroads, terminals, highways, docks, etc.

Mr. CRAGO. These organizations are not a part of the Regular Army but of the Engineer Reserve Corps, and they were organized under the provision in the act of May 18 which authorized the President to organize special and technical units?

Gen. WINSLOW. That is correct; they are a part of the National Army, and were organized under the provisions of the act of May 18, 1917.

Mr. CRAGO. They were organized as special and technical units?

Gen. WINSLOW. Yes.

Mr. TILSON. How many reserve officers are there in the Engineer Corps?

Gen. WINSLOW. There are now approximately 5,700, of whom all but about a hundred are on active service.

Mr. CRAGO. Are those officers selected by a competitive examination or on the recommendation of men eminent in the engineering profession; that is, the ones who are in these particular regiments?

Gen. WINSLOW. Those regiments were formed somewhat specially, in a somewhat different manner from the way in which the remainder of the Engineer Reserve was formed.

The railroad officers were selected by Mr. Felton upon the recommendation of the officials of the various American railroads. For

instance, one regiment of railroad men was formed in Boston. A certain proportion of the officers and enlisted men of that regiment came from the Boston & Albany Railroad, a certain other proportion came from the Boston & Maine Railroad, and a certain other proportion was selected from the men on the New York, New Haven & Hartford Railroad.

Another of the railroad regiments was formed in Pittsburgh, most of the men in that regiment coming from the Pennsylvania Railroad and a few of them from the Baltimore & Ohio Railroad.

Ordinarily the reserve officers are selected in a different way. The national defense act provided for the organization of Officers' Reserve Corps in the different branches of the service, and a few months after that act was passed regulations were published by the War Department as to the method of organizing the Officers' Reserve Corps.

The Engineer branch of the Officers' Reserve Corps was formed in pretty much the same way as the others. We have organized in different parts of the country something like 60 local boards. Each board is composed of an Engineer officer of the regular service, sometimes with an assistant already commissioned in the reserve corps, and with at least one doctor. Sometimes the doctor is a regular officer, but more often he is an officer of the reserve corps.

Any engineer in civil life who offers his services or applies for a commission in the reserve corps is sent before one of these local boards. He is examined physically by the doctor and professionally by the other members of the board. He has to state his engineering education and his technical experience since his graduation from an engineering school. According to the table, if he is a graduate of a recognized technical school or has had a certain number of years' experience, he is eligible for a commission as second lieutenant. If he has had more engineering experience, he is eligible for a commission as first lieutenant, and so on up, the more experience he has had the higher the rank for which he is eligible. For a commission in any grade he is required to have had a certain amount of actual experience or to have graduated from a recognized technical school and to have been a certain number of years in engineering work.

Those records of the local boards are sent to Washington, and in the office of the Chief of Engineers they are laid before a central board for examination and review. The larger proportion of those papers are sent through rapidly and passed with the recommendation that the man be given a commission. There are, however, of course, a number of cases where there is something doubtful, and then the case has to be considered carefully by the central board.

Prior to the 4th of March last year most of the applications we had received for commissions in the reserve corps came from men well along in life, with considerable experience in the engineering profession, and we had great difficulty in commissioning them, because the law says that the proportion of majors in the reserve corps shall not bear a greater proportion to the number of second lieutenants than the proportion of majors in the regular service bears to the number of second lieutenants in the regular service. We had so few men suitable for second lieutenants, taking their age into consideration, that the central board had to postpone the commissioning

of some of the older men because there were not enough younger men to allow the proper proportion of majors to second lieutenants. We were compelled, therefore, to make a rule that we would not commission any man as major unless he was 45 years of age. The rule had to be as fair as possible to all people concerned, so we adopted the rule of age, which is fair to all.

Mr. CRAGO. Would it have been good policy to have repealed the provision in the law in regard to that proposition?

Gen. WINSLOW. I think not. At that time the President came out very strongly for universal military service in his inaugural address, and as it was evident that we were going to enter the war there were a great many applications—

Mr. SHALLENBERGER (interposing). Do you mean to say the President came out in favor of universal military service?

Gen. WINSLOW. I may have used the wrong term. I was only trying to distinguish as to dates. I should have said universal liability rather than universal service.

The younger men who were eligible began to submit their requests in large numbers. We sent to camp most of those who applied for the first training camp, and after we had passed on their papers we took a census. We found by the middle of June that we had received something like 15,000 applications, whereas we expected we would need only about 5,000 officers.

It became necessary, therefore, to select with great care from the 15,000 applications the 5,000 men we would commission.

The first rule we adopted was that we would waive no physical defects. In the second place, we found we could get all the officers needed by taking only men over 30 years of age. Consequently, except for the men who applied prior to the opening of the first series of training camps, we commissioned no men that were not over 30 years of age, and in that way restricted the number of men commissioned to about 5,000.

About the middle of July the Secretary of War issued instructions that no applicants within the draft age who applied thereafter should be commissioned in any of the noncombatant branches of the service, unless the head of the corps could certify that there was no man outside of the draft age who was available for that particular position. That was simply confirming the authority he had given to the Chief of Engineers to commission only men over the draft age.

Mr. ANTHONY. You do not consider the Corps of Engineers a non-combatant corps, do you?

Gen. WINSLOW. When the officers are commissioned, we do, because all officers of the Corps of Engineers are commissioned as staff officers, and they only become line officers when assigned to duty with troops.

Mr. ANTHONY. The Engineer organizations are combatant troops, are they not?

Gen. WINSLOW. Yes, sir; the larger portion of them are.

Since June 20 we have adhered strictly to the rule I just mentioned, except in some cases where we needed men for some special service, as when we have to get a few camouflage men. In another case we needed to develop certain physical appliances, which required the services of mechanically skilled men who had been employed in

mechanical laboratories. We had to get a few of these men inside the draft age.

Then when the railroad organizations were increased, we had to get a few railroad men inside the draft age.

Mr. TILSON. Were those men selected by railroad officials?

Gen. WINSLOW. Yes.

Mr. TILSON. So far as the railroad engineers were concerned, they were really selected by the railroad officials, and not by you?

Gen. WINSLOW. That is correct, with the exception of two officers for each regiment, one who was selected as the commanding officer, and another who was selected as the adjutant. All the other officers of those railroad regiments have been selected by Mr. Felton upon the recommendation of the officials of the railroad companies.

Mr. MCKENZIE. All of those railroad officers had to pass the same physical test as other men who were commissioned, notwithstanding the fact that they were selected by the railroad officials for this special work?

Gen. WINSLOW. Yes; they went through the same form of examination, except that the certificate from Mr. Felton that they were good railroad men was considered to take the place of the usual professional examination.

Mr. SHALLENBERGER. There was really no mental examination of these men who were picked for these railroad regiments?

Gen. WINSLOW. No.

Mr. ANTHONY. You say the men in the railroad regiments were appointed by the railroad authorities. What railroad authorities?

Gen. WINSLOW. One regiment was formed in New England. About one-third of the men in that regiment were selected by the officials of the Boston & Albany Railroad, another third came from the New York, New Haven & Hartford Railroad, and the rest of the men in the regiment were from the Boston & Maine Railroad. I understand they were recommended by one of the vice presidents of those roads.

Mr. ANTHONY. You took the recommendations of the vice presidents of each of these roads as to the appointment of officers for the regiment of railroad men?

Gen. WINSLOW. As to the qualifications of the men for railroad duty. It was the same with other regiments. There was one regiment, the Nineteenth, which was formed for shop work, especially for the repair and erection of freight cars. They were selected generally from all over the country and organized at Philadelphia. There was one operating railroad regiment formed in Boston, one in Chicago, one in St. Louis. The shop regiment was formed in Philadelphia and the construction regiments one on the Pacific coast and another in the South, at Atlanta, Ga., and another at Pittsburgh, and another at New York, and another at Detroit.

Mr. MCKENZIE. What was the Thirteenth Regiment, organized at Chicago?

Gen. WINSLOW. That is an operating regiment.

Mr. ANTHONY. I read something in the papers about the colonel of one of the Engineer regiments cutting a lot of red tape and getting to France outside of the regular orders of the department. What do you know about that?

Gen. WINSLOW. That incident was somewhat exaggerated in the newspapers. When the regiments were ordered organized early in

May of last year the first question which came up was where we would be able to quarter the men. We wanted to organize the regiments near the railroad centers, and in most places we managed to get the use of buildings in the immediate neighborhood.

In Chicago we got the use of a municipal pier, with a house on it. In St. Louis they made use of some quarter boats not then at work.

The Boston regiment got hold of a fair-ground building, and so did the Philadelphia regiment. There were no buildings in Pittsburgh, and so the colonel of that regiment applied for tentage. He was told there was no tentage available at that time and that the Quartermaster Department could not purchase any standard tentage, so he went out and in the vicinity of Pittsburgh found a tent manufacturer who had some tents which were not of the standard color and size, but he said they would do, and he just ordered the tents, and they were sent to him, and the bill was paid by the Quartermaster Department.

MR. ANTHONY. How did he happen to get his regiment to France quicker than the other Engineer regiments?

GEN. WINSLOW. That regiment was organized at the railroad center of Pittsburgh, where there were many railroad men, and they recruited more than a hundred men a day. The colonel recruited the men for that regiment so rapidly that the thousand men were gathered together in about a week and a half from the time he got the authority to go ahead. Later he was able to send men to the Detroit regiment and some to other places. Another reason why he got that regiment equipped so soon was because he was nearer the points of supply.

MR. ANTHONY. There was no such thing occurred as taking that regiment to France without orders?

GEN. WINSLOW. Absolutely not.

MR. ANTHONY. The only red tape that was cut was in the purchase of tents?

GEN. WINSLOW. Yes. The regiment in New York had had something of a head start. It was organized with the assistance of the New York office of the American Society of Civil Engineers. But they were not able to get the men as quickly as at Pittsburgh. On about the 6th or 8th of June we sent out questions to all of the regimental commanders asking as to the status of their regiment, and Col. Jadwin, who had command of the Pittsburgh regiment, replied that he would be ready by the 13th. He was ready by the 13th.

The New York regiment was not ready for a few days after that. Since Col. Jadwin had his regiment ready first, we considered that it was the proper thing that he should go first, and, as far as we know, his was the first American regiment that ever passed under arms through England. I believe it was not reviewed by the King, but was taken straight through England and did not stop long enough to be reviewed by the King.

MR. ANTHONY. How many days elapsed after the order for the organization of this regiment was given until it left New York?

GEN. WINSLOW. It was reported ready within four weeks from the time Col. Jadwin was directed to organize it, but it did not leave New York until the 9th of July.

MR. ANTHONY. Were the men uniformed and armed?

Gen. WINSLOW. They were uniformed, armed, and equipped by the 13th day of June.

Mr. ANTHONY. Did you see the men?

Gen. WINSLOW. I did not.

Mr. ANTHONY. They were a pretty good looking body of men?

Gen. WINSLOW. I did not see them, but from the photographs they were a very good looking lot of men. Mr. Felton went out to see them, and they gave him the honor of a review.

Mr. TILSON. How were they armed?

Gen. WINSLOW. They were armed with the older Springfield rifles.

When the question of the organization of the railroad regiments came up there was a discussion in the War Department as to whether they should be given rifles or not. The idea was that they would work principally on the railroads, and that therefore only a small proportion of the men need be armed with rifles. The Chief of Engineers went to the Chief of Ordnance and to the Chief of Staff and said he wanted to bring these men as quickly as possible under military discipline, and that having rifles to drill with would be a great advantage, and so the rifles were given to them, with the understanding at first that they would only be used for drill purposes in this country, and that they would be left behind when the regiment started, it being thought then that the men would be sent direct to France.

When it came time to send the railroad regiments to Europe the available transportation which had been expected, and which had been originally assigned to those men, had been turned over to Gen. Pershing, to take over the first contingent of his expedition, and it was then evident that the railroad regiments would have to land in England. It was then thought that it would be a rather peculiar thing to have these so-called American troops land in England without arms, and so they took the arms over with them.

Mr. ANTHONY. I was wondering what sort of an appearance they made in England after having been only a few weeks in training.

Gen. WINSLOW. They looked very well. Col. Jadwin, who was the commanding officer who took the first railroad regiment over there, has an excellent record in that direction. He was one of the officers picked out as major in one of the special engineer regiments formed during the Spanish-American War, and he brought his battalion into shape in very quick time.

In organizing this railroad regiment he had the assistance of a great many men around Pittsburgh. The National Guard men in that section of Pennsylvania took a great interest in the regiment and offered their services as drillmasters, and the regiment was put into shape very quickly.

Mr. FIELDS. It was understood in England that that was an engineer regiment?

Gen. WINSLOW. It was understood in England that that was an engineer regiment. Col. Jadwin's regiment was railroaded through England. It went through very rapidly and was not reviewed by the King, but the other regiments which went a little later were kept in England for a few days, and they were reviewed by the King. The second regiment to go was the New York regiment, and that was reviewed by the King, and that was under command of Col. McKinstry.

Mr. SHALLENBERGER. In regard to these men who were taken in among the 5,000 Reserve officers, who were mostly railroad men, were they given the same rank, pay, and allowances that the Regular Army officers get while in the service?

Gen. WINSLOW. They have the same pay and allowances as the Regular Army officers. They take rank according to their commissions. A good many of them are in command of Regular officers of lower grade.

You have made a mistake in saying there were 5,000 railroad men. There was a total of about 5,000 officers all told, railroad and others.

Mr. SHALLENBERGER. I will say, then, those particular men you referred to who came in on certificates. Would any one of those officers, with the rank, or major or colonel, have authority over and take precedence over a Regular Army Infantry captain?

Gen. WINSLOW. He would outrank the captains; and if he were a major and were in command of a battalion and was working with a party of Infantry, he might be in command of a number of Infantry officers.

Mr. SHALLENBERGER. What do you think about that as a military proposition? Is not that question going to come up in this war where we have so many men of limited military experience outranking men with military experience?

Gen. WINSLOW. If the Infantry officers were men who had served for a considerable length of time in that arm of the service, it might come about that you would have a major without any military experience commanding men who had had military experience. This same thing might occur in the Infantry regiments of the National Army. They are officered in the same way—by reserve officers picked from among the graduates of the officers' training camps.

Mr. SHALLENBERGER. I have in mind the case of an officer who was for 19 years in the Regular Army, and who was a senior captain a short time ago. I think he has had some promotion since, and I consider him one of the finest officers I know in the Regular Army. He told me he was running up against majors and colonels and other officers who have just come into the service, and who would outrank him in any military operations, and it occurred to me that in the case of these reserve officers that is a proposition that ought to be taken into consideration.

We have not ever passed any legislation in regard to it, and there is a provision in the law that provides that where a reserve officer has the same rank as the Regular Army officer the Regular officer will outrank him. But the Regular officer does not outrank the reserve officers of a higher grade.

Gen. WINSLOW. That is true.

Mr. SHALLENBERGER. I was wondering if that is not a proposition that might require legislation, as it might affect men in the field.

Gen. WINSLOW. That is a question which really affects rather the Infantry and the Cavalry.

Mr. SHALLENBERGER. I can see how it would not affect the men in the Staff Corps so much. But your particular corps has a tremendous number of men already in France, and you are going to have a great many more along the lines of communication, and so it occurred to me that the possibility of a conflict between reserve Engineer officers

who are simply railroad men and men of the line, who are supposed to be trained military men, might become quite a problem.

Gen. WINSLOW. In the Corps of Engineers we have detailed so many of the senior officers of the corps to these various special Engineer organizations that promotion has been quite rapid, and the men who are captains in the regular service and who have not been given temporarily higher rank are men who have been out of West Point for less than three years. In so far as their military education is concerned, these men may be considered as possibly the superior of the reserve officers of higher rank, but when it comes to handling men and actually getting work done an Engineer who has been in the practice of his profession for some years and has been handling men is probably better qualified to handle men than a man who has been in the service only two or three years, even if a West Pointer.

A similar question came up some time ago. We are organizing now, among the engineer units, one that is known as the Twenty-third Engineers, a highway unit. When this unit was first formed the colonel commanding wanted a lieutenant colonel detailed from the Regular Service—one of the younger men in the service. We asked him to hold on, and he finally came to the conclusion that it was better to get a lieutenant colonel for a regiment like that, where the captains and lieutenants are taken from engineers in civil life, who was from civil life himself and who had had long experience in handling large bodies of men in actual construction work, and not take a younger man from the military service, but who had probably not done as much construction work and handled as many men.

Mr. SHALLENBERGER. I can see how that would work out in the case of a young lieutenant who has only been out of West Point three years and has been made a captain. I know a number of captains in the Infantry who have been in the service 10 years, and yet a man who was a major with only a very limited service would outrank the other man. That is not serious, because each of those men have had military experience.

But consider the case of the men who have come in with no military experience. Would it not have been better if those reserve officers had not been given rank at all as line officers, but had been given some other rank, which would indicate the character of their service, so that they would not have any authority over troops in the field, as compared to the real military men in the Army?

Mr. CRAIG. A distinction ought to be made between the right to command and the rank of these men who do not command troops. But that would not come up once in a thousand times.

Mr. SHALLENBERGER. I have had the question put up to me, and it might come up.

Gen. WINSLOW. When last April, the idea was first considered of assisting the French in their railroad work abroad, the first idea was that we would pick up railroad men and send them over as civilians. But the French Government objected. The French Government said they wanted no persons sent over who were not in the military service, under military discipline, and with military rank, and wearing uniforms.

Mr. SHALLENBERGER. Does the French Army give these men the same rank as the line officers in their army?

Gen. WINSLOW. I understand the French railroads are run by railroad engineers, who are military engineers.

Mr. SHALLENBERGER. Do they have the same rank?

Gen. WINSLOW. They have the rank, and they exercise authority in their respective places. A major in one of the railroad regiments would not have the authority to go outside and take command of Infantry which happened to be going along there, unless there was some special reason for that.

The CHAIRMAN. What do you mean by that?

Gen. WINSLOW. I mean Infantry troops coming along. He has nothing to do with them. He is not in command of them. It would only be in a case where he and his battalion happened to be left with a small Infantry force, in which the senior officer was a captain, left by themselves, away from any other commander. Then, being the senior officer present, he would be in command.

Mr. SHALLENBERGER. How would it be in the case of the moving of troops and the conduct of trains? Who would be in command, the railroad man or the line officer?

Gen. WINSLOW. The handling of railroad trains is done by special orders, and the commander of the troops has nothing to do with the movement of the train, even in this country. When a regiment is put on the train they have an officer along, a quartermaster, who is handling the train. Those orders have been repeated in print recently, that the commanding officer of troops must not interfere with the running of the train.

Mr. SHALLENBERGER. It has been testified before this committee that the quartermaster corps of the French Army do not have the same rank and authority, nor wear the same uniform as the man of the line, and that they are saluted differently from the men of the line.

Gen. WINSLOW. That is in the French Army?

Mr. SHALLENBERGER. That is what we have been told. I wanted to find out if the same thing did not apply to the Engineer Corps and to the handling of the railroads, whether it would not have been wiser for us to have adopted some such policy, rather than commission those men as officers in the Army.

Gen. WINSLOW. I think not. I do not think there is going to be any conflict in regard to that matter.

You brought out the point in regard to there being captains of Infantry who have been in the service for quite a number of years. That is a matter which relates solely to the Infantry and Cavalry, and not to the Engineer Corps.

Mr. SHALLENBERGER. I was just stating a fact, and stating my opinion that that conflict might occur.

The CHAIRMAN. I notice that last year we gave you for this item for pay of officers in the Engineer Corps \$482,400. That was the amount of the appropriation in the appropriation bill of May 12, 1917, which was the Regular Army appropriation bill, and that indicates that for this purpose the War Department did not go before the Committee on Appropriations and ask for a deficiency appropriation under this item. Will you explain that? That is the only place I have discovered that.

Gen. WINSLOW. Mr. Chairman, all of this matter in regard to the pay of officers is handled entirely by the Quartermaster Department, and it is all handled as one fund, and we know nothing about it, except that we give the Quartermaster General an estimate as to the average number we expect to have in the Corps of Engineers during the succeeding fiscal year. We know nothing about the details, and keep no tables.

The CHAIRMAN. Then it is purely a matter of calculation, as to how much the appropriation is to be?

Gen. WINSLOW. At the present time we have about 330 officers, and we expect to get close to 505 some time during the early part of the next fiscal year.

Mr. LUNN. What arrangements have been made, in case you get in the draft young engineers, to transfer them and get them into the Engineer Corps, rather than have them put in the Infantry?

Gen. WINSLOW. You mean as enlisted men?

Mr. LUNN. Yes.

Gen. WINSLOW. Just before the men were to report under the draft, instructions were given by The Adjutant General that an investigation should be made of the men as they reported, and they should be assigned where they would apparently fit in best. In each division of the National Army there were a few officers who were assigned to duty to receive the men when they came in and assign them to the different organizations. In the majority of the divisions they seem to have taken care to pick out the men who were mechanics, or the men who had an engineering education, and to assign those men to the Engineer Corps, as far as they would go.

As soon as the regiments were formed, the regimental commanders would go through their regiments, and where they found men who seemed to be unfitted they would report it to the division commander. These men would go out, and other men would take their places. The reports that come now are that in general the class of men received in the Engineer Corps are very good.

Mr. LUNN. I was thinking about the misplaced men. I have in mind the case of a young fellow who was working for the General Electric Co. He said he wanted to go into the Engineer Corps. I said, "You ought to stay on your job; you will be exempted on the industrial side, because they can not afford to take you away from your job with the General Electric." He took my advice, but the draft officers did not see it that way. They thought somebody else could be secured for his job with the General Electric, and so they took him in the draft. That was all right.

I took up the case to see if he could not be transferred to a place where his special talent could be used, but with utter failure. I am one of those who was very enthusiastic for the selective draft, and there are a good many who were not so enthusiastic and they have the laugh on us, in regard to the selective end of it.

Here, for instance, is a young engineer, or there is a young fellow skilled in some other technical line, do you happen to know whether there is any method by which the selective end of it could be made operative?

Gen. WINSLOW. Each division has an engineer regiment in it, and that regiment is supposed to be composed of so many men of each.

trade—mechanics, blacksmiths, and men of various trades and professions, and some men who are professional engineers. The organization of that regiment from among the men who have been drafted into a particular division is left to the division commander. He is responsible for his division, and presumably he will try to get the men who will give the best service in the places where they are put. In some of the divisions the division commanders have directed that that particular class of men be put in the Engineer regiment. Unfortunately, some of the accounts we have received are that this has not been done in all divisions.

Then, the question came up as to recruiting the special Engineer organizations, such as the forestry organization and the highway organization. The law provides that those organizations may be organized by voluntary enlistment or by draft, and to a certain extent they are all organized by voluntary enlistment. Sometimes where we wanted additional men we had to take the men from among those who had been drafted. There is one railroad regiment which was being organized as a regiment of car erectors. We are purchasing thousands of freight cars and sending them to France knocked down, and they have to be put together, so we wanted an organization for that purpose on the other side.

Mr. SHALLENBERGER. Are they all commissioned?

Gen. WINSLOW. Some of them are, but the larger proportion of them are enlisted men. Mr. Felton, through the assistance of railroad officials, got the names of the drafted men who had been working in the car shops of the different railroads and in the different car-building companies' plants, and also found out to what divisions they had been sent. We asked that these particular men be sent to that car-erecting unit. Orders were issued to that effect, and a number of them were sent.

In a few cases the division commanders objected to having the men taken by name from their divisions, and after consideration the War Department finally decided that it was unfair to do it. So the division commanders were directed, instead of taking the men out by name, to select them. If we asked for 30 men from a particular division, the division commander would be asked to pick out 30 men who were competent to do the work, with the idea that he would pick out the men who were the most competent. In most cases they did what we asked them to do, and sent good men, but in one or two cases the division officers took the opportunity of unloading on us.

Mr. QUINN. What do you mean by "unloading"?

Gen. WINSLOW. By that I mean taking people that the division commander did not want to keep and sending them somewhere else.

Mr. CRAGO. It worked both ways. In some cases men would be asked for by the division commander and you would take away from the captain of a company one or two of the most valuable men in his organization.

Gen. WINSLOW. Of course.

The CHAIRMAN. I wish you would put in the record the total number of special and technical units that have been organized in your branch of the service, together with the size of the same and the rank and pay of the officers.

I just want the number of technical and special units, with the number of men in them and the rank of the officers. I do not care for a statement as to how many of them are in this country and how many in France.

MEMORANDUM.

The number and technical designation of the various engineer units now authorized and being raised under the direction of the Chief of Engineers, with the strength of each unit in officers and enlisted, are as follows:

Forty-three divisional engineer regiments, each consisting of 1 colonel, 1 lieutenant colonel, 2 majors, 11 captains, 16 first lieutenants, 12 second lieutenants, 1,589 enlisted men.

Two mounted engineer battalions, each consisting of 1 major, 5 captains, 7 first lieutenants, 3 second lieutenants, 358 enlisted men.

Forty-five divisional engineer trains, each consisting of 1 first lieutenant, 1 second lieutenant, 82 enlisted men.

Two forestry regiments, (a) consisting of 1 colonel, 1 lieutenant colonel, 2 majors, 13 captains, 20 first lieutenants, 12 second lieutenants, 1,587 enlisted men; (b) consisting of 1 colonel, 1 lieutenant colonel, 10 majors, 53 captains, 100 first lieutenants, 60 second lieutenants, 7,779 enlisted men.

Seven standard-gauge railway construction regiments, each consisting of 1 colonel, 1 lieutenant colonel, 2 majors, 13 captains, 20 first lieutenants, 12 second lieutenants, 1,587 enlisted men.

Five standard-gauge railway operating regiments, each consisting of 1 colonel, 1 lieutenant colonel, 2 majors, 13 captains, 20 first lieutenants, 12 second lieutenants, 1,587 enlisted men.

Four standard-gauge railway operating battalions, each consisting of 1 major, 5 captains, 10 first lieutenants, 6 second lieutenants, 774 enlisted men.

Two standard-gauge railway shop regiments (1) consisting of 1 colonel, 1 lieutenant colonel, 2 majors, 13 captains, 20 first lieutenants, 12 second lieutenants, 1,587 enlisted men; (2) consisting of 1 colonel, 1 lieutenant colonel, 3 majors, 18 captains, 30 first lieutenants, 18 second lieutenants, 2,000 enlisted men.

Five standard-gauge railway maintenance of way battalions, each consisting of 1 major, 5 captains, 10 first lieutenants, 6 second lieutenants, 774 enlisted men.

Two standard-gauge railway maintenance of equipment battalions, each consisting of 1 major, 5 captains, 10 first lieutenants, 6 second lieutenants, 774 enlisted men.

One standard-gauge railway transportation battalion, consisting of 5 captains, 10 first lieutenants, 6 second lieutenants, 774 enlisted men.

One standard-gauge railway trades and storekeepers' battalion, consisting of 1 major, 5 captains, 10 first lieutenants, 6 second lieutenants, 774 enlisted men.

One light railway construction regiment, consisting of 1 colonel, 1 lieutenant colonel, 5 majors, 23 captains, 50 first lieutenants, 30 second lieutenants, 3,909 enlisted men.

One light railway operating and shop regiment, consisting of 1 colonel, 1 lieutenant colonel, 4 majors, 23 captains, 40 first lieutenants, 24 second lieutenants, 3,135 enlisted men.

One road regiment, consisting of 1 colonel, 1 lieutenant colonel, 4 majors, 23 captains, 55 first lieutenants, 29 second lieutenants, 4,655 enlisted men.

Two supply and shop regiments (1) consisting of 1 colonel, 1 lieutenant colonel, 2 majors, 13 captains, 20 first lieutenants, 12 second lieutenants, 1,587 enlisted men; (2) consisting of 1 colonel, 1 lieutenant colonel, 4 majors, 23 captains, 40 first lieutenants, 24 second lieutenants, 3,135 enlisted men.

Two general construction regiments, each consisting of 1 colonel, 1 lieutenant colonel, 9 captains, 18 first lieutenants, 12 second lieutenants, 1,539 enlisted men.

One water-supply regiment, consisting of 1 colonel, 1 lieutenant colonel, 9 captains, 18 first lieutenants, 12 second lieutenants, 1,539 enlisted men.

One mining regiment, consisting of 1 colonel, 1 lieutenant colonel, 9 captains, 18 first lieutenants, 12 second lieutenants, 1,539 enlisted men.

One quarry regiment, consisting of 1 colonel, 1 lieutenant colonel, 2 majors, 13 captains, 20 first lieutenants, 12 second lieutenants, 1,587 enlisted men.

One gas and flame regiment, consisting of 1 colonel, 1 lieutenant colonel, 2 majors, 13 captains, 20 first lieutenants, 12 second lieutenants, 1,587 enlisted men.

One electrical and mechanical regiment, consisting of 1 colonel, 1 lieutenant colonel, 2 majors, 13 captains, 20 first lieutenants, 12 second lieutenants, 1,587 enlisted men.

One surveying, ranging, and map service, consisting of 1 major, 8 captains, 55 first lieutenants, 42 second lieutenants, 2,024 enlisted men.

One port terminal service, consisting of 2 captains, 6 first lieutenants, 4 second lieutenants, 500 enlisted men.

Three auxiliary forestry battalions, each consisting of 1 major, 6 captains, 13 first lieutenants, 8 second lieutenants, 1,024 enlisted men.

Forty-six service battalions, each consisting of 1 major, 4 captains, 5 first lieutenants, 5 second lieutenants, 1,006 enlisted men.

Eighteen motor-truck and motor-car companies, each consisting of 1 first lieutenant, 53 enlisted men.

Ten searchlight companies, each consisting of 1 captain, 1 first lieutenant, 2 second lieutenants, 250 enlisted men.

Five ponton trains, each consisting of 1 first lieutenant, 1 second lieutenant, 170 enlisted men.

One ponton park, consisting of 1 first lieutenant, 1 second lieutenant, 181 enlisted men.

Engineer depot service, consisting of 2,395 enlisted men.

Twelve light tank companies, each consisting of 1 first lieutenant, 3 second lieutenants, 97 enlisted men.

Three engineer training regiments, each consisting of 1 lieutenant colonel, 3 majors, 19 captains, 37 first lieutenants, 36 second lieutenants, 3,058 enlisted men.

The next item in reference to the Engineer Corps is on page 57:

Engineer depots: For incidental expenses for the depots, including fuel, lights, chemicals, stationery, hardware, machinery, pay of civilian clerks, mechanics, laborers, and other employees, extra-duty pay to soldiers necessarily employed for periods not less than 10 days as artificers on work in addition to and not strictly in the line of their military duties, such as carpenters, blacksmiths, draftsmen, printers, lithographers, photographers, engine drivers, telegraph operators, teamsters, wheelwrights, masons, machinists, painters, overseers, laborers; for lumber and materials and for labor for packing and crating engineer supplies; repairs of, and for materials to repair, public buildings, machinery, and instruments, and for unforeseen expenses, \$50,000.

You are asking for \$15,000 more than you had last year. Will you please explain that?

Gen. WINSLOW. For many years the Engineer depot appropriation has run about \$30,000. That was a sort of standard amount, and it was sufficient for peace times. It had to be somewhat increased during the trouble on the Mexican border, and now it has had to be increased because of the increased size of the depot forces we have to keep. We used to have just the Engineer depot here at the Washington Barracks, and a very small depot at Fort Leavenworth, and one at Vancouver, and a small one in the tropical possessions.

Now, we have a very large depot here and we have to keep a large one on the Mexican border, and we have to keep the others up about as usual, although the increased charges at Panama and Honolulu and Manila are small.

The estimate upon which this is based is as follows: Fort Leavenworth, \$4,200; Vancouver Barracks, \$1,275.

Mr. GORDON. Where is Vancouver Barracks?

Gen. WINSLOW. It is in the State of Washington, about a dozen miles from Portland.

Mr. GORDON. Why is it called Vancouver Barracks?

Gen. WINSLOW. Because there is a little town called Vancouver near it.

The amount estimated for Fort Sam Houston is \$27,000; for Corozal, \$3,000; for Honolulu, \$2,200; for Manila, \$5,040; and for the Washington General Depot, \$7,185, making a total of about \$50,000.

Mr. TILSON. I notice you allot a large amount at Fort Sam Houston.

Gen. WINSLOW (interposing). At Fort Sam Houston, at San Antonio, we have a great deal of material accumulated there for use in case anything should turn up in Mexico; and it seems to be the policy of the department to continue to maintain that material within reaching distance of the border.

The CHAIRMAN. The next item is:

Engineer School, Washington, District of Columbia: Equipment and maintenance of the Engineer School at Washington Barracks, District of Columbia, including purchase and repair of instruments, machinery, implements, models, and materials for the use of the school and for instruction of Engineer troops in their special duties as sappers and miners; for land mining, pontoniering, and signaling; for purchase and binding of professional works and periodicals of recent date treating on military and civil engineering and kindred scientific subjects for the library of the United States Engineer School; for incidental expenses of the school, including chemicals, stationery, hardware, machinery, and boats; for pay of civilian clerks, draftsmen, electricians, mechanics, and laborers; compensation of civilian lecturers and payment of tuition fees of student officers at civil technical institutions; for unforeseen expenses; for travel expenses of officers on journeys approved by the Secretary of War and made for the purpose of instruction: *Provided*, That the traveling expenses herein provided for shall be in lieu of mileage and other allowances; and to provide means for the theoretical and practical instruction at the Engineer School by the purchase of textbooks, books of reference, scientific and professional papers, and for other absolutely necessary expenses, \$30,000.

That is the same amount you got last year for that item?

Gen. WINSLOW. It is the same as last year; yes, sir. Of course, the engineer school has been discontinued as far as the school itself is concerned. The course at the school, previous to the war, was about 18 months; and so all during the winter months we have had two classes of officers there, one class of officers entering in one October and leaving in April of the following year, about 18 months afterwards.

The last class was graduated about the middle of April last.

But there are a good many other things carried on in the school in addition to instruction. We have numerous publications on military, civil, and mechanical engineering. Then we also desire to keep up the library there, containing a great many professional works.

Then, in addition to that, there has always been carried on at the school a good deal of experimental work. We desire to carry on experiments to a greater extent than ever before, especially with regard to certain details of searchlight work. We desire to do that work at this school, because the school is here and we have the plant, and because in Washington we have the assistance of the trained physicists at the Bureau of Standards.

Mr. TILSON. Who attends the school?

Gen. WINSLOW. The regular attendants are officers of the Engineer Corps. The first service of the officers in the Engineer Corps, whether they graduate from West Point or come in from civil life, is one or two years with troops. They are then called to the engineering school here for a post-graduate course in civil, military, and electrical engineering. They take this course for 18

months. The engineer school corresponds to the Artillery school at Fort Monroe, where the Artillery officers take a special course in the more scientific matters connected with their branch of the service, and it also corresponds to the Field Artillery school at Fort Riley and to the Infantry school at Fort Leavenworth.

Mr. CALDWELL. The Engineer officers from the training camps were sent out here to the American University. What is that?

Gen. WINSLOW. That had nothing to do with the Engineer school I have been referring to.

The American University was started in the suburbs of Washington, and two buildings were erected, but the university itself has hardly yet gotten on its feet; so when we were looking around for camp sites last spring for these training-camp troops the officials of the American University offered the use of their grounds and of their buildings after they got through using them in June. We simply took the use of the ground. We built little frame cantonment buildings and have raised certain Engineer troops there. "American University" was simply the name of the camp.

Mr. GREENE. You spoke about the experimental work at the Engineer School here. Some time ago some of the officers indicated that there was difficulty in obtaining certain kinds of refractory lenses in this country. Have those difficulties been overcome sufficiently to make it no longer a question of anxiety, so far as the getting the necessary supply of those lenses is concerned?

Gen. WINSLOW. That is a question I can not answer, because the trouble you refer to pertains to the Signal Corps and the Ordnance Department.

Mr. GREENE. That thought was suggested by your reference to experiments in searchlight work carried on at the Engineer School, and I wondered whether that was connected with it, and whether you found any difficulty in obtaining your supply of those lenses.

Gen. WINSLOW. Prior to about four or five years ago all searchlight mirrors were manufactured abroad, but we took time by the forelock, and got the Bausch & Lomb people interested in their manufacture. They began, quite a number of years ago, working on searchlight mirrors, and although it delayed the turning out of certain searchlight for from six months to a year, we gave these people a large contract, and waited for them to develop searchlight mirrors. If you were at the San Francisco Fair, you may have seen one of their 60-inch mirrors, which was manufactured for us. The searchlight mirrors now used in our searchlights are all manufactured in this country.

We gave them these contracts—this was about 1910 or 1911—even though it meant a delay in completing searchlights in order to encourage the manufacture of the mirrors in this country. It is a good thing we did, because otherwise the supply would have been cut off by the war.

Mr. GREENE. Another part of the experimentation was with illuminating bombs and various other things?

Gen. WINSLOW. Yes; we had some experiments there with illuminating bombs. Through experimentation at the Engineer School, we have been developing a high-intensity searchlight which we believe is better than anything now in possession of the nations abroad. Some years ago a man by the name of Beck developed a

searchlight which gave a high-intensity arc, but that has been outdone in this country by Mr. Sperry, who is the same man who invented the Sperry gyroscopic compass, and worked on the installation in ships of gyroscopes to prevent the ships from rolling. He developed the Sperry light. We then bought a Beck light from the General Electric Co. and tested it in competition with the Sperry light at Fort Monroe about a year ago. The Sperry light was shown to be undoubtedly the better.

Mr. GREENE. As a matter of information, in case the question should be asked on the floor of the House, is it fair to say that, so far as the special and technical appliances are concerned, and all sorts of similar devices which are necessary for the Engineer Corps, you find yourselves well supplied now in this country, and there is no immediate prospect of anxiety about that?

Gen. WINSLOW. We find we can get pretty nearly all the instruments we need in this country as rapidly as we need them. The searchlight is a big item. We have part of it made by the General Electric Co.; the mirrors are made by the Bausch & Lomb people; and we have special high intensity apparatus and lamp made by the Sperry people, all in this country.

Now, we are also developing a number of sound range instruments, which we believe are better than those abroad. They are being manufactured in this country at various plants.

Mr. GREENE. But for general purposes, and so far as the satisfaction of the lay mind is concerned, your general run of useful and necessary instruments and appliances, so far as their supply is concerned, is now apparently in sight?

Gen. WINSLOW. For the Engineer service; yes, sir.

Mr. TILSON. Is there included in this item for experimental and testing work any amount for experimentation in connection with military fireworks, such as illumination rockets, flare bombs, etc.?

Gen. WINSLOW. The experimental work of this character is done at the Engineer School, but the cost of appliances of that kind is paid for out of the appropriation for the Engineer equipment of troops. We simply buy a small lot of that particular kind of bombs out of this appropriation and test them out. If they turn out well, we will buy a lot more of them.

Mr. CALDWELL. In making the estimates for the various items of your appropriation, would your estimation be increased with a substantial increase of the Army?

Gen. WINSLOW. This item for experimentation work at the Engineer School is independent of the number of men in the Army. We know about what we want to do, and we simply work in the experimental line until we get something that is satisfactory, and then the question of supplying the troops come out of another appropriation.

Mr. CALDWELL. My point is whether any of the items you have spoken about to-day would be increased materially with an increase of the Army.

Mr. GORDON. When did you discontinue this Engineer School?

Gen. WINSLOW. The class which was under way was discontinued on the 15th of April.

Mr. GORDON. How does it happen, then, that you are asking for the same appropriation, when the school is discontinued?

Gen. WINSLOW. The Engineer School has a good deal of work in addition to the mere teaching work. They do departmental work there, and publication work, the publication of books and papers.

Mr. GORDON. Those books are simply for the purpose of carrying on the school, are they not?

Gen. WINSLOW. They are also for use in connection with the school. The school is supposed to be the source of engineering information for the entire Army.

Mr. GORDON. The school has been discontinued?

Gen. WINSLOW. As a school, as far as the classes are concerned; yes. The students have been assigned to other work, and the instructors also, but there are still officers on duty at the school doing the other work at the school, and the experimental work is considered important. We desire to increase the experimental work and we hope to have the same amount of funds allotted for that purpose. Instead of using this appropriation this year for the routine expenses of the school we will use them for the experimental work.

Mr. GORDON. The amount necessary will be about the same, you think?

Gen. WINSLOW. About the same.

Mr. SHALLENBERGER. I understood you to say that these officers who have been commissioned since the war began in the Engineer Corps are not reserve officers of the Engineer Corps.

Gen. WINSLOW. They are commissioned as officers of the Engineer Reserve Corps and they are called into service with National Army units.

Mr. SHALLENBERGER. Have they the same relation in your corps that the Ordnance reserve officers or the Quartermaster reserve officers have to their respective corps?

Gen. WINSLOW. Exactly. The only difference in the status of the officers is that when a reserve officer is assigned to an Engineer unit or Engineer regiment he becomes a part of that Engineer regiment, and therefore a part of the line.

Mr. SHALLENBERGER. But in the other corps he would acquire a different status; that is, if he is in the Quartermaster Corps he would acquire a different status?

Gen. WINSLOW. Exactly.

Mr. SHALLENBERGER. You have not any distinction?

Gen. WINSLOW. No. An officer of the Corps of Engineers is a staff officer when he is commissioned.

Mr. SHALLENBERGER. I thought you did not consider that man as a member of the reserve officers of the Engineer Corps?

Gen. WINSLOW. No; they have exactly the same status as reserve officers in other corps.

The CHAIRMAN. The next item is:

Engineer equipment of troops: For pontoon material, tools, instruments, supplies, and appliances required for the use of the engineer equipment of troops, for military surveys and for engineer operations in the field, including the purchase, maintenance, operation, and repair of the necessary motorcycles; the purchase and preparation of engineer manuals and procurement of special paper for same, and for a reserve supply of above equipment, \$135,000,000.

You received an appropriation at the last session of Congress of \$49,150,000 for this item.

Gen. WINSLOW. We were directed by the Chief of Staff to prepare this estimate on the basis of 1,612,000 men. We have assumed that

for purposes of making estimates that these 1,612,000 men would be divided into 58 divisions, and a certain number of special service troops. It is assumed that the cost of the equipment of a division is \$150,000. It is assumed that 41 of the divisions will have been equipped by the end of the fiscal year, and that the equipment of 17 will have to be purchased next year. It is also assumed that for this engineer equipment there is required a replacement of 500 per cent a year. That is what is learned from the experience of our allies in the war, that the complete equipment of an engineer division has to be replaced about five times during the fiscal year, so we are assuming we will have to replace the equipment of 41 divisions five times during the year. In the case of the 17 remaining divisions of the 58, we have to equip them during the year. It is assumed that they will average six months of existence during the next fiscal year, and allowing a replacement of 500 per cent per year, that makes a replacement of 250 per cent for these 17. The total is \$39,675,000. That is for equipment.

The CHAIRMAN. How do you arrive at the amount of \$150,000 as the cost of the equipment of a division?

Gen. WINSLOW. There is a board which has worked out exactly what each organization of the Army should have in the way of engineer equipment, and by the actual addition of these figures we get the amount, which is approximately \$150,000. We have already equipped some divisions so we know about what it will cost.

The CHAIRMAN. What would that figure out per capita?

Gen. WINSLOW. There are something over 25,000 men in a division, and it would be about \$6 per man, or slightly less than that.

All the rest of the items are figured upon Gen. Pershing's estimates, as made abroad and sent here. There is the equipment of 10 field searchlight companies, at \$60,000, for troops which are out at the front, in the front line. For the searchlights we figure the same percentage of replacement; that is, 500 per cent a year. For troops in the rear we consider that the percentage of replacement is 100 per cent per year. Starting with 10 field searchlight companies, of which 5 will be provided by the end of this year we get \$2,550,000.

Then there are 10 antiaircraft searchlight companies, at \$80,000 apiece, at a total cost of \$3,000,000. The other things under this item include the following:

Engineer equipment of troops.

	Fiscal year 1918.		Fiscal year 1919.			
	Organized and equipped in fiscal year 1918.	Cost of equipment 1918.	Organized and equipped in fiscal year 1919.	Cost of equipment 1919.	Cost of replacement 1919, notes A and B.	Total cost of equipment 1919, column 4 plus column 5.
58 divisions, at \$150,000 (A).....	41	\$6,150,000	17	\$2,550,000	\$37,125,000	\$39,675,000
Engineer property furnished divisional Engineer regiments, Engineer train, and line troops. Corps troops:						
10 field searchlight companies, at \$60,000 (A).....	5	300,000	5	300,000	2,250,000	2,550,000
Originally with the searchlight section of the Engineer trains. Each company to have 6 24-inch searchlights, horse-drawn.						

Engineer equipment of troops—Continued.

	Fiscal year 1918.		Fiscal year 1919.			
	Organized and equipped in fiscal year 1918	Cost of equipment 1918.	Organized and equipped in fiscal year 1919.	Cost of equipment 1919.	Cost of replacement 1919, notes A and B.	Total cost of equipment 1919, column 4 plus column 5.
Corps troops—Continued.						
10 antiair craft searchlight companies, at \$80,000 (A)....	5	\$400,000	5	\$400,000	\$3,000,000	\$3,400,000
To handle portable antiair craft searchlights, motor-drawn. Portable equipment for each company 2 mobile antiaircraft searchlights.						
10 heavy pontoon trains, at \$90,000 (A).....	5	450,000	5	450,000	3,375,000	3,825,000
Each pontoon train to consist of 3 divisions of heavy equipment and half supply division.						
Army troops:						
2 regiments, gas and flame, at \$200,000 (A).....	1	200,000	1	200,000	1,500,000	1,700,000
Offensive, gas and flame.						
2 regiments, mining, at \$900,000 (A).....	1	900,000	1	900,000	6,750,000	7,650,000
For tunneling and mining.						
2 regiments, surveying and ranging, at \$700,000 (A).....	1	700,000	1	700,000	5,250,000	5,950,000
Topographical surveying, map reproduction, cartography, printing, map reproduction, map supply, translation of aeroplane photographs into maps, sound ranging and flash ranging.						
2 regiments, general construction, at \$300,000 (B).....	1	300,000	1	300,000	450,000	750,000
Construction of cantonments, hospitals, storehouses, permanent bridges, including installation of heating plants, laundries, kitchens, etc.						
2 regiments, supply, at \$300,000 (B).....	1	300,000	1	300,000	450,000	750,000
To receive, store, and issue Engineer materials in the Army zone, salvage Engineer materials from abandoned positions, and exploit local resources in Engineer materials.						
2 heavy pontoon parks, at \$150,000 (A).....	1	150,000	1	150,000	1,125,000	1,275,000
2 regiments, electrical and mechanical, at \$200,000 (B).....	1	200,000	1	200,000	300,000	500,000
Installation and operation of electric light and power plants, transmission lines.						
2 regiments, water supply, at \$1,000,000 (B).....	1	1,000,000	1	1,000,000	1,500,000	2,500,000
Well drilling, laying pipe lines, installing tanks, pumps, etc.						
Service of the rear troops:						
2 regiments, general construction, at \$300,000 (B).....	1	300,000	1	300,000	450,000	750,000
Construction of wharves, depots, storehouses, workshops, base hospitals, permanent bridges, etc., in rear.						
2 regiments, supply, at \$300,000 (B).....	1	300,000	1	300,000	450,000	750,000
Similar, to supply regiment under Army troops above.						

Engineer equipment of troops—Continued.

	Fiscal year 1918.		Fiscal year 1919.			
	Organ- ized and equipped in fiscal year 1918.	Cost of equipment 1918.	Organ- ized and equipped in fiscal year 1919.	Cost of equipment 1919.	Cost of replacem- ent 1919, notes A and B.	Total cost of equip- ment 1919. Column 4 plus column 5.
Service of the rear troops—Con.						
4 battalions, shop, at \$400,000 (B).....	2	\$800,000	2	\$800,000	\$1,200,000	\$2,000,000
For operation of work-shops and repair shops.						
1 regiment, forestry (B).....	1	800,000	800,000	800,000
2 battalions, camouflage (B)....	1	600,000	1	600,000	900,000	1,500,000
10 battalions, sawmill, etc., at \$800,000 (B).....	5	4,000,000	5	4,000,000	6,000,000	10,000,000
For installation and operation of sawmills, logging, etc.						
6 battalions, auxiliary forestry, at \$400,000 (B).....	3	1,200,000	3	1,200,000	1,800,000	3,000,000
For camp, road, and bridge work in connections with lumber operations.						
2 regiments, quarry (B).....	1	1,000,000	1	1,000,000	1,500,000	2,500,000
To supply road and railroad services.						
regiments, highway, at \$700,000 (B).....	2	1,400,000	2	1,400,000	2,100,000	3,500,000
For the construction and maintenance of roads.						
20 companies, special trucks (31 each), at \$5,000 (B).....	10	1,550,000	10	1,550,000	2,325,000	3,875,000
10 companies, harness and wagons (61 each), at \$400 (B).....	5	122,000	5	122,000	183,000	305,000
6 regiments, standard gauge railway construction (B).....	5	100,000	1	20,000	110,000	130,000
1 regiment, standard gauge railway, maintenance of way (B).....	1	20,000	10,000	30,000
2 regiments, standard gauge railway, operating (B).....	1	20,000	1	20,000	30,000	50,000
1 regiment, standard gauge railway, maintenance equipment.....	1	20,000	20,000	20,000
2 regiments, standard gauge railway, shop.....	1	20,000	1	20,000	30,000	50,000
1 regiment, standard gauge railway, miscellaneous.....	1	20,000	10,000	30,000
Miscellaneous trades and storekeepers, transportation and eating houses.						
3 regiments, standard gauge railway (with British Army).....	3	60,000	60,000	60,000
5 regiments, light railway, construction and maintenance (B).....	2½	50,000	2½	50,000	75,000	125,000
4 regiments, light, railway, operating and maintenance (B).....	2	40,000	2	40,000	60,000	100,000
2 regiments, light, railway, miscellaneous.....	1	20,000	1	20,000	30,000	50,000
Stevedores and crane operators to handle cranes and stevedore work at the ports to be operated by our transportation service.						
92 battalions, service troops.....	46	2,750,000	46	2,750,000	4,125,000	6,875,000
To furnish unskilled labor for the various services, to be attached as needed.						
Depot detachment, 32, at \$10,000. Incidental expenses of depot detachments at various camps and cantonments.	32	320,000	64,000	64,000
Total.....	21,682,000	85,407,000	107,089,000
Contingencies.....	27,911,000
Grand total.....	135,000,000

NOTE.—(1) In this estimate the following percentages of replacement are assumed and are indicated by letters A and B: A equals 500 per cent replacement per year for equipment of troops at the front; B equals 100 per cent replacement per year for troops in rear, lines of communication, etc.

(2) The figures in the column headed: "Fiscal year 1918" do not make up a part of the estimate. They show the number of units which it is assumed will be organized before June 30, 1918. It is assumed that the cost of the equipment for these units will be paid from 1918 funds.

Mr. QUIN. What do you mean by labor troops strictly for the Engineer division?

Gen. WINSLOW. I mean service troops, labor battalions, working in connection with the Engineer troops. Each of the Engineer regiments of the rear, working on the line of communication, has along with it a number of labor battalions, and a large proportion of those battalions are made up of negro laborers.

The CHAIRMAN. General, I am going to ask you to give the committee a general statement showing what the service of each one of the technical units is, and put that in the record along with the table.

Gen. WINSLOW. The character of the service of the different technical units is shown in the first column of the table.

Mr. CALDWELL. That item is based, I suppose, on an army of 1,612,000 men?

Gen. WINSLOW. Yes, sir.

Mr. CALDWELL. If, before this bill is passed, Congress fixes the size of the Army at 3,000,000 men, or any multiple of the number of men now in the Army, we will have to increase this amount in absolute ratio?

Gen. WINSLOW. In absolute ratio, no, sir. This table shows that we expect by the end of the present fiscal year to have certain organizations equipped. If you are going to order the formation of any additional organizations, you simply have to increase the other items.

The first column is for the replacement of the divisions already equipped, or which will be equipped by the end of the fiscal year, so that for any additional troops you can simply increase the amount in proportion.

Mr. CALDWELL. I simply wanted to get in the record a statement as to whether or not the proportion would continue with each 500,000 men, or whether one additional 500,000 would be increased a certain proportion, and the second 500,000 would be the same or a different proportion. In this estimate I understand you to say that each 500,000 men would have the same proportionate increase?

Gen. WINSLOW. Except that one thing has got to be very carefully looked into. You see, we use 500 per cent replacement for the troops on the front fighting line, and only 100 per cent for the service at the rear. You have to distinguish between those, but if you divide them in the same proportion as the total, you can take the same figures.

Mr. FIELDS. What are the forestry troops for?

Gen. WINSLOW. The forestry troops are going into the lumber forests. A very large proportion of the timber over there is needed for the work in the trenches. The trenches have to be revetted, and we have to build bombproofs, and those are all made from timber cut from the French forests.

Mr. FIELDS. We are getting that timber from the forest reserves of France?

Gen. WINSLOW. Yes.

Mr. FIELDS. For this work you selected men who have had experience in that work?

Gen. WINSLOW. Yes. They are sawmill men—actual lumbermen—who have been out in the field, and we have a few foresters. The idea of the foresters seems to be to cut the forests so as to preserve them,

and the idea of the lumberman seems to be to cut as much lumber as he can in the forest.

Mr. FIELDS. If you put a man in a forest to cut timber who is not an experienced man, he will waste as much timber as he saves. It is very essential, therefore, to have practical men engaged in that work.

Gen. WINSLOW. That is the reason we have the foresters, and we also have practical lumbermen.

In connection with the organization of the troops, when the forestry troops were first started, we figured we would want a proportion of about one-third foresters and about two-thirds lumbermen, and we went to the Forestry Division of the Department of Agriculture and said to them, "Can you help us in picking out the foresters?" They were very glad to offer their services, and Mr. Graves, the Chief Forester, was commissioned as a major, and went over and stayed there several months. We have had a number of other men from the Bureau of Forestry, among them Mr. Greeley, who was one of the prominent men in the bureau. He went over there as a major and is still there. The Bureau of Forestry helped us to get these men, and we took their certificates in regard to the forestry people in lieu of the professional examination.

Mr. FIELDS. Then in selecting timber, you have inspectors?

Gen. WINSLOW. Yes.

Mr. FIELDS. How did you select the timber inspectors?

Gen. WINSLOW. Some of those were recommended by the Forestry Bureau of the Department of Agriculture, and others were selected by some of the practical lumbermen we got in first.

Mr. FIELDS. The reason I asked that question is, I was talking a few days ago with a practical lumberman who was offering his services to the Government. He is a man who gets a large salary as a lumber inspector, and I was wondering if you selected men of his class and ability as lumber inspectors, when you have an opportunity.

Gen. WINSLOW. When we have an opportunity, we do. The first forestry regiment was authorized a very few days after the first railroad regiment, and the second forestry regiment was authorized on the 27th of August, and we have since been authorized to increase its size.

Mr. FIELDS. One of the very essential things in the cutting of timber is to have men who are capable of estimating a log when they look at it. You are trying to get practical men for all that sort of work?

Gen. WINSLOW. Yes, sir.

Mr. FIELDS. A man might look at a log and cut it into something which it was not best fitted to make.

Gen. WINSLOW. We have practical mill men on that work.

Mr. FIELDS. You are trying to get practical men all the way through?

Gen. WINSLOW. Yes. Col. Mitchell is the commanding officer of the second forestry regiment, and although a large portion of the regiments has gone, he is still here, and went over the papers of the candidates. Each man who submitted a request for a commission in this regiment was asked to give a full statement of his experience, and the papers were all sent out and gone over by Col. Mitchell and his officers and we believe we have picked a good lot of officers.

Mr. CALDWELL. In connection with this lumber you are using on the other side, you say it is a part of the French forest reserve. Do we pay the French Government or anyone there for stumpage?

Gen. WINSLOW. The understanding is that we are to pay eventually for everything we use, but that is one of the questions which is to be settled after the war. It is the same way with the railroad material we are sending over to the French.

Mr. CALDWELL. Who is going to own the railroad when we get through with it?

Gen. WINSLOW. That is a question to be determined after the war.

Mr. CALDWELL. Would that railroad take care of 3,000,000 men?

Gen. WINSLOW. I do not know.

Mr. GREENE. What gauge are we following on the railroad?

Gen. WINSLOW. The gauge is the same as the French gauge, but the clearance on the bridges is a little different. Our full-sized car can not get through their tunnels and over their bridges.

Mr. MCKENZIE. Returning to the question of the foresters, are these men we are sending over designated as foresters, woodchoppers? Do they work in the timber, or are they what we understand as a forester—a man who goes through the forests and marks the trees to be cut?

Gen. WINSLOW. The enlisted men of the regiment are actual woodchoppers, and at least two-thirds of the officers are actual lumbermen. There is a certain proportion of the officers who have been selected by the Forestry Bureau to assist and to try to see that the operations are carried on with as little damage as possible to the remaining trees.

Mr. MCKENZIE. Of course, the French Government has a Bureau of Forestry, and I would assume they would be doing that now.

Gen. WINSLOW. They are.

Mr. MCKENZIE. That they would at least go into the forests and spot the trees.

Gen. WINSLOW. They are; and undoubtedly they will send some of their forestry men with our officers.

Mr. MCKENZIE. The question in my mind was whether or not the French Government would permit one of our men to go into a forest and spot the trees that are to be cut.

Gen. WINSLOW. As to the details, I am not familiar with that; but we have sent over foresters. Maj. Graves, who was the chief forester of the Department of Agriculture, is over there, with several of the other men of the forestry bureau. They have been working with the French Government.

Mr. MCKENZIE. In regard to the sawmills, have you shipped a good many sawmills to France?

Gen. WINSLOW. Each battalion is supposed to have six portable sawmills.

Mr. MCKENZIE. Each battalion of foresters?

Gen. WINSLOW. Yes.

Mr. FIELDS. What horsepower are those sawmills?

Gen. WINSLOW. We can get you that information. Each one of the battalions has its own portable sawmill and its own outfit, and this is supposed to be the sized outfit that could be operated properly

by the number of men in the battalion, with the assistance of the labor battalion that goes along with it.

Mr. MCKENZIE. The question that occurred to me was whether or not those sawmills should have been purchased in France, and thus we could have saved the cost of transportation from this side.

Gen. WINSLOW. We are purchasing everything in France we can get there. We have purchasing officers abroad, and the instructions have been to do everything they can to purchase things they need abroad.

The CHAIRMAN. I will ask you to put in the record a detailed statement showing why you ask for an increase in the item for "Civilian assistants to engineer officers" from \$75,000 to \$115,000, and also include in that statement the details as to how much of the appropriation you received last year you have expended.

That brings us down to the details of the engineer operations in the field.

CIVILIAN ASSISTANTS TO ENGINEER OFFICERS.

Estimate submitted for 1919.....	\$115,000
Amount appropriated for fiscal year 1918.....	75,000

Purpose of appropriation.—Payment of salaries of civilian assistants to Engineer officers on the staffs of division, corps, and department commanders. It has been used, however, only for payment of civilian assistants to department engineers, and the estimate for 1919 includes only the estimated amount required for that purpose. The estimate for payment for civilian assistants in Europe and any others required on account of the war is included under the estimate for "Engineer operations in the field."

Basis of estimate.—The following estimates for the fiscal year 1919 have been submitted by the department engineers and form the basis of the estimate of \$115,000 submitted for the fiscal year 1919:

Northeastern Department.....	\$6,000
Eastern Department.....	35,000
Southeastern Department.....	12,000
Central Department.....	6,000
Southern Department.....	23,000
Western Department.....	9,560
Panama Canal Department.....	8,685
Hawaiian Department.....	5,300
Philippine Department.....	8,620
Total.....	114,175

Reason for increase.—The creation of two new departments (Northeastern and Southeastern) for the department engineers, of which civilian assistants must be employed. Due to the fact that these departments were created after the submission of the 1918 estimates, no provision therefor was made in the appropriation for 1918. This has caused the 1918 appropriation to be insufficient. Request has been received from the department engineer of the Panama Canal Department for an additional allotment, but it has not yet been possible to secure funds for this allotment. Another reason for the increase is that it is probable that additional funds will be required during the fiscal year 1919 on account of additional employees who will be required by the department engineers on account of extra work required in connection with the mobilization of troops, etc.

The following are the expenditures which have been made from the 1918 appropriation up to December 31, 1917:

Department engineer:	
Northeastern Department.....	\$2,592.75
Eastern Department.....	11,435.46
Southeastern Department.....	2,365.00
Central Department.....	2,409.17
Southern Department.....	7,140.13

Department engineer—Continued.

Western Department.....	\$3, 479. 39
Panama Canal Department.....	3, 528. 12
Hawaiian Department.....	768. 87
Philippine Department (expended to Nov. 30; December report not available).....	2, 616. 17
Total	36, 333. 06

Mr. SHALLENBERGER. I understand that in the case of men commissioned in the Engineer Corps of the Regular Army you require them to go to these schools, and they have to pass an examination in the schools, but that in the case of the men in the Engineer Reserve Corps you have not required them to go to a school, but they have been taken in upon certificates from the outside as to their efficiency.

Gen. WINSLOW. The law says that a candidate for admission into the Engineer Corps in the Regular Army in order to be eligible must hold a diploma showing graduation from an approved engineering school. The requirements for the reserve corps are not so severe. A man must be in the practice of engineering or some similar profession.

Mr. SHALLENBERGER. You have not had a training school to which you required the men to go?

Gen. WINSLOW. After they are commissioned.

Mr. SHALLENBERGER. But you have not required them to spend a certain number of months at a training school; you have taken them in largely upon certificates?

Gen. WINSLOW. Yes; but we try to send every man we expect to need, when commissioned, to a training camp.

Mr. SHALLENBERGER. You commission him first?

Gen. WINSLOW. If he fails to make good at the training camp, he is eliminated.

Mr. TILSON. Do you not think that is unfair to an officer? Suppose he gives up his business and gets a commission, and then he is put in a school. He is already commissioned; and if he is finally found to be not entirely fit to make a good engineer officer he is practically disgraced and sent home. Do you think that is a good way to get your officers? Why not have your training camps first and let the students go to those training camps and then commission those who pass the examinations, and do not commission a man and then send him to a school and finally dismiss him.

Gen. WINSLOW. The Engineer Reserve Corps antedated the training camps by nearly a year. Those men who had been commissioned already had taken their commissions without knowing whether the war was coming on or not. We sent them to the training camp and gave them special instruction. The question of picking out the fit was only incidental; and I may say that 85 per cent of those who went to the training camp retained their commissions.

Mr. TILSON. Why could you not have sent the other 15 per cent back home and put them on an inactive list, and not have disgraced them in the sight of their neighbors?

Gen. WINSLOW. That is what we did do in the case of the men who went to the first training camp. We sent them home and put them on the inactive list. Later the War Department gave us instructions to the effect that they did not want the list of reserve officers to be kept very large, and instructed us to eliminate those that we did

not expect to need, and so we had to vacate the commissions of those who had been tried and found wanting.

(Thereupon the committee adjourned to meet to-morrow, Thursday, January 31, 1918, at 10.30 o'clock a. m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Thursday, January 31, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent (chairman) presiding.

STATEMENT OF MAJ. GEN. WILLIAM M. BLACK, CHIEF OF ENGINEERS, ACCOMPANIED BY BRIG. GEN. E. EVELETH WINSLOW, ASSISTANT TO THE CHIEF OF ENGINEERS; COL. WILLIAM J. WILGUS, COL. WILLIAM H. ROSE, COL. MAX C. TYLER, LIEUT. COL. J. G. STEESE, MAJ. EARL NORTH, AND MAJ. ROSCOE C. CRAWFORD, CORPS OF ENGINEERS.

The CHAIRMAN. General, the next item is:

Engineer operations in the field: For expenses incident to military engineer operations in the field, including the purchase of material and a reserve of material for such operations, the construction or rental of storehouses within and outside the District of Columbia, the purchase, operation, maintenance, and repair of horse-drawn and motor-propelled passenger-carrying vehicles, and such expenses as are ordinarily provided for under appropriations for "Engineer depots," "Civilian assistants to Engineer officers," and "Maps, War Department": *Provided*, That in case of actual or threatened war, the Secretary of War may authorize the incurring of obligations for the purposes of this appropriation in excess of funds which may be available, but such obligations shall not exceed the immediate military necessities: *Provided further*, That when to the interest of the Government, funds appropriated under this head may be used for the purchase of options on material for use in engineer operations in the field, \$892,000,000.

At the last session of Congress, you got an appropriation of \$280,800,000 for this item. Will you please explain the reason for the large increase you are asking for?

Gen. BLACK. Mr. Chairman, this amount is based on the best estimates we can make, based on the requisitions that were sent from abroad and the experience of the English and the French as to the cost of their operations, and the cost of materials in this country. It is necessarily purely an estimate, because no man can by any possibility tell how much the operations in the field will cost.

I will give you a few of the items on which this estimate is based and you can see how difficult that is. Take the first one, for instance, 500 standard-gauge regular locomotives, and the second one, for 500 60-centimeter locomotives. The 60-centimeter locomotives are the little narrow-gauge locomotives that carry munitions and supplies from the railhead of the standard-gauge road right up to the trenches.

You will remember in the recent fight when Gen. Byng made his great advance, the following day you saw something about some of our engineers having gotten into it. As a matter of fact, they had carried the narrow-gauge railroad so close to the rear of the British lines that when the Germans broke through and came around our fellows were caught in there. That is what our narrow-gauge line is.

There is a whole lot of work it has to do, carrying supplies from the railhead and passing to all parts of the trenches for the quick supply and carrying up of the different materials. The standard-gauge locomotives are for our own use.

This estimate covers what we need. The railroad item amounts to a very large proportion of the estimates. It includes freight locomotives, freight cars, all kinds of track materials and equipment for the maintenance of the road, and fuel. We have to build wharves and lighters, too.

The CHAIRMAN. Can you give the committee substantially the total appropriation for railroad operations over there?

Gen. BLACK. That amounts to \$224,020,000.

The next large item is electrical equipment. There is a very large use made of electric lighting, even clear up at the front. The dugouts are all lighted by electricity. There is electricity used for all sorts of purposes, and the expense of that is a great deal. The item for cantonment lighting is quite large.

The CHAIRMAN. What is the total amount of the item for electrical equipment?

Gen. BLACK. That is \$22,000,000. I can give you a detailed copy of all this, if you wish it. I have here an itemized statement covering all the items.

The CHAIRMAN. We will be glad to have that.

Engineer operations in the field.

	Fiscal year 1918.		Fiscal year 1919.			
	Organized and equipped in fiscal year 1918.	Cost of equipment, 1918.	Organized and equipped in fiscal year 1919.	Cost.	Replacement and maintenance.	Total.
New railway equipment (this is estimate of director general of military railways and is based on assumption that 9,000,000 tons of freight will be delivered at ports in France for transportation by rail to the front):						
500 standard-gauge locomotives.				\$23,000,000		\$23,000,000
500 60-cm. locomotives.				5,000,000		5,000,000
30,000 standard-gauge freight cars.				81,000,000		81,000,000
6,000 60-cm. freight cars.				6,000,000		6,000,000
150,000 tons track materials with switches, etc.				10,000,000		10,000,000
500 miles 60-cm. track.				4,700,000		4,700,000
150 miles 40-cm. track.				500,000		500,000
Water station equipment.				200,000		200,000
Maintenance of all railway equipment:						
1,500 standard-gauge locomotives, at \$2,000.					\$3,000,000	3,000,000
900 60-cm. locomotives, at \$2,000.					1,800,000	1,800,000
40,000 standard-gauge freight cars, at \$50.					2,000,000	2,000,000
9,500 60-cm. freight cars, at \$200.					1,900,000	1,900,000
Maintenance, repairs, replacements, plant, tools, steam shovels, locomotive cranes.					10,000,000	10,000,000
Fuel, 1,500 standard-gauge locomotives and 900-cm. locomotives.					53,500,000	53,500,000
Lubrication, locomotives and cars.					270,000	270,000
Haul over French lines to American base, 9,000,000 tons, at \$1.25 per ton.					11,250,000	11,250,000

Engineer operations in the field—Continued.

	Fiscal year 1918.		Fiscal year 1919.			
	Organized and equipped in fiscal year 1918.	Cost of equipment, 1918.	Organized and equipped in fiscal year 1919.	Cost.	Replacement and maintenance.	Total.
Shop equipment.....				\$5,400,000		\$5,400,000
New equipment and maintenance shops and engine terminals.						
Wharves and floating equipment. For handling equipment and supplies shipped to A. E. F.		\$5,000,000		15,000,000	\$3,000,000	18,000,000
Electrical equipment.....		10,000,000		20,000,000	2,000,000	22,000,000
Engineer department is to furnish all electric lighting and power.						
375 hospital groups, 1,000 bed units, at \$350,000.....	75	36,250,000	300	105,000,000	10,500,000	115,500,000
Includes cost of buildings, lining, rent of land, etc. Estimate of number required based on request from Surgeon General to furnish one bed for every four men.						
58 cantonment groups, at \$5,500,000, with land.....	17	93,500,000	41	225,000,000	22,500,000	247,500,000
One cantonment group for each division; estimate includes rent of land.						
Embarkation depots in United States.....		5,000,000		6,000,000		6,000,000
For office rent and supplies, erection and lease of storehouses, piers, wharves, purchase of trucks, derricks, cranes, lighters, etc., for handling material.						
Storehouses and depots in France.		10,000,000		25,000,000	2,500,000	27,500,000
Instruction in engineer field operations in United States at camps and cantonments.....		800,000		1,000,000		1,000,000
Add for payment of civilian employees in France.....		500,000		500,000		500,000
All supplies for operation of special services except railroads.....		125,000,000		230,000,000		230,000,000
Initial and automatic supply based on American and foreign requisitions.						
To provide motor transportation for the various services, including railway department:						
2 companies, 1-ton trucks (30 each), at \$800 (B).....	1	24,000	1	24,000	36,000	60,000
6 companies, 1½-ton trucks (30 each), at \$2,000 (B).....	3	180,000	3	180,000	270,000	450,000
12 companies, 3-ton trucks (30 each), at \$4,000 (B).....	6	720,000	6	720,000	1,080,000	1,800,000
6 companies, 5-ton trucks (30 each), at \$6,000 (B).....	3	540,000	3	540,000	810,000	1,350,000
2 companies, limousines (30 each), at \$5,000 (B).....	1	150,000	1	150,000	225,000	375,000
2 companies, light all-weather (30 each), at \$1,600 (B).....	1	48,000	1	48,000	72,000	120,000
2 companies, light touring (30 each), at \$800 (B).....	1	24,000	1	24,000	36,000	60,000
4 companies, motorcycles (30 each), at \$400 (B).....	2	24,000	2	24,000	36,000	60,000
Total.....				765,010,000	126,785,000	891,795,000
Add for requirements which would have existed without present war.....						205,000
Estimate submitted.....						892,000,000

NOTE.—In this estimate the following percentages of replacement are assumed, and are indicated by the letters A and B: A equals 500 per cent replacement per year for equipment of troops at the front; B equals 100 per cent replacement per year for troops in rear lines of communication, etc. The figures in the column headed "Fiscal Year 1918" do not make up a part of the estimate. They show the number of units which it is assumed will be organized before June 30, 1918. It is assumed that the cost of the equipment for these units will be paid from 1918 funds.

Gen. BLACK. The next large item is for 375 hospital groups of 1,000 bed units each, and that amounts to \$115,500,000.

In regard to those hospitals, we had some months ago a hurried call from Gen. Pershing to ship over at once in knocked-down state portable buildings for the construction of the hospitals. We got up some very good plans, which had been submitted to and approved by the Surgeon General. But before we awarded the contract for those things, because of the trouble with shipping, Gen. Pershing told us to hold up on that for the present, that the present needs could be taken care of by the use of the existing buildings in France which they themselves had been fitting up for hospital purposes. So that, for the use of the small Army we have over there, we have not sent any portable buildings from this side, but they are buying the portable buildings in England and having them sent over to France.

Mr. MCKENZIE. General, we were told on yesterday that we were sending over foresters and lumbermen to cut the timber we will need in France, and that arrangements had been made whereby they could acquire this lumber. What is the reason for sending portable buildings over from this side, or from England, if we can acquire lumber in France?

Gen. BLACK. They can not get enough there. We are buying lumber from other sources also.

There is an enormous amount of lumber needed, apart from that. There is a great deal of lumber needed in the trench work and in the dugouts. Then also a great deal of lumber is needed for crossties, and so we are trying to get the lumber we need as best we can from all sources from which we can get it.

Mr. FIELDS. You need also some seasoned lumber?

Gen. BLACK. That is required for some purposes.

Mr. GREENE. What is the effect on the lumber used in the trenches, as to its splintering in action, or is your lumber massed in the trenches?

Gen. BLACK. The lumber in the trench proper, used for revetment, is in small pieces, and it is used in such a way that it can not splinter very badly. It would rather break in small pieces. So far as the dugouts are concerned, the roof of the dugout is made in three or four layers. The lower part might be of railroad iron, and then a layer of lumber, and there would be a layer of broken stone, or something which would cause a shell to explode before it gets down to the lumber. The sides of the trenches are revetted with lumber. Then the galleries of the mines have to be lined with lumber. There are infinite uses for lumber over there.

Mr. GREENE. The suggestion comes from experience with the old wooden ships, and the practice of clearing away all the timbers and things of that sort when she is clearing for action. I wondered whether the use of concrete, which has taken the place of wood, had gone as far as it could, and displaced lumber as far as possible.

Gen. BLACK. Yes; as far as it can. But concrete, where it is exposed to shell action is a dangerous thing, because when hit the pieces of concrete fly in all directions, and you have a separate missile in each piece of concrete. As a general rule, concrete is rather heavy for revetment work.

Mr. TILSON. Are not the trenches revetted with rather small sized and light material?

Gen. BLACK. As far as possible.

Mr. SHALLENBERGER. You say this item includes an amount for 375 hospitals with 1,000 beds in each?

Gen. BLACK. 375 hospital groups, of 1,000 bed units each.

Mr. SHALLENBERGER. How many beds does that mean?

Gen. BLACK. That means 375,000 beds, at a cost of \$350,000 for each unit. That includes everything.

The CHAIRMAN. You have 75 either constructed or under construction now, and you propose to construct 300 more?

Gen. BLACK. This is the number required for an army of a million and a half men, and the percentage of beds is based on the percentage used by the French and English, in comparison with the number of men in their offensive forces.

The CHAIRMAN. This estimate is based on 1,500,000 men?

Gen. BLACK. Yes, sir.

Mr. OLNEY. We actually have locomotives and freight cars in France?

Gen. BLACK. None of our own freight cars have gone over, but some of the locomotives are actually there.

Mr. SHALLENBERGER. What do you estimate as the cost of each locomotive?

Gen. BLACK. The original locomotives we got cost about \$45,000 apiece. I know we got them very cheap.

Mr. SHALLENBERGER. Is that a fair price?

Gen. BLACK. We got a low rate. I have had the great advantage of having with me Mr. Samuel Felton, of the Chicago Great Western Railroad. Mr. Felton, by his intimate knowledge of railroads and of the different facilities for the manufacture of railroad material, has succeeded in getting prices which have saved us near \$31,000,000 over the current prices.

Col. TYLER. The locomotives average about \$45,000 apiece. There is a little difference in the price of locomotives made by the American Locomotive Works and the Baldwin Locomotive Co.

Mr. LUNN. What is the difference between the average price which the American Locomotive Works have been getting and what you paid them for these locomotives?

Col. TYLER. We got the locomotives about \$1,500 cheaper than the market price, due to arranging the contract in such a way that when all the material for the locomotives was delivered the company would get paid for that material. Then, when a third of the locomotives had been finished and the material for all of them had been delivered, they received a payment of that proportion of the total value of the order, and when the order was filled they got payment for all of them, so that the result of that was that the company did not have to borrow so much money as they would ordinarily have to borrow, and that reduced the price of the locomotives to the Government.

Gen. BLACK. We saved the interest on the money the company would have had to pay.

Mr. LUNN. The stock of the American Locomotive Works has been going up because of the orders they have had for munitions. Their great profits have come through the making of shells; and I was

wondering whether they were giving you a genuinely low price or simply reducing the price of the locomotives by the amount of interest they saved.

Gen. BLACK. Here is a note I have on that subject:

By adopting an American design for 150 of the first 300 locomotives ordered, and by minor changes in specifications in all of them, and by allowing partial payments to the manufacturers for materials delivered in the works, a saving was made on the first 300 locomotives of \$1,050,000.

Mr. GORDON. I understood you to say your estimate for hospital facilities in France was based upon the losses of the allies since the commencement of the war.

Gen. BLACK. Not since the commencement of the war. The experience of the allies showed that for so many thousand men in active service at the front so many beds are required.

Mr. GORDON. Is it not a fact that until very recently, the allies having been short of artillery and of all other essentials of war, that their losses have been away out of proportion to their recent losses?

Gen. BLACK. No, sir; that was only at the very first. Since they have been digging in that has not been the case so much. What the adequate supply of artillery has done has been to make it possible for them to make offensive operations successfully and with less losses than they had previously had.

Mr. GORDON. Is it not a fact that the Artillery is used for repelling attacks?

Gen. BLACK. Where you can do that; yes.

Mr. ANTHONY. Your estimate of \$115,000,000 for hospital facilities is based on an Army of 1,500,000 men?

Gen. BLACK. Yes.

Mr. ANTHONY. You will not build those buildings in advance of the proportion required for the number of men in the field?

Gen. BLACK. They will be built in advance, so that they will be ready when the men get there.

Col. ROSE. The materials will be purchased in advance. To get the materials delivered is a matter of some months.

Gen. BLACK. Most of the amount of the estimate will be expended by three persons, one of whom we sent as the purchasing agent or disbursing officer of the sums which Gen. Pershing requires for the purchase of materials abroad. In the second place, the locomotive materials and machinery, which are purchased through Mr. Felton, are paid out of this, and all the rest is paid for purchases made through Col. Rose.

I want to show you, gentlemen, what we have had to do in order to do this work. We have had to expand. At the beginning of the war in the office of the Chief of Engineers there were 8 officers and 14 civilians; at present there are 31 officers and 180 civilians. In the office of Director of Military Railroads at the beginning of the war there was 1 civilian. There are now in that office 41 officers, 11 enlisted men, and 28 civilians.

In the purchasing office at the beginning of the war there was 1 officer and 20 civilians. At present there are 86 officers, 133 enlisted men, and 257 civilians. At the engineer depots at the beginning of the war there was 1 officer and 20 civilians. At present there are 17 officers, 65 enlisted men, and 1,839 civilians. That expansion is nec-

essary, and as the work becomes greater we have to expand more. Our experience in this war has been that the surest way of requiring more expansion in the way of officers and men is to make a table and say that is enough. The next day you have to change your table.

Mr. McKENZIE. If you will explain briefly the necessity of having so many officers in comparison with the number of enlisted men and civilians, I think it will be a good thing to do.

Col. ROSE. I can explain that, so far as the purchasing division is concerned. The enlisted men that have been mentioned are enlisted men of the engineer depot detachment which was organized to enable us to draw from men in the draft the men for special clerical duties, whom we were not able to get through the Civil Service Commission. A good many of the civilian employees we took on we are about to lose as soon as they are drafted, and we were not able to get them exempted because they occupy clerical positions.

The Civil Service Commission has literally been swamped with demands for employees, and it is impossible for us to get the class of employees we require from the Civil Service Commission. The educational examinations which they hold do not produce the class of men we must have.

In connection with the whole operation of our depot system, for some months we were tremendously handicapped by the impossibility of getting the civilian assistance we required. So the engineer depot detachment was formed, authorized by the Secretary of War, and formed from men specially selected, who had been drafted, and who were at the various cantonments, and we were also allowed to have men inducted into the service, who had been drafted but not yet called.

That depot detachment was divided among the various depots. Some of those are enlisted as enlisted men in the Engineer depot, and some of them are in our own purchasing office. They are also distributed among all the cantonments and subdepots, where we sent engineer material. The organization of that depot detachment has been our salvation, so far as getting skilled civilian assistance is concerned.

We can get accountants of experience in handling property accounts, and we can get men who have worked for railroads and manufacturing concerns, and expert stenographers, who know the technical terms, and the enlisted men referred to are men used in those capacities and are members of the engineer detachments.

The officers engaged in that work are men who are actually experienced in the work of the purchasing of this material. They must be men of experience, who can take a cablegram and can interpret it in such a way that our manufacturers can understand it, and can write specifications. For instance, we will get a demand from France for a certain quantity of a certain article, that will just give the general dimensions. We have an officer who will write the specifications for that. Then our purchasing officers must negotiate with the manufacturers, and they issue their proposals for bids from those specifications, and get the representatives of the manufacturers here to handle the engineering and financial end of the purchasing, and the rest of it is handled by clerks. A very large number of officers is required for that. Our purchases are running into a million dollars a day.

They are also used for inspection duty at the factories. Of the total number of officers shown, perhaps 30 are located at different centers of production. For instance, at Schenectady, N. Y., we have a force of inspectors located there to inspect the material we get from the General Electric Co.'s works. We also have inspectors at Erie, Pittsburgh, Cleveland, New York, and Norfolk. Some of that material is inspected at the depots.

Mr. McKENZIE. These men are attached to these specific places and are not sent all over the country?

Col. ROSE. Yes. I think there are not over 30 officers engaged in that duty. The inspection duty is now enormous, considering the great number of purchases we have to make. The bulk of our inspection work is now done through the organized civilian agency of Robert W. Hunt & Co., who are inspectors of years of experience and whose services are largely employed by civilian engineer organizations. They have a trained force of about 1,400 inspectors, and they have offices in the principal cities of the United States, which are centers of the territorial district of their inspection service.

Early in the war we saw that we would be swamped so far as the inspection service was concerned if we tried to train our own men for that duty, because of the number of men that would be required and the nature of the training. So we made a very satisfactory arrangement with the firm I have mentioned, so that their whole inspection force is at our call, and we have gotten very satisfactory results from them.

Mr. SHALLENBERGER. Are those men commissioned?

Col. ROSE. No; they work as civilians and we pay them on a per diem basis. In a few cases we have brought in specialists.

The head of my financial department is a young man at the head of the firm of B. H. Namm & Co., which has the third largest department store in Brooklyn, N. Y. He is commissioned in the Engineer Reserve Corps as a captain. He is at the head of my financial department and he handles the checking of all the vouchers and the comparison of the vouchers with the inspector's reports and the preparation of the vouchers and the rendering of payment.

In the case of these partial advance payments that were arranged with the locomotive manufacturing companies in order that we could make a saving of \$1,000 on each locomotive, which was the proposition they offered us in case we could arrange such a system, when the representatives of the Baldwin Locomotive Works and the American Locomotive Works come to our office with their vouchers, they take the checks back in their hands. The payments are made within 30 minutes after the vouchers get in our office. That work is done promptly, and the representatives of the locomotive manufacturing companies go away with the checks in their hands, and in one case the amount paid was \$5,000,000 in a single check.

Mr. SHALLENBERGER. Is that still done?

Col. ROSE. Yes, sir. Moreover, Capt. Namm has organized the financial division, so that we are now taking advantage of the manufacturers' discounts, and we have saved \$60,000 in three months by prompt payment. The manufacturers told us if we would make prompt payments they would give us their regular manufacturers'

discounts, and we make special arrangements to get the money into their hands.

Mr. FIELDS. I believe it was stated awhile ago that we saved \$1,500 on each locomotive by reason of this contract, and I think Col. Rose just stated that we saved a thousand dollars.

Col. ROSE. I think the figure is a thousand dollars.

Gen. BLACK. We have Mr. Felton's statement that on the first locomotives ordered we saved \$1,050,000.

Col. ROSE. Only a part of that saving was made by changes in the designs and specifications, which made more economical methods of manufacture possible, and \$1,000 of it was saved by making this provision for partial payment.

Mr. FIELDS. You figure that the total saving would average a thousand dollars?

Col. ROSE. No; the total saving amounts to about \$3,000 per locomotive, of which \$1,000 is represented by the saving effected by the making of the arrangement for the partial payment. We protect the Government in this case, and actually take title to the material that is delivered at the factory. The first payment is made when all the essential parts of the locomotives, such as boilers, side frames, wheels and axles, and the other essential parts of the locomotives—we have listed about six essentials parts—we make the first payment when the material for one-third of the locomotives has been delivered to their works, and the machine work has actually begun. Then we take title to all the material that has been delivered. The second payment is made on the completion of the first locomotives, and again we take title to all material in their works. The final payment is made upon the completion and delivery to the representative of the Government of the first locomotive. I think you will find, if you ask the American Locomotive Co., that they are exceedingly pleased with the arrangements for payment that has been made.

Mr. LUNN. Those locomotives become the property of the Government?

Col. ROSE. They are the property of the Government.

Mr. SHALLENBERGER. The fact that you have built this railroad has impressed the members of the committee, but I find that we are spending very little of this money for building a railroad, and that the most of the money is for equipment.

Gen. BLACK. There is a great deal for track. We bought 102,000 tons of rails.

Col. ROSE. There seems to be a misunderstanding among the members of the committee in reference to this railroad. We are not building any railroad in France.

Col. WILGUS. This is for rehabilitating railroads.

Mr. SHALLENBERGER. Your statement shows only \$10,000,000 for the track material, switches, etc., and you have an item of \$4,700,000 for 500 miles of 60-centimeter track and \$500,000 for 150 miles of other track and \$200,000 for water equipment. That is only about \$24,000,000 of the entire amount of \$892,000,000, and it seems that you are having your greatest trouble in getting 30,000 freight cars and the 1,500 locomotives.

Gen. BLACK. We have the items set out in detail.

Mr. SHALLENBERGER. The question with me is whether you are going to spend this money to build a railroad. You are going to have

difficulty, apparently, in getting rolling stock, and you have to get that in this country.

Gen. BLACK. We will take such as we can rehabilitate in France.

Mr. SHALLENBERGER. Yet you have got to build your freight cars over here and the engines you want and you have to transport them to the other side before you have a railroad ready to run.

Gen. BLACK. No, sir; because we are using the French equipment—as much as possible of the French equipment as we can repair—and will take that from our needs here.

Mr. SHALLENBERGER. Are you not buying locomotives in this country?

Gen. BLACK. This is the estimate for the next fiscal year. That is the estimated amount we will have to buy. We have bought already some standard-gauge locomotives in this country.

Mr. SHALLENBERGER. Those you have bought you will have to transport to the other side?

Gen. BLACK. Yes; we are trying to get that to the minimum.

Mr. SHALLENBERGER. You have an item here for \$225,000,000 for cantonments. Do you expect to house our troops in cantonments on the other side?

Gen. BLACK. We will have to do that with all of the Army except those who are on the firing line.

Mr. SHALLENBERGER. Do the English and the French house their troops in cantonments?

Gen. BLACK. Yes; the type of building we will build is based on the French type, the latest model we could get, with some improvements.

Mr. SHALLENBERGER. I understood they housed their troops by billeting them.

Gen. BLACK. Where they can.

Mr. SHALLENBERGER. I talked not long ago to a French officer about the training camps over there, and he told me they did not have training camps such as we have, but their training was practically done in the field, and he showed me pictures, and he explained to me that they did not have the lumber with which to build the cantonments, and they did not have the tentage, and the only troops who had tents were those who were brought from Africa, and that the general practice, so far as the troops of the European countries are concerned, is not to try to house them in cantonments, because they could not get the lumber with which to build the cantonments.

Gen. BLACK. Those troops have to be housed.

Mr. SHALLENBERGER. It is not possible to avoid this expense of housing them in cantonments, because we have here?

Gen. BLACK. We are not fighting the war from this side. Gen. Pershing is doing that. We do not send a thing over there that he does not request. At the present time the troops are mostly billeted, and as far as they can be billeted they will be. But we have to pay for that. That expense comes out of this appropriation. This would include anything that has to be done. It is intended to cover the whole question of housing troops.

Mr. CALDWELL. I have heard we even had to pay rent for the trenches. I did not believe that story when I heard it, and I would like to know what you know about it.

Gen. BLACK. I do not think that is the case. Col. Wilgus has just returned from France, Mr. Chairman, where he has been the assistant to Gen. Atterbury, the director general of transportation in France. He is thoroughly familiar with this particular subject, and I am sure he can give the committee some valuable and interesting information in regard to it.

The CHAIRMAN. Colonel, what was your position before you came into the Army?

Col. WILGUS. My experience goes back to 1885, when I started in the West, building the railroad which is now the Chicago Great Western Railroad, and building quite a number of railroads in the West, near St. Joseph, Mo., and Fort Leavenworth, Kans.; then I built a belt line around the city of Chicago and located railroads in northern Minnesota, in what are now practically the mining regions there. Then I came back to my native East as engineer in charge of the rehabilitation of the Rome, Ogdensburg & Watertown Railroad, and at the same time building a railroad known as the terminal railroad, around Buffalo. Then I was made chief assistant engineer of the New York Central, and then engineer of maintenance of way of all the New York Central lines. Then I was made vice president of the New York Central, and incidentally built the Grand Central Terminal and had charge of laying out the plan for the operation of its lines in Pennsylvania, New York, and New England.

We are building no railroads, as such, in France. We are extending or rehabilitating the existing lines of railroads, of which there are two principal stems. Those lines we propose to operate.

We do not propose to build any new construction on those lines, but have put a lot of work on the existing lines of railroads and will continue to do so, in the way of building connections and double tracks and some switching yards, engine terminals, and other similar facilities needed for use in running our cars over the French railroads. The French will continue to administer the railroads. They will run their own military trains and their regular civic traffic over them, and we will be permitted to join the procession with our trains, manned by our men, and operated over those two principal routes in the same way as is done in the United States when one railroad will have trackage routes over another road.

Mr. GARRETT. And France is using the same trackage with whatever equipment they have?

Col. WILGUS. Precisely.

Mr. GARRETT. How many engines has France operating over these two roads?

Col. WILGUS. I could not say how many they have on these two routes we propose to use.

Mr. SHALLENBERGER. The whole system is under the command of Gen. Atterbury?

Col. WILGUS. He is Director General of Transportation.

Mr. SHALLENBERGER. He is a railroad man who was brought into the service since the war?

Col. WILGUS. He went to France in September. I was there in May and handled things until he arrived.

Mr. SHALLENBERGER. He is a thoroughly practical railroad man?

Col. WILGUS. Absolutely. He is one of the ablest railroad men in the United States.

Mr. McKENZIE. What is the standard division in France?

Col. WILGUS. You mean as to length?

Mr. McKENZIE. Yes, sir.

Col. WILGUS. They vary from 50 to 100 miles.

Mr. McKENZIE. That is one thing a man should keep in mind when speaking about the engines, because every division is practically a separate railroad.

Col. WILGUS. Precisely; and the engines are not always working. They require inspection and repairs.

Mr. McKENZIE. On those roads over there there would be six divisions?

Col. WILGUS. More than six divisions.

Mr. QUIN. How long is it going to take to have our trains running as you want them?

Gen. BLACK. That is again the question of transportation. Everything hinges on the shipping. Water transportation is the main question. It all depends on how fast we can get the ships.

Mr. QUIN. We have had a good many statements before the committee in regard to the building of docks and wharves on the other side. What is your judgment as to the time it will take you to get the wharves and docks ready to receive the supplies?

Col. WILGUS. So far as the ports are concerned, we are not at all in bad shape at the present time.

Mr. QUIN. Will you not have to have the wharves and docks ready to receive the ships?

Col. WILGUS. They are ready.

Mr. CALDWELL. In shipping cars over, will they not take up a great deal of space for their weight?

Gen. BLACK. They are knocked down and set up on the other side.

Mr. CALDWELL. They are specially built cars for this particular purpose?

Gen. BLACK. They are specially built cars for this particular purpose and they differ in certain particulars from our freight cars, because of the French clearances, they are different from ours because of the military needs.

Col. WILGUS. And also the French couplers, and every fifth car is fitted with a box in which a brakeman rides. In their general appearance they are the same as our medium capacity freight cars.

Mr. CALDWELL. Are they built on the foot and inch basis, or on the metric system basis?

Col. WILGUS. They are built according to our American standards.

Mr. CALDWELL. But their cars, built on the other side, are built on the metric system, are they not?

Col. WILGUS. Yes, but everything is made so that it fits.

Mr. CALDWELL. Although the systems are different you get them close enough together so that the play will take care of itself?

Col. WILGUS. Absolutely. They are all adjusted to their clearances and their gauges.

Mr. CALDWELL. You do not contemplate any trouble over that?

Col. WILGUS. We do not expect any trouble on that account.

Mr. CALDWELL. Is the width of the track the same?

Col. WILGUS. There is a difference of three-sixteenths of an inch.

Mr. CALDWELL. That does not amount to anything in a practical way?

Col. WILGUS. It does not make any practical difference. We are building our cars and locomotives so that they will accommodate themselves to the French gauge.

Mr. CALDWELL. How wide are you building them?

Col. WILGUS. They are 4 feet 8 $\frac{1}{4}$ inches.

Mr. SHALLENBERGER. Who is going to operate the railroad after we get it in France; the French or the United States?

Col. WILGUS. Primarily, the railroads there will be under the administration of the French Government and the civil companies, and we will come in and operate under trackage rights, with our officers in parallel with their officers. At every place where there is a French division superintendent we will have an American officer at his elbow, and we will keep in touch with our trains, manned by our men.

Mr. SHALLENBERGER. I have been told that the French railroad system has been a very poorly operated system and has not been kept up as well as the railroad systems of England or Germany, and I wondered whether or not that was a fact, or whether you were going to remedy that by American assistance. Is it not a fact that the French railroad system has gone to pieces?

Col. WILGUS. No, sir. We have a very high admiration for the way in which the French have been managing their railroads under the very trying conditions which have existed, short of men and material, and on an average they have kept their railroads running better than ours, as regards time.

Mr. GARRETT. When we get our full equipment there, how much equipment will France be operating as compared with what we are operating?

Col. WILGUS. I should say on part of the routes the number of trains will be about alike. In other parts France will have very much in excess of ours, so far as the matter of trains is concerned.

Mr. GARRETT. On a general average what would you say?

Col. WILGUS. On a general average I should say we will be running from 50 to 100 per cent more than they would.

Mr. GARRETT. At least two to one?

Col. WILGUS. On many portions of the roads.

Mr. GARRETT. Do you expect any trouble as to priority of trains over there?

Col. WILGUS. No; for the reason that they have a very simple and admirable system, in that they establish what are called marches. If they say they can run their trains 20 minutes apart, that will be three trains an hour, or 72 trains per day that it will be possible to run. Then they call that a 72-marche railroad, and they would give us the right to occupy marches 12, 16, 19, and 26, say, and we would have a right to join the procession and take our place in those marches. We expect no trouble in doing that. Their aim is the same as ours. We have found them to be very cooperative in that respect.

Mr. ANTHONY. What is the custom on American railroads in reference to the supply of freight cars? How many idle freight cars or cars that are not in transit are allowed to each car that is loaded and in transit?

Col. WILGUS. That would be a rather hard thing to state accurately, except that I can say in the United States the average number of miles per day made by a freight car is only 25 miles in the 24 hours, or about a mile per hour per day on the average.

Mr. ANTHONY. What number of hours is occupied on the sidings in the process of loading and unloading? What proportion should be maintained in excess of the number in actual use?

Col. WILGUS. I should say probably five times as many; in other words, about 20 per cent of them.

Mr. ANTHONY. Counting on the wastage and destruction of a certain percentage, what percentage of wastage do you figure in this number of freight cars?

Col. WILGUS. We have not figured on any wastage, except that I have added 20 per cent to the actual figures that I arrived at as being actually needed for contingencies, and those contingencies would cover such things as wastages.

Mr. ANTHONY. You stated that the prime necessity at this time is ships.

Col. WILGUS. Yes.

Mr. ANTHONY. Did you find any congestion in the water terminals on the French side?

Col. WILGUS. Yes.

Mr. ANTHONY. What was the cause of that?

Col. WILGUS. Lack of cars principally.

Mr. ANTHONY. On the rail lines?

Col. WILGUS. Yes.

Mr. ANTHONY. The principal thing you need now is ships?

Col. WILGUS. Yes.

Mr. ANTHONY. What arrangement are you relying on to furnish you the additional ships you need?

Gen. BLACK. That is a matter that belongs to Gen. Goethals.

Mr. ANTHONY. Does the force of the Engineer Corps have charge of the unloading of ships on the other side?

Col. WILGUS. Yes.

Mr. ANTHONY. And the Quartermaster Department has charge of the loading of the ships on this side?

Col. WILGUS. I believe so, although there I am stepping beyond my own bailiwick.

Mr. ANTHONY. Would it facilitate the handling of the business if one department had charge of both ends of it?

Col. WILGUS. That has been my own personal view. It may be that others in the Army do not agree with me, but I felt that it would be better to have some common head or central administration on both sides.

Mr. ANTHONY. Is it considered to be part of the work of the Engineer Corps of the Army to load and unload ships?

Gen. BLACK. Before this war started the operation and the construction of military railroads in the field of operations was assigned to the engineer department.

When the war started, Gen. Sharpe, then the head of the Quartermaster's Department, requested that in order to get everything simplified, the whole of France should be considered the field of operations, and at that time an agreement was made with the Engineer Department to build the ports and port facilities, and that the unloading should be done by the Quartermaster's Department and therefore the stevedore regiments have been raised by the Quartermaster's Department.

Afterwards, Gen. Pershing found that it would be more convenient to have the whole of that work in France put under the transportation department, which is a separate department from the Engineer Department, but is under its supervision; we attend to the things for that department on this side. We make the estimates and furnish the materials they ask for.

Mr. ANTHONY. What is your opinion about it? Should that work of loading and unloading be in charge of the same branch of the Army?

Gen. BLACK. I think the whole matter is in process of complete settlement now.

Mr. ANTHONY. With the idea of putting it under one head?

Gen. BLACK. No, sir. I do not think it is necessary. If we have the proper supply of stevedores on both sides, it does not make any difference what head it is under. The present arrangement seems to be working out now.

That question of stevedores at the port of embarkation has been one that they have been troubled about a good deal.

Another question that comes in that adds to the difficulty is the question of priority of shipments. That can not be settled by any one except by the man in supreme authority over everything. He would know whether rations are more needed than construction materials. As a general proposition the question of priority of shipment is settled by cablegrams received from Gen. Pershing which tell his greatest needs, and then those cablegrams are put before an assistant chief of staff. Gen. Goethals is now acting in that capacity, taking advice from the other advisors of the Chief of Staff.

He then assigns to the Engineer Department and states to us that we can have so many thousand tons of embarkation facilities. Then we decide, on the basis again of the requisitions for France, which of the things they have asked for are the most needed. I do not think you can simply it any further. I do not think it makes any particular difference one way or the other, if the work is well done, and I think it will be well done.

Mr. McKENZIE. I would like to ask a question in regard to the engines and cars. You have described very fully two main lines of railroads which you expect to utilize, and you have also stated that we have other ports where we land material and troops. Is your purpose to use any of those engines and cars on the lines of railroads communicating with the other ports?

Col. WILGUS. Yes; to this extent. I was on the commission that first was sent to England and France in May to see what the needs were of the English and French and to find how we might best assist them. We found from the best authorities in France that they required some locomotives to make good their losses, which they had been unable to replace by reason of their being at war and the railroad shops being out of commission. So we recommended to Washington that in some manner the locomotives should be gotten over to France.

That was acted upon to the extent that we have been authorized to loan to the French Government, out of our locomotives, locomotives which will be used to a certain extent by reason of the fact

that our supplies will be moved over other lines than these two. The French will operate those trains carrying our supplies up to a point of junction with one of our main roads, and we will have some of our locomotives loaned to them in that service.

Mr. McKENZIE. The entire number of engines and cars spoken of here this morning will not be entirely used on the lines of railroads under American operation, or joint operation?

Col. WILGUS. That is true; except when we get up to a million men we probably will have to call in the locomotives which we have loaned on these other lines in order to maintain our necessary supply over our own lines, and we have so notified the French. Those locomotives were loaned to the French with the understanding that we will have them back as we need them.

Mr. TILSON. There has been so much talk about our building railroads that I would like to have it perfectly clear about what the conditions of these routes of railroad is. Is some of it still to be double tracked, or is it just to be put in good condition, improved over the bad condition it has gotten into, due to the fact of its being used in time of war? What is the condition of those two roads?

Col. WILGUS. In our work we have to build a line to hook up one system with another system.

Mr. TILSON. That is all the new construction we are going to have?

Col. WILGUS. We will have to construct new terminals and new storage yards for the storing of the 90 days' reserve supplies for the American Army plus any advance you have to make.

Mr. FIELDS. These routes you showed us on the map are double-tracked already?

Col. WILGUS. They are double-tracked already; the French railroads are double-track roads.

Mr. CALDWELL. You mean the terminals at the ports?

Col. WILGUS. The terminals at the ports and intermediate terminals. The word "terminal" does not necessarily mean the end of the track.

Mr. ANTHONY. You said that the French lines are well constructed and are in good condition.

Col. WILGUS. They are in fair condition with respect to traffic. They have been allowed to run down during the war.

Mr. ANTHONY. What weight are the rails used on the lines we are going to use?

Col. WILGUS. They run from 60 pounds to 92 pounds, depending on the line.

Mr. HULL. What is the maximum grade over there?

Col. WILGUS. About 1 per cent. There are some slightly steeper grades, but that is the standard grade.

Mr. CALDWELL. What is the weight of the ordinary rail used on the New York Central lines?

Col. WILGUS. On the main lines it is from 100 to 120 pounds. We have ordered for French use and are getting delivered 80-pound rails.

Mr. CALDWELL. Do you think the 80-pound rail will do?

Col. WILGUS. Yes; for the reason that the axle loads on the French roads are much less than the axle loads on the roads in the United States.

Mr. CALDWELL. They use lighter trains, and they run slower?

Col. WILGUS. Precisely. Our locomotives over there only weigh about 35,000 pounds to the axle, as compared to 50,000 pounds to the axle on our trunk lines in the United States.

Mr. CALDWELL. Are the roads we are taking over rock ballast or dirt ballast?

Col. WILGUS. Portions of them are rock ballast, but it is gravel ballast for the remainder of the distance. There is no dirt ballast there.

(Thereupon the committee adjourned.)

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Friday, February 1, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent, jr. (chairman), presiding.

STATEMENTS OF MAJ. GEN. WILLIAM M. BLACK, CHIEF OF ENGINEERS, AND MR. SAMUEL M. FELTON, DIRECTOR GENERAL OF MILITARY RAILWAYS, ACCOMPANIED BY BRIG. GEN. E. EVELETH WINSLOW, ASSISTANT TO THE CHIEF OF ENGINEERS; COL. WILLIAM J. WILGUS, COL. WILLIAM H. ROSE, COL. MAX C. TYLER, MAJ. EARL NORTH, MAJ. BOSCOE C. CRAWFORD, AND MAJ. RUFUS W. PUTNAM, CORPS OF ENGINEERS—Concluded.

The CHAIRMAN. General, the next item is, "Contingencies, Engineer Department, Philippine Islands: For contingent expenses incident to the operations of the engineer department in the Philippine Islands, to be expended at the discretion of the Secretary of War, \$4,000." That is the same appropriation that has been carried for several years.

Gen. BLACK. That estimate was made, based on the previous year's estimate. Since then we have received more specific information and we want to change that estimate. We will be entirely satisfied with \$2,500 instead of \$4,000.

The CHAIRMAN. Will you give us the details in regard to that estimate? You may insert that in the record.

Gen. BLACK. Because of the smaller number of troops stationed there they are not able to do so much work as heretofore and therefore we can safely reduce the estimate.

CONTINGENCIES ENGINEER DEPARTMENT, PHILIPPINE ISLANDS.

As indicated by the title of this appropriation it is for contingent expenses which can not be foreseen in advance. The estimate from the department engineer for the fiscal year 1919 is, however, made up on the following basis:

Pay rolls and services.....	\$500
Supplies.....	1,000
Unforeseen miscellaneous expenses.....	1,000
Total.....	2,500

The CHAIRMAN. The next item is:

Military surveys and maps: For the execution of topographic or other surveys, the securing of such extra topographic data as may be required, and the preparation and printing of maps required for military purposes, to be imme-

diately available and remain available until December 31, 1919: *Provided*, That the Secretary of War is authorized to secure the assistance, wherever practicable, of the United States Geological Survey, the Coast and Geodetic Survey, or other mapping agencies of the Government in this work, and to allot funds therefor to them from this appropriation, \$1,000,000.

At the last session of Congress you received an appropriation under this item of \$700,000, so that you are asking for an increase of \$300,000. Will you please explain that?

Gen. BLACK. That is made up of a number of different items. The process of making these military maps you are entirely familiar with. The first of these maps were made entirely in time of peace, by details from the Army, under the Department of Engineers.

Then two years ago, by the action of your committee, we got authority to make use of the Geological Survey more extensively than had been done.

At the outbreak of the war the Geological Survey was doing practically all the field work that was being done on the military maps, except some field surveys. The demand upon the Geological Survey for trained men to send to France was so great that their force has been depleted. Work which they could not undertake is being done by the commissioned and enlisted men, just as it had been before the war, by men under the department engineers.

These maps are printed at our establishment at the Washington Barracks. They are very confidential. The survey does not send out or distribute any of our military maps whatever. They can make their base maps from them, but the military information is all printed and distributed by ourselves.

The first item we have in this appropriation you will find is \$40,000 for the carrying on of the operations of this map-reproducing plant we have at Washington Barracks, which also does work for the War College. It reproduces the maps.

We have, thanks to the liberality of this committee, obtained a first-class lithographic press, and that is kept busy on all kinds of war maps, including the confidential maps, and on all kinds of confidential work for the War College itself. The first item of \$40,000 is for that.

The next item is for the equipment of the offices of the department engineers. Under the regulations as they used to be in force the drawing materials and the transportation were furnished by the Quartermaster's Department to the department engineers. That has been changed.

There was great difficulty in getting those things in proper quality, and so the Quartermaster's Department desired to have that changed, and desired that we arrange the purchase of those things. That is simply paying from one pocket instead of the other. That makes about \$30,000 of the appropriation.

The next item of that appropriation is \$20,000 for redrawing lithographic maps for the island of Oahu, in Hawaii. There is a large demand for that map all the time by the people on the island and others interested.

The next item is \$120,000 for preparation for fire control for land defenses. That requires detailed surveys in the vicinity of each of our fortified cities and the cities along the coast, and it requires detailed maps on a larger scale than military maps. The military

maps form the basis. Some of the detailed maps have to be extended to a scale of 12 inches to the mile. We are asking \$20,000 for that work. It is strictly for defensive purposes.

The next item asked for is for continuing progressive work on military maps of the region along the Atlantic seaboard and for 100 miles inland. That is particularly important in the South.

There are no maps, even road maps, in the South. Take, for instance, the industrial region in Georgia and Alabama. There are no maps that show how operations can be conducted between them and the coast. The States have not done anything and the United States has not done anything along that line in that region. We are asking for \$788,790 for that work.

This military map making is absolutely essential if we are ever going to be attacked by a foreign enemy. We have not sufficient maps of our own coasts.

To-day the chances are we are not going to be invaded for three months, anyway. When such an invasion will come, nobody knows. This \$788,000, of course, could be cut down, but the more it is cut down the longer the making of the maps will be delayed.

This is used not only for military purposes. Certain nonmilitary information is given to the Geological Survey, and those maps are sent all over the country. There is a very large civil demand for them, so that as much of the \$788,790 asked for as you think can be given ought to be given.

It takes a year or more after we get an appropriation before we get the maps out. I am not sufficient of a prophet to know that we are not going to be attacked within that time. We do not know what is going to happen.

Mr. McKENZIE. Will this \$788,790 complete the survey?

Gen. BLACK. No, sir. It takes \$3,000,000 to do that.

Mr. McKENZIE. Do you estimate that you can use that amount this year?

Gen. BLACK. Within the next fiscal year; yes, sir.

Mr. GORDON. Can you divert the necessary men to that particular work during the next fiscal year?

Gen. BLACK. Yes, sir. There are a good many men who can be obtained for this work who are not fitted to go to the front. Service at the front requires the full physical energy of a man, and if a man is deficient physically he simply becomes a pensioner of the United States. That class of men are cut out from going to the other side.

Mr. CRAGO. Could you not make use of your troops in training and use them for this purpose, and would it not give them good training?

Gen. BLACK. Not very well, because they have their hands full getting their other training.

Mr. CRAGO. Would not this work be good training for them?

Gen. BLACK. For a small number of the men it would. We, in the Engineer Corps, have been very fortunate, indeed, in having probably the best-equipped civil element in the country for military work in our civil engineers who have been conducting work in the field and have been accustomed to handling men, and handling them in gangs. Yet those very men find, when they get in the Army, that the organization and training required for an army and the discipline required for an army, where an enormous number of men are gathered to-

gether for a single purpose, is so very much more complex and detailed that there is a very large amount of information they have to get before they can handle their troops.

For example, when we get these railroad regiments, they are made up of railroad experts and workmen, because they have railroad work to do in France. But before they could get out of this country we had to put two Regular officers with each regiment for the purpose of showing them how to get their supplies for their men and how to take care of their men and how to keep their men in good shape when they get on the other side, and that training takes about six or seven months.

Col. WILGUS, what is your experience on that matter? How long does it take an officer of that kind to get on to the details that are necessary for him to know so that he can take care of his men?

Col. WILGUS. I should say it would take several months before he is able to do that without having to go through a mental process to do what should be done.

Gen. BLACK. You hear a great deal about red tape in the Army, and paper work. The paper work is enormous, especially since there is so much paper work required in connection with the supply of the troops, and paper work required to make the necessary deductions in the case of each man when he has to send home a portion of his pay and when he has subscribed for a certain amount of Liberty bonds, and when he has taken out life insurance.

Those papers are made as simple as possible, and I think you will find that it has been made as simple as can be. You have heard stories of suffering for lack of supplies. A very large part of that suffering on account of lack of supplies is due to the ignorance of the officers as to how to get the supplies. They do not know how to get them. In administering the affairs of an army of a million men gathered together at one point, each man of whom must be accounted for carefully, there is a tremendous amount of technical work required, and it is that technical training that no man in civil life has, and it is hard to get.

Mr. HULL. You spoke of the completion of this work costing \$3,000,000. Do you mean when the work is completed, you would have a complete map of the entire country?

Gen. BLACK. No, sir; we would have only a complete map of our coast line, for 100 miles back. Certain portions of the coast line they have already done. In order to get our coast line 100 miles back—

Mr. HULL. Does that include the Canadian frontier?

Gen. BLACK. We have not done much work along there, especially between the boundary of the State of Washington and the head of Lake Superior.

Mr. HULL. Does that include work along the Mexican boundary?

Gen. BLACK. Yes, sir; to the Pacific coast.

Mr. FIELDS. A point of order was made against this item for making maps last year, and it was contended by the member who made the point of order that the Geological Survey had this work, therefore this item was unnecessary in this bill.

Gen. BLACK. No, sir; they do not do this work.

Mr. FIELDS. I would like you to explain that in detail.

Gen. BLACK. The Geological Survey, under the law, is making a topographical survey of the United States, and doing other research work in geological matters. Military maps contain a great deal more information than that obtained by the Geological Survey.

There is a good deal of other matter put on military maps than is put on the ordinary topographic map. Take, for instance, the question of roads. There must be shown on the military map the character of the road, what kind of a road it is, and what condition it is in. That does not show on an ordinary topographic map to-day. Then, too, the character of every bridge must be shown, whether it is made of wood, steel, or whether it is an arch bridge; the length of the span and the height of the bridge above the water. Everything must be shown in order to show how much that bridge can carry, and how it can be destroyed.

Then, take the matter of railroads. The information must be given as to whether a railroad is a single-track or a double-track road, what switches there are, and where they are, what storehouses are on the road, and what facilities of all kinds which the road possesses for the use of an army.

Then, too, the topography of the country itself must be shown, where there are stone walls, and where there are fences; also where there are forests, and whether or not they can be gone through, whether the forest is thick or thin enough for military operations.

Then, when you come to the villages, you must know the capacity of each village for military work, whether there are any manufacturing establishments there, and what they can manufacture, what depots are there, what supplies can be brought in and stored there. All of that is military information.

Then there must also be shown on that map possible sites for camps, and there must also be shown where aviators can land. It requires certain definite characteristics. They can not land everywhere. All of this is called military information, and is in addition to the information obtained by the ordinary topographic survey.

Mr. FIELDS. In other words, the topographic survey is merely the groundwork?

Gen. BLACK. Yes; and this military information is then added to it. That is all confidential.

Mr. SHALLENBERGER. General, do not the topographic survey men put that information on the map?

Gen. BLACK. Not unless they are working for us.

Mr. SHALLENBERGER. Are they not working for you?

Gen. BLACK. To the extent of their power.

Mr. SHALLENBERGER. You commissioned most of their clerks, did you not?

Gen. BLACK. No, sir; we commissioned only those who are working on the military maps.

Mr. SHALLENBERGER. Who pays them?

Gen. BLACK. They are paid by the United States.

Mr. SHALLENBERGER. Are they paid as officers out of this fund?

Gen. BLACK. They are not paid out of this fund. They are paid out of the appropriation for the pay of officers of the Army.

Mr. SHALLENBERGER. Then the statement that these men were being paid out of another fund for the Geological Survey is not a

fact? These men were being paid out of the Geological Survey fund when you took them, and now their pay comes from another fund?

Gen. BLACK. Such as are on purely military work and have commissions in the service are paid out of the appropriation for the pay of the Army. But there are a good many men in the Geological Survey doing Geological Survey work, and they are not paid at all from the Army appropriation.

Mr. SHALLENBERGER. Those that are commissioned are paid out of the appropriation for the pay of the Army?

Gen. BLACK. Yes, sir.

The CHAIRMAN. Of course, that will reduce the appropriation for salaries of men in the Geological Survey to that extent?

Gen. BLACK. Yes, sir. General Winslow can tell you about the Geological Survey men abroad.

Gen. WINSLOW. We sent abroad first, at the request of the military authorities abroad, 13 officers, and that number was subsequently increased about one-half that number. They are there now, locating targets for the heavy guns that go over there. They are attached to the heavy gun organization there.

Mr. SHALLENBERGER. You commissioned more than that?

Gen. WINSLOW. We commissioned more than that, but those were the first men sent over there, and the best men, the men who were most skilled in that kind of work were sent over first.

Gen. BLACK. Then there were some others who came from the Coast and Geodetic Survey, but the detachment of officers with the heavy gun detachment over there were taken entirely from the Geological Survey.

Mr. SHALLENBERGER. You say that you are taking the men here who are not physically fit to go abroad and fight and putting them on this work, on this side. Would those men be commissioned?

Gen. BLACK. To a certain extent they are and to a certain extent they are not. The force that is engaged in the actual office work are civilians entirely, and frequently in making a detailed survey of a camp site, or something of that kind, we get civilians if we can. Those who are commissioned are the class of men who are needed permanently for that kind of work.

Mr. SHALLENBERGER. They are only commissioned for the emergency during the war?

Gen. BLACK. Yes, sir; they are; and in addition to that, those officers are commissioned in the Reserve Corps, and a man is put on the active list during the time he is actually at work, and when the war ceases he will be discharged and put on the inactive list.

Mr. SHALLENBERGER. Are they commissioned as engineers?

Gen. BLACK. They are commissioned as reserve engineer officers.

The CHAIRMAN. What rank?

Gen. BLACK. That depends on the nature of their duties. Most of them are lieutenants, a few of them are captains, and a very few of them are commissioned as majors.

Mr. KAHN. Is your idea in granting commissions to these men who have to get military information to enable them more easily to get the information?

Gen. BLACK. Yes.

Mr. KAHN. The people would be more apt to give information that is serviceable for military purposes to a man in the uniform of an officer than they would to a civilian?

Gen. BLACK. Very much more so. In addition to that, we have a hold on a man like that to prevent him from making improper use of the information he gets.

Mr. SHALLENBERGER. Does the man ask the people for the information? For instance, he would not go out and ask a farmer for military information, would he? He is supposed to know how to get it?

Gen. BLACK. He is supposed to be enough of a practical engineer to be able to do that.

Mr. SHALLENBERGER. As a matter of fact, if the Germans are going to invade this country and they have those topographical maps, even without this military information, that would be all they need, would it not?

Gen. BLACK. No; it would not.

Mr. SHALLENBERGER. They would have sufficient information, would they not?

Gen. BLACK. Of course, it would be better than nothing.

Mr. SHALLENBERGER. And you allow anybody who wants those topographical maps to have them, so it would not be a difficult matter for the Germans to get copies of those maps.

Gen. BLACK. There is no way of preventing those maps from getting into the hands of anybody who wants them.

Mr. GARRETT. When you have made your topographical survey, as described, without the military information, that survey would show all the bridges, their height, etc.?

Gen. BLACK. No, sir.

Mr. GARRETT. Those maps would not show that?

Gen. BLACK. No, sir. They simply show that there was a bridge at a certain point.

Mr. GARRETT. As to the villages and towns you referred to, and their resources, our country has been very progressive in that way, and each city and town has been very energetic in publishing to the world everything they possess in the way of warehouses and factories, and that information has been scattered throughout the world, as far as it could be, and so, as a matter of fact, the Germans probably have that information, have they not?

Gen. BLACK. There is a great deal of that information I would be delighted to have them have. There is a great deal of that information which has been published, but not in detail so far as the smaller places are concerned. They have not shown everything.

Mr. KAHN. Of course, so far as the roads are concerned, you could probably get that information from the automobile maps.

Gen. BLACK. Yes, sir; and we are using them as far as we can. We have a copy of every automobile map in the United States.

Gen. WINSLOW. We have obtained a great deal of valuable information connected with the roads of the country from the Office of Public Roads and Rural Engineering in the Department of Agriculture. Also, the Goodrich tire people have a number of pathfinders go over the country gathering information as to the character of the roads. Last summer one of their men asked us what information, in addition to what we had, we would like to get, and

they would direct their men to get it. They have done that, and we have received a great deal of valuable information from them. They are sending it in constantly and it is sent to the department engineers to be put on the maps.

Mr. SHALLENBERGER. Did you commission them also?

Gen. WINSLOW. No, sir.

Mr. SHALLENBERGER. Was not that military information they gathered for you?

Gen. WINSLOW. Yes. Those men go out and gather information in regard to roads for the benefit of automobile tourists. They publish cards that show the character of the roads and the grades. Then they have their men in addition to that get us other valuable information and add remarks in regard to the bridges. All of that is valuable information.

Mr. SHALLENBERGER. Is there any other reason for commissioning men doing clerk's work in the Army of the United States except that you want to make them subject to military control, to prevent them giving out the information to people who should not have it?

Gen. WINSLOW. That is the principal reason.

The CHAIRMAN. Is there any other special item under the item for military surveys and maps that you wish to call to the attention of the committee?

Gen. BLACK. I think that is all.

The CHAIRMAN. The next item is, "Lithograph press, Army Service Schools, Fort Leavenworth, Kans. For one-power lithograph press for the Army schools, Fort Leavenworth, \$6,000." That is a new item. That does not come under your jurisdiction, does it?

Gen. BLACK. Yes, sir. At Fort Leavenworth they also have a map-reproduction establishment which has been used in connection with the schools there. An effort has been made for three years to give them a power press at those schools, and we have put the item in again for \$6,000 for a power press there.

The CHAIRMAN. That is a new item, and it comes under the jurisdiction of your department?

Gen. BLACK. Yes, sir.

Mr. HULL. Do you do some work around Fort Leavenworth?

Gen. BLACK. Yes, sir; one of our depots is there.

Mr. HULL. You make maps in the interior?

Gen. BLACK. The maps that are made there are more particularly maps made for special studies and special military work, used in the training. They have produced there, for the purpose of giving problems out, maps of the Gettysburg Battle Fields, and a number of other maps of battle fields, and they are good topographical maps of the country. Those are given to the men for the purpose of working out problems in strategy and tactics.

The CHAIRMAN. You say they have been asking for this press for some time, and you think it is absolutely essential?

Gen. BLACK. I think it is.

The CHAIRMAN. I think that covers all of your items in the bill. I want to ask you to add to the hearings a statement as to what additional appropriation would be required under each of these items if the Army were raised to 2,000,000 men, and then what additional appropriation would be required if the Army were raised to 2,500,000

men, and also what additional appropriations would be required if the Army were raised to 3,000,000 men.

Gen. BLACK. I will be glad to do that.

Total estimated amounts necessary for the following items based on armies of 2,000,000, 2,500,000, and 3,000,000 men, respectively, are as follows:

	2,000,000	2,500,000	3,000,000
<i>Engineer equipment of troops.</i>			
Divisional troops.....	\$44,925,000	\$54,375,000	\$63,875,000
Corps troops.....	11,385,000	13,800,000	15,410,000
Army troops.....	21,075,000	32,325,000	32,375,000
Line of communications and service of the rear troops..	33,875,750	38,325,500	42,677,250
Service battalions (labor).....	7,906,250	8,937,500	9,968,750
Contingencies.....	30,733,000	32,236,000	35,791,000
	150,000,000	180,000,000	200,000,000
<i>Engineer operations in the field.</i>			
Military railroads:			
New equipment.....	207,990,000	272,570,000	337,160,000
Maintenance.....	24,400,000	30,100,000	35,800,000
Miscellaneous.....	91,810,000	112,200,000	132,560,000
Hospital buildings.....	163,675,000	231,000,000	279,125,000
Cantonments.....	302,500,000	387,500,000	480,000,000
Storehouses and depots in France.....	36,000,000	45,000,000	54,000,000
Civilian employees in France.....	750,000	1,000,000	1,250,000
Initial and automatic supply for special services.....	400,000,000	500,000,000	600,000,000
Motor transport.....	4,000,000	5,000,000	6,000,000
Wharves and floating equipment.....	20,000,000	25,000,000	30,000,000
Embarkation depots in United States.....	8,000,000	10,000,000	12,000,000
Instruction in engineer operations in the field, United States.....	1,000,000	1,250,000	1,500,000
	1,260,075,000	1,620,620,000	1,969,425,000

Gentlemen of the committee, if you would like to ask any further questions about our purchases, or what we have done, we have with us this morning Mr. Felton, who was in charge of all our railway and machinery purchases, as well as Col. Rose, who is our general purchasing agent, and Col. Wilgus can give you detailed information as to how everything relating to transportation is made up.

Mr. LUNN. I would like to ask whether there is any coordination in your department that has been perfected within recent months that will bring these purchasing agencies together.

Gen. BLACK. Yes, sir. For quite a long time back all purchases of the different departments were coordinated, in a measure, through the Priority Board. They are now making arrangements so that the various purchasing organizations we have in the Army shall purchase under one general head—I mean a one-man head—the things they are best fitted for purchasing. For example, there are certain things which, because of our practical experience our organization is best fitted for purchasing, and so far as those particular items are concerned, it is intended that we shall purchase them not only for our own but for the other departments. Then there are other things which the Quartermaster's Department are best fitted to purchase, and they will purchase them and supply us. That arrangement is now in process of formation. There has always been coordination, in a measure, and that is now being perfected.

Mr. KAHN. That will be under the control of Mr. Stettinius?

Gen. BLACK. Yes, sir.

Mr. SHALLENBERGER. We have had some figures in reference to the prices of the engines, and it has been said that we saved about \$3,000

on an engine. What sort of an engine was that? Our engines are not like the French engines, and I was wondering how you could make a comparison and ascertain how much you saved on those engines.

Gen. BLACK. Mr. Felton is more familiar with that subject than anybody else, and I will be glad to have him tell you about it.

Mr. FELTON. They were engines designed for service in France, with French clearances and for French structures. They have about two-thirds of the tractive power of our present freight engines here.

Mr. SHALLENBERGER. How were the comparative prices made? Did you compare the prices of the large engines, or of the small-sized engines? As I understand it, these engines cost about \$45,000, and because of the fact that we have perfected an arrangement for part payment, when certain parts of the engines are finished, we save a thousand dollars, and I also understood that we saved a total of \$3,000 on each of those engines. I have learned from what you say that they only have about two-thirds of the power or capacity of one of our big freight engines, and I wondered how you arrived at the saving.

Mr. FELTON. It is more than that. In the first place the price of the engines built by the American Locomotive Works for France was \$51,000. Now, the price of the engines built by the Baldwin Locomotive Works for the English in French service was about \$45,000. Those engines were of just the same tractive power, with a little difference in design, one of them being of French design and the other of American-English design.

The first engines we bought were on a hurry call, and I asked the American Locomotive Works to build half of these engines just like they built for the French, and the Baldwin Locomotive Works to build one-half, the same kind they built for the English, with superheaters added.

In making the contract there was a difference of about \$5,000, because we had to add to the price of the Baldwin engines the cost of the superheater.

After those engines were practically completed we had another requisition, and Baldwin people had been so remarkably prompt in their deliveries—in fact, they completed their first engine about 21 days after the order was given them—that we concluded, with Gen. Black's approval, to save that \$5,000 and take the Baldwin engines, and from that time on we ordered only Baldwin engines. One-half of the first engines were built by the American Locomotive Works and the rest of the engines were built by the Baldwin Locomotive Works, at a saving of practically \$5,000 on each engine.

We inserted in our contract a provision that we should get the benefit of any reduction that might be made by the price fixing of the Federal Trade Commission or any other Government agency, and it was fortunate that we put that in. We estimated that on the last engine we got that we will save us about \$4,000.

Mr. SHALLENBERGER. In comparison with what England and France have paid for exactly the same kind of engine?

Mr. FELTON. Yes, sir.

Mr. SHALLENBERGER. The fact that the American engine is so much larger, and therefore more expensive, would not affect the comparison made with the English or French engine, and it would not necessarily show the economy you effected as well as if you compared it with the same type of engine?

Mr. FELTON. I am comparing the engine with itself, as it were. I am dealing with two types of engines, both of them built for service in France.

Mr. SHALLENBERGER. The American engine is to cost more money than the French engine, because it has more effectiveness?

Mr. FELTON. The American engine, as you understand it, could not be used over there at all.

Mr. SHALLENBERGER. Those engines do not pull as much as the American engine?

Mr. FELTON. They have about two-thirds of the tractive power.

Gen. BLACK. What would be the relative price of the heavy American engine and the French engine?

Mr. FELTON. The price would vary with the tractive power. I should say that one of our Mikado engines at that time would cost about \$70,000.

Mr. SHALLENBERGER. That is about what our American railroads are paying for them?

Mr. FELTON. Yes.

Mr. ANTHONY. What would the same engine have cost, prior to the breaking out of the war in Europe; that is, the Mikado engines?

Mr. FELTON. The Mikado engine would have cost about \$28,000, and the other engine cost about \$18,000.

Mr. ANTHONY. What are the principal elements of increase included in that price, labor and material?

Mr. FELTON. Labor and material.

Mr. ANTHONY. Mostly labor?

Mr. FELTON. No; the material is an enormous item. The increase in the cost of materials going into a locomotive has been from 50 to 200 per cent.

Mr. OLNEY. The cost of labor is about 20 per cent on a locomotive, is it not?

Mr. FELTON. It is more than that. It will vary with these changes in designs. Originally, it ought to have been about one-third. Now I should say it is less.

Mr. ANTHONY. With your experience, how do you account for the fact that there is an increase of nearly 200 per cent in the cost of a locomotive, while in the case of an automobile, made of practically the same material, there has not been an increase of over 10 per cent?

Mr. FELTON. I do not know enough about the manufacture of automobiles to answer that question.

Mr. ANTHONY. It is a manufacturing proposition, is it not?

Mr. FELTON. The amount of material in a locomotive is so much greater than the amount of material in the automobile that I hardly think that is a fair comparison.

Gen. BLACK. May I ask a question? May not some of that difference have been excess profit on automobiles, which has been cut down?

Mr. ANTHONY. That may be.

Mr. HULL. What is the weight of one of these engines?

Mr. FELTON. You mean of ours?

Mr. HULL. Yes.

Mr. FELTON. About 160,000 pounds.

Mr. MCKENZIE. In connection with the question asked by Mr. Anthony as to a comparison of the cost of automobiles and loco-

tives, might not the fact of the great competition among manufacturers of automobiles be quite a factor in keeping down the cost, and the lack of competition in the manufacture of locomotives might also be a factor in keeping the price up? In other words, is it a fair comparison?

Mr. FELTON. I do not think it is a fair comparison at all. I know the first automobile I bought the agent got \$1,000 as his commission, which was 25 per cent of the selling price of the machine.

Mr. TILSON. Are these engines you refer to at the pier now, waiting to be shipped across?

Mr. FELTON. The French have some.

Mr. TILSON. Have we a number of them?

Mr. FELTON. Yes.

Mr. TILSON. We got the impression from some statement which has been made to the committee that these engines were doing duty on some American railroads to help in clearing the freight congestion.

Mr. FELTON. Only some of them have been converted. They are in service on our railroads temporarily.

Mr. TILSON. What change do you have to make in them?

Mr. FELTON. We have to change the couplers.

Mr. TILSON. The wheels are all right?

Mr. FELTON. The gauge is close enough to our gauge so that the engine can run on our tracks. We have to change the grates and the couplers.

Mr. TILSON. That is not very expensive, is it?

Mr. FELTON. It costs about \$600 for each engine.

Mr. TILSON. And does it cost them back again in shape for use on the French roads?

Mr. FELTON. No; that cost would be very slight. There would be no material involved in that. The change to our coupling involves the cost of a new coupler. When we take that out we can put the others on, and there is very little expense involved in that.

Mr. TILSON. For a cost of \$600 we can convert these engines intended for French use into engines that we can use here until they can be transported abroad?

Mr. FELTON. Yes.

Mr. LUNN. I would like to ask you a question regarding the engines. As I understand it, the ones you purchased from the American Locomotive Works cost \$51,000 at the start, and the ones you got from the Baldwin Locomotive Works cost \$45,000?

Mr. FELTON. Yes; about that.

Mr. LUNN. Were they the same engine?

Mr. FELTON. No. They had the same tractive power, but they were different in construction. The American engine was a less expensive engine to build.

Mr. LUNN. Probably the Baldwin people would have charged as much as the American people for the same type of engine?

Mr. FELTON. I do not know. I tried to get the American people to bid on the Baldwin design, but they would not do it.

Mr. LUNN. You found you could save \$5,000 by taking the Baldwin engine?

Mr. FELTON. We first found that a saving of \$4,000 could be made, and later on we saved \$1,000 by making payments on account; so that made a net saving of about \$5,000.

Mr. LUNN. Then, the American Locomotive Works would not build any of those engines at that price?

Mr. FELTON. No; they declined, and said they did not have time to make the new patterns and drawings necessary to build the type of engine that the Baldwin people built, and so we gave the contracts to the Baldwin Locomotive Works.

Mr. LUNN. You have purchased a good many engines?

Mr. FELTON. I have been buying them practically all my life.

Mr. LUNN. Have you bought most of your engines from the Baldwin Locomotive Works?

Mr. FELTON. Very largely. The Baldwin Locomotive Works have been in my territory, and so I have bought a great many engines from them.

Mr. LUNN. Do I understand correctly that the drawings had to be made by the Baldwin people, and that the American people were unable to do any of this work?

Mr. FELTON. I will tell you what they said. I said, "I wish you would bid on that engine, because I would like to have you build half of them." They said they could not; that it would take them too long to make the patterns and the drawings. Then the Locomotive Committee of the Council of National Defense gave the American Co. a large number of engines for Russia to fill their works; and what they did not get from us for France they got for Russia and for the French railroads direct.

Mr. LUNN. Can you give us the names of the members of the Locomotive Committee of the Council of National Defense?

Mr. FELTON. Mr. Vauclain was chairman of that committee, and Mr. Fletcher, I think, was a member, and I think there was also a Lima man on the committee.

Mr. SHALLENBERGER. What position does Mr. Vauclain hold in the Baldwin Locomotive Works?

Mr. FELTON. He is vice president of the Baldwin Locomotive Works. Mr. Fletcher is president of the American Locomotive Co.

Mr. LUNN. Where did you get any competition in the bidding for the locomotives? Why could not the American have had them without any competition?

Mr. FELTON. Because I did not think it was worth \$5,000 more.

Mr. LUNN. That is exactly what I was trying to bring out. The American would insist on having \$5,000 more for the same engine, as against the price charged by the Baldwin people?

Mr. FELTON. No; I did not say that. It is a different design.

Mr. LUNN. Who designed it? Did the Baldwins design it?

Mr. FELTON. No. The engine which the American built was built to French specifications for the French State railroads.

Mr. LUNN. If they did not design it, why could not the American people have those designs, the same as the Baldwin people?

Mr. FELTON. The design of a locomotive requires an immense amount of work in the drawing room, and a large amount of pattern work. The American people had built a large number of engines for France, and they were running them out of their works fairly well.

Mr. LUNN. The Baldwin people were not building these French engines for the French Government?

Mr. FELTON. The Baldwin people were doing the same thing, only they were building locomotives for the English Government for use in France, engines that had French clearances.

Here were two engines, one being built for France and the other for England, and they had the patterns and the designs, and they were going through the shops, and in order to get the engines quickly, I said each of them should build the engine they could build the quickest, but when we came to the large order I said I was not going to pay \$5,000 more than was necessary.

Gen. BLACK. The French specifications on locomotives and on railroad cars, and on some other items, have increased the cost in every figure. The French are very particular in their specifications, and the way they are written makes an increased cost. They are especially particular in regard to the painting of the engines, and when it came to making our engines, we saved \$65,000 on the painting of the engines.

Mr. FELTON. We saved \$65,000 on the total number of locomotives purchased on the one item of painting alone.

Mr. LUNN. You think that the tremendous increase in the cost of the locomotives at the present time over the cost in the prewar period is in large part due to the increase in the cost of the materials?

Mr. FELTON. I did not say that. I said the material which goes into the locomotive has increased enormously in cost.

Mr. LUNN. Have you any idea what that amounted to in the cost of the locomotives?

Mr. FELTON. I could figure that.

Mr. LUNN. I would like to have the figures in reference to the material, and also in reference to labor.

Mr. FELTON. I can give you the figures showing how it stands between labor and material.

Mr. HULL. The price of material is fixed by the Government?

Mr. FELTON. On a part of it.

Mr. HULL. What was the price before the war on steel rails?

Mr. FELTON. Steel rails before the war were \$30 a ton for the open-hearth rail. For our open-hearth rail for France we paid \$40, and the French and the Russians paid from \$55 to \$59, according to our figures. To-day we are buying Russian rails at \$50 a ton. There is an increase from \$30 to \$50.

Gen. BLACK. The open-market price to-day is what?

Mr. FELTON. There is not any.

Gen. BLACK. You know of a transaction recently, do you not?

Mr. FELTON. I know of a transaction recently where the price was \$74 a ton.

Mr. SHAILENBERGER. What do you know about the story about the price of steel being quoted at \$90 a ton, and then being put back to \$55 a ton?

Mr. FELTON. I have not heard of that.

Gen. BLACK. That was during the early conferences between the War Board and the steel men. That was for steel plates, I believe.

Mr. SHAILENBERGER. They put down the price of plates; why do they not put down the price of rails?

Mr. FELTON. You might say the price of rails did not go up. It did not begin to go up as much as the price of plates.

Mr. GORDON. To what extent did you investigate the cost of the labor and material that went into the locomotives in fixing the price?

Mr. FELTON. I did not fix the price.

Mr. GORDON. Who did?

Mr. FELTON. I asked for bids for the engine. It went through that form, and the locomotive committee got the price, and the bids were \$45,000 and \$51,000.

Mr. LUNN. The locomotive committee was composed of the representatives of the companies?

Mr. FELTON. Yes. They were officials of the companies. Then I tried to get them down, and I succeeded in reducing the price.

Mr. NICHOLLS. The only two bidders for those locomotives were members of the locomotive committee?

Mr. FELTON. Yes; they were the only two people who could make the engines.

Mr. GORDON. Then, as a matter of fact, the manufacturers fixed their own prices?

Mr. FELTON. The price was fixed, I think, in competition for the foreign work. I think originally their basis of price came from the price they charged the English and the French.

Mr. GORDON. Before we went into the field they charged enormous prices to all the foreign Governments for everything furnished; that was well known, was it not?

Mr. FELTON. I do not think they did in the early part of the war, because I think they were so hard up for orders that they would have made almost any price to get the foreign orders.

Mr. GORDON. They were receiving enormous prices for iron and steel?

Mr. FELTON. That was further along in the war.

Mr. GORDON. Before we entered the war?

Mr. FELTON. Before we entered the war; yes. During the first year of the war everybody was taking orders at any price they could get, and the prices were very low.

Mr. GORDON. To what extent were the elements of cost, especially the cost of material and labor, investigated by anyone outside of the manufacturers themselves?

Mr. FELTON. I investigated them as best I could, and did the best I could with the conditions that confronted me.

Mr. GORDON. You had just the manufacturers to deal with?

Mr. FELTON. Yes.

Mr. GORDON. And only one of them consented to bid, and so you were practically up against it?

Mr. FELTON. They both bid, but they both bid on their own type of engines, and it was up to me to decide whether the \$45,000 engine was the best, or the \$50,000 engine.

Mr. GORDON. Are those the only two manufacturers of locomotives in this country?

Mr. FELTON. They are the only two that bid. The Lima Locomotive Works build locomotives, and some smaller manufacturers build smaller locomotives.

Mr. GORDON. You called on the locomotive committee of the Council of National Defense, which was composed of representatives of these firms?

Mr. FELTON. We had them recommend builders.

Mr. SHALLENBERGER. What salary did they get?

Mr. FELTON. I think they get a dollar a year.

Mr. GORDON. Did they furnish any detailed statement showing the increase in the cost of labor and material that would justify this enormous increase in price?

Mr. FELTON. There was not any increase in price. That was the ruling price at the time. We compared the prices on a pound basis with the prices of other locomotives to see whether these prices were fair, and we found they were.

Mr. GORDON. That was based upon the prices they had been getting?

Mr. FELTON. There was a market. When we went into the war there was a certain market price for locomotives that they charged American railroads, and by getting a pound price I made my comparisons to see what the comparison was with the prices on these smaller engines. That was the only check we had.

Mr. KAHN. Did the same condition prevail with regard to the locomotives as with other commodities—that is, when the foreign nations began to bid against each other they forced the prices up?

Mr. FELTON. I think they were bidding against themselves in this country on everything.

Mr. KAHN. The English were trying to get locomotives as fast as they could?

Mr. FELTON. I do not think that applies to the equipment situation as much as to the other situation, such as that in reference to billets and plates.

Mr. KAHN. That is, material?

Mr. FELTON. I mean to say there was not such a demand from England and France on this country for other things as there was for billets and for plates and for shell steel.

Mr. KAHN. You found that their bidding against each other caused a great rise in prices in this country for war material?

Mr. FELTON. There was a time when they bid against each other, but they soon centered their efforts in one man, and that was Mr. Stettinius.

Mr. KAHN. I think the war was on for about two years before they did that.

Mr. FELTON. Not so long as that. It was pretty early in the war when they made that arrangement, and after that the prices were held down.

Mr. GREENE. Did this competition for structural steel plate tend to enhance the price of the other metals that went into the locomotives?

Mr. FELTON. Yes.

Mr. GREENE. That is an indirect effect of competition?

Mr. FELTON. Yes.

Mr. SHALLENBERGER. You spoke a moment ago about estimating the cost of the engine by the pound. When we were considering the price of machine guns, and the cost of the actual material going into the

guns was before this committee, and the Secretary of War was here, I quoted the price of 5 cents a pound, and he said they bought them for 3 cents and a fraction. Figuring out the cost at 5 cents a pound for the material on the engines makes a cost of \$8,000 for the raw material, and that means about \$37,000 for the labor and the cost of manufacture.

Mr. FELTON. I do not think your basis is correct. Our engines are fabricated.

Mr. SHALLENBERGER. The material in the engine is not any better than the material in the machine guns, is it?

Mr. FELTON. Not the material, but the work is more. I will figure that up and give it to you, you would like to have it.

Mr. SHALLENBERGER. I would like to have you put that in the record.

Mr. FELTON. I have ascertained that the percentages of labor, material, and overhead charges of the cost of manufacture of a locomotive in 1914 and 1917, respectively, are as follows:

Material, 1914, 64.2 per cent; 1917, 70.8 per cent.

Labor, 1914, 18.4 per cent; 1917, 14.3 per cent.

Overhead charges, 1914, 17.4 per cent; 1917, 14.9 per cent.

Mr. HULL. You spoke of the engines costing \$18,000 before the war.

Mr. FELTON. Yes.

Mr. HULL. Did you mean before our declaration of war, or before the European war broke out?

Mr. FELTON. Before the European war, about the time the European war broke out.

Mr. HULL. That is about the lowest you ever bought these engines for, is it?

Mr. FELTON. No. I have bought an engine similar to this engine as low as \$15,000.

Mr. HULL. Has the price of switching engines advanced proportionately?

Mr. FELTON. I think not.

Mr. ANTHONY. Was it possible before the war for the railroads of this country to obtain competitive bids from the locomotive manufacturers?

Mr. FELTON. Yes.

Mr. ANTHONY. Is it not a fact that many of the big railroad systems had been compelled to manufacture their own locomotives because they found they could manufacture them cheaper than they could buy them?

Mr. FELTON. No, sir; very little of that sort of thing has been done. The Pennsylvania Railroad has a very large shop at Altoona, Pa., and they have always kept some engines building in that shop, so that when there was any idle time they would work on those engines.

Mr. ANTHONY. It has been my impression that a good many of the systems had been doing their own manufacturing of locomotives. Has the Santa Fe System been doing that?

Mr. FELTON. The Pennsylvania and the St. Paul are the only two roads I can think of now that did any extensive work in building their own engines.

Mr. ANTHONY. The New York Central did that for a while, did they not?

Mr. FELTON. The New York Central has always patronized the American Locomotive Works, located at Schenectady, which is on their own line, just as the Pennsylvania Railroad has concentrated their manufacture at the Baldwin Locomotive Works.

Mr. ANTHONY. I know the Santa Fe System has made a good many engines.

Mr. FELTON. They did in times gone by, but not in recent years.

Mr. GARRETT. You went into the market to buy engines and you only found two concerns that could make the engines that you wanted?

Mr. FELTON. And make them quickly.

Mr. GARRETT. In the time you wanted them, and you gave one order to one company for half of the engines and you gave an order to the other company for half of the engines, and one company charged \$5,000 more for the engines than the other. There was no competition; you had no way of forcing competition, and so the only thing left for you to do was to give the one making the engine that would answer the same purpose the contract for making the remainder of the engines, and thereby you saved \$5,000 on each engine. If they are making an exorbitant profit, there is one of two things the Government can do—either commandeer the engines or get their excess profits back in taxes, which I think they will proceed to do.

Mr. FELTON. Yes; I think so.

Mr. QUIN. What did the engine that you are paying \$45,000 for now cost in 1914?

Mr. FELTON. About \$18,000.

(Thereupon the committee adjourned to meet Monday, February 4, 1918, at 10.30 o'clock a. m.)

ARMY APPROPRIATION BILL, 1919.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Thursday, January 31, 1918.

The committee this day met, Hon. S. Hubert Dent, jr., (chairman) presiding.

STATEMENT OF BRIG. GEN. J. McI. CARTER, CHIEF MILITIA BUREAU.

The CHAIRMAN. General, the first item for the National Guard is, on page 66, "Arming, equipping, and training the National Guard," and the total amount you are asking for under that head is \$316,500. That is a very small item this year as compared to the amount appropriated for the same item last year. Will you please explain that estimate?

Gen. CARTER. I want to say in respect to the estimates for the next fiscal year for the National Guard that we were ordered to make our estimates for the existing establishment, and at the time we submitted this estimate all of the National Guard except that of the Territory of Hawaii had been brought into the Federal service, except a few of the State staff corps and department officers. We therefore based those according to instructions, to care for the Hawaiian National Guard and the standing expenses, such as property and disbursing officers, and the care of property, and things like that.

It would have been impossible at that time to tell just what we would need in the way of an appropriation for any other than the Hawaiian National Guard, because it was dependent upon the action of the governors of the States, and we did not know whether they would want to organize under the act of June 3, 1916, additional National Guard units.

Since that time some States have organized units. I have a statement as to those that have been organized, and as to others that have expressed their intention of so doing.

We are in a situation now of being unable to supply those units with arms, equipment, and uniforms, because they are not to be had. We have funds appropriated for this present fiscal year. As soon as we can get those things from the supply department, or in the open market, we propose to equip these new regiments.

The CHAIRMAN. What States have organized?

Gen. CARTER. In addition to the National Guard in Hawaii, which exists as it did prior to the draft, there is a regiment of Field Artillery in Indiana, a regiment of Field Artillery in Minnesota, one in New Jersey, and two Coast Artillery companies in New Jersey.

There are two companies of Coast Artillery in Virginia which have been recognized, and three have been inspected for recognition, and as soon as minor corrections can be made in the organization they will be taken in. There is the Fifth Infantry in California, a company of Coast Artillery in Florida, a Field Hospital company in Iowa, and four companies of Infantry in Iowa; three companies of Infantry in Maine; two regiments of Infantry in Tennessee, and the following are authorized:

Two regiments and a battalion of Engineers in Michigan; three separate battalions of Infantry in California; a battalion of Infantry in Idaho; a regiment of Cavalry and Infantry in Iowa; a regiment of Infantry in Maine; one regiment of Infantry in South Dakota, and Texas is authorized to raise three regiments of Infantry, and recently authority was granted Texas to raise six regiments of Cavalry.

Mr. GREENE. There is apparently some military organization now under way in Vermont. Does that take the form of what is popularly called the Home Guard, or is that to be recognized?

Gen. CARTER. That is probably the Home Guard, but they have not notified the Militia Bureau that they intended to organize, although if they should present an organization later for inspection, and it complied with the law, we would accept it. The law provides that each State may have a minimum of 800 hundred men per Senator and Congressman, and that the organization of the unit as to branch or arm of the service that shall be formed from that number of men shall be prescribed by the President, so that we can regulate the organizations as to the arms of the service in the States, but we can not limit them as to the number of men they may put in the National Guard, nor can we compel them to raise regiments if we consider it necessary. There has been, I think, some delay and some uncertainty as to the status of the National Guard, because there has apparently been a general opinion held that our military system might be changed as a result of the war, and some of the governors of some of the States have hesitated to go ahead with the organization of the National Guard on that account. But others have endeavored to replace the regiments drafted into the Federal service as fast as they could; and others still have depended for their military force in the State entirely on the Home Guards, or State constabulary. Those troops are called by different names in the different States. New York has about 12,000 at the present time, and Connecticut and Massachusetts have quite a large number. Pennsylvania and Wisconsin are well provided with State forces, entirely under the control of the governors of those States.

The only provision the General Government makes is that it has authorized the Ordnance Department to issue arms and equipment, and by issuing obsolete arms, a good many arms have been furnished, although some of the States, like New York, have purchased their own arms.

Mr. CALDWELL. Is there not any National Guard in New York now?

Gen. CARTER. None recognized. There are some State staff corps officers.

Mr. CALDWELL. Under our constitution it is provided that the governor must maintain a militia to the extent of 10,000 troops, and I saw in the paper that the governor commissioned certain men and authorized them to raise their regiments.

Gen. CARTER. There is, as I said, a force of some 12,000 men in New York in the State guards. They have never been presented for recognition as National Guard troops.

Mr. CALDWELL. Those are State police. They wear different uniforms, and they do not come under the Militia Bureau at all. What I was talking about was this, when you drafted the National Guard and took them away from New York, moved them away from their armories, there was left a certain amount of material and equipment for the men who would come in and start a new National Guard, and I was under the impression that something was done.

Gen. CARTER. When the National Guard was called in, owing to the urgent need of equipment for Federal uses, the Government endeavored to buy from the States the military equipment and materials they had in excess of their needs.

Mr. SHALLENGERBER. You spoke about the National Guard in certain States that has been recognized. What does that mean?

Gen. CARTER. It means that we have inspected the units and found that they comply with the law.

Mr. SHALLENGERBER. Are they authorized and organized?

Gen. CARTER. They are organized, and they are entitled to armory-drill pay and uniforms, arms, and equipment.

Mr. SHALLENGERBER. You are liable to call them into the service any time you want them?

Gen. CARTER. Not liable to.

Mr. SHALLENGERBER. You are authorized to do it?

Gen. CARTER. We are authorized by law.

Mr. CALDWELL. Have you been stimulating this, or have these new organizations sprung up of their own accord?

Gen. CARTER. We have not endeavored to stimulate it, because we could not equip them now, and we have told the adjutants general of the States that we would recognize any units they presented, with the understanding that they must wait for equipment, arms, and uniforms until we have provided for the Federal forces, and that while subject to the draft or call into the Federal service, it was not intended at the present time to draft them. We have taken the ground that the act of June 3, 1916, provided the means whereby the governors may raise forces that could be put in training, and when trained would be available for Federal use, and these men undergo that training while in State service, and are available later for Federal call, if needed. To organize a regiment of green men and induct it into the service would only add to our difficulty in the way of getting supplies.

The CHAIRMAN. What is the condition of the equipment of those organizations in the different States?

Gen. CARTER. Two Coast Artillery companies in New Jersey that were first recognized have been equipped. Some of them have made requisitions for supplies, and we have asked the supply department of the Army to notify us at the earliest practicable time when we can hope to get this material, and we have informed some of the

States—we say they can buy uniforms in the open market if they can be had at a reasonable price, and we will procure them in that way.

Mr. SHALLENBERGER. You had a regiment offered from Nebraska. What is the status of that regiment? They thought they were going to be called, and then it was abandoned. What was the reason for that?

Gen. CARTER. The regiment was authorized, and they went ahead with it, and my recollection is—I have not the record here—that we inspected them, and then they withdrew their request, and I understand the regiment is to be disbanded.

Statement as to circumstances connected with the disbandment of the Nebraska regiment herewith:

STATEMENT AS TO WITHDRAWAL OF REQUEST FOR RECOGNITION OF REGIMENT OF INFANTRY, NEBRASKA NATIONAL GUARD.

WAR DEPARTMENT,
MILITIA BUREAU.

Washington, February 6, 1918.

Inspection, with a view to Federal recognition, was requested by the adjutant general of Nebraska under date of October 20, 1917.

The officer in charge of militia affairs, Central Department, was on October 24, 1917, directed to confer with the adjutant general of Nebraska and arrange details of inspection.

The report of the inspecting officer was received in the Militia Bureau December 11, 1917. This report disclosed defects and irregularities in the organization which it was necessary to correct or remove before recognition could be extended.

While these defects were in process of correction the governor of Nebraska informed the Secretary of War as follows:

"The Seventh Infantry, Nebraska National Guard, has been disbanded to enable men to enter service as individuals. In view of the fact that the amendment to the selective-service regulations changing status of men of draft age in National Guard units was announced by the Provost Marshal General too late to enable men of Seventh Infantry to secure discharges and enlist before December 15, I request that authority be granted for them to enlist now for assignment to the Thirty-fourth Division."

The following telegram was sent to Gov. Neville on January 11, 1918:

"Reference your telegram to Secretary of War of January 8 concerning disbanding Seventh Nebraska, all men who have taken oath under act of June 3, 1916, pass to the National Guard Reserve. You are authorized to discharge men from reserve to enlist in Federal service to take effect upon completion of their induction into Federal service. Such members of this regiment as may be of draft age will not be permitted to enlist unless special provision is made to have them inducted into service through the local-boards prior to the regular call for drafted men.

"J. McI. CARTER,
"Chief Militia Bureau."

The following telegram, dated January 14, 1918, was received same date:

"LINCOLN, NEBR., *January 14, 1918.*

"CHIEF OF MILITIA BUREAU,

"*Washington, D. C.:*

"No members of the Seventh Nebraska Infantry have subscribed to the oath provided for in section 70 of the act of June 3, 1916. All men were enlisted for the war period only. All members of the Seventh Infantry have been honorably discharged and are now free to enlist as individuals.

"CLAPP, *Adjutant General.*"

On January 15, 1918, the following telegram was sent to the adjutant general of Nebraska:

"Re telegram 14th instant. Section 7, chapter 205, of Nebraska, 1917, requires enlistment for period prescribed in regulations governing National Guard. Required oath given in section 70, act of June 3, 1916. Mandatory in section 71, same act. Any other form of oath illegal. Policy of War Department to grant discharge to members National Guard at termination of war upon individual application only.

"CARTER, Chief Militia Bureau."

Since it appears from the statement of the adjutant general of Nebraska that no members of the Seventh Nebraska Regiment were properly inducted into the service as members of the National Guard, no further action has been taken.

J. MCI. CARTER,
Brigadier General, National Army,
Chief Militia Bureau.

Mr. SHALLENBERGER. Did they withdraw the request? Will you put in the record a statement showing whether they withdrew the request, or whether the War Department informed them that they would not be called? It seems to be the opinion out there that they did not want them to exist as National Guard, and they hoped after they had formed their organization that the time would come when they would be called into the service, but upon learning that they would not be called the project was abandoned.

Gen. CARTER. Early in August, when we had drafted all the National Guard we had, it became necessary to decide what we were going to do for additional National Guard, and we obtained an opinion from the Judge Advocate General that the governors of the States were authorized to go ahead and organize up to the limit fixed by the law, and we told them that the organizations they would form from the men thus enlisted would be the same as those specified under former arrangements early last May. We also told them that while those organizations would be subject to the draft, they would not be drafted until the needs of the Federal Government demanded it, but that the individual members would be subject to the selective draft.

In a great many States they seem to have lost sight of that last statement. Many men were induced to enlist with the understanding that they could thereby enter the service voluntarily and would escape being drafted.

Mr. SHALLENBERGER. Provided you recognize them before the draft, then the fact that they had enlisted in the National Guard would have released them from the draft.

Gen. CARTER. That was contrary to the information sent them, but in many cases we urged upon the adjutant general of the State that he inform the individual members of that fact before they enlisted.

Mr. LUNN. If you had drafted a regiment prior to the call of any of the individuals, then they would not have been subject to the selective draft?

Gen. CARTER. Yes.

Mr. OLNEY. You have abandoned the scheme of raising 25,000 of the so-called United States Guards?

Gen. CARTER. Yes.

Mr. OLNEY. Many States have Home Guards and some have not?

Gen. CARTER. Yes.

Mr. OLNEY. What is going to happen in the case of the Home Guards?

Gen. CARTER. We will use Federal troops in the States where protection can not be afforded otherwise.

Mr. OLNEY. Where protection is needed in case of strikes or riots?

Gen. CARTER. I think I can state the policy. It is the duty of the State to protect life and property. It has that police power reserved to it. If, however, through some failure of the legislature to act or through some lack of sufficient agencies for enforcement of law and order, there appears to be danger that we will be injured in our prosecution of the war or that property will be destroyed and lives lost we will put Federal troops on duty.

Mr. GORDON. If they are called for by the governor?

Gen. CARTER. Wherever we can get them.

Mr. TILSON. Suppose you thought that some of the bridges on the New Haven Railroad, that were important in the matter of transportation, would be destroyed, and you wished to have those bridges guarded. Would you consider it your duty to send Federal troops there or would you have any right, or could you arrange with the States to send members of the Home Guards there, the State of Connecticut having a good Home Guard?

Gen. CARTER. We have asked the States to do that; that is, we have asked all the Eastern and Seaboard States to do that. Where they have not a Home Guard, we have had to provide Federal troops.

Mr. TILSON. What is your policy toward the troops called into this kind of service? Do they receive the same pay as the men in the United States service, or what is the arrangement?

Gen. CARTER. They are entirely under State control, and we have no appropriation under which we could pay them. There is no law under which they could be in the Federal service; the law only covers National Guard service.

Mr. TILSON. Then, you penalize the States that do provide for the taking care of their own forces; you call out their men, whereas, in other States, where they do not have such a guard, you send Federal troops to do that work?

Gen. CARTER. We do not call them at all. We ask the governors to preserve law and order in their States. We expect them to do it.

Mr. TILSON. Do you not think there ought to be some sort of recognition that would recognize these Home Guard troops that are under the control of the States so that they could be used by the Federal Government and paid when they rendered that service?

Gen. CARTER. No; I think that would add another force to the Army. We already have three different branches of our Army now, and if we used poorly trained men, it takes a great many more to do the same work. It is much more expensive than if we use the troops who are now in the Federal service. Until we get to the point where it is necessary to send these trained men to Europe it will be more economical to use the soldiers we have in training for that purpose.

Mr. TILSON. Then unless the State wishes to do it, and pay for it, you would call in the Federal forces from the outside to guard the property within the State, although that State had armed forces to do that work?

Gen. CARTER. As I said before, rather than see some utility that is vital in the prosecution of the war destroyed or property destroyed, we will send troops, but we do not desire to do it, although we would have to do it in some cases.

Mr. LUNN. If you are going to send troops, you would call on some particular company or battalion; you would not form another unit?

Gen. CARTER. No. The United States is divided into six departments and each department has a commanding general, with headquarters at a central point in the department. The department commander is charged with the administration of all military forces in his department, and we expect him to keep posted as to the needs of everything in his department. When we are called upon by any locality or organization of any kind for Federal aid, we ask the department commander to send an inspector or go there himself at once in order to determine what the necessities of the case are and to make recommendations to us, and we then expect him to get such aid as he needs from such of his own troops as are available to take care of the situation. If he reports that he has no troops for that purpose, we have to take them from some of the cantonments.

Mr. LUNN. It would be a temporary assignment?

Gen. CARTER. Yes.

Mr. LUNN. It would not be a permanent proposition?

Gen. CARTER. No; it would be a temporary assignment, and if an organization were scheduled to go abroad, we would not take a unit from them.

Mr. LUNN. What troops did you send to Lewiston, Me., where there was a strike and where they had no Home Guard, and yet there was not any Government work going on? Have you any authority to quell a strike?

Gen. CARTER. No; not unless the governor or the legislature of the State informs us that he or they are unable to keep the peace.

Mr. LUNN. Then they can call on the Federal Government?

Gen. CARTER. Yes.

Mr. LUNN. Did not the proposition to raise a force of 25,000 United States guards fail because you could not get volunteers?

Gen. CARTER. No. It was owing to a change of conditions that occurred after we started organizing the guards. The Secretary of War decided that the troops who would be the last to go abroad might be used for that class of duty and so save the expense that would be otherwise incurred.

I was not informed as to the exact reasons, but I judge that it was found that we were not sending troops abroad as fast as we had expected and that some of them would be here for quite a considerable while, and those who would be the last to go might be used, and thus save the cost of an additional force.

Mr. TILSON. Do you not think it would be economical from a military point of view if the States were encouraged to raise these forces out of the men not subject to the draft or, perhaps, under the age for military service, and thus encourage the raising of these troops and train them, so as eventually not to use any of our men who would be sent for military duty abroad?

Gen. CARTER. State Guards?

Mr. TILSON. Do you not think the State Guards ought to be encouraged by the Federal Government?

The CHAIRMAN. You mean the guards provided for in the national defense act?

Mr. TILSON. I am speaking of the Home Guards.

Mr. LUNN. You are not referring to the United States Guards?

Mr. TILSON. No.

Gen. CARTER. We have encouraged that. It is not the function of the Federal Government, anyway. We have told them we thought it was a good idea.

Mr. TILSON. Do you not think it would be a good idea to have the Federal Government connected up with that, so that if the governor should need that force it could be used, composed of men, for instance, over 45 years of age? They would form a perfectly good force for work of that kind, whereas they would not be fitted to go abroad.

Gen. CARTER. I think it is an admirable idea to have them for that kind of work. But as far as taking them into the Federal service—

Mr. TILSON (interposing). I do not mean that at all, but they could be used for the work that the National Guard was used for in other times?

The CHAIRMAN. In regard to these organizations you mentioned in the different States, what is the age of the men they are taking into those organizations?

Gen. CARTER. From 18 to 45, but a great many of them are trying to get men beyond 31 years of age so that they will not be taken out by the selective draft after the men are partially trained.

Mr. SHALLENBERGER. Is this policy which was applied in the Nebraska case the same that is applied all over the country?

Gen. CARTER. Yes.

Mr. SHALLENBERGER. The governor of Nebraska came here and saw the officials in the War Department. He must have gotten assurances that it was all right to go through with it, because he went home and resigned the governorship to take charge of it. But later on information was given that the regiment was liable to be called into the service. If a regiment should be organized in any of these States and it was thoroughly organized, it would not be the intention of the War Department to call that regiment into service now? You do not expect to take that way of raising an army, to allow a regiment to be organized now and then inducted into the service as an entire regiment? Your policy is rather to take men in the cantonments and train them there, rather than to have them raised as National Guard units and then taken in in a body?

Gen. CARTER. The policy is this, that inasmuch as the act of May 18, 1917, provided means for raising an Army, we had to proceed along the lines indicated there up to the point of another draft; and, as we had taken in all of the National Guard that existed at the time of the President's proclamation, that we would not for the present, at least, draft any more National Guard regiments; that is, for the present. The policy as to the future must depend upon circumstances.

Mr. SHALLENBERGER. The present policy is as you have indicated?

Gen. CARTER. If we could get a regiment fairly well trained and bring it into the service, it would be a distinct loss to leave it out, but to add a new force would simply add to the present difficulty.

The CHAIRMAN. The point is this, as I understand it, you take these organizations in under the national-defense act, and they have to take the oath, and that will make them subject to the draft?

Gen. CARTER. Yes.

The CHAIRMAN. So that the President could call these organizations in at any time he wanted to after they were once taken in under the national-defense act?

Mr. SHALLENBERGER. These companies were already organized, and they were already training. The officers had provided the uniforms, supposing that they were going to be called as a regiment. It is apparent that there was a change in policy.

It has been charged in Nebraska that political influence had something to do with the calling off of that particular regiment, and I wanted to know whether that was a special policy, which was adopted for Nebraska, or whether it was the general policy you have adopted for the entire country.

Gen. CARTER. No, sir; I can tell you the entire history of that. We did not have any requests for the formation of the National Guard troops from the governors of the States for some time after the draft of August 5. We had announced this policy I spoke of. In New Jersey they organized a regiment of Heavy Artillery. As soon as it was organized they wanted it drafted. They had been told, prior to the time when it was inspected for Federal recognition, and prior to this Federal recognition, that its draft must depend upon the needs of the Federal Government, but that was not definite enough. For some time the matter was discussed as to whether it would be expedient to take entirely new regiments, when we had no clothing for them, and no equipment or arms for them. The matter was brought to a head finally by a letter from the lieutenant governor of Nebraska, who said he would be called to take over the governor's duties if the governor went away, and he thought it was only just that they should find out just what the situation was, so that they could make their arrangements. Then the matter was discussed very thoroughly, and I was informed of the policy I have just told you about—that for the present no National Guard regiments would be drafted.

Mr. SHALLENBERGER. Do you know anything about an original agreement or understanding whereby the regiment was considered to be called? There was no change of policy, apparently.

Gen. CARTER. Never. There must have been some misunderstanding in Nebraska.

Mr. CALDWELL. Under the national defense act of 1916 we made a special exception of the ancient organizations that had existed in the United States for a long time. One was the Boston organization, and there was also the ancient artillery of New York, and some others, making nine all told. In New York these organizations have opened their doors and let in a large number of young men who are doing guard duty, particularly on the waterworks and on the big bridges. I want to know whether they should not be included as part of the National Guard organization that the State is supposed to have. They now include perhaps three or four thousand men.

The CHAIRMAN. They expressly asked to be excluded from that.

Gen. CARTER. There is no organization of the National Guard of that character now in Federal service. We never recognized any

organization that is now in State service. I mean to say we have never recognized any prior to the draft of August the 5th, who did not come in at that time.

Mr. HULL. It is the policy of your department to discourage at the present time the formation of any of these new National Guard units, is it not?

Gen. CARTER. No, sir; we will inspect them and give them Federal recognition, and give them drill pay for drills attended, but we have told them we can not furnish them complete armament and uniforms at the present time. We will get those things as soon as they can be had.

Mr. SHALLENBERGER. I think I can distinguish what you mean. The fact that you would recognize a regiment does not mean that you are going to call them in. That is what they evidently thought at first. They started in on that, and later they found out that it did not mean they were going to be called into the service, and they dropped out.

Mr. HULL. You do not discourage them, but at the same time you do not offer them any encouragement that they will be taken into the Federal service?

Gen. CARTER. We have told them the law makes them available for the draft, and their being brought into the service must depend upon the needs of the Federal Government, and that is a matter that is settled by the President. No units could now be brought in without another draft proclamation.

Mr. HULL. There is no prospect of their ever getting into the service?

Gen. CARTER. I can not say that.

Mr. HULL. It would take a new draft proclamation by the Executive?

Gen. CARTER. Yes, sir.

The CHAIRMAN. Have you any changes to suggest in the estimates as given in the bill before us, as to the amounts of the appropriations?

Gen. CARTER. There is a letter here which was sent to your committee. It says:

In connection with the estimates submitted by this bureau for appropriations for the support of the National Guard for the fiscal year 1919, your attention is invited to the fact that, in accordance with instructions, the estimates were based upon the then existing conditions, viz, that all National Guard organizations, excepting that of Hawaii, had been drafted into the Federal service. The figures submitted, therefore, covered only the probable expenditures for Hawaii and certain minor and general expenses of the National Guard as a whole which would not be obliterated by the draft of the continental National Guard.

Since the date of the submission of the estimates in question, however, new units of the National Guard have been organized in some of the States and have been extended Federal recognition by the War Department.

These new units and probably others that may be organized and recognized before the end of the fiscal year 1919, are unprovided for in so far as estimates for Federal funds are concerned.

As the National Guard of the States ceased to exist on August 5, 1917 (the date of the draft into Federal service), the greater part of the appropriations for the Guard for 1918 will, under the probability that the present war conditions will continue the drafted Guard in the Federal service for the remainder of the current fiscal year, be unused and covered back into the Treasury.

Mr. ANTHONY. What does that mean, that the National Guard ceases to exist?

Gen. CARTER. The National Guard in the States; the units of the National Guard for which this appropriation was made.

Mr. ANTHONY. Not the National Guard as an institution?

Gen. CARTER. No; I do not mean to say that. I mean the troops composing the National Guard in the States. The letter goes on to say:

It is believed that this balance if made available, together with the specific estimates already submitted, will be sufficient to meet the needs of the National Guard for the fiscal year 1919, including all newly organized and recognized units.

As it is impossible to foresee what new units of the National Guard may be organized and recognized up to June 30, 1919, or the amount of Federal support that will be required therefor, it is recommended that the following draft of proposed legislation be forwarded to the Secretary of the Treasury for submission to Congress with request for favorable consideration.

The CHAIRMAN. You are only asking for the unused balance of the present appropriation for the present fiscal year?

Gen. CARTER. That it be reappropriated and made available for the same purposes during the next fiscal year.

The CHAIRMAN. What is the amount of that?

Gen. CARTER. Of the appropriations for 1918, the present balance is \$13,750,000. That will be reduced by our expenditures from now until June 30, 1918.

The CHAIRMAN. That is the only suggestion you have to make with reference to a change?

Gen. CARTER. Yes.

The CHAIRMAN. Have you drafted the language you wish to be used in order to cover that point?

Gen. CARTER. The suggestion was made that the following paragraph be inserted in the bill:

That any unexpended balances remaining on June 30, 1918, in the appropriations "Arming, equipping, and training the National Guard, 1918"; "Arms, uniforms, equipment, and so forth, for field service, National Guard, 1918"; and "Supplying and exchanging Infantry equipment, National Guard, 1918," are hereby reappropriated and made available for expenditures for similar purposes during the fiscal year 1919.

Mr. ANTHONY. I gather that the real reason for turning down that regiment of Nebraska troops—

Gen. CARTER (interposing). We did not turn them down.

Mr. ANTHONY. You refused to take them into the Federal service, as I understand it.

Gen. CARTER. They have never been extended Federal recognition, and have not become National Guards.

Mr. ANTHONY. That is practically turning them down, because the governor stated that the purpose of their organization was to enter the Federal service.

Mr. SHALLENBERGER. I think the Government did not turn them down, but did give them to understand they were not likely to be called into the service.

Mr. ANTHONY. That is what I mean. Is it not true, General, that the real reason the War Department did not take them in was because it would have been a practical recognition of the principal of raising troops by the volunteer system?

Gen. CARTER. No, sir. We took in every man in the National Guard, some 400,000 of them, on August 5, and we now have above 470,000 in those National Guard divisions.

There were a number of reasons that led to the decision—not a number of them, but several reasons. At the present time we are taxing all our resources to supply the men we now have, and to create the necessary reserves to put in France for the use of the troops going over there. We have to accumulate a large amount of supplies.

To take into the service a lot of new men and try to equip them and arm them at this time would add to our burdens. There is no room in the cantonments anywhere for the existing regiments of the National Guard. If we call them into the Federal service we would have to leave them in the States. Later on there will be room in the cantonments for them, and we will be able to furnish them the necessary supplies.

Mr. ANTHONY. You did raise a number of regiments of the National Guard which were drafted into the Federal service practically under the volunteer system?

Gen. CARTER. There were a number of regiments raised just prior to the draft of August 5, but every one of those regiments complied with terms of the law. The officers were those prescribed by section 74. They had had prior military training of some kind. The men had taken the oath and passed the examinations required, by Federal officers, and were in all respects accepted in compliance with the provisions of the act of June 3. Of course, they did not have all the training they should have had, but that was impossible.

Mr. ANTHONY. And you got that number of men, and they came in in a very short period of time?

Gen. CARTER. Yes.

Mr. TILSON. You provide for the payment of the Hawaiian troops?

Gen. CARTER. Yes; they are included.

Mr. TILSON. What do you say in regard to the Hawaiian troops being brought into the Federal Service?

Gen. CARTER. That was discussed at the time they were framing the draft. I am not fully posted as to the reasons, but I think that the fact that they were left there was due to two factors, one was that those troops were originally planned to reinforce the garrison at Hawaii in case of need, and the other was that it was represented if those troops were taken out of there it would unsettle the labor situation in Hawaii and put the people in the sugar business and in other business in a very difficult situation as to the procurement of labor.

Mr. TILSON. What would you say as to their very recent, urgent request of the Congress that we pass legislation bringing them in?

Gen. CARTER. That was in the Philippine Islands. They were not included in the National Guard act of June 3, 1916.

Mr. TILSON. Have you nothing in your estimates for the Philippine Islands?

Gen. CARTER. No; that is not within the jurisdiction of the Militia Bureau.

Mr. HULL. You say you did not use some of the units because you did not have equipment for them or a place to put them, but the War Department afterwards did take the people in under the draft?

Gen. CARTER. No; they had arranged for the draft long before these National Guard units were formed, and they had provided the cantonments for them, and they were getting the clothing for them.

Mr. HULL. If they had taken the organizations in, it would have lessened the number of men they would have drafted?

Gen. CARTER. No; the proclamation fixed the number in the draft. They have not all gotten in yet. We made provision for those men at the time the proclamation was issued, and we have to take those men.

Mr. MCKENZIE. Is it not a fact that probably one of the reasons why the War Department took the position that was taken in regard to this matter was due to the fact that notwithstanding the national-defense act provides that the governor shall appoint the officers in the National Guard, and that those officers shall take certain examinations to show their qualifications, that, after all, you would be getting into the organization of this great National Army, perhaps, regiments with picked officers, who might have the favor of the governor or the lieutenant governor, or whoever it might happen to be, who was commissioning these officers in this particular unit of the National Guard, and therefore you would induct into the Army of the United States a regiment or a unit improperly officered, and if you undertook through military channels to kick those fellows out, there would be a howl go up that would be heard across the Atlantic Ocean?

Mr. ANTHONY. Is it not true that the War Department has the authority to pass on the qualifications of those officers, and after they are in the service can put them out again if they are not up to the requirements?

Gen. CARTER. Yes, sir.

The CHAIRMAN. General, I wish you would put into the record a statement showing in detail what each of the items is.

Gen. CARTER. That is included in a letter to the chairman, dated February 1, 1918, reading as follows:

FEBRUARY 1, 1918.

Hon. HUBERT S. DENT, JR.,

*Chairman Committee on Military Affairs,
House of Representatives.*

SIR: Complying with your verbal request, made during the hearing before your committee yesterday on the estimates for the expenses of the National Guard for the fiscal year 1919, for a detailed statement showing the various items making up the estimates, which, as was stated in the record, cover only the National Guard of Hawaii and certain minor expenses of the National Guard in general. I take pleasure in forwarding herewith additional data along the lines indicated. If you should desire any further or more detailed information I shall be very glad to supply it.

In the event the favorable consideration should not be given by your committee to the suggestion that the unexpended balances of this year's appropriation be made available for the fiscal year 1919, in view of the fact that it is impracticable, if not impossible, even to hazard a guess as to what will be the strength or status of the National Guard next year, may I request that opportunity be afforded to present, through proper channels, for the consideration of your committee some other plan whereby there may be assured some adequate provision for the National Guard as it may exist during the year 1919. There are existing National Guard organizations not in the service, in addition to the National Guard of Hawaii, and it is fairly safe to presume that other new National Guard organizations will be formed but to what extent is not known. In addition, it is within the range of possibility that the National Guard now in the Federal service may return and reassume (through reorganization and recognition) a National Guard status. It is with a view to safeguarding the proper maintenance of these organizations by provision for some proper and sufficient appropriations, that I make this request.

Very truly, yours,

J. McI. CARTER,

Brigadier General, National Army. Chief, Military Bureau.

STATEMENT REGARDING ESTIMATES FOR FISCAL YEAR 1919.

Appropriation: "Arming, equipping, and training the National Guard, 1919."
 Subappropriation: "Expenses, camps of instruction." Amount estimated, \$150,000.

The enlisted strength of the Hawaiian National Guard for the fiscal year 1918 was approximately 3,000 men. The cost of the encampment held in the fall of the calendar year 1917 amounted to approximately \$135,000. The minimum enlisted strength of the Hawaiian National Guard organizations now recognized by the War Department is approximately 4,500 men, and it is estimated that the cost of an encampment for this number of men would be \$150,000, being based as follows:

	1918	1919
Transportation of officers and enlisted men.....	\$68,000	\$75,000
Pay of officers and enlisted men.....	30,000	34,000
Subsistence of enlisted men.....	32,000	35,500
Incidental expenses.....	5,000	5,500
Total.....	135,000	150,000

Subappropriation: "Expenses, selected officers and enlisted men, military service schools." Amount estimated, \$50,000.

At the time the estimates for the fiscal year 1919 were submitted it was the opinion of this office that many officers and enlisted men of the Hawaiian National Guard would be ordered to military service schools. Under present conditions it is hardly probable that all of the officers and enlisted men that it was originally thought might be ordered to schools will be so ordered, and it is therefore now thought that the amount estimated is too large and should be reduced to \$10,000.

Subappropriation: "Pay and allowances of officers, National Guard, Military Bureau." Amount estimated, \$12,000.

As the Hawaiian National Guard and several new continental National Guard organizations are not in the Federal service, and as the law provides for the assignment of two National Guard officers in the Militia Bureau, the amount, \$12,000, included in the estimate for this purpose was considered a conservative amount in view of the possibility of the assignment of two officers in this bureau during the fiscal year 1919.

Subappropriation: "Pay of property and disbursing officers for the United States." Amount estimated, \$26,000.

This amount was based on the pay for 49 property and disbursing officers, at \$500 per annum, and for the pay of the property and disbursing officer for the Hawaiian National Guard, at \$1,500 per annum, totaling, \$26,000.

Subappropriation: "General expenses, equipment, and instruction, National Guard." Amount estimated, \$50,000.

The funds under this subappropriation are required by law to be apportioned according to the enlisted strength of the National Guard. The strength of the National Guard of Hawaii for the fiscal year 1918 was approximately 3,000 men, and the amount allotted to the Territory was \$28,893.65. The minimum enlisted strength for the organizations of the Hawaiian National Guard now recognized is approximately 4,500 men, and that in proportion to the amount appropriated for the fiscal year 1918, the amount required for the 4,500 men would be approximately \$43,000. The additional \$7,000 was included to meet any incidental and emergency items in connection with the National Guard of Hawaii and the possible increased cost in supplies and stores purchased for and issued to the National Guard of Hawaii.

Subappropriation: "Travel of Federal officers and noncommissioned officers making inspections." Amount estimated, \$5,000.

The amount expended in the fiscal year 1917 for this purpose was approximately \$25,000, and as the Hawaiian National Guard will have to be inspected in the fiscal year 1919 it is thought that the amount estimated is conservative.

Subappropriation: "Travel of Federal officers and noncommissioned officers changing stations." Amount estimated, \$2,000.

There are no figures upon which this estimate could be based, but in view of the possibility of the relief or detail of inspector instructors or sergeant instruc-

tors in connection with the National Guard of Hawaii, it is thought that in all probability the full amount estimated will be required for this purpose.

Subappropriation: "Travel of Federal officers and noncommissioned officers on visits of instruction." Amount estimated, \$15,000.

This amount was not based on any accurate figures, but it is thought that the amount in all probability will be required for the purpose for which estimated in connection with the visits of instruction of inspector instructors and sergeant instructors on duty with the National Guard of Hawaii.

Subappropriation: "Travel of Federal officers and noncommissioned officers, connection with camps of instruction." Amount estimated, \$1,000.

As the Hawaiian National Guard is not in Federal service and as it, under the law, is required to hold an encampment of 15 days each year, it is thought in all probability this amount will be required in connection with these camps.

Subappropriation: "Inspection of material, Field Artillery, Coast Artillery, and Signal Corps." Amount estimated, \$500.

Inasmuch as the Hawaiian National Guard includes Signal Corps and Coast Artillery Corps, the amount estimated is thought will be required for this purpose.

Subappropriations: "Transportation of supplies." Amount estimated, \$10,000.

As the shipments of supplies will be to the Hawaiian National Guard, for which \$100,000 is estimated (\$50,000 under the subappropriation "General expenses, equipment, and instruction, National Guard," general appropriation "Arming, equipping, and training the National Guard, 1919," and \$50,000 under the appropriation "Arms, uniforms, etc., for Field Service, National Guard, 1919"), it is the opinion of this office that the amount estimated is not in excess of what will be required for this purpose.

Subappropriation: "Expenses, sergeant instructors." Amount estimated, \$5,000.

As this subappropriation includes expenses of quarters, fuel, light, medicine, and medical attendance for sergeant instructors, and as the item of quarters alone for eight sergeant instructors detailed with the National Guard of Hawaii would amount to \$2,880, it is thought that the additional amount of approximately \$2,000 is not in excess of what will be required for the other items of expenses for the sergeant instructors detailed with the National Guard of Hawaii.

Appropriations: "Arms, uniform, equipment, etc., for Field Service, National Guard, 1919." Amount estimated, \$50,000.

The funds under this appropriation are required by law to be apportioned according to the enlisted strength of the National Guard. The strength of the National Guard of Hawaii for the fiscal year 1918 was approximately 3,000 men, and the amount allotted to the Territory was \$33,375.60. The minimum enlisted strength for the organizations of the Hawaiian National Guard now recognized is approximately 4,500 men, and that in proportion to the amount appropriated for the fiscal year 1918, the amount required for the 4,500 men would be approximately \$50,000.

Mr. OLNEY. Do you realize that the enthusiasm of the home guards was broken down in the States where home guard organizations were established, because they had no Federal recognition?

Gen. CARTER. I have not kept in touch with that.

Mr. OLNEY. They are men beyond the draft age, in most cases.

Gen. CARTER. We have no connection with that guard, but we are trying to keep in touch with them to find out what force is available, and what there is in the way of possible available military help in the States. I did not know that that feeling had grown up. I suppose every man knows if he wants to serve the Federal Government the way is open in the Regular Army and the National Guard by voluntary enlistment. I had not heard of any such feeling existing that you refer to.

Mr. OLNEY. All of the enlistments in the home guard were of men between 31 and 50 or 60 years of age.

The CHAIRMAN. Has there been any effort made to raise reserve battalions to fill up the ranks of the troops that have been called into the Federal service?

Gen. CARTER. No, sir. The act of May 18, 1917, provided for the draft, and they decided to use that rather than to resort to the system of having reserve battalions, which would be expensive, because we would have to provide camps for them.

Mr. TILSON. Have you still got the depot brigades?

Gen. CARTER. They will have replacement divisions instead of depot brigades.

Mr. SHALLENBERGER. Why did they abandon the depot brigades?

Gen. CARTER. They can have fewer encampments, and there is less overhead cost in the replacement divisions than in a depot brigade for every division.

The CHAIRMAN. Recently there has been a call of a certain percentage of these men to be trained somewhere immediately to go to France. How are they selected? That is depleting some of the State National Guard organizations.

Gen. CARTER. Everybody regrets that, but it is due to the fact that certain special troops have had to be formed at once for service abroad, and they had to take trained men.

Mr. GORDON. Do they call for volunteers?

Gen. CARTER. That depends on the division commander. He might take volunteers, or he might take certain units. Rather than break up an entire unit he would possibly take a few men from each.

The CHAIRMAN. Why was not the plan pursued of selecting a unit instead of picking up 500 men from various units?

Gen. CARTER. Because if you take a unit out of a division, you break up the team. You can take a few men out and replace them with green men, and they will absorb the training very quickly.

The CHAIRMAN. You have taken a regiment out?

Gen. CARTER. No, sir; we have just taken a certain number of men. They have been called on for a certain number of men.

The CHAIRMAN. In the Rainbow Division?

Gen. CARTER. We did not take those men out of organized divisions. We took them from various States. We never had had an organized division such as we have now, fully officered and equipped.

The CHAIRMAN. I believe they were in their home States.

Gen. CARTER. That matter of pulling troops out of divisions has gone considerably further in the National Army than in the National Guard. The National Guard was the last to suffer from it.

Mr. McKENZIE. One complaint that has come to me has been that a great many officers in the National Guard have been ordered to take efficiency examinations, without any preparation for these examinations, and the people making the complaints contended that in those cases the National Guard officer, in fairness, ought to have been given at least the same opportunity to prepare himself that one of the officers trained at one of the officers' training camps has had; that he should have had the opportunity of three months' training in one of the camps before being ordered to take an efficiency examination. What is there to that?

Gen. CARTER. We have never discharged a man because of lack of technical training. It has been because of his lack of capacity and

fitness. The act specifies very plainly what they may be discharged for. We would not expect a man coming into the service without prior professional training to have that training, and we have been trying to give it to them, where they have shown adaptability. Where they have character and capacity and fitness, we are trying our best to hold on to them and promote all of the best men. Where a man has shown himself not adapted, not a good officer, and not capable to lead men in the field, we did not want him as an officer. He is a round peg in a square hole.

Mr. McKENZIE. I think you are right about that, but it has been brought to my attention that is one of the means of what we might call railroading these officers out of the National Guard; that you would see that a man was incompetent and would not make an efficient officer; and it would be a good way of getting rid of him to order him to take an efficiency examination, and therefore he would be out of the service.

Gen. CARTER. You must have misunderstood that matter, because we have not yet given any of them an examination except in a physical way. We have inquired into their qualifications, conduct, and efficiency; we have called before the boards officers who have had them under their observation; and we have been shown the result of their work; and we have taken into consideration what they have done prior to their entry into the Federal service, what kind of a reputation they had, and then what kind of a record they had made. The boards have considered all this information, and in nearly every instance the majority of the board have been National Guard officers.

We did have some boards who sent in recommendations that officers who were assigned to Field Artillery regiments be discharged because they were not good Field Artillery officers. In every case we have sent instructions to find out whether an officer was capable in any branch of the service, and if he was that, the division commander should transfer him to the branch in which he would be the most useful. If he was incapable of being an officer, we did not want him any longer.

Mr. GREENE. Is there not a certain element in the make-up of an officer that is very important, and that is temperamental fitness? A characteristic adaptability to the military profession may be lacking in many men who may be brilliant geniuses in some other line?

Gen. CARTER. Yes, sir.

Mr. HULL. You admit that one of the crying needs of the Army to-day is good officers?

Gen. CARTER. Yes, sir.

Mr. HULL. Is it not a fact that there is no way by which you can take into the Army a competent officer who has had training, and who has been in the National Guard, at the rank he had in the National Guard?

Gen. CARTER. When you say I have no way—

Mr. HULL. I mean the Army; I refer to the organization.

Gen. CARTER. The President, of course, could appoint that man from civil life. With respect to bringing him into the National Guard I want to say this: That every organization of the National Guard, when it came into the service was fully officered. We were not responsible for the personnel beyond the fact that we said they

were acceptable, and in our judgment efficient. If a man fails to take advantage of the existing military organization in his State, that fault can not be laid at the door of the War Department. Even then, when we brought this National Guard into the Federal service we had to reorganize it. We had to reduce it from nine regiments in a division to four. That made a large number of surplus officers, but we took them and are utilizing them right now, and we will soon have used them all.

In the meantime we could not appoint additional officers to the National Guard, with all of those officers to choose from. We have filled vacancies with those officers, but we could not appoint new men into the National Guard while that list of surplus officers remained.

Mr. HULL. I am not blaming your department. We need officers, and yet we have surplus officers, but for some reason the War Department is not using those officers where they ought to be—on the line.

Gen. CARTER. I do not know. I suppose they have done their very best to get the best men available. Occasionally, of course, some man has been missed who would make a good officer.

Mr. HULL. The case I have particularly in mind has been called to the attention of the Secretary of War, and your department is familiar with it. There is no question about the ability of the man, and yet he can not get back in the service.

Mr. ANTHONY. What did he get out for?

Mr. HULL. After the border trouble he was a judge of the district court. He had all the experience necessary. He simply resigned from the National Guard. It seems to me that when there is an opportunity to get a man of his ability, there ought to be some way to pick up good officers of that kind.

Mr. MORIN. A few weeks ago there were a hundred officers relieved from duty, and among those there were a large number from Pennsylvania who had been in the National Guard for a great many years. Were all those men relieved from duty because of physical disability?

Gen. CARTER. I do not remember. A considerable number were found to be physically deficient when examined with a view to their going on foreign service. I do not remember what particular officers you refer to.

Mr. MORIN. I have in mind one particular officer who, in my judgment, is one of the best men you could have gotten. I refer to Col. Kearns. He is a lawyer by profession, but he has been in the National Guard for 20 years. He is just 44 years of age. He was colonel of what was formerly the Eighteenth Pennsylvania, and what is now the One hundred and eleventh Regiment at Camp Hancock. He is a man about 6 feet 3 inches tall, and in condition he weighs about 205 pounds. He looks to be in perfect health, but he was discharged. He said the only reason he could assign for that was physical disability, and the physicians at home who examined him could not find anything wrong with him. I think if there is any other reason besides his physical qualifications, he ought to be told what they are. It seems to me he should be assigned to some other duty, and not be discharged.

Gen. CARTER. When we are organizing this same kind of troops later for home duty he could be. But these divisions are now being

organized and prepared for service in France, and that is a very difficult and hazardous service. There have been a number of men who have gone over there who have broken down, and we are trying now to avoid that.

Mr. MORIN. This man is a big, active man, and in good physical health, and has had 20 years of service in the National Guard. He organized the regiment of which he was colonel, and it is the biggest uniformed regiment in the country.

Gen. CARTER. His examination was made by a board of officers who took an oath to find according to the evidence, and the surgeons were the division surgeons. I do not remember whether he was one of the men who was given a reexamination.

The CHAIRMAN. General, I will ask you to put into the record a statement showing the details of each item of your estimate.

In reference to the paragraph on page 68, "To provide for pay and allowances of officers of the National Guard assigned to duty in the Militia Bureau, \$12,000," there never have been any National Guard officers assigned there?

Gen. CARTER. There was one last year for quite a while. If we got some National Guard in, we would like to have those men.

The CHAIRMAN. You would like to have that item carried in the bill?

Gen. CARTER. Yes; a portion of that amount has been expended. (Thereupon, the committee adjourned to meet to-morrow, Friday, February 1, 1918, at 10.30 o'clock a. m.)

ARMY APPROPRIATION BILL, 1919.

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Wednesday, February 6, 1918.

The committee this day met, Hon. S. H. Dent, jr. (chairman), presiding.

STATEMENT OF MAJ. GEN. HENRY P. McCAIN, THE ADJUTANT GENERAL OF THE ARMY.

The CHAIRMAN. General, there is one item in the bill that relates to your department, on page 5—I believe that is the only one you are asking for—"contingencies"?

Gen. McCAIN. Heretofore we have asked for \$7,500. The increase is due to the increase of the Army and the increase of the tactical divisions and districts. I believe it is as low as we could very well make it, with any assurance that they will get the articles that they need at these headquarters.

The CHAIRMAN. \$15,000 was not sufficient last year?

Gen. McCAIN. I think it was last year, but it is increasing all the time and it will be greater next year.

The CHAIRMAN. I have a list of items upon which I want Gen. McCain to give us some figures.

What is the total enlisted strength of the Army?

Gen. McCAIN. The total enlisted strength of the Army on January 31, as near as could be estimated, was 1,479,259.

The CHAIRMAN. How is that divided between the Regular Army and the National Army?

Gen. McCAIN. Regular Army, 493,105; National Guard, 430,554; Reserve Corps, 74,750; and National Army, 480,850.

Mr. GORDON. Is that all?

Gen. McCAIN. That makes the total.

The CHAIRMAN. What is the total number of officers of the line in each branch of the service?

Gen. McCAIN. Regular Army, 7,452; National Guard, 13,803; Reserve Corps, 39,717; and National Army, 2,879; making the total on January 31, 63,851.

Mr. ANTHONY. What date is that?

Gen. McCAIN. January 31, 1918.

The CHAIRMAN. Have you the figures to show how they are divided among the different branches of the service?

Gen. McCAIN. Do you mean Infantry, Cavalry, etc.?

The CHAIRMAN. Yes, sir.

Gen. McCAIN. No. We have been interchanging them. Those, for instance, in the National Army and the Reserve Corps we have

been assigning to duty wherever they could best serve. I can get that information.

The CHAIRMAN. I should be glad if you would.

Mr. GORDON. Does this total enlisted strength, 1,479,259 include officers and men?

Gen. McCAIN. No; just the enlisted men.

The CHAIRMAN. Please give us the number of officers of the staff.

Gen. McCAIN. In the staff corps, general staff, 80; Adjutant General's Department, 384; Inspector General's Department, 44; Quartermaster's Corps, 6,638; Medical Corps, 26,009; Dental Corps, 5,405; Veterinary Corps, 2,009; Judge Advocate General's Department, 201; Engineer Corps, 6,526; Ordnance Department, 4,503; Signal Corps, 9,823; Bureau of Insular Affairs, 2; chaplains, 498; professors at Military Academy, 7; total January 31, 1918, 62,129.

Mr. ANTHONY. Of what kind, the staff?

Gen. McCAIN. Yes, sir; that is the staff.

Mr. SHALLENBERGER. Staff officers?

Gen. McCAIN. Yes, sir.

Mr. ANTHONY. You have as many staff officers as you have line officers?

Gen. McCAIN. Yes, sir.

The CHAIRMAN. Can you tell us how many of the reserve officers are on active duty?

Gen. McCAIN. I have given the total number of reserve officers, 39,717.

Mr. GREENE. What proportion, if any, is on active duty now?

Gen. McCAIN. I think they are all on active duty. If they are not called to active duty in a reasonable time we discharge them.

Mr. ANTHONY. These medical officers, 26,009, are they on active duty?

Gen. McCAIN. Yes, sir; practically all of them. You will find that from time to time they relieve a man from active duty if they do not need him, and put him on the inactive list, but practically all of the officers in the Reserve Corps are on active duty now.

The CHAIRMAN. Are the 39,717 included in the total number of line officers, that is, included in the 63,851?

Gen. McCAIN. Yes, sir.

The CHAIRMAN. That is the number of line officers assigned to the Regular Army, the National Guard, and the National Army?

Gen. McCAIN. Yes, sir.

Mr. GREENE. How many reserve officers?

Gen. McCAIN. Fifty thousand six hundred and forty-eight reserve officers in the staff.

Mr. GREENE. Those are all on active duty?

Gen. McCAIN. As I said, they are practically all on active duty. You will find not all on active duty, but practically all.

The CHAIRMAN. They are included in the total number of staff officers?

Gen. McCAIN. Yes, sir.

Mr. TILSON. They are not receiving pay?

Gen. McCAIN. Yes; all on active duty.

Mr. TILSON. But those not called?

Gen. McCAIN. They do not receive any pay.

The CHAIRMAN. What was the strength of the Regular Army on April 1 last?

Gen. McCAIN. Officers, 5,791, and enlisted men, 121,797.

The CHAIRMAN. What was the strength of the National Guard on the same date?

Gen. McCAIN. Officers in Federal service, 3,733, and in State service, 3879; enlisted men in Federal service, 76,713; and in State service, 97,295.

Mr. SHALLENBERGER. The National Guard?

Gen. McCAIN. Yes; that is the National Guard. That made a total on April 1, 1917, of officers, 7,612, and enlisted men, 174,008.

The CHAIRMAN. Please state in the same way the strength of the Regular Army and the National Army on June 5?

Gen. McCAIN. Regular Army officers, 6,341, and enlisted men, 190,068; National Guard in Federal service, officers, 3,787, and in State service, 4,602; enlisted men in the Federal service, 90,362, and in the State service, 138,063. Total strength June 5, 1917, officers, 8,389, and enlisted men, 228,425.

The CHAIRMAN. That is the total, both State and Federal service.

Gen. McCAIN. Yes, sir.

The CHAIRMAN. Please give us the similar figures for September 1, 1917.

Gen. McCAIN. Officers in the Regular Army, 7,022, and enlisted men, 308,145; National Guard, all in the Federal service, officers, 12,945, and enlisted men, 350,225.

The CHAIRMAN. All in the Federal service?

Gen. McCAIN. Yes; at that time.

The CHAIRMAN. You have already given us the total strength of the drafted men up to January 31?

Gen. McCAIN. No; I did not give you that. The total drafted men on February 4, 1918, was 531,144.

Mr. TILSON. What status do you give a man if he is drafted and is then sent to a National Guard organization as many thousands were; is he a National Army man or a National Guard man after that?

Gen. McCAIN. Our regiments are all numbered serially and he belongs to a certain regiment of the United States Army.

Mr. TILSON. But you seem to have a sort of distinction running all the way through between the National Army and the National Guard. Here are a number of men drafted who normally would belong to the National Army, but, as a matter of fact, they were sent to fill vacancies in the National Guard?

Gen. McCAIN. That is true, and not to the Regular Army. The distinction has been kept up to the time, but that is now fading away and it is all one Federal Army.

Mr. TILSON. Do you not think that it should all be wiped out?

Gen. McCAIN. Absolutely; and we are doing that just as far as we can.

Mr. TILSON. Do you not think that there should be a freer interchange of officers among the National Guard, the National Army, and the Regular Army?

Gen. McCAIN. We are trying to figure that now; we want that.

Mr. SCHALLENBERGER. The enlisted men taken in the National Army and taken in the National Guard are counted here in the Na-

tional Guard? Your figures do not balance with the report of the Provost Marshal General, which shows that over 500,000 men were called out by draft, while your figure for the National Army is 480,000. So those men must have been sent to different places?

Gen. McCAIN. You can not keep track on that. They are sent to fill vacancies wherever needed.

Mr. SHALLENBERGER. Either in the National Guard or the Regular Army?

Gen. McCAIN. Wherever they come in. We have taken the National Guard from the last returns that we got by regiments.

Mr. SHALLENBERGER. It does not follow that a National Guardsman is a volunteer, because he may have been drafted and put over there?

Gen. McCAIN. You can not count on who is a volunteer and who is a drafted man.

Mr. McKENZIE. It would not do, in order to find out the total number of men in the service, to add the last figure you have given to the number of men in the National Guard and the Regular Army?

Gen. McCAIN. No.

Mr. McKENZIE. This figure is simply useful in showing the number of men drafted, not the number of men in the service.

Gen. McCAIN. The figures in the top are the only safe figures—that is, on the 31st of January.

The CHAIRMAN. The next item, General, is the dates when the drafted men were called and the number of men in each call. After I made that memorandum, I found that was really in Gen. Crowder's report. I suppose you have it?

Gen. McCAIN. Yes, sir. On September 5, 1917, 31,486. Those were the accepted men from the call.

The CHAIRMAN. The men actually accepted.

Gen. McCAIN. Yes, sir. September 5, 1917, 31,486; September 19, 1917, 261,319; September 26, 1917, 428; September 28, 1917, 19,004; October 3, 1917, 132,386; October 27, 1917, 42,901; November 2, 1917, 6,819; November 19, 1917, 17,251; December 5, 1917, 8,445; December 14, 1917, 905; December 19, 1917, 9,000; December 21, 1917, 1,000. and February 4, 1918, 200, making a total on February 4, 1918, of 531,144. A call has been made for February 23, 1918, for 74,506, making a grand total called to date of 605,650.

Mr. ANTHONY. All except the last 74,000 will be in your total?

Gen. McCAIN. Yes, sir.

Mr. GORDON. The 200 called for February 4 do not appear up to January 31?

Gen. McCAIN. The figures I gave you were for February 4. The total number of drafted men to date is 531,144, with another call out for the future.

The CHAIRMAN. The next item is the number and kind of technical troops, and how many, if any, were drafted?

Gen. McCAIN. Technical troops have been secured both by volunteer enlistment and by draft. I have not those separately put down.

The CHAIRMAN. What do you mean by that, that you have gone out and drafted men especially for these technical troops, or have taken the technical men from the regular draft law?

Gen. McCAIN. We do both. If some of the technical corps want certain men, we ask the Provost Marshal General—he has that so he can do it now—to give us so many men possessing certain qualifications.

Mr. GORDON. Only from those liable to the draft?

Gen. McCAIN. No, sir. We have also to fit that occasion an index of the men in the National Army. We have about completed the index of the men in the National Army and we are engaged in indexing all of those in the Regular Army. We will in a short time have every man measured and know what he is best fitted for. When one of the chiefs of bureaus wants a certain number of men possessing certain qualifications he makes a requisition on The Adjutant General and we distribute that call over the different divisions, telling the division commanders to furnish so many men possessing these qualifications and to send them to a certain point. We have to follow that rule. We found that it was confusing for anybody to go into a division and say, "I want these men," by name, because he would take the very men that the division commander wanted. They protested, and instead of doing that, we ascertain what each division commander has and we call on him to furnish his proportion of men possessing these qualifications. In that way we accomplish the same purpose and at the same time preserve the organization of the division.

Mr. TILSON. You say in proportion to the number of each kind of men in each division?

Gen. McCAIN. Yes, sir.

Mr. TILSON. For instance, if there is a large number of one particular kind of troops in one particular division your quota from that division would be much larger for that particular kind of man?

Gen. McCAIN. That is right.

Mr. SHALLENBERGER. You have spoken of furnishing men for special service. If a man is in class 2, a skilled mechanic, and you do not find what you find in class 1, do you go into class 2 and transfer him?

Gen. McCAIN. I do not know that that question has ever been raised. So far we have not found it necessary. That would be for the Provost Marshal General to determine. We ask for certain men possessing certain qualifications, and he goes out and gets them.

Mr. SHALLENBERGER. He stated yesterday in his testimony that he already was expecting to have to invade class 2. He had stated to us before that he was expecting to get his Army from class 1, in all human probability.

Gen. McCAIN. He may have to go there.

Mr. SHALLENBERGER. Would you think that under the law he would have the authority to do that, notwithstanding that the man had been put into class 1 and his number was far back on the call he still can invade any of these and reach out and pick the man?

Gen. McCAIN. I think absolutely, because that is divided into classes by regulation.

Mr. SHALLENBERGER. Even after in the class they can change to the other class?

Gen. McCAIN. Yes, sir.

Mr. SHALLENBERGER. Then, if a man is in any particular class he is liable to be drawn?

Gen. McCAIN. Yes.

Mr. GARRETT. It is an advantage to be in any class except 1.

The CHAIRMAN. Please give us the number and kind of these technical troops and what branches of the service they are connected with?

Gen. McCAIN. The Engineers have a total of 119,476 enlisted men.

Mr. GREENE. What is the date?

Gen. McCAIN. This is under date of January 21. It is practically correct, although it is changing all the time, every day.

Mr. GORDON. Just enlisted men?

Gen. McCAIN. Yes, sir.

Mr. KAHN. Men enlisted?

Gen. McCAIN. Yes, sir.

Mr. SHALLENBERGER. Those men are all in the Regular Army?

Gen. McCAIN. No; these are not all in the Regular Army. This is in the Engineer Corps.

Mr. ANTHONY. These men will all be in addition to the total figure you gave us for the strength of the line?

Gen. McCAIN. No; they are included.

Mr. SHALLENBERGER. They are scattered all through the Army, some of the Regular Army, and some of the National Army?

Gen. McCAIN. Everything, volunteers and everything.

Mr. SHALLENBERGER. They are not confined to any particular branch?

Gen. McCAIN. You might say that they have absolutely the same status, because as soon as the war is over they can go, every one of them.

Mr. SHALLENBERGER. Why do you call them engineers; are they of the National Army, the Regular Army, or the National Guard?

Gen. McCAIN. Most of them are in the National Army, but we do not make any distinction. We call that the Engineer Corps. We are not making any distinction there.

The CHAIRMAN. Let me see if I understand you, General. The number of these technical troops which you are giving us now are included within the 1,479,259 total enlisted strength of the Army, or are they in addition to that?

Gen. McCAIN. This is in addition to that. The others are the line.

The CHAIRMAN. In addition to the 1,479,259 which you have already given us?

Gen. McCAIN. Yes, sir.

The CHAIRMAN. Please proceed to give us those figures and then we will ask questions.

Gen. McCAIN. Ordnance Department, 20,000.

The CHAIRMAN. Enlisted men?

Gen. McCAIN. Yes, sir. Signal Corps, 151,747.

Mr. SHALLENBERGER. Those are not additional to the 1,479,000?

Gen. McCAIN. Yes, sir.

The CHAIRMAN. These are the organizations, as I understand, of technical troops provided for in section 4 of the act of May 18, which are in addition to the Regular Establishment?

Gen. McCAIN. Yes, sir.

Mr. FIELDS. You have in the Ordnance Department 20,000 enlisted men at the present time?

The CHAIRMAN. Up to January 21.

Mr. FIELDS. When Gen. Crozier was before the committee he said that the number was 5,000.

Mr. KAHN. Up to the 1st of January, I think he said.

The CHAIRMAN. The figures which Gen. McCain is giving us have been taken right from the records of his office and they are bound to be the accurate figures.

Mr. SHALLENBERGER. The figure you have given—1,479,259—is that the enlisted strength of the Army?

Gen. McCAIN. Of the line of the Army. Quartermaster's Department, 140,266; Medical Department, 84,700, including 16,000 in the Veterinary Corps.

Mr. CALDWELL. Sixteen thousand even?

Gen. McCAIN. Yes, sir. That is as near as we can get it right now. I do not think that anybody would be safe in swearing to any of these figures, because they are changing every day.

The CHAIRMAN. They do not change to any appreciable extent?

Gen. McCAIN. No; they are going out and coming in.

The CHAIRMAN. Is that all of the technical troops?

Gen. McCAIN. In the question of sanitary troops established by General Order No. 80, 1917, I find this notation. The total number of commissioned officers, "may be approximated equal to, but not to exceed one for every 1,000 of the total strength of the military forces, authorized from time to time pursuant to law." Allowing one sanitary officer for every 1,000 as above quoted and distributing proportionately "among the several grades as in the Medical Corps, now established by law," the number of commissioned officers in each grade would be as follows: Majors, 484—

Mr. SHALLENBERGER (interposing). In the Sanitary Corps?

Gen. McCAIN. Yes, sir; captains and lieutenants, 1,016, making 1,500 officers, and the total enlisted strength of the Sanitary Corps at the present time is 3,945.

Mr. QUIN. Does that include the officers?

Gen. McCAIN. No; officers 1,500, and enlisted men 3,945.

Mr. SHALLENBERGER. Have you those 1,500 officers?

Gen. McCAIN. Yes; they have those men right now, I think.

The CHAIRMAN. Have you the total enlisted strength of the technical troops?

Gen. McCAIN. No; I have not.

The CHAIRMAN. You have not any figures to show how many of these technical troops were drafted and how many were volunteers?

Gen. McCAIN. No; I have not those separated.

The CHAIRMAN. Can you put that information into the record?

Gen. McCAIN. I do not know whether we could ever get that, unless we went into the record of every man, but I can make an effort to get it.

Mr. KAHN. They are being inducted into these branches every day?

Gen. McCAIN. Yes, sir; and they are all mixed up.

Mr. ANTHONY. You have the total number of men drafted, and if you subtracted that from the total number of men in the Army then you would have the number of volunteers?

Gen. McCAIN. No. As to how many were volunteers and how many were drafted men in the technical corps, when they want a

thousand men in the technical corps, we will send to the division commander or to a department commander and we will call on them indiscriminately. Regular Army, National Guard men and drafted men and they will send the one thousand. They may be all mixed together and there is absolutely no way to tell, unless you went into the record of each one, who was a volunteer and who was a drafted man.

Mr. KAHN. As a matter of fact, up to the 15 of December. I think it was, you allowed the men who had been drawn under the draft to volunteer in these different technical corps?

Gen. McCAIN. Yes, sir.

Mr. KAHN. A drafted man can still go into these technical corps and they do go into the technical corps by induction from the local board?

Gen. McCAIN. Yes, sir.

Mr. KAHN. So that those men probably go into the branches of the service that they think they can do the best work in, but they probably would not volunteer if they had not been drafted?

Gen. McCAIN. I think that is true.

Mr. GARRETT. The recent order was issued to prevent that.

Mr. KAHN. No.

Mr. ANTHONY. That would be a comparatively small number out of the total?

Mr. KAHN. I do not know what it figures up, but I understand it is pretty considerable.

The CHAIRMAN. I understood you to say very explicitly that the total figures 1,479,259 of the Regular Army, National Army, and National Guard were not included in the total figures of the special and technical troops?

Gen. McCAIN. That is right.

Mr. WISE. For instance, some technical branch wants 1,000 or 2,000 men. You then send out to the different departments to give you so many men to be assigned. Are those deducted or have they been counted?

Gen. McCAIN. These are based on the most reliable returns that we can get. The returns are all very slow in coming in.

Mr. WISE. He might count the same man twice?

Gen. McCAIN. No; the figures here are supposed to separate them.

Mr. ANTHONY. Is there such a corps in the Army as the insurance corps?

Gen. McCAIN. No, sir.

Mr. ANTHONY. I have noticed enlisted men wearing a uniform that said they were attached to the insurance corps?

Gen. McCAIN. We detail them there for duty to help out the insurance business.

Mr. ANTHONY. How many men have you detailed with the insurance division?

Gen. McCAIN. I can not tell you.

Mr. ANTHONY. They are regularly enlisted men?

Gen. McCAIN. I can tell you how it is worked in this country. At the headquarters of a division or post the commanding officer or general has detailed men to do this very line of work. He has not transferred them. We have sent over to France a number of officers.

specially commissioned for that purpose. They are commissioned in the National Army and detailed to this duty. There is no distinct corps. They are all detailed. We commission them, it is true, because of their knowledge of the insurance business.

Mr. ANTHONY. Have some enlisted men been sent to France?

Gen. McCAIN. They have been commissioned in the National Army and detailed to the insurance people. There is no distinct corps.

The CHAIRMAN. The next question relates to the number of National Guard officers discharged for inefficiency and the proportionate number of officers discharged from the Regular Army and the National Army, together with data showing what was done with the surplus officers by reason of the organizations?

Gen. McCAIN. By action of the efficiency board under the provisions of section 9 of the act of May 19, 1917, 6 colonels, 1 lieutenant colonel, 6 majors, 33 captains, 36 first lieutenants, and 31 second lieutenants, a total of 113.

Mr. GREENE. Up to what date?

Gen. McCAIN. Up to the present time.

Mr. ANTHONY. Were there not some brigadiers and major generals?

Gen. McCAIN. That is for inefficiency. By reason of disability under section 9 of the act of May 19, 1917, 1 major general, 5 brigadier generals, 13 colonels, 10 lieutenant colonels, 31 majors, 96 captains, 81 first lieutenants, and 49 second lieutenants, making a total of 288.

By resignation, 1 colonel, 3 lieutenant colonels, 11 majors, 68 captains, 97 first lieutenants, and 81 second lieutenants, making a total of 261.

Mr. TILSON. Right in that connection, in a number of those really inefficient cases, they are permitted to resign. I have heard of a number of cases where a board sat and the man then was given the privilege of resigning.

Gen. McCAIN. Some went out that way.

Mr. CRAIG. You do not have any brigadier generals in the resignation list?

Gen. McCAIN. There is actually one, but he is not on this list.

Mr. CRAIG. One already in?

Gen. McCAIN. He has resigned.

Mr. TILSON. Do you know whether it was a bona fide case of resignation or an enforced resignation by reason of a board of efficiency?

Gen. McCAIN. I think really a board of efficiency would have been called, but I do not like to put it that way.

The CHAIRMAN. There were 662 officers separated from the service of the National Guard by reason of resignation, disability, and inefficiency. You have some other figures with respect to that question.

Mr. FIELDS. Most of those resignations were asked for?

Gen. McCAIN. There is nothing to show that they were. They resigned for one reason or another, ill health, etc.

Mr. SHALLENBERGER. And a great many of them on account of business, I presume?

Gen. McCAIN. Yes, sir.

The CHAIRMAN. Can you give us the proportion that these figures bear to the Regular Army and the National Army?

Gen. McCAIN. I have this memorandum: Disposition of National Guard officers who were rendered surplus through consolidation of

regiments. The following organizations have been utilized as pioneer regiments for corps and Army troops: First New Hampshire Infantry, Fifth Massachusetts Infantry, Sixth Massachusetts Infantry, Eighth Massachusetts Infantry, First Vermont Infantry, First Connecticut Infantry, and First Maine Heavy Field Artillery. All of the officers of those regiments were carried as surplus.

Mr. SHALLENBERGER. Carried as what?

Gen. McCAIN. Carried as surplus. The following organizations were turned over to Gen. Carleton to be organized into corps and Army troops: The First, Tenth, Twelfth, Fourteenth, Forty-seventh, Seventy-first, and Seventy-fourth New York Infantry. All of these officers were considered as surplus, and, in addition, the following officers have been sent to Gen. Carleton: 2 colonels, 1 lieutenant colonel, 12 majors, and 45 captains.

The CHAIRMAN. Sent to whom?

Gen. McCAIN. Gen. Carleton, who is organizing these Army troops.

Mr. TILSON. Where?

Gen. McCAIN. Down at Camp Green.

Mr. ANTHONY. What kind of troops?

Gen. McCAIN. Corps troops. They are auxiliaries. We want a regiment here and there.

Mr. TILSON. A sort of depot brigade idea?

Gen. McCAIN. No, sir. As soon as the corps is organized they go along as a part of the corps.

Mr. SHALLENBERGER. Are there any corps there new?

Gen. McCAIN. No; we have not the organization.

Mr. SHALLENBERGER. Officers but no troops?

Gen. McCAIN. Officers for those regiments. We are sending the men there all the time.

Mr. ANTHONY. Organizations organized for special duties?

Gen. McCAIN. Yes, sir. They belong as a part of a corps. A corps must have a lot of auxiliary troops, Cavalry for special purposes, etc.

Mr. ANTHONY. You used the word "pioneer" troops?

Gen. McCAIN. Yes; that does not refer to these.

Mr. KAHN. Do you use the pioneers for mining?

Gen. McCAIN. All sorts of special work. It is not so much mining, but all sorts of technical work which belongs to the corps as distinct from an organization of Engineers, Signal Corps, and other troops. They belong to the corps commander and are commanded by him and utilized by him as he sees fit.

Mr. TILSON. What kind of an organization is that?

Gen. McCAIN. There will be regiments and brigades, just according to the number they have and the strength of the corps. It is a regularly organized, straight organization.

The following officers have been assigned to the National Cavalry regiments: 6 majors, 46 captains, 7 first lieutenants, and 7 second lieutenants.

The following officers have been assigned to the Artillery park: 1 lieutenant colonel and 1 major.

The following officers have been assigned to ordnance training camp at Camp Sheridan: 1 major and 20 captains. Thirty others are to be appointed later.

Appointed in Signal Corps: 1 major and 2 captains.

Appointed in Ordnance Department: 1 captain.

Ordered to service abroad: 1 lieutenant colonel.

To brigade and field officers' school: 4 colonels and 2 lieutenant colonels.

All National Guard divisions ordered overseas have taken with them surplus officers to be used in filling vacancies.

Remaining surplus officers are attached to divisions and are being utilized in various capacities, such as billeting officers, instructors in schools, range officers, etc. They are being absorbed in divisions as rapidly as vacancies occur, and are being called for by Ordnance Department and Signal Corps for such duties as those departments require. With numerous requisitions for officers for various duties, all surplus officers will soon be absorbed. No surplus National Guard officers have been absorbed in a lower grade than that held by them at the time.

The CHAIRMAN. I think that covers everything, except that you have not given us the number of Regular Army officers and those in the National Army who have been discharged for inefficiency or disability.

Gen. McCAIN. In the Regular Army two second lieutenants, on account of inefficiency, and the appointments of eight first lieutenants have been terminated. In the National Army the appointments of four first lieutenants have been terminated.

Mr. TILSON. How do you account for the casualties among the National Guard being so much greater than among the other service?

Gen. McCAIN. Probably they were not subjected to the same examination as these other people when they entered the regular service or the National Army.

Mr. TILSON. Do you not think that there is a probability that these National Guard officers have not been utilized to the best advantage possible? I know of good material among the National Guard officers.

Mr. GORDON. That is only one-eighth.

Mr. TILSON. But one-eighth is a large number, and when you see such a small percentage of Regular and National Army officers being put out of the service, it seems strange that there are so many National Guard officers.

Mr. CRAGO. Maybe this will explain that: We asked for the proportion of National Guard officers who had been discharged by reason of disability, resignation, or inefficiency, and the proportion between the ones rendered surplus and the ones who were still in command of troops. In other words, there is an impression that because of the fact that these men were rendered surplus that they were immediately subjected to a test of whatever kind requiring them to get out of the service. That is the impression that is abroad. I do not know that it is true.

Gen. McCAIN. I do not think that is true. Of course, they all grow out of the proceedings of a board. The Secretary has given instructions that they shall be examined by a board which will always be composed of a majority of National Guard officers.

Mr. CRAGO. That rule has been followed?

Gen. McCAIN. The Secretary has ordered that now. That has not always been the rule.

Mr. GARRETT. That is a very recent rule.

Gen. McCAIN. It has not always been done.

Mr. GARRETT. Before that the board was composed of a majority of the other branch of the service?

Gen. McCAIN. I do not know; I can not say.

Mr. CRAIG. Composed entirely of the other branch?

Gen. McCAIN. No attention was paid to that, so far as I know. In some cases, in one case I have in mind, it was not possible to convene a majority of National Guard officers for the reason that officers of the appropriate rank were all attending the field officers' school at Fort Sam Houston, but in the future that will be followed.

The CHAIRMAN. That is all the data you have?

Gen. McCAIN. Yes, sir. There was another question asked about debts of officers when commissioned. That was section 1 of Bulletin 69, War Department, December 12, 1917.

The CHAIRMAN. There is one other question. Do those figures show how many surplus officers are now unassigned?

Gen. McCAIN. No.

The CHAIRMAN. Can you put that in the record?

Gen. McCAIN. I think I can get that and put it in the record, Mr. Chairman.

Mr. SHAULENBERGER. Are those surplus officers all National Guard officers?

Gen. McCAIN. Yes, sir.

The CHAIRMAN. One of the members of the committee asked me to have you put into the record the order prohibiting the discharge of an officer for debt, that was existing at the time he was commissioned.

Gen. McCAIN. That was section 1, of Bulletin 69, War Department, December 12, 1917, which reads as follows:

The War Department, department and division commanders, or other military authorities, during the continuance of the present emergency, will not take notice of, or concern themselves with, the obligations assumed, transactions occurring, or domestic or personal controversies arising, prior to the entry of officers of the National Army and of forces composed of former members of the National Guard into the service of the United States; nor of any matters of like nature occurring or arising after entry into the military service unless the facts presented bring the conduct of the officer within the provisions of the Articles of War; and that with respect to all such transactions and controversies the parties concerned shall be left to the remedies afforded by the civil courts.

Mr. FIELDS. Following that up, where the resignation of an officer has been asked for because he owed debts when he went into the service, or that were brought about after he went into the service, by reason of his property being taken away from him by reason of a defective title, what is the policy of the department with regard to that kind of a case?

Gen. McCAIN. I think that each case should be judged on its own merits. If the conduct is such as to bring at the time discredit on the service or is liable to bring about scandal to the service or to so affect the officer that the soldiers of his command will cease to have respect for him, the War Department could not help but take cognizance.

Mr. FIELDS. I have in mind a specific case, where a man who had been a National Guard officer for 12 years, a very high-class citizen.

had invested his means in coal lands and had started the operations of coal mining. When the call came for troops on the Mexican border, in 1917, he went to the border. During his stay there the title to his property was contested, the case was tried during his absence, and judgment was rendered against him and his property swept away from him. It left him in debt several thousand dollars—the debts he had incurred in preparing to finance this operation. A great many of his friends advised him to go into bankruptcy, that the debt was so big he could not meet it, but he refused to do so, and he and his brother, who is also an Army officer, decided that they would pro rate all they could spare of their salaries on a percentage basis among his creditors, which it seems to me was the only thing an honest man could do. Some of the creditors filed a complaint with his superiors and his resignation was asked for on the ground that he owed these debts. I wondered what the policy of the department was in cases of that character.

Gen. McCAIN. So long as an officer is acting in good faith, the way you state it, I do not think the department would look upon it as detrimental to the officer.

Mr. FIELDS. If I have presented it correctly, the officer who asked for this man's resignation evidently exceeded his authority and violated the suggestion of the order which you have just read.

Gen. McCAIN. As a matter of fact, whatever I would say on that point would be just my own individual view. Personally, under the statement of facts which you have given, I would not ask for an officer's resignation.

Mr. FIELDS. Here is the point I want to make. It seems to me it puts a good many men who might be drafted into the service in a very embarrassing position. Many men within the draft age are men who have been engaged in business and have probably incurred financial obligations, because the business of the country is largely run that way. These men, we will say, are drafted, and they are men of business ability, probably the most apt men to make good officers, but if the case I referred to is to be followed by the department and these men are to be put in an embarrassing position, they do not dare to ask for a commission or try to get a commission for fear that as soon as they get a commission complaint will be filed against them because they are in debt and they will be sent from the Army under disgrace which they can never outlive.

Mr. GORDON. That probably led to the promulgation of the order which the general has read.

Mr. FIELDS. I was aware of the order. I wanted to know if men in the field were honoring this order or were going ahead in violation of the suggestion of the order and asking for the resignation of these men.

Mr. GORDON. Was the resignation asked for after the order was made or before?

Mr. FIELDS. After.

Mr. CALDWELL. What is the rate now at which volunteers are entering the service, about how many a day?

Gen. McCAIN. It varies every day, but the last figure I have is 740 volunteer enlisted men enlisted on February 4.

Mr. CALDWELL. Does that include those inducted into the service through the local board?

Gen. McCAIN. No; volunteer enlistments. This is a report of the recruiting officers which shows the recruits. It does not include any reenlistments, and does not include any enlistments made in the field. It includes the enlistments at the general recruiting stations throughout the country.

Mr. CALDWELL. You say it does not include the enlistments in the field?

Gen. McCAIN. It does not. We have no report of any enlistments which might have been made in the field by organizations.

Mr. CALDWELL. I do not quite get that. Suppose a man went to an army corps where there was a regiment and said he wanted to join, they have authority to take him in?

Gen. McCAIN. Yes, sir. That is not included. There are comparatively few of those. We have to wait until we get the returns.

Mr. CALDWELL. The marines that are in France are under the jurisdiction of the Army. Have you any record of how many of those we have under the jurisdiction of the Army now?

Gen. McCAIN. No, sir; I have not. We have a brigade there.

Mr. GORDON. Enlistments in the Marine Corps are not included in the figures you have given?

Gen. McCAIN. No, sir.

Mr. CALDWELL. You have a brigade there?

Gen. McCAIN. Yes, sir; and replacement troops of a certain number.

Mr. CALDWELL. Did you include in the engineers the foresters?

Gen. McCAIN. Yes; I included everything.

Mr. CALDWELL. The foresters are a part of the engineers?

Gen. McCAIN. Yes, sir.

(Thereupon the committee adjourned to meet to-morrow, Thursday, February 7, 1918, at 10.30 o'clock a. m.)

COMMITTEE ON MILITARY AFFAIRS,
Thursday, February 7, 1918.

The committee this day met, Hon. S. H. Dent, jr. (chairman), presiding.

**STATEMENT OF MAJ. GEN. HENRY P. McCAIN, THE ADJUTANT
GENERAL OF THE ARMY—Continued.**

The CHAIRMAN. General, you want to make some corrections in the figures which you gave the committee yesterday?

Gen. McCAIN. Yes, sir. I was in error in stating that the staff departments were not included in the total of 1,479,259. They are. That number includes all the enlisted men we have in the Army of every description.

The CHAIRMAN. By the staff departments, you mean the technical troops as well as the regular troops?

Gen. McCAIN. Yes, sir; everything we have in the way of enlisted soldiers is included in that figure.

As to the Signal Corps I gave the authorized figures yesterday, which were not exactly correct, and the Quartermaster's Department did not report their number exactly right. I should like to restate the figures.

Mr. SHALLENBERGER. Then we can accept the figures of 1,479,259 as the total Army?

Gen. McCAIN. Yes, sir.

Mr. SHALLENBERGER. And 125,980 as the total number of officers?

Gen. McCAIN. Yes, sir. I got a corrected sheet from the Quartermaster's Department yesterday, in which they gave their number as 102,206 instead of 140,000, and the Ordnance Department has gained since my report—they have 27,466 instead of 20,000. The Signal Corps proper has 23,545; the Aviation Section, 90,114; and the Medical Department, 84,700. That makes a total in the staff departments of 328,031. The Engineers are included as a part of the line. I do not put them in the staff.

Mr. KAHN. That is under the law of June 3, 1916?

Gen. McCAIN. Yes, sir; the national-defense act of June 3, 1916.

Mr. SHALLENBERGER. The figures you gave yesterday of the actual number of Engineers was 119,000?

Gen. McCAIN. That is 111,279.

The CHAIRMAN. Are there any other corrections?

Gen. McCAIN. You wanted me to fill in your fifth question yesterday on this blank, the number of officers in each arm of the service?

The CHAIRMAN. Yes, sir.

Gen. McCAIN. I have that. As to the officers in the Regular Army we have Infantry, 3,616; Cavalry, 1,488; Field Artillery, 960; Coast Artillery, 1,388; and total, 7,452. National Guard, Infantry, 9,355; Cavalry, none; Field Artillery, 3,761; Coast Artillery, 687; and total, 13,803. Reserve Corps, Infantry, 27,163; Cavalry, 2,028; Field Artillery, 8,412; Coast Artillery, 2,114; and total, 39,717. National Army, Infantry, 1,871; Cavalry, none; Field Artillery, 668; Coast Artillery, 340; and total, 2,879. That makes the total, Infantry, 42,005; Cavalry, 3,516; Field Artillery, 13,801; Coast Artillery, 4,529; and the grand total, 63,851.

Mr. SHALLENBERGER. They are all line officers?

Gen. McCAIN. Yes, sir.

The CHAIRMAN. I want to ask you, General, what you think of the practicability of a bill which has been called to our attention requiring the War Department to notify the parents of the sickness of men in the hospitals?

Gen. McCAIN. I am looking up that very question. I do not know of any reason why that could not be done. It does not require any act of Congress.

The CHAIRMAN. It can be done without an act of Congress?

Gen. McCAIN. Yes, sir.

Mr. KAHN. By regulation?

Gen. McCAIN. Yes, sir. It will be easy for the doctor at the hospital to have a card or telegram, if it is urgent, and send it. We have never done that, but in the matter of casualties in this war my office is prepared to tell all about that—casualties, missing, deaths, and wounded. We are prepared to do that. We are going to require

the doctors in the hospitals to keep the parents of those entitled to be informed as to the progress of the treatment in the hospital.

Mr. ANTHONY. You would not recommend that that be done except in serious cases—that is, that the parents be notified of a soldier going to a hospital.

Gen. McCAIN. You can readily see that you might cause unnecessary worry, because if the parents got a notice they would jump immediately to the conclusion that their son was dangerously ill. That would be bad.

Mr. TILSON. You might require it to be done unless, in the opinion of the physician in charge, it was thought unnecessary, something to that effect; put the responsibility up to the doctor himself, and if he abused his discretion very rankly, or was mistaken in his judgment, he could be called to account?

Gen. McCAIN. Yes, sir.

The CHAIRMAN. You do not think it requires any legislation?

Gen. McCAIN. No, sir: I am trying to ascertain the best way to do it.

Mr. KAHN. General, is the department contemplating asking for any additional draft legislation?

Gen. McCAIN. I have not handled that, Mr. Kahn, and I do not know. From what I hear I think Gen. Crowder is handling that end.

Mr. KAHN. I know, of course, that he would draw up the necessary legislation.

Gen. McCAIN. In what respect?

Mr. KAHN. I wanted to know whether you had formed an estimate or an opinion of how many more million men would be required, assuming that this war was to last one, two, and three years, if you could give us an estimate of how many men we would require on that basis?

Gen. McCAIN. The Secretary is really the only one who would have any authority to speak. I have always had my own personal opinion.

Mr. KAHN. I wanted to get your opinion.

Gen. McCAIN. I do not know how far that would conflict with the ideas of the Secretary.

Mr. KAHN. I had figured out that you have in the fighting force, according to the figures you gave us, 1,039,949 men under arms. That is eliminating the various corps and also the Engineers who are not fighting troops.

Mr. LUNN. Did not the chairman make the statement that on September 1, 1917, the fighting force amounted to 1,073,000, or was that the Army and Navy?

The CHAIRMAN. The Navy and Army on September 5. That included the enlisted men in both the Navy and Army and Marine Corps, a little over a million men.

Mr. MORIN. Assuming that we will have to have 5,000,000 men over there, at least 5,000,000 men, and that we should get them as quickly as possible, how many do you think it would be possible for us to get ready each year?

Gen. McCAIN. I am not really able to say. We are making headway all the time. Everything is growing. If we can get the ships, we can get the men after this year.

Mr. MORIN. Assuming that we could get the ships, how many men could we get ready: what would be the maximum each year after the first year?

Gen. McCAIN. I do not see any reason, if we could get the ships, why we can not send over 3,000,000 men.

Mr. MORIN. And give them sufficient training in this country?

Gen. McCAIN. Yes, sir.

Mr. MORIN. If we have to have 5,000,000 men and get sufficient ships, we could have the 5,000,000 men over there in two and one-half years?

Gen. McCAIN. Easily, as far as getting the men is concerned, after we get the ammunition. I do not know just what the Ordnance Department is going to be able to do after they get all the plants running.

Mr. MORIN. And equip them and supply them?

Gen. McCAIN. I do not know what the Quartermaster's Department and the Ordnance Department can do. Outside of that, there is no limit, so far as I can see, in getting them ready.

Mr. MORIN. You could not equip that many in a year?

Gen. McCAIN. Not unless we expanded enormously from what we have done. We would have to start a great many plants all over the country.

Mr. MORIN. Then, it is safe to assume that it would take us at least three years to get 5,000,000 men over there, trained and equipped?

Gen. McCAIN. I think we can do it before that, if we are willing to take a chance here and there, willing to go in without fear of making a mistake.

Mr. GORDON. How much training do you figure on giving those men?

Gen. McCAIN. They ought to have at least three months in this country. They ought to have more, but when an emergency presents itself, if that is the only thing, we would not stop for three months or any other particular time.

Mr. GORDON. You consider some training absolutely vital, do you not?

Gen. McCAIN. Yes, sir.

Mr. GORDON. Just how much and how long?

Gen. McCAIN. I put three months on that.

Mr. GORDON. That would be the minimum amount of training that you think the men should have before being sent over?

Gen. McCAIN. Yes, sir.

Mr. GORDON. Have not a great many men been sent over who have not had that much training?

Gen. McCAIN. Well, I do not know. I do not know of any that have been sent, except some individual drafted men.

Mr. KAHN. There were some men from Camp Lewis who went over who had not been in three months, and one of them was the brother-in-law of a Member of this House.

Gen. McCAIN. Individuals going into an organization need less time in a trained organization. We would not keep the whole organization back because they had not had three months' training.

Mr. KAHN. These men were taken from the brigade depots to fill up units in the Regular Army and the National Guard.

Mr. ANTHONY. In view of the fact that the Chief of Staff of the Army a little less than two years ago stated that he would consider it unsafe to send any man on the battle line unless he had two years' training, the military opinion has undergone a rapid change as to the necessity of a long period of training?

Gen. McCAIN. It does not, to my mind. I think those things are adjusted by necessity. I do not think that you can make a soldier in three months or six months or a year.

Mr. ANTHONY. But it does not take two years?

Gen. McCAIN. I think it takes two years.

Mr. ANTHONY. You really think that?

Gen. McCAIN. Yes, sir; to make the best soldier.

Mr. ANTHONY. Is it not a fact that 80 per cent of the men who are doing the fighting on the battle line have not received that much training?

Gen. McCAIN. That does not mean that they should not have it.

Mr. GREENE. We are not sending unfit men?

Gen. McCAIN. I would not say that.

Mr. GARRETT. They would be more fit if they had more training?

Gen. McCAIN. Yes, sir. It is a relative term.

Mr. QUIN. I know that some young men from my county—Pike County, Mo.—enlisted along last May in a regular organization and were immediately sent to France. I judge that to be true from censored cards which they sent back and which were published in the local newspapers. They were boys that I know personally. I take it for granted that they could be trained over there?

Gen. McCAIN. Yes, sir. They are getting the very best training over there. You must not lose sight of that. They are training in an atmosphere of war.

Mr. MORIN. How much training are they getting over there before being put into the line?

Gen. McCAIN. I do not know just exactly the number of months, but they are still being trained. They are going to school and doing all sorts of things.

Mr. MORIN. They probably get at least three months' training?

Gen. McCAIN. Yes, sir; very many get more than three months' training.

Mr. MEKENZIE. Who do you know, if anything, about the scrutiny that is exercised by the War Department in the commissioning of men of the Staff Corps? My reason for asking that question is that every few days I pick up one of the Washington papers and see that So and So of the Arlington Hotel or So and So of the Harrington Hotel or So and So of the Patent Office has been commissioned in the Signal Corps or the Sanitary Division or in the Ordnance Department or somewhere else. Are those men given an examination or how do they proceed to get commissions?

Gen. McCAIN. The staff bureau convenes a board of officers and they examine them physically and mentally. It is determined in the regular way by boards of officers who are supposed to be competent. Then it comes up to the staff bureau and the chief reviews it and passes on it, and if it is all regular it comes to my office, having been approved by the Secretary of War, and we issue the commission.

Mr. SHALLENBERGER. Can you give us the number of officers that have been commissioned from civil life in the Army without going through the training camps, and the rank they hold?

Gen. MCCAIN. I will try to.

Mr. SHALLENBERGER. I am told that over in Europe where the men have actually seen trench life, have been in actual battle, that they wear certain chevrons so that the public knows. What would you think of the proposition of having some distinguishing mark like a broad band on the sleeve or something of that kind for all the men who have seen service in Europe, compared to those who never get there?

Gen. MCCAIN. We will have something like that. We are getting up a distinctive mark for people who have done distinctive service. Then we will have a campaign badge just as we have had for all the wars heretofore.

Mr. ANTHONY. Would you confine it to men who have seen service in the present war or to men who saw service in the Spanish War?

Gen. MCCAIN. We would give him a campaign badge just like this [indicating] for each war.

Mr. GREENE. What are you going to do with a man who enlists with good faith, but who, on account of possessing certain talents or resources, is assigned to and performs some military service that does not take him into the field of action; a service that is essential, of course, to the operation of the Army, just exactly as your own service? Take your own case, as an example; you are not liable to be ordered into the field of action at all under existing circumstances, at least, because you are more valuable to the organization and the furtherance of the operations right where you are; yet should there be any distinction in the character of the uniform to indicate that you have been performing a service not as heroic, perhaps, as another man?

Gen. MCCAIN. I think those of us who remain in Washington feel that very keenly. We are simply unfortunate, but we have to have somebody to do that.

Mr. GREENE. But should your uniform undertake to differentiate?

Gen. MCCAIN. I think it is all right to take the men who share the dangers of the fight and have something to show it. That is a part of my misfortune.

Mr. GREENE. Not after the service is performed, but while it is in progress, would it not be a bad proposition to make a distinction between men as to whether they have been at the front, or whether they have performed equally as important service at home?

Gen. MCCAIN. I would not put anything on the uniform right now to show that they have been over there.

Mr. GORDON. Do you not distinguish between services such, for example, as you yourself are rendering, and the services rendered by a lot of fellows who have commissions that are performing purely civilian employment? Do you not distinguish between one of the most important positions in the Army, to wit, The Adjutant General, and the hundreds and thousands of men who are filling these purely clerical positions?

Gen. MCCAIN. As a matter of fact, I do not make a great deal of distinction. We do not keep the men here unless it is necessary.

Sometimes, no doubt, people may stay here a little longer than they should, but we are trying to put them where they can do the best service for the Government. There are some officers in my office who are just as indispensable in that office as they are on the battle front. We could not get along without them. Those men feel it. They want to go, all of them. We have to keep somebody. Naturally, you will accumulate a lot of officers in Washington. They come to visit here on their way to the front, and you see more of them than are really stationed here.

Mr. GORDON. There can not be any question about that. Anyone who has knowledge of our tremendously large military department knows that that work is vitally essential, and I do not think that any good citizen would criticize if he knew the facts. It is up to you gentlemen to determine who has the necessary technical knowledge and experience to perform those duties. To what extent have the different bureaus considered the proposition of putting men who are out of the draft age in these clerical positions?

Gen. McCAIN. They are doing that all the time. That is the rule, as far as possible. They can not always do it. I want to say for the officers, all of them, from the lowest to the highest, that I do not believe I have found one that did not want to go to the front. They are all after it. It is hard to keep them here. They feel that they have not been justly treated when they are sent here. Take the field clerks, they all want to go over there. It is a hard matter to get any field clerks for the commands in this country.

Mr. GORDON. What is the real function of a field clerk?

Gen. McCAIN. He keeps the records and the correspondence. He bears the same relation to the division or Army headquarters in the field that the clerks in my office bear to me here in Washington, only they have to go outside. They are attached to the commands.

Mr. GORDON. It is not a very hazardous position?

Gen. McCAIN. No.

Mr. GORDON. There has been a very great demand for those positions?

Gen. McCAIN. Yes, sir. We appoint them only as vacancies occur and only as Gen. Pershing asks for them. We have had a great many applications, but we appoint them only as vacancies occur, and they must be stenographers and typewriters.

Mr. FIELDS. How many field clerks have you in the service at this time?

Gen. McCAIN. We have in round numbers 1,600.

Mr. QUIN. Do you not think that it is a little gally on the part of these field clerks to be asking to be commissioned? There is a bill pending before this committee.

Gen. McCAIN. I would not recommend that. In my view, I think it would be objectionable.

Mr. QUIN. I thoroughly agree with you. There is a bill before Congress, and I have received a lot of letters from them.

Gen. McCAIN. I have made a recommendation against it.

Mr. ANTHONY. I regard your judgment as very sound along lines of military policy. Do you not think it is the wrong military idea to commission young men of draft age for the nonmilitary duties that Mr. Gordon has just spoken about in this country? We are

conducting quartermaster schools for young men of draft age and taking them for quartermaster jobs all over the country, and we have a vast reservoir of middle-aged men, above the draft age, who could perform those duties, perhaps even better than those young men, and which would release a large number of active men for the line of the Army. I understand that in England and other European countries they have just the opposite military policy from ours, they utilize the middle-aged men for those nonmilitary positions. Do you not think it would be a good plan if we adopted such a policy?

Gen. McCAIN. Yes, sir; as a matter of fact, we do that.

Mr. ANTHONY. You have not been doing it?

Gen. McCAIN. Not always. It has not been done as thoroughly as some of us would like.

Mr. ANTHONY. Is it possible for a man 40 years of age to secure an appointment to one of these quartermaster schools, where they are training the quartermaster officers?

Gen. McCAIN. Yes, sir; for a long time, as soon as an application like that came to my office, within the draft age, it was automatically returned to him with the suggestion that he must hunt somebody outside of the draft age for the position. If they must have the man who is within the draft age, he must make a certificate that the man possesses certain qualifications that he can not readily get out of the draft age.

Mr. ANTHONY. Is it true that the quartermaster schools are composed of a great percentage of men who are within the draft age?

Gen. McCAIN. There are a great many.

Mr. ANTHONY. They are taken from the enlisted men, largely?

Gen. McCAIN. Yes, sir; by the division commanders, a great many.

Mr. KAHN. As I understand, these men, who have gone to Camp Johnston and to Jacksonville, are, for the most part, drafted men who were selected by their commanding officers as having the necessary qualifications for service in the Quartermaster Corps. Is not that your understanding?

Gen. McCAIN. Yes, sir; they get them from the enlisted men through the division commanders.

Mr. KAHN. After all, the men in that corps are largely enlisted men or drafted men who have been recommended by their officers?

Gen. McCAIN. Yes, sir.

Mr. McKENZIE. There are a number of young men who have volunteered for that specific unit, as I understand. There were two of them in my office a short time ago—one of them from the county seat of my home county. They said that they had volunteered for that service. They were ordered to this camp at Jacksonville, and then it was found that they did not have accommodations and they were sent to the American University camp. I am sure that they were volunteers.

Mr. GARRETT. It occurs to me that inasmuch as the men between the ages of 21 and 31 are to fight the battles in this war, why would it not be just and proper and right that these men should fill all of the positions they are competent to fill in any department, regardless of whether or not they are trying to stay out of the trenches or trying to get into the trenches?

Gen. McCAIN. That is what we have done. We have opened up the commissions widely to all enlisted men, not to those within the draft age, but to those from 21 to 40 years of age.

Mr. KAHN. Is it not a mistaken idea that the man in the Quartermaster Corps, in modern warfare, has a snap? Does he not come under fire as much as the man in the trenches, with no weapon to defend himself?

Gen. McCAIN. I think the position of an officer is so important that we should not allow the fact of his occupation or his age or anything to interfere with selecting the right man for the right place. An officer has to be physically sound, he has to work all day and he has to plan at night. He has to take care of his men at night, and he has all sorts of things to do. It requires an unusual man, and when you get those men you should make them officers.

Mr. KAHN. I am speaking as much for the enlisted men of the Quartermaster Corps as for the officers. My understanding is that the men in the Quartermaster Corps are compelled to go right up to the first line of trenches with ammunition, and with food and supplies of all kinds and that they are directly under fire?

Gen. McCAIN. In the field they would be.

Mr. HULL. What percentage, General, of the Quartermaster Corps are under fire in France to-day?

Gen. McCAIN. I can not tell you.

Mr. HULL. You could give us an idea, a very small percentage?

Gen. McCAIN. Of those in the Quartermaster Corps?

Mr. HULL. Yes, sir.

Gen. McCAIN. It would be a small proportion. It would be handled by the regimental supply officers, those belonging to the organization proper.

Mr. HULL. What do you think of registering the men between the ages of 31 and 40?

Gen. McCAIN. I see no objection to it. I do not think that it is highly important at this time.

Mr. HULL. There is a large number of men, of course, not the same proportion, but a large number that we might find.

Gen. McCAIN. We have given them a chance to volunteer. We are enlisting them every day.

Mr. HULL. There is a large number who have not volunteered?

Gen. McCAIN. Yes, sir. We are enlisting those every day. In the present stage of the war, I do not see any necessity for registering those above that age.

Mr. HULL. What is the age limit for a man to seek a commission in the Quartermaster Corps and the Ordnance Department?

Gen. McCAIN. There is no age limit fixed by law.

Mr. HULL. What is the regulation?

Gen. McCAIN. They have not actually published any regulations. They have not taken anybody, generally speaking, over 50 years of age, unless it was an unusual case.

Mr. HULL. What is the proportion of the enlisted men to the entire strength of the Army, about?

Gen. McCAIN. You have in round numbers 1,500,000 enlisted men, and you have in round numbers 125,000 officers.

Mr. HULL. Does that include the Hospital Corps?

Gen. McCAIN. Yes, sir. One hundred and twenty-five thousand officers in round numbers.

Mr. HULL. What is the proportion of actual enlisted men of the fighting line to all others?

Gen. McCAIN. We have 125,000 officers and we have in the line of the Army to-day 1,151,228 men.

Mr. HULL. That is a loss of about 33 $\frac{1}{3}$ per cent?

Gen. McCAIN. The easiest way to get at the figures of the requirement is about 1 officer to 22 or 23 enlisted men.

Mr. HULL. There is another proportion that I am trying to ascertain, and that is the actual fighting strength of the Army.

Gen. McCAIN. We have it right now.

Mr. HULL. What is the actual capacity of the cantonments at this time for enlisted men?

Gen. McCAIN. I can not tell you. It is between 500,000 and 600,000.

Mr. HULL. Could you ascertain and put that in the record?

Mr. GORDON. Including the National Guard?

Gen. McCAIN. Yes, sir.

Mr. HULL. That is, the actual maximum capacity for enlisted men of the 16 cantonments.

Mr. ANTHONY. May I supplement that? Will the National Guard cantonments be suitable also for training men after the guard has left?

Gen. McCAIN. They are only tents, and are not as suitable, but they are all right.

Mr. ANTHONY. They have a good many wooden structures?

Gen. McCAIN. Yes, sir; we could use them.

Mr. KAHN. Who designated the various camp sites?

Gen. McCAIN. That was done by the department commanders in compliance with a study which was made by the War College.

Mr. KAHN. The War College officers went over the ground personally?

Gen. McCAIN. They went over what facilities, what qualifications, what features a good camp site should possess, and in accordance with that, they sent to the commanding generals copies of that study and directed them to make their locations as far as practicable so they would possess those features.

Mr. KAHN. Can you put into the record the names of the various camp sites and cantonment sites and also give the names of the commanding officer who recommended each site?

Gen. McCAIN. Yes, sir.

Mr. ANTHONY. In connection with that, General, could you give us the recommendations of the boards of officers in the various departments that recommended these camp sites? I understand that there were boards of officers appointed by the commanding generals.

Gen. McCAIN. Yes, sir.

Mr. ANTHONY. And they made certain recommendations to the commanding generals, and in some instances, these recommendations were followed and in other instances the commanding general went over them and selected other sites. Is that true?

Gen. McCAIN. I do not recall right now whether that is absolutely true or not where a definite recommendation was made by a board. It may have been done.

Mr. ANTHONY. Could you put in the record the names of the officers who recommended the camp sites at Funston and Doniphan?

Gen. McCAIN. Yes, sir.

Mr. ANTHONY. We want to fix the responsibility for the location of the cantonment at Funston in that flat river valley, when there were so many other locations in the vicinity on the same reservation which were superior from a sanitary and military standpoint.

Gen. McCAIN. Yes, sir.

Mr. ANTHONY. Also, can you tell us whether there was any instance where the commanding general or the War Department itself changed the recommendation of the board after it was received?

Gen. McCAIN. Yes, sir.

Mr. HULL. You spoke of target practice taking a great deal of time. Up to recent times the Army has not thought it was necessary to have much target practice, has it?

Gen. McCAIN. Oh, I think so. We have always devoted a great deal of attention to target practice.

Mr. HULL. You have?

Gen. McCAIN. Yes, sir; a great deal of attention.

Mr. HULL. That is diametrically opposed to what I have understood from some officers.

Mr. KAHN. As a matter of fact, the law gives additional pay for three grades of expert riflemen?

Gen. McCAIN. Yes, sir; we pay a great deal of attention to target practice.

Mr. KAHN. And the law provides extra pay for artillerymen for becoming experts?

Gen. McCAIN. Yes, sir.

Mr. SHALLENBERGER. I notice in this story about the boat which was sunk yesterday that there were so many casual officers. Those are officers attached to no command, not assigned to any particular command?

Gen. McCAIN. They speak of the man who is in command of the casualties on the ship. An officer who comes to a military post is a casual at the post. In most of the cases he will be a man in command of the casual enlisted men. They always put them under some officer. The enlisted men who have no organization on ship board they get them all together and put them under a casual officer.

Mr. SHALLENBERGER. I have been informed that you have in the different commands of the country a lot of officers who are not assigned to the different commands and they are more or less in charge of the recruits who are to be sent to the different places where needed?

Gen. McCAIN. We call those unassigned.

Mr. SHALLENBERGER. What I wanted to know is can you tell us how many of those there are in the Army at present?

Gen. McCAIN. I will try to do that.

Mr. SHALLENBERGER. Now, I want to ask you in reference to the matter of the young officers, who are assigned to the noncombatant corps.

I want to ask you if it is not true that an army needs a tremendous surplusage of officers when they fight, because military experience has proven now that the officers are killed more rapidly in proportion to their numbers than the men. I am referring now to the officers who take the men into battle.

When this war started, an old German farmer who lived in my community told me what was going to happen. He predicted the victories of the German army, because they had a tremendous surplusage of trained young officers. He said that when the men went into the war and went into battle the captains and the lieutenants are the men who take the men into battle, and when those officers are killed off you have got to have other men to put right in their places, and he said that Germany had five times as many of those trained officers in reserve as England, and that England only had fifteen or twenty thousand. At the beginning they were killed off almost more rapidly than they could be trained, and Germany had them already trained and in reserve, and that was one of the reasons for the German victories. That was the prediction and the explanation given by this old German farmer.

If we do not train these young officers to take the places of the men who are going to be killed when our men go into battle we are liable to make the same mistake as England and the other nations did. Do you not think we ought to train more young officers for the fighting front than for anything else?

Gen. McCAIN. We are doing that.

Mr. SHALLENBERGER. It is a matter of record before this committee that when you had the first training camps you trained those young officers, apparently for that kind of work. We were told that after the line of officers who conducted these camps had picked out the men they wanted, they turned the balance of the men over to the Quartermaster's Department or to the other staff corps, and that the staff corps did get a large number of young officers from those camps.

As I understand it, you now have a plan to bring those men largely from the ranks, and to put them in as Mr. Kahn had indicated. But it is a fact, is it not, that in the beginning a great many of the young officers trained in these camps were trained for the staff corps and put into the staff corps?

Gen. McCAIN. Yes; that is true. We asked them to go into the camps and send people there and select the men they wanted, and we helped them to do it, and they got officers who were specially qualified for those duties.

Mr. SHALLENBERGER. Do you think the men trained in these camps should be trained for the positions of combatant officers, and then if they are found incompetent for that duty they should be sent into the ranks, rather than be put into the noncombatant corps?

Gen. McCAIN. I think there is a misapprehension about that, and I would like to clear it up as far as I can.

The men who went to the staff corps were not failures. They left the training camps before graduation, and they were found to be specially qualified for the staff departments, and the staff departments wanted them, and they were released from the training camps in order to let them go to the staff departments.

Now, in reference to the second training camp, a large number of men were passed on as unfitted for line duties, but they were fitted for the staff corps, and some of them went to the Quartermaster's Department, some of them to the Ordnance Department and some of them to the other staff departments. We got a report in regard to

those men, and we sent the list of the men to the various staff departments, in the order in which they were recommended, and it was left entirely to the head of the bureau to find out whether he would recommend them or not. I want to get rid of the impression that the men who went to the staff departments were failures. They were not failures by any means.

Mr. SHALLENBERGER. Was the first officers' training camp held before the draft was called?

Gen. McCAIN. Yes; we had those men graduated and at the camps before the first men of the draft reported there. We had them there ready to receive these men.

Mr. SHALLENBERGER. You have taken into consideration, then, in the training of these officers the fact that you need a great reservoir of trained combatant officers of the company and regimental ranks to supply vacancies created when casualties occur when you go into battle?

Gen. McCAIN. Yes, sir.

Mr. SHALLENBERGER. You think you have a proper proportion of officers for that purpose? You recognize the fact that it has been discovered in the armies that are fighting in this war that the casualties are very severe among the young officers?

Gen. McCAIN. It is absolutely essential to have a reservoir of officers. I made the statement a while ago that I thought we needed three times as many officers as were necessary to actually man the organizations, so that you would have two officers in reserve for every one in action.

Mr. SHALLENBERGER. You are preparing to have these reserve officers combatant officers and not to have a great number of those men in the staff corps among the young officers?

Gen. McCAIN. We do not need these training-camp officers now, and we are going to graduate them in three months. The chances are that not one of them will get a commission on his graduation, because the organizations are filled now with officers. But we put them on an eligible list. They are in that reservoir of trained officers where we can draw from them, and we are going to add to it until we get a reservoir that we think will answer all the purposes they will be needed for. And it is going to be done without costing the Government anything extra. We are taking the enlisted men. That has a double advantage. It has the advantage of economy, and it gives the drafted man or the man who volunteers a chance to get a commission. So that a man from the outside can not get a commission unless he goes into the enlisted ranks.

Mr. SHALLENBERGER. I went to three different departments after war was declared, asking for the commissioning of some men who had spoken to me, and I was informed that no one was being taken into the Army and being given a commission without having had military experience. I thought that was the rule, but that has been broken?

Gen. McCAIN. In the staff bureaus?

Mr. SHALLENBERGER. Yes.

Gen. McCAIN. Yes; I think it has been broken in many cases.

Mr. SHALLENBERGER. At the beginning was that the rule?

Gen. McCAIN. I do not think they made any rule on that point. Take, for instance, my own department. Before taking a man in

as an adjutant general, I much prefer him if he has had some experience in that line, but I do not keep him out simply for the reason that he has not had that experience, and if I found a man whom I considered was the man I wanted, I recommended him for a commission.

Mr. SHALLENBERGER. I saw some newspaper correspondence from some fellows of that capacity, who were afterwards commissioned as majors, and I thought the rule must have been broken.

Gen. McCAIN. I do not know that there was any such rule. I have no doubt they thought it would be best if they had some one with experience.

Mr. HULL. Does the department in any way look after these men after they are in the service? Does it look after the efficiency of the men in the staff corps, and pay attention to the incompetent men?

Gen. McCAIN. I do not understand just what you mean.

Mr. HULL. Do they watch the efficiency of these men? Do they watch to see if they come up to the standard of an officer, in the different departments in Washington? Do you try to drop them out if they lack efficiency?

Gen. McCAIN. We are dropping them out every day, and we are getting many protests from every source in regard to that.

Mr. GREENE. Is it not true that notwithstanding some of these staff corps are technical, and are described as noncombatant corps, the service their officers perform takes them into the zones of action, so that they must be in good physical condition and able to withstand the hardships they have to endure, which are imposed upon them, and which are in many cases as arduous as the hardships imposed upon the men in the trenches or in the line?

Gen. McCAIN. Absolutely.

Mr. GREENE. So that the proposition of getting older men who may be able to perform administrative or clerical duties, and putting them into these organizations may not be so practical, inasmuch as there are many men in those organizations who may, after some service in this country, be transported right to the front, and given duties connected with transports, or munition trains, or any other duty connected with their department in the field of action itself?

Gen. McCAIN. Yes, sir. We tell them that. A great many of them say they want to go to the staff departments, and that their deficiencies will not affect them there. We tell them they take exactly the same physical examinations throughout the army, whether they are in the line or the staff, and no one knows when anybody is going to be called into the field and may have to suffer the hardships of the field, and any physical defects that will prevent a man from doing that when he is called would disqualify him.

Mr. GREENE. Are you prepared to give now, or if you are not, will you put into the record, an itemized statement that will show, first, the number of so-called provisional officers, who have been commissioned in the service since that act took effect, also how many men you have now who have been candidates for provisional commissions, and have been accepted and are on the so-called eligible list, awaiting their turn to be commissioned?

Gen. McCAIN. I can give you a part of that information now, and I will complete it in the record.

We have from the first training camp and the first examination 1,162 names on an eligible list; and from the second training camp we have 1,000 names. We have got on the eligible list for provisional second lieutenants, in round numbers, 2,162. We have vacancies at the present time on that list amounting to 127. We will have, as soon as this class graduates out at Fort Leavenworth about the 25th of this month, something like 255 vacancies on that list.

Mr. GREENE. That includes the 127?

Gen. McCAIN. That includes the 127. That leaves about 1,800 eligibles for appointments as provisional second lieutenants, for whom there are at the present time no vacancies in the Regular Army.

Mr. GREENE. What is the policy of the department as to the extent of the period of eligibility at the present time?

Gen. McCAIN. We are going to keep them right along. We have not put any limit on that, at the present time.

Mr. GREENE. Would you be disposed, when you examine the question again, to put into the record, in such language as you care to use, a general summary of the policy of the department toward the incorporation of these eligibles into the service? That may suggest some general answer to you, so that we may have a compact story from which we may get the information, a general story of what you are doing with them, or what you intend to do with them.

Gen. McCAIN. You wanted to know how many were dropped out, I believe?

Mr. GREENE. No, I did not ask you for that; but if you have the information, it can be put into the general story. You mean eliminated after observation?

Gen. McCAIN. Yes; we have of cavalry officers 5, of field artillery officers 2, of coast artillery officers 5, and of infantry officers 13, making a total of 25.

Mr. GREENE. That is, of those who were formerly on the list of eligibles?

Gen. McCAIN. Formerly provisional second lieutenants, and who are, for one cause or another, gone.

Mr. GREENE. Have you any list of those who, having been on the list since last summer, have been eliminated before they got their provisional commissions?

Gen. McCAIN. No, I have not got that list here.

Mr. FIELDS. General, when the American Army goes into battle, what position do the officers take? Do they lead?

Gen. McCAIN. It depends on the occasion. The officer's place is in front, except when he goes to what we might call a forlorn hope. His post is where he can best direct the operations of his troops.

Mr. FIELDS. Is the same true of the English and the French armies?

Gen. McCAIN. So far as I know, it is.

Mr. FIELDS. What about the German army in that respect? I have read that the German officers never lead, that they always send their men ahead.

Gen. McCAIN. We see all sorts of reports of that kind, but I think it is safe to assume they are doing it in the most efficient way.

Mr. KAHN. Do you know anything about the German tactics, at all?

Gen. McCain. No, sir.

Mr. KAHN. What challenged my attention to that was that Gov. Shallenberger suggested that their officers lead their men. I knew that the English officers lead their men, and I assume the American officers are going to follow those tactics. But my reading shows that the German officers are behind the men.

Mr. SHALLENBERGER. I did not mean to indicate that in particular, but I was referring to the general fact that the commanding officers of companies, captains and lieutenants, those who command the important fighting units are the officers who are killed off most rapidly, and whose places must be filled. As a general proposition, when they go into battle, these young officers are killed off very rapidly, and I have heard it said many times that that was the greatest drawback of the English army early in the war, because they did not have a sufficient number of young officers to take the place of those who were killed in battle.

Gen. McCain. It is difficult to keep an officer from exposing himself.

Mr. HULL. Is it not true that under the conditions of modern warfare there is no special zone of safety, and that the men who are furthest forward may be in the safest position?

Gen. McCain. In the trench; they are all right in there together.

Mr. FIELDS. I was talking about their position.

Gen. McCain. Their position is going to be determined——

Mr. FIELDS. (interposing). By the circumstances by which they are confronted?

Gen. McCain. Yes.

Mr. GREENE. Is it not true that in figuring the casualties among officers and enlisted men that you must not lose sight of the basis of calculation? For instance, in a modern Infantry company there are 250 enlisted men and 2 captains, and if the captains are killed, that makes a percentage of loss 100, whereas, if 2 enlisted men are killed, the percentage of enlisted men killed is a very small proportion.

Mr. ANTHONY. General, what have you done, or what do you contemplate doing in regard to raising troops in Porto Rico?

Gen. McCain. We are going to raise a division of 12,000 men there.

Mr. ANTHONY. Will you raise such a division under the draft?

Gen. McCain. Yes.

Mr. ANTHONY. And that is contemplated to be done in the immediate future?

Gen. McCain. Yes.

Mr. ANTHONY. Now, as I understand it, an officers' training camp has just been completed there?

Gen. McCain. Yes.

Mr. ANTHONY. And I understand that Col. Townsend has succeeded in turning out some very competent Porto Rican officers. Is the department satisfied that they have the right material among the natives for good officers?

Gen. McCain. Yes.

Mr. ANTHONY. You are going to raise one division of troops there?

Gen. McCain. Yes, something over 12,000. It will have a general officer as its commander.

Mr. ANTHONY. Are those troops destined for service on this side or on the other side?

Gen. McCAIN. I do not think that has been determined. We will use them wherever it seems best to use them.

Mr. ANTHONY. They will be trained on the Island of Porto Rico?

Gen. McCAIN. Yes.

Mr. ANTHONY. And the company officers will be largely natives?

Gen. McCAIN. They will be taken from the people down there.

Mr. ANTHONY. Of course, the English language will be used in the instruction of the men?

Gen. McCAIN. Yes.

Mr. ANTHONY. That is now the language in the Regular Porto Rican Regiment, for commands?

Gen. McCAIN. Yes.

Mr. QUIN. I would like to know how many men there are in a division.

Gen. McCAIN. The number varies. I think the Germans at the present time have from 12,000 to 15,000 in a division. Our regiment has about 3,600 men. There are two regiments to a brigade, and two brigades to a division, and then in addition to that you have got to put in the auxiliary troops. If you have a division at its full strength, with all the men in it that will be needed under any circumstances, it will have, in our service, about 27,000 men. But you will hardly ever find a division that large.

Mr. QUIN. That is the size of the American division now?

Gen. McCAIN. Yes; if you get everybody in there who belongs to the division, you will probably have 27,000 men.

Mr. CRAIG. The company in this warfare is the real fighting unit. It has been found so, and that is one reason they make it so large. In the company there is reflected, in different forms, every branch of the administration of the army, with the captain at the head of it, and when a commanding officer makes any corrective criticism, it goes down as far as the captain, and when anybody, from the lowest private up to the captain makes a kick, it is directed at the captain.

But it has been the policy, seemingly, of the department, in order to find the right kind of men for clerical positions, to ruthlessly go to these companies and take these men, where most of the men are from the same town, and where a captain had picked out men that he knew for these positions, and had made his company efficient by reason of having a good cook, or by reason of having good mechanics, and perhaps he had some fellow in a position like that who had some knowledge of engineering acting as an executive officer.

The captain had made the unit efficient, and we want to keep it efficient, but in spite of that these men have been robbed in many instances of the very men they had picked for their particular unit, to make it efficient.

Is it not possible by asking for volunteers, or going out into civil life, or going into the draft to get men for these places, instead of taking them out as they have been taken, and breaking up the efficiency of these companies?

Gen. McCAIN. That has received our very serious consideration. We have got now, as we have never had before, a line on the enlisted men of the army that is very helpful. We know what they can all

do, or at least if we have not that information about all of them, we will have it within the next 10 days or two weeks. We try to put a man in the position for which he is best fitted.

If the staff departments want a certain number of men with certain qualifications, they make a requisition on The Adjutant General, and we send it to the division commanders, assigning a certain quota to each one, and tell him to furnish so many men possessing the qualifications desired, for this purpose.

In that way the organization commanders are able to protect their organizations. They will not take everybody out of a battalion or a company or a regiment who possesses those qualifications. They will leave somebody there for the purposes of the organization itself.

Mr. CRAGO. Should not that be the paramount consideration, because the company is the real fighting unit?

Gen. McCAIN. That is true, but it is a fact that you have to get men for the technical corps that possess certain qualifications.

Mr. CRAGO. But you are taking them from these organizations that have already been organized, and which are properly balanced. You are taking men away from the company who expected to serve with their comrades, and you are separating them as widely as though they came from opposite sides of the continent, instead of from the town where the company was organized, and you have rendered that company inefficient, in spite of the fact that you have the whole body of citizenship to draw from, or you have the draft forces to draw from.

Gen. McCAIN. We know it hurts the organization, and we are trying to avoid that. We were never in a position to make those selections before. Now, with the information we have, which the Provost Marshal General gets from these people, if the engineers want men with certain qualifications, we can make requisition on the Provost Marshal General and he will induct into the service those men from the outside, and that avoids the necessity of putting them in an organization, and taking them out of an organization. The division commanders are watching that. They protest against breaking up organizations, and we know the importance of it, but sometimes it has not been possible to avoid it.

Mr. CRAGO. I think that is one of the worst things for the organization. I want to make a statement with reference to the Quartermaster's Department. I do not believe many members of the committee understand that the men in field service are usually in more danger than the average company officer. The only commissioned officer killed in the battle of Polo was Capt. Gravenbuhl of the Quartermaster's Department, and he was the only officer killed in the entire engagement of that day.

Mr. GORDON. The officers in the Quartermaster's Department have charge of carrying quartermaster's supplies and munitions to the front?

Gen. McCAIN. They do everything that a quartermaster would do. They have the transportation and munition supply companies.

Mr. GORDON. What proportion of the men already sent over, or about to be sent over, were in organizations, and what proportions were in detached units? What proportion of them are sent in organized military units?

Gen. McCAIN. Practically all of them. Some come back sick. We put them in a hospital and return them. Some of them for various causes could not accompany their organization when the organization left here, and we put them on the transport and let them join the same organization over there. In the case of recruits we put them on in a detachment and send them over. Some of them were not filled up when they went over, and we will have a stream of unassigned men going and coming all the time.

Mr. GORDON. I asked that question because there was a statement in one of the newspapers yesterday that at Camp Sherman there has been a call issued for 6,000 volunteers from that camp.

Gen. McCAIN. I saw that statement. I do not think there is anything in that. We would not ask for volunteers. We have got the men right there. It is not necessary to ask for volunteers. There is nothing to that.

Mr. MORIN. Does not the law require that these boards which pass on the efficiency and disability of National Guard officers shall be composed of a majority of National Guard officers?

Gen. McCAIN. No; but the Secretary has directed that they be composed of a majority of National Guard officers.

Mr. MORIN. Those officers who were discharged or who have been relieved from duty were all Regular Army officers?

Gen. McCAIN. As a matter of fact, I never notice that myself. Personally I regard it as unimportant. I think if they get officers who have a due sense of their responsibility—I would hate to think any of them would be prejudiced after they had been sworn in to do their duty.

Mr. MORIN. I agree with you there.

Gen. McCAIN. I think the Regular Army officer would be less liable to be biased than anybody else. We get National Guard officers, and they all ought to be senior to the officer who is being passed on, but it is not always possible to do that. It is very objectionable to have a junior passing on a senior officer, when the action of the board may result in his elimination from the service.

Mr. MORIN. There is a general impression that the law requires that.

Gen. McCAIN. No; the law does not require that.

Mr. SHALLENBERGER. You were speaking a while ago about the location of the camps. I understood you to say that the division commander was the real authority who decided that matter?

Gen. McCAIN. The department commander. They did it under a general specification of what constituted a good camp site.

Mr. SHALLENBERGER. Was that a Regular Army officer in every case?

Gen. McCAIN. Yes.

Mr. SHALLENBERGER. Do you know the name of the department commander who was responsible for establishing the camp at Deming, N. Mex.? The Nebraska troops are located there.

Gen. McCAIN. That was done by the commanding general of the Southern Department. That officer has been changed several times.

Mr. SHALLENBERGER. Where are the headquarters of the Southern Department located, at San Antonio?

Gen. McCAIN. At Fort Sam Houston, San Antonio, Tex.

Mr. SHALLENBERGER. Is that camp expected to be continued for the use of troops?

Gen. McCAIN. I think so.

Mr. SHALLENBERGER. I ask you that because the governor of Nebraska not long ago sent an emissary to investigate the conditions there. In his report he said:

The enlisted men have two grievances. First, keeping them there so long when they feel that they are fitted for service abroad. Second, the sand. I can not find words strong enough to condemn the location of any army camp in the country where the sand is so deep and so wide and sand storms so frequent and so severe. No matter how exaggerated a story about sand storms at Camp Cody may sound, you are warranted in believing them. When one of these storms strikes the camp—and they are very frequent—practically all the work must be suspended. Regimental drills are impossible because companies get lost, captains become separated from their companies, and mounted men have to trust to the instinct of their mounts to get them back to cover. The sand is a foot deep at all times, and from six feet to a mile deep when the wind blows strong.

You can imagine that the presence of 25,000 men at a given spot in such a desert does not have a tendency to allay the plague of sand. By almost superhuman effort hard roads have been built in camp. The suggestion that the plague of sand might be allayed by oiling the camp site would be very good were it not for the fact that it would exhaust the oil supply of the Republic to accomplish that end.

I unhesitatingly give it as my individual opinion that it was a grave injustice to the brave young men who enlisted, or who willingly accepted Army service, to submit them to such terrible conditions as I have outlined, especially when an equally convenient camp site along the border might easily have been found where the sand plague might have been avoided.

You think that camp site was inspected the same as every other?

Gen. McCAIN. Yes; if I recall correctly, Gen. H. A. Green was at the head of the board that selected it, and Gen. Parker, I think, was the commander of the Southern Department at that time.

Mr. SHALLENBERGER. I got this from a Nebraska paper, and it is the report of an accredited representative of the governor of Nebraska. Have there been complaints from any other State about that camp?

Gen. McCAIN. Not that I recall.

Mr. KAHN. That was spoken about on the floor of the House. That camp was used as a camp during the Mexican border trouble, was it not?

Gen. McCAIN. It was used by the State.

Mr. HULL. The governor of Iowa was here yesterday, and he sent a commission down there exactly like that referred to by Mr. Shallenberger, in answer to complaints that came from people in Iowa. There are a large number of Iowa troops there, and I have heard the same thing as was referred to by Gov. Shallenberger, and the governor of Iowa read a report of a commission he sent down there bearing out almost word for word what Mr. Shallenberger read.

Mr. SHALLENBERGER. This representative of the governor of Nebraska also states that the town has only 1,500 inhabitants, and that rents for accommodations for officers have gone up until it is not uncommon to find two and three room apartments renting for as high as \$80 to \$100 a month, while four and five room cottages readily rent at from \$100 to \$175 a month. He says that storerooms that formerly went begging at from \$12.50 to \$20 a month are now renting at from \$125 to \$200 a month. In other words, not only is

the place apparently unsuitable because of the sand conditions, but the rents have gone up until they are abnormally high.

Gen. McCAIN. The prices of rents are all high down there.

Mr. SHALLENBERGER. This representative of the governor of Nebraska goes on to say:

But whoever is responsible for locating an Army camp on such a God-forsaken, sand-plagued, wind-swept desert is also responsible for a lot of overtime work on the part of the recording angel. When the average soldier finds cause for cursing, he is usually equal to the occasion. I indorse every cuss word I heard when the sand was the topic of conversation.

Mr. ANTHONY. Has the department any control over cases of extortion practiced in the vicinity of military camps; for instance, in the prices of articles sold to the soldiers?

Gen. McCAIN. I do not think they have, except that they can clean out anybody who becomes a nuisance, in the zone range.

Mr. ANTHONY. But where a soldier is being robbed, there is nothing to protect him?

Gen. McCAIN. Except to keep these people out and not let them operate inside of or near the camp.

Mr. ANTHONY. Will you put in the record the information you said you had in reference to the Porto Rican organization?

Gen. McCAIN. Yes.

(Thereupon the committee adjourned to meet to-morrow, Friday, February 8, 1918, at 10:30 o'clock a. m.)

SUPPLEMENTARY STATEMENT MADE BY THE ADJUTANT GENERAL OF THE ARMY.

SELECTION OF CAMP SITES AND CANTONMENT SITES.

Department commanders were directed on May 7, 1917, to appoint boards of officers to select sites in their respective departments. This was done, and the department commanders, after getting the reports of the boards, submitted them to the War Department with their own recommendations. The department commanders at the time were: Northeastern Department, Brig. Gen. Clarence Edwards; Eastern Department, Maj. Gen. J. Franklin Bell; Southeastern Department, Maj. Gen. Leonard Wood; Central Department, Maj. Gen. Thomas H. Barry; Western Department, Brig. Gen. Hunter Liggett; Southern Department, Brig. Gen. James Parker.

The sites recommended by the boards of officers appointed by the department commanders were as follows:

Northeastern Department.—Ayer, Mass.

Eastern Department.—Yaphank, Long Island, N. Y.; Wrightstown, N. J.; Annapolis Junction, Md.; Petersburg, Va.

Southeastern Department.—Columbia, S. C.; Atlanta, Ga.; Little Rock, Ark. (this site was the fourth choice of the board, which recommended Alexandria, La.; Hattiesburg, Miss.; Meridian, Miss.; and Little Rock, in the order named; Little Rock was ultimately chosen); Spartanburg, S. C.; Augusta, Ga.; Anniston, Ala.; Greenville, S. C.; Macon, Ga.; Montgomery, Ala.; Hattiesburg, Miss.; Fayetteville, N. C. (this site was chosen at first, but on account of inadequate water supply was rejected, upon Gen. Wood's recommendation, and Charlotte, N. C., substituted); Alexandria, La.

Central Department.—Chillicothe, Ohio; Louisville, Ky. (this site was the second choice of the board, Jeffersonville, Ind., having been placed first; Louisville was finally selected); Battle Creek, Mich.; Rockford, Ill.; Des Moines, Iowa (this site was the second choice of the board, the Twin Cities site in Minnesota having been first choice; Des Moines was finally selected as most suitable and available); Fort Riley, Kans. (this site was the third choice of the board, Fort Leavenworth, Kans.; Colorado Springs, Colo.; and Fort Riley having been recommended in the order named; Fort Riley was finally selected).

Southern Department.—Fort Worth, Tex.; Dallas, Tex. (this site was recommended by the board and by the department commander, but was later eliminated, Fort Sam Houston having been chosen instead); Waco, Tex.; Houston, Tex.; McAlester, Okla. (this site was recommended by the board and by the department commander, but was later eliminated in favor of Fort Sill); Deming, N. Mex.

Western Department.—American Lake, Wash.; Linda Vista, Cal.; Palo Alto, Cal.

The sites as finally selected and the names given to the camps at these sites are as follows:

Site.	Name of camp.
Spartanburg, S. C.	Camp Wadsworth.
Augusta, Ga.	Camp Hancock.
Anniston, Ala.	Camp McClellan.
Greenville, S. C.	Camp Sevier.
Macon, Ga.	Camp Wheeler.
Waco, Tex.	Camp MacArthur.
Houston, Tex.	Camp Logan.
Deming, N. Mex.	Camp Cody.
Fort Sill, Okla.	Camp Doniphan.
Fort Worth, Tex.	Camp Bowie.
Montgomery, Ala.	Camp Sheridan.
Hattiesburg, Miss.	Camp Shelby.
Alexandria, La.	Camp Beauregard.
Linda Vista, Cal.	Camp Kearny.
Ayer, Mass.	Camp Devens.
Long Island, N. Y.	Camp Upton.
Wrightstown, N. J.	Camp Dix.
Admiral, Md.	Camp Meade.
Petersburg, Va.	Camp Lee.
Columbia, S. C.	Camp Jackson.
Atlanta, Ga.	Camp Gordon.
Chillicothe, Ohio.	Camp Sherman.
Louisville, Ky.	Camp Taylor.
Battle Creek, Mich.	Camp Custer.
Rockford, Ill.	Camp Grant.
Little Rock, Ark.	Camp Pike.
Des Moines, Iowa.	Camp Dodge.
Fort Riley, Kans.	Camp Funston.
Fort Sam Houston, Tex.	Camp Travis.
American Lake, Wash.	Camp Lewis.
Charlotte, N. C.	Camp Greene.

Fort Riley, Kans.—The board which inspected the sites at Fort Riley, Kans., was composed of Col. E. W. Evans, Cavalry; Maj. Wildurr Willing, Corps of Engineers; Capt. S. J. Turnbull, Medical Corps; Capt. C. H. Canby, jr., Quartermaster Reserve Corps; and Maj. G. Sturtevant, Twenty-fourth Infantry. Fort Riley was the third choice of the board. It having recommended Fort Leavenworth, Kans.; Colorado Springs, Colo.; and Fort Riley in the order named.

The sites inspected at Fort Riley were the Ogden Flats, the Smoky River Flats, and the Republican Flats. The board stated in its report that the grounds on each of these sites were regarded as being too low for the establishment of anything like a permanent camp and that the available camp sites at Fort Riley were believed to have other very undesirable features—extreme heat in summer, insect pests, and the possibility of floods, with the added objection that there was but one railroad passing through the reservation.

While the board recommended Fort Leavenworth as the most desirable site and did not favor Fort Riley, it was stated in its report that the sites at Colorado Springs and Fort Riley were considered as available and adapted for the purposes and that, of the two latter, Colorado Springs was considered preferable.

In forwarding the board's report, the commanding general, central department, stated that, while he accepted the board's unanimous recommendation for placing the cantonment at Fort Leavenworth, the maneuver grounds available at that post were limited, and he also called attention to the fact that there

is no opportunity there for artillery firing. He stated that he personally preferred placing these cantonments on military reservations, and therefore preferred Fort Riley to the site at Colorado Springs, which latter is on private property. He also called attention to the fact that there are 22,000 acres on the Fort Riley Reservation most suitable for artillery and other ranges and for maneuver purposes, and stated further, that, while the fact was not regarded as being of great importance, the facilities for the training of mounted troops at Fort Leavenworth were much less than at Fort Riley or Colorado Springs.

The War Department, having adopted the policy of locating these cantonments on military reservations wherever practicable, called upon the department commander for a specific recommendation with regard to the relative merits of Fort Riley and Fort Leavenworth as a site, and the department commander recommended Fort Riley on account of the greater available area at that place for training purposes. The War Department then approved Fort Riley as the location for the cantonment.

The name of the officer or officers responsible for the selection on the Fort Riley Reservation of the present camp site is not shown by the records.

Fort Sill, Okla.—The board that inspected the site of Camp Doniphan at Fort Sill, Okla., was composed of Brig. Gen. C. G. Morton, Lieut. Col. W. J. Barden, Corps of Engineers; Maj. J. R. Shook, Medical Corps; Maj. H. L. Laubach, Nineteenth Infantry; and Capt. Charles E. Wheatley, Quartermaster Corps. The board did not recommend Fort Sill on account of the supposed inadequate water supply, but when it developed later that the authorities at Lawton, Okla., were willing to furnish all the water required, the War Department approved the department commander's recommendation to locate a cantonment at this post, because of the facilities for training afforded by the large military reservation and on account of the various utilities already constructed there and owned by the Government.

Little Rock, Ark.—This site was favorably reported upon by the board, but was the board's fourth choice, it having recommended Alexandria, La.; Hattiesburg, Miss.; Meridian, Miss.; and Little Rock, in the order named. The board's reasons for not giving Little Rock a higher rating lay in the fact that malaria was present there, due to certain undrained areas in the vicinity. As the War Department desired to locate the National Army cantonment for the twelfth divisional area (Arkansas, Mississippi, and Louisiana) within the limits of that area, the department commander was asked to investigate further the Little Rock site or some other good site. In replying, Gen. Wood called attention to the fact that the city had offered 3,000 acres free to the Government and had appropriated \$50,000 for mosquito eradication to remove the malarial conditions, and he recommended that this site be approved on account of the unusual railroad facilities, the many land-grant roads, the size of the city, the desire and ability of the citizens to cooperate, and the climatic conditions, a desirable feature of which is the low relative humidity prevailing during the summer months.

Fayetteville, N. C.—This site was originally selected and approved, but it developed that the water supply was entirely inadequate and that a new supply would have to be tapped, and it was decided, after further study by the department commander and upon his recommendation, to designate Charlotte, N. C., for the purpose instead of Fayetteville.

Louisville, Ky.—This was the second choice of the board, it having placed Jeffersonville, Ind., first. In remarking upon the board's action the department commander stated that the board's whole report was inconclusive and would require consideration by the War Department before action was taken. The department commander himself recommended the site at Lexington, Ky., which was placed fifth by the board. Louisville was finally approved by the War Department as being the most desirable site on account of the unusual advantages afforded by that location.

Des Moines, Iowa.—This site was the second choice of the board and the department commander, the Twin Cities site in Minnesota having been recommended as the first choice. The War Department regarded the cost of the Twin Cities site as prohibitive, and Des Moines, being suitable and available, was selected after consultation with the department commander, who recommended that action.

Fort Riley, Kans.—The board recommended Fort Leavenworth, Colorado Springs, and Fort Riley in the order named, and the department commander approved the board's proceedings, except that he preferred Fort Riley over

Colorado Springs on account of the fact that the site at the latter place was on private property. He called attention, however, to the fact that Fort Riley had certain advantages over Fort Leavenworth in that there were 22,000 acres of land on the Fort Riley reservation which were very suitable for artillery and other ranges and for maneuver purposes, and that the maneuver grounds at Fort Leavenworth were limited and gave no opportunity for artillery firing. Fort Riley was eventually approved by the War Department after recommendation by the department commander as being the most desirable site.

Dallas, Tex.—The site at Dallas was recommended by the board and by the department commander, but as it was not deemed advisable to locate more than four cantonments in Texas and as it was desired for cogent reasons to locate a cantonment on the military reservation at Fort Sam Houston, the Dallas site was eliminated by the War Department after careful consideration. The sites at Houston, Fort Worth, and Waco, Tex., were approved.

McAllister, Okla.—This site was recommended by the board and by the department commander, but was later rejected in favor of Fort Sill, Okla. The change to Fort Sill was made for the reason that the objections raised by the board to this site were later removed when the city of Lawton agreed to supply sufficient water. The department commander then reported Fort Sill as available for selection. The War Department decided upon Fort Sill because of the facilities for training afforded by the large reservation already under Government control and on account of the various utilities already constructed there and owned by the Government.

CAPACITY OF THE CAMPS AND CANTONMENTS FOR ENLISTED MEN.

The capacity of the 16 National Army cantonments for enlisted men, allowing 500 cubic feet of air space for each man, is approximately 628,805.

The capacity of the 16 National Guard camps for enlisted men is approximately 503,959.

NUMBER OF OFFICERS COMMISSIONED FROM CIVIL LIFE WITHOUT GOING THROUGH TRAINING CAMPS AND THE RANK THEY NOW HOLD.

Of the 125,980 officers now serving in the Army of the United States, approximately 42,161 were commissioned from civil life without having received a course of military training at officers' training camps. The grades in which they are now serving follow: Major general, 1; brigadier generals, 4; colonels, 98; lieutenant colonels, 202; majors, 2,472; captains, 6,015; first lieutenants, 31,192; second lieutenants, 2,177. Total, 42,161.

APPOINTMENT OF PROVISIONAL SECOND LIEUTENANTS.

Since the passage of the national defense act, June 3, 1916, directing that hereafter appointments to the grade of second lieutenant shall be made provisionally for two years, there have been 4,574 candidates so appointed.

There are two eligible lists, one from the July (1917) examination, which includes those examined at the first training camps, and the other from the second training camps. The first list contains 1,162 names, but some of the candidates on this list are civilians and are still undergoing training at Fort Leavenworth, Kans., and their names will not be permanently placed on the eligible list until the completion of the training, February 25, 1918, and they have been reported as qualified. The second list from the second training camps was to contain 1,000 names, but not quite that number have been found qualified.

No limit has been placed on the eligibility of candidates on the eligible list other than that imposed by law and the action of the President upon the termination of the war.

Of these officers, 33,423 (including the major general and the 4 brigadier generals) are in the Medical Department, 162 are in the Judge Advocate General's Department, and 498 are chaplains. In the large majority of the remaining cases military training had been received prior to appointment, many of them having served for years in the Regular Army or the National Guard, a considerable number as officers; 502 Engineer officers are also included in the above number. These are experts in some particular line, as railroad experts, etc., and this also applies to a large extent to appointments that have been made in all the various staff corps and departments. Very few appointments

are now being made direct from civil life, as practically all bureaus of the War Department have established special training camps.

Civilians of the July examination are undergoing training at Fort Leavenworth for the mobile Army, and at Fort Monroe for the Coast Artillery. The training at Fort Leavenworth will be completed February 25, 1918, and that at Fort Monroe March 27, 1918. Until the completion of the training at each training camp, the number of candidates undergoing training for a place on the eligible list who have been found not qualified will not be known. Only one such candidate has been officially reported to the War Department, although it is known that several have been found not qualified.

An examination was held in July, 1917, to determine the fitness of candidates for provisional appointment as second lieutenants in the Regular Army. This examination was held before examining boards and included an academic examination, as well as at training camps where no academic examination was required. Many more candidates were examined and found qualified than there were vacancies to which they could be appointed.

The law governing such appointments (national-defense act) provides that the qualified candidates shall be divided into classes for appointment as follows:

1. Graduates of the Military Academy.
2. Enlisted men of the Regular Army, including officers of the Philippine Scouts and members of the National Guard of at least 90 days' Federal service.
3. Members of the reserve corps and honor graduates of distinguished colleges.
6. Civilians.

All qualified candidates of class 2 were appointed with rank from October 24, 1917, and all qualified candidates of class 3 were appointed with rank from October 25, 1917. Those candidates of class 6 for whom there were vacancies were appointed with rank from October 26, 1917. The last candidates of class 6 to receive an appointment in the mobile Army attained a general average of 80 per cent. There still remained approximately 500 qualified candidates of class 6 for whom there were no vacancies. The mental disqualifications of approximately 500 more who were found physically and morally qualified were waived, and it is these candidates who either now do or will very soon constitute the eligible list for appointment in the Regular Army as vacancies may hereafter occur.

All those candidates from the first training camps who were found qualified in the examination for appointment in the Regular Army were appointed second lieutenants in the reserve corps at the close of the camps in August, 1917, pending their appointment in the Regular Army. Those who were appointed in the reserve corps, but for whom there were no vacancies in the Regular Army in October, 1917, are still on duty under their reserve corps commissions with regiments of the Regular Army. As far as their eligibility for appointment in the Regular Army is concerned, they will continue on their present duty until vacancies in the Regular Army may occur, to which they will be appointed.

At the present moment there are 102 vacancies in the grade of second lieutenant in the mobile Army, and when the vacancies on the detached officers' list shall have been filled there will be 127 more vacancies in the grade of second lieutenant to be filled by the appointment of candidates from the eligible list. This last number of vacancies includes 28 vacancies in the Coast Artillery Corps.

As soon as the report of the qualified candidates shall be received from Fort Leavenworth, and every candidate is placed in his proper place on the eligible list, it is the intention of The Adjutant General's office to fill the vacancies in the grade of second lieutenant in the mobile Army at the earliest possible date.

Those civilian candidates who are now undergoing training at Fort Leavenworth and at Fort Monroe and who are found qualified will at once be appointed in the Officers' Reserve Corps to await their appointment in the Regular Army.

ARRANGEMENTS MADE FOR THE PORTO RICO DRAFT CONTINGENT.

On December 22, 1917, the Provost Marshal General was informed, by direction of the Secretary of War, that when adequate shelter and supplies shall have been provided the necessary steps should be taken to call into active service and mobilize at San Juan, P. R., the Porto Rico contingent of the selective draft, about 12,800 enlisted men.

The cantonment division of the Quartermaster General's office was instructed to proceed without delay to provide a suitably constructed camp at San Juan similar to those constructed for the National Guard divisions to accommodate about 12,800 enlisted men and about 650 officers, the housing to be in tents, framed and floored, at the rate of one pyramidal tent, large, for each six men.

The Quartermaster General was instructed to provide the necessary tentage, clothing, and other quartermaster supplies and camp equipage and a suitable allowance of transportation.

The Chief of Ordnance was directed to furnish the necessary arms, ammunition for target practice, and other ordnance stores.

It is expected that the barracks formerly occupied by the Porto Rico Regiment of Infantry will provide suitable hospital accommodations.

The contingent, when mobilized, will be organized into eight white and four colored provisional training battalions. The whole will be organized into a provisional division consisting of three provisional regiments.

The present plans provide that a brigadier general will command the provisional division, and that he will have an appropriate division staff to assist him. The brigadier general has not yet been designated.

ARMY APPROPRIATION BILL, 1919.

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Friday, February 8, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent, jr. (chairman), presiding.

STATEMENT OF MAJ. GEN. JOHN BIDDLE, ACTING CHIEF OF STAFF.

The CHAIRMAN. General, there are a few items in the appropriation bill which relate to the office of the Chief of Staff about which the committee wants some information. The first item is on page 2. "Contingencies of the Army." You are asking for \$300,000 and you had for last year \$100,000.

Gen. BIDDLE. Mr. Chairman, there are a number of small items given in the estimates which are about the same as they were last year, excepting an increase due to the fact that we have a larger establishment. There is, however, a tremendous increase in the last item, called unforeseen contingencies. It is difficult to state exactly how that money will be spent. I have here a statement as to what has been done with that fund for last year, and there may be similar items come up or there may be new ones. It is the only fund which is at the disposal of the Secretary of War for any of these contingencies. We had \$100,000 last year which was allotted for this purpose, and we have spent up to the present time about \$80,000, so that it looks as if we would probably have a deficiency for the rest of this year. It is simply the best estimate that can be made ahead of time as to what these unforeseen contingencies may be.

The CHAIRMAN. What is the amount of that?

Gen. BIDDLE. \$263,000; making in all \$300,000. If it is of interest to you, Mr. Chairman, I will give you an idea of how it was spent in the last six months. There was an item, for instance, for the purchase of lithographing tables, and a large item was the establishment of the statistical division in The Adjutant General's Office which amounted to \$35,000; expenses of entertainment of high French and British officials, \$5,000; expenses of the cantonment adjustment commission, \$5,000; purchase of law books for the American Expeditionary Forces, \$17,000; expenses of the French Scientific Commission, \$3,000. Those give you a general idea of what these unforeseen contingencies are. For the next year we do not know what they will be. We believe from the past that we are liable to have a demand for that amount; and, as I say, it is the only fund which the Secretary has for these purposes.

The CHAIRMAN. Will you put in the record an itemized statement of the amount under each one of these subdivisions in this item?

Gen. BIDDLE. The items are in the estimates, so far as we can really give them.

The CHAIRMAN. I want that to go in the record so as to show what you are asking for under each one of these subdivisions.

CONTINGENCIES OF THE ARMY.

[Estimated, 1919.]

Purchase of professional books, publications, etc.....	\$10, 000
Photographic material and supplies.....	5, 000
Confidential purposes.....	10, 000
Travel expenses.....	5, 000
Purchase of maps.....	2, 000
Telegraphic services.....	3, 000
Stationery and contingent expenses, office of the Chief of Staff.....	1, 500
Unforeseen contingencies.....	203, 500
Total.....	300, 000

Gen. BIDDLE. Yes, sir. There is one item, which is called "travel expenses," which I thought you might ask about. That is for the travel expenses of the Secretary and the Assistant Secretary of War and the civilians he may send on any special work.

The CHAIRMAN. The next item is for the Army War College, \$9,000.

Gen. BIDDLE. That is the same as it was last year.

Mr. SHALLENBERGER. How can that department get along with the same amount of money in time of war that it had in time of peace?

Gen. BIDDLE. Because there are other items in the way of clerks, etc., which come in later on.

The CHAIRMAN. The next item is "Contingencies, military information section, General Staff Corps, \$2,000,000." You had \$1,000,000 last year.

Gen. BIDDLE. It is very hard in a case like that to give the details. I have talked it over thoroughly with the chief intelligence officer, who is Col. Van Deman, and he has to base his estimates largely on what he thinks he will need rather than on any definite information. He has consulted the experience of the English Government and the French Government in doing intelligence work, and his estimate, he tells me, is largely based on their experience. He has to have, to begin with, a very large clerical and messenger force here, amounting to \$300,000, and he has to have also a number of agents all over the country. He has at each one of these divisional camps and cantonments intelligence officers who have certain counterespionage work to handle. He also has a number of secret agents. He estimates about \$100,000 for the agents and about \$100,000 for their expenses. Their expenses are pretty hard to itemize and pretty hard to state in advance, in that you have to allow them leeway in the work in obtaining the information, and they are given a great deal of independence. Col. Van Deman exercises such control as he can, but his control is largely in choosing the proper men to do this work. Besides the work here, Gen. Pershing has asked for \$500,000 for his work in France, and another \$500,000 goes to the work abroad which is handled from here. One reason for the large increase is due to the fact that up to date we have been relying largely on our allies for our

information about the enemy, both as obtained in France and in other places; and we feel we should bear our share of those expenses, and so, \$500,000 is for work all over the world to get information.

The CHAIRMAN. After all, necessarily, an item of this kind must be largely guesswork a year and a half in advance.

Gen. BIDDLE. It is, except, as I say, we know that up to the present time this year we have spent between three and four hundred thousand dollars, and, of course, the work is just beginning.

Mr. TILSON. General, what kind of record is kept of the expenditures under this fund, so that a year hence if anybody wants to know just what has been done with it, they can ascertain at that time?

Gen. BIDDLE. You could ascertain how much went for salaries and how much for expenses and everything of that kind.

Mr. TILSON. But it would be lumped in that way, so much for salaries, etc.?

Gen. BIDDLE. No; the officer in charge would be able to tell how much he paid each individual man and how many men he had, and everything of that kind. He might not be able to tell just exactly what the man's expenses were in the way of paying spies, or something like that, but he would be able to tell in detail what each man had been given and the general nature of his work.

Mr. TILSON. It is perfectly obvious, General, that in advance nobody can tell about an appropriation of this sort, and nevertheless it is an appropriation that might in the long run be easily abused, so that my question went to whether or not to would be impossible hereafter to get an intelligent idea of what has been done with it in case there were any criticisms or any accusation of abuse of the fund.

Gen. BIDDLE. There is no question of that being done, because he has to keep his accounts and payments in that way. He keeps a fairly accurate statement of what he has done up to date.

Mr. KAHN. General, is the Bureau of Intelligence making investigations as to the loyalty of people in this country?

Gen. BIDDLE. Yes, sir; we have intelligence officers at the divisions who keep track of men who may be around the different cantonments, and then if anybody is in any way suspicious or if his name is given as a suspicious person it is investigated thoroughly.

Mr. KAHN. Is there any duplication of work, or do you work in harmony with that branch of the Department of Justice which is also investigating cases of disloyalty?

Gen. BIDDLE. Yes, sir; we keep in very close touch with them in all things and try not to duplicate their work.

Mr. KAHN. When you get a fairly good case against a man who is disloyal, do you just send him to one of the internment camps?

Gen. BIDDLE. Yes, sir; if it is an evident case.

Mr. KAHN. Suppose a man commits acts which, if he were a citizen, would be considered treasonable, would the military authorities try him?

Gen. BIDDLE. I think we would probably report that to the Department of Justice.

Mr. KAHN. Is there any method by which the military authorities can try a case of an American citizen, for instance, who is giving aid and comfort to the enemy?

Gen. BIDDLE. It never has been done, as far as I know; but I can see no reason why it could not be done; and in France especially I think it probably would be done. But we have here the civil tribunals, and the chances are, I think, we would turn them over to them when possible.

Mr. KAHN. Of course, it is a very serious condition that confronts us, and we all recognize the fact that there is altogether too much disloyalty in this country, and I wish there were some way to get at them in a very summary manner.

Mr. GORDON. As I understand, there has been no execution in the military service?

Gen. BIDDLE. None has been brought to my attention.

Mr. GORDON. There has been none kept from you?

Gen. BIDDLE. Not that I know of.

Mr. GORDON. Do I understand you correctly to say that you can not see why the Army should not try people for disloyalty in the service?

Gen. BIDDLE. Mr. Kahn asked me if there was any objection to turning them over, not especially in France, but in this country, to the civil authorities or civil tribunals, and I replied in the affirmative.

Mr. GORDON. There was a case in the Civil War, the Milliken case, in which they tried three men by court-martial, and the Supreme Court discharged them on the ground that the military authorities had no jurisdiction. That is still the law and is recognized by the military authorities?

Gen. BIDDLE. That would be my general idea, that we would only undertake it where the civil tribunal fell down.

Mr. GORDON. What do you mean; failed to convict him?

Gen. BIDDLE. There might be a case in the face of the enemy where something would have to be done.

Mr. GORDON. Where active military operations are going on. In that connection I would call your attention to the fact that Indiana was in a military zone: it was declared to be a military zone; there had never been any insurrection and the courts were open, and therefore the court said that the military authorities had no jurisdiction and could not obtain jurisdiction in the State of Indiana. There has been no attempt of that kind on the part of the military authorities to try men in civil life? That is quite an important question.

Gen. BIDDLE. I do not think there is any disposition on the part of the Army authorities to take any authority away from the civil courts.

Mr. GREENE. If it is not antagonistic to the policy of the department I should like to ask you this question: The report is in circulation as to military prisoners that they condemn a man to death and have carried that sentence into execution and there has been no publicity about it. Are you prepared to say now, as Acting Chief of Staff, whether the policy of the department up to this time has contemplated such a course of action?

Gen. BIDDLE. The present instructions are that no death penalty shall be given without referring it to these headquarters.

Mr. GREENE. Which means the President eventually, as Commander in Chief?

Gen. BIDDLE. Unless the Secretary wishes to take action. It would come to me and I would refer it to the Secretary, and it would, if he so directed, go to the President.

Mr. GREENE. Even under those conditions is it understood to be the policy that the Secretary would order the carrying into execution of such a sentence and that there would be no publicity about it?

Gen. BIDDLE. It has never been done, so far as I know. The only sentence which was carried out that I know of was the case of the colored soldiers down South, and that was given publicity.

Mr. GORDON. As a matter of fact, the execution of the negroes down in Texas was done without the previous approval of the sentence by the President.

Gen. BIDDLE. Yes, sir.

Mr. GORDON. And therefore a regulation was issued prohibiting that sort of thing hereafter?

Gen. BIDDLE. Yes, sir; but the commanding officer was entirely within the law.

Mr. GORDON. Within the Articles of War?

Gen. BIDDLE. Yes; but it was considered better policy to submit the cases for approval, and orders were issued that any death sentence shall be sent up to the headquarters for approval.

Mr. CRAGO. General, regarding the appointment of officers, etc., in the National Guard units, section 76 of the national-defense act of June 3, 1916, provides that vacancies in the National Guard, after drafted into the service of the United States, shall be filled by the President, as far as practicable, by the appointment of persons similarly taken from said guard. Would you care to say whether that is the policy?

Gen. BIDDLE. It is the policy, and it has been always the policy. There may have been one or two exceptions, but it has only been in very rare instances. There may have been cases in the guard where they desired a Regular officer to command a brigade or division or a regiment.

Mr. CRAGO. I have in mind a division where the major general of the division has been appointed from the Army, and he never had any connection with the National Guard. Now, they have two vacancies in brigade commands, and they have a surplus of colonels who are retarding the promotion of other men in the organization by reason of the fact that they seek to give the surplus officers the command of organizations wherever they can. Would it be the policy of the department to recommend some of these colonels for promotion to brigadier general in the division?

Gen. BIDDLE. If they are competent; yes, sir.

Mr. CRAGO. Would it not be well to put them in, if they only last 10 or 15 days, so that the young men in the organization might have a chance?

Gen. BIDDLE. The question of surplus officers of the National Guard has been a very difficult one to handle. We are trying to take care of all of those who are efficient. When we make promotions we consider the National Guard officers just as much as any others; but we are rather slow about making promotions to general rank so as to be more sure what we are doing.

Mr. CRAGO. In this case you have a man who has been in command of the regiment probably 10 or 15 years—a very competent regimental commander. Do you not think that it would be entirely fair to give him a chance to command the brigade rather than take some officer from the Regular Establishment who probably has never even commanded a regiment?

Gen. BIDDLE. I think that each individual case has to be settled by itself. Without knowing the situation and the special organization, I can not say, but our general feeling is to promote National Guard officers whenever we think they are competent. On the other hand, it must be said that when it comes to general officers even the National Guard often prefers to have a Regular officer.

Mr. CRAGO. That may be true in certain cases. I am very glad to see that you have done that in the New York division. I think it is a great compliment to Gen. O'Ryan. I believe he deserves it.

Gen. BIDDLE. I agree with you.

Mr. CRAGO. I rather think they missed the intent of section 77 when they did appoint these officers to the National Guard organizations to command the organizations, other than the ones with which they had been connected. Section 77 provides that officers of said guard rendered surplus by the disbandment of their organizations shall be placed in the National Guard reserve. In the Pennsylvania division they disbanded a regiment and one regiment substantially absorbed another. Then they took the colonel of the regiment which had been disbanded and put him in command of this old organization, because there happened to be a vacancy in the colonelcy of that regiment. Do you think, General, that that is likely to keep up the organization spirit very much?

Gen. BIDDLE. To put one of the colonels in command?

Mr. CRAGO. Here is one organization from the extreme eastern end of the State. That organization was not considered very efficient. It was disbanded and the men assigned to the regiment from the extreme western end of the State, organized and raised under entirely different conditions, with an entirely different class of men, yet the colonel of the eastern regiment was put in command of the western regiment because there happened to be a vacancy in the western regiment by reason of the promotion of the former colonel of that regiment to a brigadier generalship in the Army.

Gen. BIDDLE. The division commander in each of those cases was given full authority to organize their division and to do what he thought necessary in the most efficient way. I would say, to answer your question, that it would be better organization to transfer the colonel to that regiment rather than to promote some one and still have this colonel to be taken care of.

Mr. CRAGO. Of course, he will go into the National Army rather than into the reserves?

Gen. BIDDLE. Yes, sir. The extra officers are held simply for such length of time until we can give them commands. We do not keep them there indefinitely.

Mr. CRAGO. Following the tenor of section 77, if you promoted some of these colonels to brigadiers, you would solve this very problem?

Gen. BIDDLE. We will do that in time if they are declared efficient, because it is our policy and desire to give the National Guard officers every opportunity to command.

Mr. CRAGO. I think those things have caused more trouble with the **National Guard organization than any lack of equipment or lack of proper camp arrangements or anything of that kind.**

Gen. BIDDLE. I am aware of it. At the same time, they can not be put in the organization to which they originally belonged, and we are trying to place them where they can get command in accordance with their rank.

Mr. SHALLENBERGER. General, on the matter of National Guard officers we had a statement from The Adjutant General yesterday that 662 National Guard officers have been dismissed from the service for one reason and another since we entered the war. There are 13,823 National Guard officers. In the Reserve Corps, the National Army, there are 39,779 officers, practically 40,000, and only a very few—four or five or six—among that great number have been found inefficient. Yet none of those officers had more than three months' training, as a rule, in training camps, and thousands have been citizens who were brought into the Army without any training at all, and there were very few, while there was this great number in the National Guard.

Gen. BIDDLE. There are two answers to that question. In the first place, only a portion of those who go to the training camps get commissions. The other is, the boards that report on these officers do not report on an officer and recommend his discharge simply because he has not learned all of his duties. They report him as a man who is liable to be a good officer, who has shown the qualities of zeal, ability, etc., and who in time will become a good officer. In the reports of these boards, and I have read a good many of them, they never discharge a man because he has not learned to do this or he has not learned to do that, but because he has not shown improvement, zeal, or other qualities of an officer. As you know, these boards in the divisions have a majority of National Guard officers, and, of course, we always, or practically always, promote a National Guard officer.

Mr. TILSON. That is only quite recently?

Gen. BIDDLE. No, sir; it has always been that way. In the divisions they are practically all National Guard officers, just the division commander and some dozen others out of several hundred are regular officers, and naturally they would put on a majority of the National Guard officers on any board, but in order that there should be no question about that, two months or so ago an order was issued that there should always be a majority of National Guard officers, except in cases where it was impracticable, and then the commanding general should report the facts to these headquarters.

Mr. HARRISON. I have a case right now where that was not done.

Gen. BIDDLE. I will say in addition, that any case brought up as to injustice we have always followed it up and sent an inspector.

Mr. SHALLENBERGER. I should like to ask if it has not been the policy to spend all of the time in discovering the inefficient officers in the National Guard, and not those in the other departments, so that there has been no culling performed upon them?

Gen. BIDDLE. That is not strictly so. The culling has been more in the National Guard, but that has been, I think, for the reason that I gave you before, that these men who came from the training camps have been culled and while they did not know all the details of mili-

tary work to start in, it was considered that they would learn if given an opportunity.

Mr. SHALLENBERGER. I have had, in fact, correspondence with some of the soldiers from my own State and one of the greatest troubles has been the fact that these young men, just brought into the service, with very little, if any experience, apparently are not inefficient at all.

Gen. BIDDLE. I do not know the figures.

Mr. SHALLENBERGER. They are in the records. None of these majors and colonels who have come in from civil life have been declared useless.

Gen. BIDDLE. There is only one answer that I can make, that those men were picked specially for that high rank after careful culling. It is the duty of the division commander to have his division as competent as he can, and if he does not report a man to us for inefficiency we have usually no knowledge of his efficiency. I think the general inspection shows that these men from the training camps are a very splendid lot of young men, and, while they lack at the beginning some knowledge, they will acquire it. The knowledge which they lack and which the National Guard men have is in taking care of their men. They have not learned that. That will take time. That is the reason why the complaint comes from the soldiers. We feel that these young officers can learn those things. We do not want to take out of the Army anybody that we feel can learn, but those who can not or will not learn we wish to get rid of.

Mr. SHALLENBERGER. I can easily understand that among 40,000 it is possible to find some incompetent National Guard officers who are supposed to have been tried out in the past. After you get through with the National Guard you might pass an efficiency board on some of these corps also.

Gen. BIDDLE. We shall. The division commander can do so any time he pleases.

Mr. SHALLENBERGER. It has been developed before the committee that the National Guard has been the one last considered in the places where they are gathered, in the condition of their camps, etc., and the priority orders which were brought out here in the matter of supplies; in fact, a sort of showing here that they were not quite as well taken care of. It was shown that the death rate is higher than in any other branch of the Army, being two and one-half times that of the Regular Army. It is a matter of record here that the men called out for the National Army were put in these cantonments, built at great expense, thereby necessitating the putting of the National Guard into these temporary camps, where they had no hospitals properly prepared, no steam heat, no sewerage, and all that sort of thing. Those men were called out and the National Army was called out in the face of information being furnished that they were not prepared to take care of them; the Quartermaster Department had not the clothing for them, the camps were not finished, and the hospitals were not finished when they were called out. Can you tell us why it was deemed essential to the organization of the Army that these men should be called out at that time rather than the National Guard, when it became evident that you could not get the ships to send them abroad and have not yet, and, further, in view of the fact, as shown by the records, that more than a million men have

volunteered in excess of the National Army and you have plenty of men to fill these cantonments—why, in the face of that, did you call out the National Guard?

Gen. BIDDLE. I was not at the time. I only came here three months ago. My own idea is that they felt that if the United States would show that it was in earnest by bringing men actually into the field for training it would have a strong moral effect both on our country and on the countries abroad. Whether that was the actual guide, I do not know. That was my feeling. Of course, it must be said in addition that no one realized at the time the great trouble we would have with equipment and also with ships. The National Guard were put into tents simply because we hoped to get them over earliest.

Mr. SHALLENBERGER. Those men were called out in September. That is not a very long time, but it seems to me somebody should have discovered the shortage of ships. We are not going to have the ships now, according to the testimony of the Secretary of War, to move the National Guard, and we are not going to have the ships to move the National Army for a long time, and those men could have been kept in modern cantonments rather than to put them where they were. I do not hesitate to say that I think that is one of the activities of the Government and of the department which might subject them to criticism—the fact that this National Army was called out before the Government was prepared to take care of it, thereby forcing the National Guard to be put into these camps, where they have evidently suffered greater loss and where the conditions have been generally worse than they would have been if placed in modern cantonments for the winter.

Gen. BIDDLE. I am talking a little without being very familiar with the subject. My understanding is that the National Guard were all put in the South because it was considered that the location would be equally as healthy—in fact, more healthy—than more northern States. In case of the draft, where the men would probably remain all winter in camp and because of the desire to bring the men in the vicinity where they came from, a more substantial type of structure was needed on account of the climate.

Mr. TILSON. That was a distinction that did not wholly materialize, because Spartansburg, Charlotte, and those places are all in a section which we know is not really south. The weather this year has been very severe, and if you go back through the weather reports of each year you will appreciate that people in that part of the country would necessarily suffer almost as much as in this part of the country.

Gen. BIDDLE. But they would not suffer as much as in New York or Michigan or Ohio, and the winter does not last as long.

Mr. SHALLENBERGER. One of the greatest defects, in my opinion, was the lack of proper hospital facilities. The testimony shows that they had mere shacks for these men; they had very poor accommodations. They had a greater loss in the National Guard from disease than in any other branch of the Army, which, I think, is well explained by the fact that they had the poorest hospital accommodations. The National Guard of Nebraska was sent to Deming, N. Mex. I put in the record yesterday the testimony of the gov-

ernor's representative who went out there and told about the conditions. It is extremely cold at night in the wintertime and very warm in the summer, and instead of being a healthy climate for men from all latitudes, it is rather bound to be a dangerous climate.

Gen. BIDDLE. As a matter of fact, in the Army we think that tents are perfectly comfortable, if they have stoves.

Mr. SHALLENBERGER. But not for hospitals?

Gen. BIDDLE. No. I should like to add that as soon as this sanitary situation was reported, as soon as the first epidemic appeared, a board was sent, in the early part of November, to all of these hospitals. The epidemic was a surprise to us, and about the time I came back I issued instructions to have Gen. Gorgas and his party do and asked for whatever was necessary, and in consequence, we did express everything he asked for. I should also add that when we found that the equipment was short, especially in clothing, there were still 180,000 men from the first draft who had not been called. They were immediately stopped until the clothing became sufficient.

Mr. SHALLENBERGER. As an experienced officer and the Acting Chief of Staff of the United States Army, I want to ask you if it would not have been a better exhibition of the military power of this Nation if, as we called these men—there was no question about getting them—you had been in a position to take them and clothe them and give them all the equipment and accouterments that a soldier should have as fast as they came in?

Gen. BIDDLE. That is pretty hard to answer. Of course, as a general proposition, you should be ready for people before you call them. On the other hand, we did expect that by the time cold weather came we would have the clothing ready and that there would not be any real suffering.

Mr. SHALLENBERGER. Did you not have notice? It is a matter of record that the Quartermaster General went so far in his statement before the committee as to say that he wrote a letter to the War Department that he could only take them so fast and they came faster. He wrote three letters.

Gen. BIDDLE. I am talking a little bit in the air, not having been here.

Mr. SHALLENBERGER. You are not responsible for what occurred, I understand.

Gen. BIDDLE. I do not want to avoid responsibility. I want to give you some idea of what guided the action taken. I think the idea was to get men into training in the hope that they would in time get whatever equipment was necessary and that it would be possible to get them over to France sooner and that the men should have at least six months' training here before they went abroad. That was the plan, I think. That we have made mistakes in some matters is apparent.

The CHAIRMAN. And you were also trying to make a big show for the benefit of the allies?

Gen. BIDDLE. To my mind it was simply the moral feeling that we were doing something. If we had stood still for six months and had done nothing but accumulate supplies, that certainly would have had its effect in Europe. In the same way, the sending over of that small outfit with Gen. Pershing in the beginning had its effect in Europe, and I think this did, too.

Mr. FIELDS. General, in regard to the questions that have been asked by Gov. Shallenberger on the question of weeding out National Guard officers, I have in mind an officer whose resignation was asked for because of preexisting debts which he had incurred in a large financial transaction before he came into the Federal service. Is it the policy of the department to dismiss officers from the service because of such conditions?

Gen. BIDDLE. No, sir; not if he makes good. The only point to be considered would be the effect upon his future.

Mr. FIELDS. What do you mean by "if he makes good"?

Gen. BIDDLE. In a case like that my idea is, that if the fact of this man having these debts would indicate that he was an officer who would keep on making debts, and for that reason would not be a good officer, I would consider those conditions. But if a man, simply for one reason or another got into debt, which he was trying every day to pay off, and was honest at the bottom, I certainly would not consider that against him.

Mr. FIELDS. In other words, if he was doing everything an honest man could do under the circumstances to meet those obligations, it is not the policy of the department to ask for his resignation or to force him out of the service?

Gen. BIDDLE. That would not be my policy. Of course, the division commander has a large amount of latitude and there may have been other reasons, too. My own policy, in time of war, is that if a man is going to make good, the past, unless he is dishonest, counts but little.

Mr. FIELDS. Then if he was a good officer and there were no other reasons for asking for his resignation other than the fact that he owed these preexisting debts, and he was paying those debts on a pro rata or percentage basis, and his commanding officer asked for his resignation, he exceeded his authority and violated the policy of the department; is that my understanding?

Gen. BIDDLE. That is putting it pretty hard, because each case would have to be decided by itself.

Mr. FIELDS. You understand I said, if I stated it correctly.

Gen. BIDDLE. If a man for some reason or other had accumulated debts which were not accumulated in a dishonest way, and if that was the only thing against him, and if he was making every effort to pay them, and was a good officer, I myself certainly should not recommend his discharge.

Mr. McKENZIE. General, where the commanding officer of a division, having the authority to observe all the officers under him, asks an officer to resign, of course he does not make that request unless it is founded upon some state of facts.

Gen. BIDDLE. Yes, sir.

Mr. McKENZIE. Does he report to you or to the department here in Washington the grounds upon which he bases the request for the resignation? In other words, is there not a record made of it further than simply the commanding officer asking a subordinate officer to resign?

Gen. BIDDLE. The few cases that have been brought up to me have had a record with them. I remember there were three cases which came up recently from one of the States, I have forgotten now just

which one, which we investigated, and in each case the officer, in submitting his resignation, had given the reasons for it.

Mr. McKENZIE. In the case that Mr. Fields cites the reasons would appear from his statement, and if those were the reasons it would be so stated, and if there were any other reasons they would also be stated; is not that true?

Gen. BIDDLE. Yes, sir; but, of course, there is this to be said, if the officer submitted his resignation willingly, it would be accepted even on that ground. We have had one or two resignations where the man stated he was in financial difficulties which he could not pay off and therefore he asked that his resignation be accepted.

Mr. FIELDS. In reply to the question of Mr. McKenzie, you said that the officer tendering his resignation makes a statement. I infer from that that you get no record from the officer who requested his resignation?

Gen. BIDDLE. Not necessarily. Of course, if the officer objects in any way or wishes to present the case to us, that would be done; or if he is asked in writing to submit his resignation; but if his division commander simply asks it verbally, we would not necessarily have it here.

Mr. FIELDS. General, this is the thought I had in mind in asking my question. Many of the men in the National Guard were men engaged in business before they went into the Federal service, and they were called away suddenly from their business and many of them doubtless had incurred financial obligations at the time. Now, if the department is going to take notice of that, although those obligations may have been incurred in a perfectly legitimate way and because of the high standing of the man he was able to get such credit, it seems to me it is going to work a great hardship upon the National Guard officers and upon other men who may be drafted into the service who are capable of making good officers, but who know that if they succeed in getting commissions these complaints are liable to be filed against them.

Gen. BIDDLE. I can not imagine a case of a man being discharged or asked to resign, as you put it. Of course, there may have been individual cases up, but I can not imagine from the statement you make that man should be asked to resign, unless there was something more than you have stated.

Mr. FIELDS. They are the facts as presented to me. The case I had in mind was the case of a man who had been in the National Guard for 12 years, and he had bought 25,000 acres of mineral land and had started coal operations and had incurred considerable obligations in starting such operations, and after he had gone into the service the title to his property was contested and was taken away from him, which left him several thousand dollars in debt. He and his brother, who is an Army officer, are applying every dollar they can spare from their salaries to this indebtedness on a percentage pro rata with his creditors. Some of those creditors filed complaints against him, and his resignation was asked for on that ground. His record as an officer, I understand, is splendid.

Gen. BIDDLE. If he is doing his duty as an officer, and if these debts standing over him do not affect his work as an officer, to my mind I think a mistake was made. I would also state that under

such circumstances when any individual case is brought to our attention we have it investigated. You can not, of course, establish any general rules about a matter of that sort, but whenever you see an injustice is done you can simply go after the man who does it.

The CHAIRMAN. The remedy in a case of that sort would be to appeal to the Secretary of War or to the Chief of Staff.

Gen. BIDDLE. There are a great many appeals, and we always consider them very carefully; in fact, the Secretary himself considers most of them personally.

Mr. FIELDS. Then if he should fail to offer his resignation under circumstances of that kind his commanding general would try him, would he?

Gen. BIDDLE. He might try him if he thought the case warranted it; yes; or he might bring him up before a board. That is within his authority.

Mr. McKENZIE. General, is not the situation just about this: If an officer happens to get into the Army and is involved in debt and is an honorable man and trying to act honorably, the Army will take care of him, but the Army refuses to stand as a receptacle for a man who undertakes to get in and make the Army a harbor in which to protect himself against his honest creditors?

Gen. BIDDLE. That is what I was trying to state to Mr. Fields.

Mr. FIELDS. That is absolutely correct, and the Army should distinguish between a man of that kind and a man who is called into the service from his business and is involved in debt.

Gen. BIDDLE. Yes, sir; that is the distinction I have been trying to make.

Mr. ANTHONY. General, is it the policy of the War Department now to permit National Guard organizations to serve in the units of their respective States?

Gen. BIDDLE. As far as possible, yes, sir.

Mr. ANTHONY. What is the reason for the consolidation of some of the National Guard regiments; that is, where you put regiments from one State in with regiments from another State, which to me appears to be openly in violation of a provision of law which, I think, was secured by Mr. McKenzie, of Illinois, the intent of which was to permit the National Guard units to serve as such throughout the war?

Gen. BIDDLE. Of course, the National Guard units from a single State were not big enough to fill a division, which means 27,000 men. There were only two or three States who had enough National Guard for that.

Mr. ANTHONY. What I have in mind is where you took a regiment from one State and consolidated it with a regiment from another State.

Gen. BIDDLE. That was simply to absorb the National Guard in these divisions.

Mr. ANTHONY. Was not that in violation of the intention of that provision of law?

Gen. BIDDLE. I do not think so. Otherwise, you would have no place to put them. They would have to be either consolidated or discharged, because only a certain number of divisions were needed, and each division has a certain organization.

Mr. ANTHONY. Is not the matter of your divisions a flexible one?

Gen. BIDDLE. No, sir; not the number of regiments or brigades.

Mr. ANTHONY. But the size of a division, as to the number of men, is flexible?

Gen. BIDDLE. No, sir.

Mr. ANTHONY. Is it fixed now?

Gen. BIDDLE. Yes, sir.

Mr. ANTHONY. What is the number?

Gen. BIDDLE. About 27,000 or 28,000.

Mr. ANTHONY. The Adjutant General spoke to us yesterday of a division of 12,000 men.

Gen. BIDDLE. I do not think that was one of our divisions.

Mr. ANTHONY. It was in Porto Rico, I believe.

Gen. BIDDLE. There may have been a special division there, or a Philippine division, of that size.

Mr. ANTHONY. What is the size of a French division now?

Gen. BIDDLE. It has been reduced lately. It is between 15,000 and 20,000 men.

Mr. ANTHONY. As a matter of fact, are not the sizes of divisions constantly being changed in the Army in an effort to keep in touch—

Gen. BIDDLE (interposing). No, sir; the changing of the size of a division abroad is largely due to a lack of men. Our organization is based on the best opinion of the military authorities abroad as well as our own, and we feel we ought to start out with that number, and one of Gen. Pershing's most urgent requests is always to keep the divisions full.

Mr. ANTHONY. I can not see quite the argument that you advance as to why you should have to take a regiment from one State and consolidate it with a regiment from another State in order to keep a division full. Why could you not simply take a certain number of company units from another State and attach it so as to complete your division, if that is necessary?

Gen. BIDDLE. Because we had more distinct regiments than we had places for them in these different organizations.

Mr. ANTHONY. Were you forced to change your regimental organizations in your National Army units the same way in order to make up your divisions?

Gen. BIDDLE. There were no units of the National Army. That was started anew.

Mr. ANTHONY. I may be very dense on military subjects, but I never could quite see the logic of that argument.

Gen. BIDDLE. Mr. Anthony, suppose we had from the States 50 regiments. Suppose in our organization we only had room for 25 regiment; you either have to discharge 25 of those regiments or you would have to consolidate them with the others.

Mr. ANTHONY. Why could you not make an additional division?

Gen. BIDDLE. Because we had all the divisions of the National Guard we needed, and we did not have the men to fill them. Another reason was that none of these regiments was full.

Mr. ANTHONY. Why could not the regiments have been filled up? It has been announced as your purpose to use your drafted men for the purpose of filling up regiments in the National Guard or Na-

tional Army. Why were not those regiments filled up to their capacity and organized properly into your divisions?

Gen. BIDDLE. To begin with, of course, we took the National Guard in as a unit, and they were not filled at the time. Then we had all these regiments of National Guard and we had a certain number of divisions to put them in and a certain number of regiments in those divisions, and so it seemed to us by all odds the best thing to consolidate and put them in together. That is the only answer I can give. We made an effort to keep the older organizations intact as much as we could. Of course, we did not always succeed in that, but we made an effort to do it.

Mr. GORDON. General, Gen. Sharpe testified before our committee that he formally notified you long before these last drafts were made, in November and December, I believe it was, that he would not have sufficient clothing and blankets for these men until the 31st of December, and that you replied in substance that you would call them out any way.

The CHAIRMAN. Gen. Biddle was not the Chief of Staff. It was Gen. Scott.

Mr. GORDON. He said the Chief of Staff. When were you appointed Chief of Staff?

Gen. BIDDLE. I have been acting since the 1st of November.

Mr. GORDON. I was using the term "Chief of Staff" impersonally.

Gen. BIDDLE. Yes.

Mr. GORDON (continuing). That the reply of the Chief of Staff was that they would call them out any way because of the psychological effect on the enemy of the failure to call out these units. Did that come within the purview of your official duties since you have been Chief of Staff?

Gen. BIDDLE. Not any further than what I mentioned a few minutes ago. There were still about 180,000 of the first draft to come in when I arrived here the 1st of November, and then it was put up to me that the equipment was lacking, and as winter was coming on we stopped at once bringing in more men, and they have not come in yet.

Mr. GORDON. Then since you have been Chief of Staff you have not called in any units after you were advised they had not sufficient blankets and clothing to equip them?

Gen. BIDDLE. That is practically so. We called in a few special units, a few engineers and others, but that is practically so. But I want to state, in justice to the others, that when I came here winter was here and the actual situation was much better known than it was in the summer, when doubtless that remark was made; so that I might very well have made that remark at that time, or Gen. Scott or whoever it was would have taken the action I did when I took it.

Mr. GORDON. Is it your judgment that we ought to call men by the draft into the military service when we are not prepared to clothe and equip them because of any psychological effect on the enemy?

Gen. BIDDLE. I have already answered that. I think that was the judgment of everybody here at the time. I do know we shall not do it in the future because we do not have to do it in the future.

Mr. ANTHONY. General, when we first began to increase our military forces, it was the policy of the War Department to resort en-

tirely to the draft to raise the Army; and is it not true that subsequent to that determination the department began largely to recruit the Regular Army and the National Guard by the volunteer method, so that you got all the men you were prepared to take care of by the volunteer method, or all you should have had at that time, and that when you resorted to the draft you were unable to properly clothe and take care of them; is that correct?

Gen. BIDDLE. I do not think so, to the extent that we could have taken care of very many more than came in through the volunteer method.

Mr. ANTHONY. But you could not take care of all you finally did get by the draft?

Gen. BIDDLE. No, sir; there was a shortage of clothing and equipment. The shortage in clothing is practically made up now, but the equipment not yet.

Mr. ANTHONY. In other words, there were so many more volunteers than had been anticipated that it perhaps exhausted the supply?

Gen. BIDDLE. Well, I do not know how many volunteers did come in, but of course we were able to take care of them and many more.

Mr. ANTHONY. Have you the figures to show how many volunteers came into the Regular Army and the National Guard?

Gen. BIDDLE. The Adjutant General would have them. I know they came in little by little until very near the end of the time when volunteering was stopped, and then for the last week or two they came in very rapidly. Up to that time they had not come in very rapidly.

The CHAIRMAN. On January 31 of this year Gen. McCain testified there were in the Regular Army and National Guard about 924,000 men.

Mr. CRAIG. Fifty-one thousand of them were drafted men.

Mr. MCKENZIE. General, do you believe that the passage of the conscription law had any tendency to deter young men from enlisting in the Army?

Gen. BIDDLE. It is just a question of individual judgment which I do not think anybody could answer. I do not see why it should have, from the fact that so many enlisted just before the enlistment was stopped.

Mr. MCKENZIE. Then, just reversing the question, do you believe that the passage of the conscription law had any influence on bringing men into the volunteer service?

Gen. BIDDLE. Not to any great extent; no. There were some toward the end who came in simply because they felt they would have more choice of location, but those psychological questions are rather beyond my ken.

Mr. HULL. General, I would like to ask you a question, going back to the questions of Mr. Anthony in regard to the destruction of the National Guard. I have in my own district a Cavalry unit which was formed to reorganize the National Guard of Iowa, but before that was completed it was called off. They had four troops. The four troops were taken to the border and given the proper training down there. Largely the men who went into that service went in because they were farm boys who loved horses, and they made ideal cavalymen. After they came back from the border they were called out.

and they were kept as a Cavalry troop, I think, up to about October or November. Then orders came that they should be made over into a machine-gun company. This was done. Now, I understand, they are forming Cavalry regiments, but these boys are in a machine-gun company. Now, do you think that is good military policy?

Gen. BIDDLE. If there were Cavalry in those divisions, of course, that would not be the policy, but there are no Cavalry in those divisions.

Mr. HULL. But you are forming Cavalry regiments?

Gen. BIDDLE. Not in the divisions; no, sir. We are forming some corps Cavalry and are taking men who have had experience as cavalymen as much as we can. Of course, there is a Cavalry division which is being formed; but it is questionable whether it will go over to France for some time, as they are not using very much Cavalry over there at present. The only answer I can give you is that when they formed this division there was no Cavalry, and therefore the cavalymen were put in units where it was thought they would fit best. They were put into the Artillery largely on account of their knowledge of horses, etc., and they were put into machine-gun companies because those were separate units where the four troops of which you speak could keep their own identity, rather than be amalgamated into an Infantry regiment where they would have lost their identity. Of course, you understand I am talking generally, because I do not remember this particular case, but that is the policy we tried to follow when there were relatively a small number of men such as you speak of. We tried to put them in some organization where they could keep their own identity as far as possible.

Mr. HULL. Now that they are forming Cavalry, would it not be a good plan to pick those men up who are already trained as cavalymen? They have had no machine-gun experience; at least, they have had no machine guns.

Gen. BIDDLE. As a general proposition, those men would make the best men. What has been the special action in this case, I am sorry to say, I do not know; but I do know, of course, that we are trying to get men of experience for these Cavalry regiments.

Mr. HULL. There is another question I would like to ask. The First National Guard Regiment of Iowa is down on the border, and is short of men. They want, of course, to secure men from Iowa, and men from Iowa, of course, would prefer to go there. Is there any objection or is there any reason why when you draft men, after you have inducted them into the service, you should not send them to this regiment without giving them three or four months in a cantonment, if the officers of the regiment would prefer it?

Gen. BIDDLE. There is no reason, except the regiment might be going abroad promptly or something of that sort.

Mr. HULL. The regiment is not going abroad shortly.

Gen. BIDDLE. I mean we might want to get men who have had several months' training before we send them to the regiments; but, as a general proposition, of course, we would like to keep men who know each other and who are from the same part of the country together.

Mr. HULL. Did your department have anything to do with the selection of Camp Cody as a camp?

Gen. BIDDLE. The camps were selected largely on the advice and opinion of the department commanders. I do not remember especially about Camp Cody, but I rather take it for granted that, along with the other ones, the department commander of that department recommended Cody.

Mr. HULL. Have you had any complaints about that selection or would they come to you?

Gen. BIDDLE. They would come to me. Not especially; no, sir; not enough to make me feel there was a mistake made.

Mr. HULL. There seems to be a very general complaint about the selection of Camp Cody. I myself do not know why it should have been selected, because it is way out West and is in a very high altitude, and it has one very disagreeable condition, and that is the sand storms which prevail there practically every week, and make it almost impossible to practice or do anything else.

The CHAIRMAN. General, the next item is "Expenses of military observers abroad." What is the necessity for this item?

Gen. BIDDLE. We are sending officers abroad for special observation constantly. For instance, as you know, Gen. Crozier has just gone abroad for observation work, and we sent all the division commanders abroad to educate them so they could better train their divisions.

The CHAIRMAN. Then this item is necessary to pay such expenses?

Gen. BIDDLE. Yes, sir. It is independent of the military attachés and the men of the Military Intelligence Office.

The CHAIRMAN. And independent of the men operating with Gen. Pershing's Army?

Gen. BIDDLE. Yes, sir.

The CHAIRMAN. Mr. Gordon wants to know why there should be any extra expense, inasmuch as the officers get pay and allowances.

Gen. BIDDLE. This is for mileage, automobile hire, and many other things—perhaps guides or whatever might be necessary. Of course, they would not be paid their pay and allowances out of this fund.

Mr. GORDON. They would not?

Gen. BIDDLE. They would not get the regular pay and allowances of an Army officer from this appropriation.

Mr. GORDON. They are all Army officers?

Gen. BIDDLE. Yes, sir.

Mr. GORDON. If they get their regular pay and travel allowances—

Gen. BIDDLE (interposing). Their traveling allowances would come out of this. I thought you meant their pay.

Mr. GORDON. In detailing an Army officer and sending him on a trip, he gets his pay and traveling expenses under the law, even if he is sent to Europe.

Gen. BIDDLE. Yes, sir; and they are paid out of this fund.

Mr. GORDON. What part of their pay and allowances comes out of this fund?

Gen. BIDDLE. All except their ordinary pay and what they would get at any station.

Mr. GORDON. What are they entitled to in addition to their ordinary pay and allowances?

Gen. BIDDLE. They are entitled to the expenses of their journey.

Mr. GORDON. Do they get mileage, too?

Gen. BIDDLE. I do not believe we have in mind the same meaning of the word "allowance." When I say "pay and allowances," I have in mind the ordinary allowances of a man at the post. What I think you have in mind is the allowance for travel.

Mr. GORDON. Yes.

Gen. BIDDLE. They get mileage or expenses according to the conditions which the law calls for. I mean in certain cases they get mileage and in other cases they get expenses.

Mr. GORDON. In what cases do they get mileage?

Gen. BIDDLE. Well, for instance, suppose I went abroad from here. I would get mileage from here to New York, because that is the rule, and I would get expenses on the ship. When I get on the other side I would get expenses or mileage according to the way I made the journey. If I went on the railroad train I would be given mileage, but if I had to hire transportation I would probably just get expenses. That is all covered by law and regulation.

Mr. SHALLENBERGER. Is mileage and all expenses paid out of this fund, or is mileage taken out of the mileage fund?

Gen. BIDDLE. All expenses are paid out of this fund.

The CHAIRMAN. As I understand, the mileage allowance applies only to travel in this country?

Gen. BIDDLE. I would not be quite sure of that.

The CHAIRMAN. In this country or its possessions?

Gen. BIDDLE. It applies to a certain extent in France. It makes very little difference to the Army officer; it amounts to the same thing.

Mr. ANTHONY. Would these observations be confined to our own Army abroad, or to the foreign armies?

Gen. BIDDLE. Foreign armies.

Mr. ANTHONY. I understand it is your policy to send the general officer in command of a department or division for certain service abroad for observation. Would that come out of this appropriation?

Gen. BIDDLE. Yes, sir. We call them observers.

Mr. ANTHONY. But it is really not observing in the way that we have been accustomed to use that word?

Gen. BIDDLE. It is observing largely for his own education. I will add that all of these officers, when they come back, report here, and they are required to give information from what they have learned over there. For instance, if a military mission went abroad they would be considered an observers.

Mr. SHALLENBERGER. If I understand, there is no possibility of double pay for travel or expense allowance, and if an officer is paid out of this fund he is not paid out of the other fund?

Gen. BIDDLE. It is absolutely impossible to secure double pay in any way.

The CHAIRMAN. How do you estimate that item, \$100,000?

Gen. BIDDLE. It is more or less a guess. We had that amount last year, and they fairly well spent it.

The CHAIRMAN. How much have they spent up to date?

Gen. BIDDLE. I do not know exactly how much.

The CHAIRMAN. Will you spend it all by the time?

Gen. BIDDLE. We will not spend any more because of the fact of its being there. We have certain policies that we are trying to carry out; that is all.

The CHAIRMAN. The next item is "United States Service Schools"?

Gen. BIDDLE. There is somewhat of an increase in that item due to the fact that we are enlarging the school of musketry and the school of artillery at Fort Sill. The regular schools as they have been run during peace times have largely been given up, but we are making use of the facilities of the schools for instructing new officers.

The CHAIRMAN. Please put in the record a statement showing where that increase comes.

Gen. BIDDLE. There is one in the estimates. I have here a very full statement. I think it is rather unnecessarily full as to each and every item.

The CHAIRMAN. Substantially as in the estimate?

Gen. BIDDLE. Yes, sir; except a little more detail.

United States service schools.

Employees.	Rate.	Estimated, 1919.	Estimated, 1918.

Urgent deficiency appropriation not classified, 1918.....			25,325.00
Total.....		82,810.00	60,675.00

The CHAIRMAN. The next item is on page 16, "Pay of clerks, messengers, and laborers, office of the Chief of Staff." You are asking for an increase of 19 clerks?

Gen. BIDDLE. That is simply due to the increase of the Army and the large amount of extra work which comes in consequence. This applies both to the office at the War Department and the office at the War College. The amount of pay is based largely on the proportion usually observed and also on the class of men that we think we should have.

Mr. GORDON. To what extent do you utilize commissioned officers in your office?

Gen. BIDDLE. What do you mean?

Mr. GORDON. How many men do you have in your office who are holding commissions in the Army, doing any kind of work, clerical or otherwise?

Gen. BIDDLE. We have, as far as I know, none doing strictly clerical work. It is our effort to avoid that. The number of officers of the

General Staff at the War Department, in my office, is 22, and at the War College 24.

Mr. GORDON. Is it your policy to utilize civilian service in all cases where it may properly be done?

Gen. BIDDLE. Yes, sir.

Mr. GORDON. The 22 commissioned officers that you have are necessary for the performance of the duties?

Gen. BIDDLE. It is necessary for them to be officers. We have tried hard to limit the number of officers, especially lately, and have been very particular, having a special regard to men within the draft age. We have not taken anybody within the draft age, except where their qualifications were such that you could not get another suitable man outside of the draft age. There are a great many new industries, like automobile, munitions, and others, which are new, and therefore the young men are the only one who know them. We have therefore had to commission a good many men within the draft age. We limit it as much as we can.

Mr. SHALLENBERGER. You have not yet the number of officers that you are entitled to under the law?

Gen. BIDDLE. No, sir.

The CHAIRMAN. How many officers have you in the General Staff?

Gen. BIDDLE. In the permanent General Staff we have now 80, with 8 vacancies. We are allowed 88, outside of the general officers; but in addition to that all the departments have General Staff officers, and all the divisions and corps and armies. They are not all appointed yet, because we have not formed any corps and we have not formed any army.

The CHAIRMAN. That explains the difference. Gen. Sharpe testified that there were 348 in the General Staff, and Gen. McCain told us the other day that there were 80. I suppose the difference is due to the staff officers with the Army.

Gen. BIDDLE. At the division, corps, and army headquarters. In France, where they have now about 20 on the permanent General Staff, we expect that Gen. Pershing will increase that number to 40. In an army there are 18 General Staff officers, in the five corps 35, and in the 44 divisions 176. That brings the number up to this total number here. Of course, they have not all been appointed yet.

The CHAIRMAN. How many have been appointed?

Gen. BIDDLE. In round numbers, I should say about 275. We have had to increase the number, or will increase it, because Gen. Pershing has recommended an additional General Staff officer for each division.

Mr. SHALLENBERGER. The 88 General Staff officers are actually in service with you in the city of Washington?

Gen. BIDDLE. No, sir; not entirely. There are 22 at the War Department and 34 at the War College. There are about 20 over with Gen. Pershing, and Gen. Bliss took over about 5 with him. We still have some vacancies.

Mr. SHALLENBERGER. Two hundred and seventy-five are to be appointed?

Gen. BIDDLE. They are all appointed to be with the divisions. Each division has three or four, and each department headquarters has a certain number.

Mr. SHALLENBERGER. Did you say 20 more?

Gen. BIDDLE. There will be a certain number of additional staff officers permanently assigned. Others are simply detailed to the division or other unit. If they leave the division, they probably go back to other work. If we reduced the number of divisions, the number of General Staff officers would be reduced.

The CHAIRMAN. Did I understand you to say that the 275 you have now include those on duty here in your office and at the War College?

Gen. BIDDLE. Yes, sir; it includes all of those on this duty as well as all of those on duty with the organization.

Mr. QUIN. When you say "War Department," what do you mean by that to comprehend?

Gen. BIDDLE. The office of the Chief of Staff.

Mr. GREENE. There is a differentiation between the officers of the General Staff who are provided by law of the permanent Army and such temporary officers as you are now calling in. Do you contemplate that these temporary officers will remain actually permanent?

Gen. BIDDLE. If we reduce the number of divisions, they drop out automatically and as we increase them they increase automatically.

Mr. GREENE. Are these extra men appointed from the outside as reservists or are they taken from the Regular Army?

Gen. BIDDLE. From the Regular Army.

Mr. GREENE. They are detailed to the General Staff rather than holding a commission in that arm of the service?

Gen. BIDDLE. Yes, sir. An officer in any branch of the service may be detailed to the General Staff and assigned to duty with one of the divisions.

Mr. GREENE. It is a detail and not a tenure?

Gen. BIDDLE. Yes, sir.

Mr. MORIN. Does the law require that the boards which pass on the National Guard officers shall be composed of a majority of officers of the National Guard?

Gen. BIDDLE. It is not a law, but an order issued from our office.

Mr. MORIN. When was that?

Gen. BIDDLE. About the middle of November.

Mr. MORIN. Did that go into effect at once?

Gen. BIDDLE. As far as I know. I explained that before. This is the situation. We felt that we wanted the National Guard to be considered by their own people. Of course, in the National Guard divisions there are only about a dozen Regular officers against several hundred National Guard officers and the chances were that there would always be a majority on any board, but in order that there could be no question the division commanders were instructed to see that there was a majority of National Guard officers on these boards, except in cases where it was impracticable, and then in those cases to specially notify us and that we would take it up.

Mr. MORIN. Do you know whether that was so of the board which passed on these officers of the Pennsylvania regiments at Camp Hancock a few weeks ago, and was their case passed on previously or since?

Gen. BIDDLE. I think since, but there have been very few Regular officers with the Pennsylvania National Guard, and it would have been very hard to find a board which was not composed of a majority of National Guard officers.

Mr. MORIN. The board that passed on these Pennsylvania regiments, was that composed of National Guard officers or Regular Army officers?

Gen. BIDDLE. I feel sure that there was a majority of National Guard officers on that board.

Mr. MORIN. Please put that in the record.

Gen. BIDDLE. Yes, sir.

ADDITIONAL STATEMENT WITH REFERENCE TO THE COMPOSITION OF BOARDS WHICH
ELIMINATED NATIONAL GUARD OFFICERS FROM THE TWENTY-EIGHTH DIVISION
(PENNSYLVANIA).

A careful examination of the records in the Militia Bureau shows that in the elimination of all officers from the Pennsylvania National Guard division this elimination was the result of action in every case of boards of officers, the majority membership of which was National Guard officers.

Mr. HARRISON. I tried to find the law that requires a majority of the board to be National Guard officers, but I could not do it.

Gen. BIDDLE. There is no law. It is an instruction from these headquarters.

Mr. HARRISON. I have two cases right in my district. One of the officers who was a National Guard officer was displaced, but the Secretary of War set aside the finding of the board. When I went to look up the law, I could not find it.

Gen. BIDDLE. It would not be in the law. I do not think it is a proper thing to put in the law. We follow up individual cases. In every case that suggests there was any injustice done we have had it carefully investigated.

Mr. HARRISON. In this case an officer was a colonel in the National Guard for 15 years, I think.

Gen. BIDDLE. What organization was that?

Mr. HARRISON. A Virginia organization.

Gen. BIDDLE. Are you sure that it was not physical?

Mr. HARRISON. His case was not; the case of the lieutenant was physical. I had him examined by the doctors at the University of Virginia, and they pronounced him absolutely physically fit. On that representation he was given another examination. That produced a certain amount of demoralization in the National Guard.

Gen. BIDDLE. To my mind, the answer has always been that the Guard acts on its own members and a National Guard officer is put in the vacancy.

Mr. HARRISON. In this case they did not put a National Guard officer in the man's place, and that produced a certain amount of demoralization in the Virginia National Guard.

Gen. BIDDLE. I remember the case of Virginia being brought up. All I can say is that we try to apply the strict rule, and apply it impartially.

Mr. HARRISON. I understand. I have no complaint. I was wondering whether that policy was being strictly followed.

Gen. BIDDLE. As far as I know. Gen. Carter has charge of it, and his assistant looks over all cases. He has orders to report any violation to me. Of course, there are some cases where it is not practicable, for some reason or other, but those cases are always investigated specially.

Mr. LUNN. In connection with the accident on yesterday this statement appears in the press:

A pathetic feature is that, although all the victims wore tags, no identification numbers had been put on them because these Americans had not as yet been assigned to definite Army units. Therefore, there is no way to identify them, and they will be buried in one grave.

If that is true—of course, we do not know—would not there be some officer tremendously at fault?

Gen. BIDDLE. I do not believe that is true, but, of course, I could not state absolutely.

Mr. LUNN. If it is true, some officer has failed in a way that would deserve very severe punishment?

Gen. BIDDLE. Yes, sir; if those men were not properly marked so that they could be identified.

Mr. MORIN. Did I understand you to say, General, that in all cases where these National Guard officers were removed, that National Guard officers were put in their places?

Gen. BIDDLE. As far as I know; yes, sir.

Mr. MORIN. As high as colonels?

Gen. BIDDLE. Yes, sir.

Mr. MORIN. I have in mind a case—the One hundred and eleventh Pennsylvania Regiment—where I understand a Regular officer was put in his place.

Gen. BIDDLE. There are certain instances in the case of technical regiments—

Mr. MORIN (interposing). Just an Infantry regiment.

Gen. BIDDLE. I doubt it, unless they have asked for it or there was some special reason. We do have constant requests for Regular officers, but we almost always turn them down.

Mr. MORIN. He was from some State, perhaps out West. If that is the case, do you not think it would be better to put in somebody from Pennsylvania?

Gen. BIDDLE. No, sir.

Mr. MORIN. If you could get the right man, because there is a certain feeling among the people of that State that it ought to be a man from Pennsylvania in charge of the Pennsylvania troops, if it is possible to get the proper man?

Gen. BIDDLE. There is something to be said on that side. We leave it so much to the division commander that we do not go into his assignments unless there is complaint.

Mr. MORIN. That is one State organization, and there is a feeling that the men volunteered and that they should be commanded by officers from that State if you can get the men.

Gen. BIDDLE. In the course of time, when officers from the training camps are brought into regiments, there is bound to be more or less mix up of States; and if, for example, the division should meet with great loss, it would be filled up from the nearest division. There will have to be changes.

Mr. ANTHONY. Is it the purpose of the General Staff to formulate military plans for the Army of the United States and for probable campaigns?

Gen. BIDDLE. Yes, sir.

Mr. ANTHONY. Preliminary to the 1st day of last April, did the General Staff ever formulate a plan of campaign for the American Army in Europe?

Gen. BIDDLE. I do not know about the date; I was not here; but I do know that the whole question of the best use of the American Army when we entered into the war was very thoroughly studied by the General Staff.

Mr. ANTHONY. Preliminary to the 1st day of last April, had plans for the transportation of an army of 500,000 or 1,000,000 men ever been perfected to carry such an army to Europe?

Gen. BIDDLE. We have made on various occasions during the last three of four years many plans for transporting the Army to Europe. Of course that exact question as to whether at that particular time I am unable to answer, because I was not here at the time, but I do know that plans have been made as to what we should do with our Army, and there have been various plans as to how many transports we would need and all that to carry the Army to Europe or elsewhere.

Mr. ANTHONY. Has the General Staff ever outlined how many men it would be practicable for this country to transport to Europe?

Gen. BIDDLE. Yes, sir; I believe so. I do not know whether it was worked out with the boats we have now available.

Mr. ANTHONY. Do you remember how many men the General Staff recommended it was possible to transport?

Gen. BIDDLE. No; I never heard any such figures.

Mr. ANTHONY. I was wondering if you had.

Gen. BIDDLE. No, sir. It has been a constant source of study at the War College.

Mr. ANTHONY. Previous to the European war did the General Staff ever contemplate the idea of the American Army operating in Europe?

Gen. BIDDLE. It contemplated it as a possibility, but not in my time as a probability. When the war began I was not with the War College. They may have taken that question up more fully later.

FEBRUARY 8, 1918.

OFFICE OF THE CHIEF OF COAST ARTILLERY.

STATEMENT OF BRIG. GEN. JOHN D. BARRETTE, ACTING CHIEF.

The CHAIRMAN. In the item on page 5, "Coast Artillery School, Fort Monroe, Virginia," you are asking for a less amount than the appropriation of last year?

Gen. BARRETTE. Yes, sir. We are asking for the routine amount of \$28,000. We got \$32,000 last year, because there was \$4,000 extra asked for relief maps for instruction. We have gone back to

the routine amount. We have not been able to make an estimate that would be a valuable one for the increased work that we can foresee. The school for enlisted specialists is going to multiply its output about forty times. In addition to a large expansion in the number of electrician sergeants, sergeants major, master gunners, and radio sergeants, we are going to train chauffeurs for tractors, trucks, and automobiles. It is expected that the number of officers passing through the school also will be multiplied about forty times. Of course, the expense will not increase at all in proportion, but there will be a certain amount of expense that we can not foresee, and we will probably have to come back for that expense.

Mr. ANTHONY. What is the idea of training the chauffeurs at Fortress Monroe?

Gen. BARRETTE. For the motorized regiments of heavy artillery which are going to France.

Mr. ANTHONY. For artillery purposes only?

Gen. BARRETTE. Yes, sir. The Quartermaster Department has at Jacksonville a school; and the idea at first was to train our chauffeurs there, but that school did not have the capacity, and so lately it has been decided that they would prefer us to train our own.

Mr. ANTHONY. It is the plan to transport practically all of the heavy artillery in France by motor?

Gen. BARRETTE. That which the Coast Artillery will have will be motor drawn or on railway mounts.

Mr. ANTHONY. What will be the size of the guns that the Coast Artillery will handle in France?

Gen. BARRETTE. Six, eight, ten, twelve, and fourteen inch guns and twelve-inch mortars and sixteen-inch howitzers.

The CHAIRMAN. When will you know how much you will need?

Gen. BARRETTE. As soon as we get the instruction under way, of these chauffeurs. I can give you now an approximate estimate.

The CHAIRMAN. We should be glad to have it now. If we want more definite information, we can get it later.

Gen. BARRETTE. I can say for the enlisted-specialists' school, for which we usually ask \$7,000 (this year \$10,000), we will probably want \$25,000 for this increased work; and for the officers' school, for which we usually ask \$8,500, we will probably want \$25,000.

The CHAIRMAN. You will practically want \$30,000 additional?

Gen. BARRETTE. \$50,000 additional.

The CHAIRMAN. You said that you had asked for \$10,000 in one item and wanted \$25,000. Did you mean \$25,000 additional?

Gen. BARRETTE. Yes, sir; \$25,000 additional.

The CHAIRMAN. That would be practically \$50,000 additional?

Gen. BARRETTE. Yes, sir; that is as near as we can make the estimate now.

The CHAIRMAN. Have you an itemized statement of each one of the subdivisions under this item?

Gen. BARRETTE. Yes, sir; I have a complete statement fully itemized.

The CHAIRMAN. Please put it in the record.

Gen. BARRETTE. Yes, sir.

(The statement referred to follows:)

Object of expenditures.	Estimated, 1919.	Expended, 1917.
Incidentals:		
Chemicals.....	\$50.00	\$48.77
Stationery.....	3,000.00	3,097.17
Printing.....	1,350.00	780.00
Binding.....	250.00	24.09
Hardware.....	150.00	227.45
Materials.....	2,000.00	1,567.23
Cost of special instruction of officers detailed as instructors.....	600.00	500.00
Employment of temporary, technical, or special services.....	250.00	35.40
Extra-duty pay—		
1 carpenter (civilian), at \$1,000 per annum.....	1,000.00	435.47
1 overseer (soldier), at \$0.35 per diem.....	100.00	86.00
Office furniture and fixtures.....	1,500.00	1,511.13
Machinery.....	250.00	513.52
Unforeseen expenses.....	1,500.00	845.09
Total under this heading.....	12,000.00	9,671.92
Division of enlisted specialists:		
Engines.....	500.00
Generators.....	250.00	55.32
Motors.....	250.00	352.02
Machines.....	300.00	355.20
Measuring instruments.....	1,200.00	266.25
Special apparatus.....	2,500.00	2,674.72
Materials.....	5,000.00	3,374.30
Total under this heading.....	10,000.00	7,077.81
Department of artillery and land defense:		
Special apparatus.....	250.00	1,325.43
Materials.....	750.00	1,179.65
Experimental purposes.....	500.00	518.31
Total under this heading.....	1,500.00	3,023.39
Department of engineering and mine defense:		
Engines.....	250.00	65.17
Generators.....	100.00
Motors.....	100.00	53.86
Machines.....	150.00	571.78
Measuring instruments.....	500.00	49.12
Special apparatus.....	300.00	3,275.58

Total under this heading.....	2,000.00	5,710.81
Library:		
Purchase of books and periodicals.....	2,400.00	2,361.97
Binding of same.....	100.00	184.10
Total under this heading.....	2,500.00	2,546.07
Total.....	28,000.00	28,000.00

Thereupon the committee adjourned to meet on Monday, February 11, 1918, at 10.30 o'clock a. m.)

INDEX.

A.

Additional pay—	
For length of service—	
Enlisted men—	Page.
General Staff.....	251
Medical Corps.....	245
Signal Corps.....	243
The Line.....	219
Officers—	
Adjutant General's Department.....	252
Engineer Corps.....	254
Inspector General's Department.....	254
Ordnance Department.....	257
The Line.....	206
To officer in charge of public buildings and grounds, Washington, D. C....	275
To officers below the grade of major who furnish their own mounts.....	286
Additional officers for the Army, pay of.....	192
Additional special and technical troops.....	21
Additional 20 per cent increase, foreign-service pay.....	282
Adjutant General's Department, pay of officers.....	251
Aeroplanes:	
Aircraft guns.....	129
Arming.....	22
Bomb-dropping aeroplanes.....	39
Age limit for officers.....	198, 1241
Aircraft Board.....	1098
Alaska, roads and trails:	
Asked for 1919, appropriated 1918.....	1061
Repair and maintenance.....	1061
Allentown camp:	
Confinement of soldiers.....	1194
Courts-martial trial, etc.....	1195
Dissatisfaction among troops.....	1200
Ambulance Corps:	
Ambulances furnished by Quartermaster Corps.....	1164
Separate organizations.....	1167
Standardized motor ambulances.....	1211
Ambulance service, pay of personnel.....	259
Ambulances, chassis for.....	438
Ammunition:	
Artillery.....	6
Factories.....	47
For heavy guns.....	50
For howitzers.....	46
For machine guns.....	72, 140
For pistols.....	125
For rifle ranges for civilian instruction.....	60
For small arms.....	79
French supply.....	52
Salvage of.....	6
Special class.....	106
Amount required by the Medical Department for an army of 1,500,000 and 3,000,000 men (estimate).....	1158
Amount unexpended, Ordnance appropriation.....	43
Annual death rate from disease in army.....	1225

	Page
Appropriations:	
Barracks and quarters.....	799
Contingencies of the Army.....	1319
Clothing, camp and garrison equipage.....	629
Medical Department.....	1049
Ordnance.....	43
Pay of the Army.....	192
Roads and trails of Alaska.....	1068
Subsistence.....	291
Horses for Cavalry, Artillery, and Engineers.....	763
Waters and sewers at military posts.....	605
Transportation of the Army and its supplies.....	423
Arms, tentage, and equipment for military schools and colleges.....	67
Army:	
Pay of.....	191
Subsistence.....	293
Army and Navy:	
Ammunition for.....	50
Competition of labor.....	47
Army, contingencies of:	
Amount asked for under each subdivision.....	1360
Amount received last year.....	1359
Unforeseen contingencies.....	1359
Army Medical Museum, appropriation.....	1183
Army Service Corps, pay of.....	200
Army, the wings of.....	33
Army War College, maintenance.....	976
Army War College, appropriation.....	1360
Armored motor cars, appropriation and estimates.....	137
Armory, Springfield.....	5
Arnold, Col. H. H., Signal Corps, Air Division, statement.....	1101
Arsenals:	
Capacity of.....	933
Frankford Arsenal.....	25, 79
Guarding and policing.....	5, 25
Rock Island Arsenal.....	5, 75
Watervliet Arsenal.....	5
Artillery officers transferred to Ordnance Department.....	26
Assembly depots for ordnance.....	6
Automatic machine rifles:	
Appropriations and estimates.....	129
Testing.....	131
Average pay, enlisted man, Ordnance Department.....	21
Aviation:	
Amount asked for.....	1075
Appropriation.....	1067
Increase.....	1125
Balloons.....	1086
Bogey price for machines.....	1118
Bombing program, bombs, etc.....	1103
Bombs.....	1073
Browning and Vickers air-craft guns.....	1116
Builders of Liberty motors.....	1118
Commissioned officers in Aviation Section.....	1081
Cotton cloth used instead of linen.....	1122
Cross-license agreement and license, amount.....	1107
Engineering schools cooperating.....	1075
Engines used in France and England.....	1068
European experts on aviation advising.....	1068
Fields constructed and under construction, names, location, area and cost.....	1079
